metrical manner that complements their reserved and dignified social demeanour. Younger men, by contrast, often sing in an exuberant and dramatic style, consistent with their more extroverted demeanour and evocative of the heroic affect that characterizes their repertory. Many men's songs are not metrical or are executed in an 'elastic' rhythm and singers perform them using an array of techniques such as portamento, melisma, vocal pulsation, yodelling, or leaps into falsetto register (see ex.3). A number of these techniques are said to be drawn from women's lament styles and infuse men'performances with a sense of melancholy or nostalgia. As men age, they often turn to a more sedate performance style, known as *shtruar* ('calm') that is closer to women's singing. Particularly in Lab communities, men may recognize a formal distinction between young men's songs (*këngë djemurishte*) and elders' songs (*këngë pleqërishte*). In turn, women as they age may begin to incorporate into their performances more demonstrative elements of the men's style.

Throughout Albania, men in stock-breeding communities have accompanied their herding activities with various types of aerophones. Most common are end-blown or duct flutes ranging in length from 20 to 90 cm. While the term *fyell* is known throughout the country, other regional names include *njijare* or *cule* in Labëri, *kavall* or *duduk* in Tosk areas, and *bilbil* or *fyelldrejti* for northern duct flutes. In some communities a double-bore duct flute is played, known as *binjak* ('twin') in the north and *culedyjare* ('double flute') in Labëri. Some herdsmen say that they use their flutes to calm their animals or to direct their movements. To do so they perform expansive, unmetrical melodies with descriptive titles such as 'When the sheep go to drink water' or 'Air of the shepherd in the mountain'. In southern areas herdsmen also perform melodies in the style of women's laments, which they term *vajtim* or *të qarë*. At smaller family gatherings, flute players might perform song tunes or melodies for group dancing.

A second type of herdsmen's instrument is the single-reed pipe, generally made from cane. In the north the most common such instrument is the *zumare*, which consists of two parallel pipes with a single bell made from an animal's horn. This instrument may be attached to a skin bag to form a bagpipe, known as *bishnicë* or *mishnicë*. In the south individual reed-pipes, known as *pipezë*, are sometimes played by pairs of men in the manner of a polyphonic song. The southern bagpipe or *gajde*, found only along the eastern border, has a wooden chanter and drone pipe, each with a single reed. Unlike other aerophones, the *gajde* is played primarily in farming communities (sometimes together with frame drum) to accompany singing or dancing.

2. Urban music. During the late Ottoman period, distinctive musical styles developed in both northern and southern towns. For religious holidays or family celebrations, land-owning families or members of the rising middle-class hired professional ensembles to perform songs and instrumental music for both dancing and listening. Their music was reserved primarily for men's gatherings, although in some areas women performers were engaged for female guests. While many of the performers were Roma, some were ethnic Albanians. The largest and most polished ensembles performed in the major towns, but smaller groups gradually introduced urban repertories to outlying towns and villages.

In the northern town of Shkodër and in the towns of Central Albania (particularly Tirana, Durrës and Elbasan), the most typical ensemble or *aheng* (*çallgi*, *saze*) of the early 20th century consisted of a long-necked, plucked *saze* or a short-necked, fretted *llautë*, a clarinet (*gërnetë*), a violin played vertically on the knee, and a frame drum (*def*) or goblet drum (*qypi*). The repertory of such ensembles was based on the system of Ottoman *makam*s and included locally created songs and dance tunes as well as Ottoman compositions and modal improvisations (*taksim*). Albanian-language songs that were created within this repertory may be in a variety of metres and generally alternate lines of text with instrumental interludes. Some songs are multi-sectional, incorporating several changes in metre. While Ottoman compositions are no longer performed, northern urban songs are still widely sung and have been recorded in recent decades by singers such as Fitnete Rexha, Hafsa Zyberi, Luçije Miloti, Myslym Leli and Merita Halili. Since World War II the accordion has largely replaced the plucked strings, and contemporary ensembles often augment or replace the older instruments with saxophone, synthesizer, electric guitar and bass, and Western drumkit. As Western instruments have been adopted, performers have gradually modified their intonation to a tempered diatonic scale.

In the south, early 20th-century ensembles or *saze* featured one to two clarinets and/or violins, a *llautë* and a large *def*. To these were eventually added accordion and, more recently, amplified instruments. Southern *saze* have performed music that is closer in style to nearby rural genres than to urban Ottoman ones. Typically, the lead clarinet and violin play interweaving, pentatonic melody lines, while *llautë*, accordion and any other instruments provide a chordal accompaniment. *Saze* have developed their own repertory of polyphonic songs and play a variety of dance tunes, including more rapid ones for women and slower tunes with more elastic metres for men. They are most renowned for virtuoso solo improvisations, played most often on clarinet or violin, that are known variously as *kaba*, *avaz*, *vajtim* or *me të qarë*. Similar to herdsmen's melodies but more expansive and highly ornamented, these performances draw on expressive features of women's lament styles to evoke feelings of longing and nostalgia. Most of the pre-World War II recordings of southern music featured performances by Rom *saze* from towns such as Korçë and Leskovik, sometimes accompanying Albanian singers. Performers of this repertory in recent decades have included clarinettist Laver Bariu and the Lela family, both from Përmet. Women singers such as Vaçe Zela from Vlorë and Eli Fara from Korçë have popularized the performance of monophonic songs based on southern pentatonic scales and accompanied by *saze* instrumentalists.

In towns throughout Albania, amateur musicians also developed repertories that they performed for their own enjoyment. Particularly in the south, men in the late Ottoman period created songs either in Turkish or local styles that they sang to the accompaniment of instruments such as the *ud*, *bakllama* (Turkish *bağlama*) and *buzuk* (Turkish *bozuk*). By the turn of the 20th century, these were often replaced by European instruments such as the guitar, violin and mandolin, used to accompany a new type of urban song (*këngë qytetare*) based on the Western tonal system. Another characteristic European

ensemble, the brass band, was also popular in early decades of the 20th century. Various types of urban songs, particularly those that can be spontaneously harmonised, are still sung enthusiastically by urbanites at many family occasions.

3. INSTITUTIONAL SETTINGS. Since the mid-19th century, when members of the intelligentsia first began to publish collections of song texts, forms of Albanian folk music have been systematically employed to encourage national loyalties and serve as models for a national culture. Following World War II, such practices became institutionalized as state policy under the new socialist government. Traditional songs were introduced at all levels of the school curriculum and became the basis for compositions in the Western classical style (see §I above). Both Radio Tirana (established in the 1940s) and the state television (initiated in the late 1960s) broadcast many hours of national music each week, disseminating state-sponsored musical styles to even the most isolated rural areas. While music-making continued in family and community settings, media forms came to set the standard for Albanian musical performance, not only within Albania but also in neighbouring Yugoslavia.

In emulation of Soviet models, a State Ensemble of Folk Songs and Dances (Ansambli Shtetëror i Këngëve dhe Valleve Popullore) was founded in Tirana, as were similar amateur ensembles throughout the country. Each full ensemble consisted of vocal soloists, a chorus, an instrumental group and a troupe of dancers. For younger Albanians especially, participation in an ensemble came to replace older, rural settings for music-making that had been rendered obsolete by policies such as the collectivisation of agriculture and, in 1967, the abolition of all forms of religious practice. In order to give the new ensembles showcase, a network of folkloric festivals was created. Most festival performances featured choreographed dance suites set to highly arranged and harmonised musical accompaniment. At the National Folk Festival, however, which was held every five years in the town of Gjirokastër, village groups presented performances that, while also arranged, were closer in style to community music-making. Partly to assemble materials that could serve as a basis for new artistic forms, scholars trained in ethnography, folklore, ethnomusicology and dance ethnology undertook detailed documentation of Albanian folkloric forms, resulting in an extensive programme of scholarly publication. Formerly assigned to several different institutes, after 1979 these scholars worked under the auspices of the Institute of Folk Culture (Instituti i Kulturës Popullore) in Tirana.

During the socialist period, artistic innovations were actively encouraged as long as they were viewed as contributing to the evolution of Albanian socialist culture. Many older song texts representing past modes of life or oppositional political stances were not performed. In their place, performers were encouraged to create new songs, known as *folklor i ri* ('new folklore'), that extolled the Party of Labour and its leader Enver Hoxha. Many groups also experimented with new musical formats. The orchestra of the State Ensemble began as an expanded version of a northern urban ensemble, but gradually adopted a core configuration of Western instruments, with local Albanian ones used for occasional colour. Some regional ensembles developed 'families' of *çiftell*, or *fyell*. or created orchestras of instruments that were formerly played separately. Such new configurations were often used to accompany types of singing that were once performed *a cappella*. Women joined men as prominent public performers of rural and urban styles, either as vocal soloists, singers in mixed ensembles or even instrumentalists. As in neighbouring countries, large integrated ensembles, performing complex arrangements with discipline and precision, came to be seen as embodying many of the ideals of socialist ideology.

The fall of the socialist system in 1991 precipitated large-scale social dislocation and economic hardship in Albania, affecting all aspects of musical life. Since the government can no longer support its extensive cultural institutions, the future of both professional ensembles and research institutes is now in question. Few Albanians have either the capital or the business expertise to open private recording companies or performance venues. Families that might once have hosted a large wedding celebration with a live band might now plan a small family gathering with dancing to recorded music. In response to such conditions, a number of prominent performers and scholars have left the country. Other musicians support themselves through concerts in neighbouring countries or tours of expatriate communities in western Europe and North America. Although recordings of national music are still broadcast on radio and television, many of the cassettes available for sale are imported from Macedonia. At present the most ubiquitous forms of music are popular styles from the United States and Western Europe. Only when Albania has recovered from the economic strains of recent years will an active musical life develop in which local musicians have a more prominent role.

GEORGE LEOTSAKOS (I), JANE C. SUGARMAN (II)

Albano, Marcello (*fl* Naples, 1601–16). Italian composer and musician. He was mentioned by Cerreto (*Della prattica musica vocale et strumentale*, Naples, 1601/*R*) as one of a number of singers and instrumentalists in Naples. He published two volumes of music at Naples in 1616. The first, *Il primo libro di canzoni, e madrigaletti*, for three and four voices (RISM 1616[11]), includes settings of texts by Tasso, Marino and Francesco degl'Atti. The canzoni – in fact canzonettas – usually have four-line stanzas and use triple metre occasionally. The tenor parts can be omitted. The five madrigalettos (one of which is by Scipione Dentice) are longer and avoid triple metre but are similar in style to the canzonettas. Albano recommended that lute, harp or harpsichord accompaniment be used, that the tempo be a little rushed and that, whereas intermediate cadences must be sung in strict time, final cadences could be drawn out a little. His second published volume, *Madrigali* for five voices, survives incomplete. The texts, by Guarini, Rinuccini and Tasso, among others, are shorter and their textures more imitative than was usual in Neapolitan madrigals of the time. In both prints Albano was occasionally old-fashioned in that he set accented text syllables to high pitches on weak beats and unaccented syllables to low pitches on strong beats.

KEITH A. LARSON

Albareda, Marcián (*b* late 16th century; *d* probably Barcelona, mid-17th century). Spanish composer. He was appointed *maestro de capilla* of La Seu d'Urgell Cathedral on 15 January 1622. In 1626 he followed Joan Pau Pujol in the same capacity at Barcelona Cathedral, where he probably stayed for the remainder of his life. Only a few of his works survive: masses, motets, villancicos and unaccompanied romances, for four, six and eight voices. They lack Pujol's creative ingenuity and technical brilliance. Albareda's music is all in manuscript in the Cathedral, Barcelona, except the following four pieces, which are in manuscript at the Biblioteca de Cataluña there: *responsión*, *A la media noche*, 6vv; *Alma, llegad al convite*, 6vv; romance, *Convidando está a su mesa*, 4vv; villancico for the Holy Sacrament, *Hoy deste pan consagrado pienso comer un bocado*, 8vv. (J. Wolf: *Historia de la música, con un estudio critico de historia de la música española por Higinio Anglés*, Barcelona, 1943, rev. 4/1965 by J. Subirá)

BARTON HUDSON

ALBAUTOR. *See* Copyright, §VI (under Albania).

Albéniz, Isaac (Manuel Francisco) (*b* Camprodón, Gerona, 29 May 1860; *d* Cambo-les-Bains, 18 May 1909). Spanish composer and pianist. When he was a year old he moved with his family to Barcelona. His musical propensities soon became apparent, and his sister Clementina gave him piano lessons when he was about three and a half. A child prodigy, he made his first public appearance at about five, at the Teatro Romea in Barcelona. Shortly afterwards he began lessons with Narciso Oliveras. In 1867 he was taken to Paris where, it is said, he studied privately with Antoine-François Marmontel, eventually taking the entrance exam for the Paris Conservatoire; though impressed with his talent, the jury is said to have refused him admission because he was too immature. In 1868 Albéniz's father lost his government post, and, to earn money, took Isaac and Clementina on recital tours of the Spanish provinces. Soon the family moved to Madrid, where Albéniz was enrolled in the Escuela Nacional de Música y Declamación (now the Real Conservatorio Superior de Música). His studies were constantly interrupted; having experienced the life of a travelling virtuoso, he repeatedly gave recitals in the provinces or wherever fate took him. He returned intermittently to Madrid and studied for a time with Eduardo Compta and José Tragó. His travels took him to Puerto Rico and Cuba in 1875 before he finally settled down to serious studies.

Albéniz returned to Europe and enrolled at the Leipzig Conservatory in May 1876 but remained there for only two months; by summer he was back in Madrid seeking financial aid. Through the intercession of Guillermo Morphy, secretary to King Alfonso XII, he obtained a pension to attend the Brussels Conservatory. There he studied the piano until 1879, first with Franz Rummel and then with Louis Brassin, obtaining a first prize. He did not, as many biographers claim, go on to study with Liszt, though he seems to have travelled to Budapest in August 1880 with the goal of meeting the Abbé. By mid-September 1880 Albéniz was again in Madrid pursuing his performing career. He made tours of Spain and appearances in the Spanish-speaking Americas. He also began to conduct, and by 1882 he had become administrator and conductor of a touring zarzuela company in Spain. It is probably from this time that his earliest attempts at zarzuela originate – *El canto de salvación*, *¡Cuanto más viejo ...!* and *Catalanes de Gracia*. In 1883 he moved to Barcelona where he studied composition with Felipe Pedrell. While still continuing to perform he gave piano lessons, and on 23 June 1883 he married his pupil Rosa Jordana. By the end of 1885 they had moved to Madrid, where, through the protection of his old friend Morphy, Albéniz firmly established himself in Madrid's musical life, performing in the homes of nobility, organizing and participating in concerts and teaching. By 1886 he had written over 50 works, principally for piano, and on 21 March 1887 he gave a concert in the Salon Romero devoted solely to his own music. His own works were also featured in a series of 20 concerts given under the auspices of Erard, the French piano manufacturer, at the French pavilion of the 1888 Universal Exposition in Barcelona. A facile improviser, Albéniz composed quickly, producing a large body of solo piano pieces, much of it delightfully inspired salon music (dances, études and character-pieces) in simple forms, redolent with repeats. But he also undertook more ambitious projects, two piano concertos (op.78 and the *Rapsodia española*) and a four-movement symphonic piece (*Escenas sinfónicas*). By 1889 he was well known as a pianist-composer, with his compositions published by Spain's leading music publishers. In March he gave concerts in Paris; a few months later he appeared in London, where his success ensured repeated visits. In June 1890 he placed himself under exclusive contract as a composer and performing musician to the manager Henry Lowenfeld and moved to London by the end of the year with his wife and children (Alfonso, Enriqueta, and Laura; two others, Blanca and Cristina, had died in early childhood). Notable among the concerts Albéniz gave under Lowenfeld's management were two in November 1890 focussing on modern Spanish orchestral music, and a series of ten chamber music concerts that took place in the first half of 1891 (for which he invited his friend the violinist Enrique Fernández Arbós to participate).

Through Lowenfeld, who was associated with musical theatre, Albéniz agreed to compose music for a comic opera, *The Magic Opal*, written by Arthur Law. He also came into contact with Horace Sedger, manager of the Lyric Theatre, and became involved with its production of *Incognita* (an adaptation of Charles Lecocq's *Le coeur et la main*, opening 6 October 1892). On 19 January 1893 *The Magic Opal*, a work in the vein of Gilbert and Sullivan, had its première at the Lyric. After a successful run, it was revised slightly and staged at the Prince of Wales Theatre as *The Magic Ring* (11 April 1893) with Albéniz conducting. The next offering at the Prince of Wales, *Poor Jonathan* (15 June 1893), was an adaptation of Carl Millöcker's *Der arme Jonathan* to which Albéniz contributed some numbers and acted as musical director.

Albéniz's theatrical involvement brought him to the attention of Francis Burdett Money-Coutts, heir to the banking fortune of Coutts & Co. and financial investor in both the Prince of Wales and Lyric theatres. Money-Coutts, an amateur poet and playwright, had become a partner with Lowenfeld in the contract concerning Albéniz's musical talents; by July 1894 Money-Coutts was Albéniz's sole patron.

After *Poor Jonathan*, Albéniz moved back to the continent because of illness, settling in Paris. He soon resumed his performing activities in Spain, at the same time working on *Henry Clifford*, an opera based on the Wars of the Roses to a libretto by Money-Coutts. He spent the summer of 1894 in Paris completing the score as well as composing yet another stage work, *San Antonio de la Florida*, a one-act zarzuela to a libretto by Eusebio Sierra; this was first given in Madrid, at the Teatro Apolo on 26 October 1894, the composer conducting. Because it was more ambitious musically than the typical zarzuela in the accepted *género chico* style, *San Antonio* was not entirely successful. A month later Albéniz conducted his *Magic Opal* (presented in Sierra's Spanish translation under the title of *La sortija*) at the Teatro de la Zarzuela and was again criticized for writing a work that did not conform to the established mould. Disgusted, he returned to Paris. Albéniz was not the only Spanish composer to encounter resistance from the establishment. Efforts to elevate the artistic content of the zarzuela as well as to create a Spanish national opera (vigorously supported by Tomás Bretón and Felipe Pedrell) repeatedly faced deep-rooted prejudices.

In March 1895 Albéniz appeared as a soloist in a concert series sponsored by the Sociedad Catalana de Conciertos in the Teatro Lírico in Barcelona. The series of five concerts, fostered by Albéniz, was conducted by d'Indy, and marked the beginning of their friendship. Ernest Chausson, whose *Viviane* was performed on the series, became a close friend of Albéniz as well. In time Albéniz formed close ties with Charles Bordes, Paul Dukas and Fauré, and became a cherished member of the French musical community.

On 8 May 1895 Albéniz conducted the première of *Henry Clifford* at the Gran Teatro del Liceo in Barcelona. As was the custom there, the work was performed in Italian. Though not appreciated by the general public it proved a success with the critics, who felt that the music showed promise. Money-Coutts's and Albéniz's next endeavour was a one-act opera based on the novel *Pepita Jiménez* by Juan Valera. It had its première on 5 January 1896 at the Gran Teatro del Liceo (in Italian) to the decidedly enthusiastic applause of the general public; the press however were disappointed, having hoped for something more substantial from the composer of *Henry Clifford*. In March and April Albéniz set a group of poems by Money-Coutts and also began (though left incomplete) work on a choral piece *Lo llacsó* with text by the Catalan poet Apeles Mestres. Albéniz not only promoted Spanish music (his own as well as that of his compatriots) in the concerts he organized but also actively participated in the *modernismo* movement for the resurgence of Catalan culture, which had taken hold in Barcelona in the 1890s. By September Albéniz had expanded *Pepita* to two acts and, though he continued to give concerts, much of 1896–7 was devoted to promoting the opera's performance. On 22 June 1897 *Pepita*, conducted by Franz Schalk, was produced in German at the German Theatre in Prague to great praise. Angelo Neumann, manager of the theatre, contracted Albéniz to compose two stage works, which did not however materialize. Instead, the composer embarked on a trilogy, *King Arthur*, to a libretto by Money-Coutts. Albéniz's talent for inventing attractive vocal lines woven around a vibrant orchestral fabric had formed the compositional basis for *Clifford* and *Pepita*, operas that succeed from moment to moment. The immense undertaking of a trilogy, however, daunted rather than excited Albéniz's imagination. Contrary to his usual speed, Albéniz took four years to finish *Merlin* (1898–1902), *Lancelot* was left incomplete after the beginning of the second act and *Guenevere* remained untouched.

Meanwhile, from 1896, in addition to composing songs, many on texts by Money-Coutts, Albéniz sought inspiration from his native land in works for solo piano and for orchestra. Notable was *La vega* (initially intended for orchestra), which marked a turning-point in his piano style; his deliberate exploitation of the sonorous properties of the piano, juxtaposing its different registers and utilizing the piano for its colouristic effects, foreshadows *Iberia*.

From 1898 to 1900 he taught advanced piano at the Schola Cantorum (among his students was Déodat de Séverac); he had to resign because of poor health and in 1900 left Paris for the warmer climate of Spain. In Barcelona he became associated with Enric Morera and the movement to promote the performance of Catalan lyrical works. He made repeated attempts to have *Merlin* and *Pepita Jiménez* produced in both Madrid and Barcelona but met constant opposition from the establishment. In 1902 Albéniz agreed to compose a three-act zarzuela to a libretto by Cristóbal de Castro, *La real hembra*. He set little more than the prelude and first two scenes however, and Castro never completed the libretto. Though Albéniz had support from the press, his international reputation was a liability. He was viewed as a Spaniard 'in foreign attire' and thus not only lacked commitment from the public and the impresarios but also suffered from their intrigues and jealousies. Since all efforts to secure performances of his lyric works failed, at the end of 1902 Albéniz returned to France where, esteemed by colleagues there, he felt he could more effectively advance the cause of Spanish music.

Suffering from Bright's disease, he spent much time in the warmer climate of Nice. He resumed work on *Lancelot*, eventually putting it aside to revise the orchestration of *Pepita* for a performance in French at the Théâtre de la Monnaie, Brussels. *Pepita*, along with *San Antonio de la Florida* (translated into French as *L'ermitage fleuri*), was given on 3 January 1905 to enthusiastic reviews. Albert Carré, director of the Paris Opéra-Comique, expressed interest in *Pepita*, but it was not given there until 1923. Although the Monnaie announced plans to perform *Merlin* the following winter in a French translation by Maurice Kufferath, the production did not materialize. In April 1905 Albéniz began a lyric drama in four acts entitled *La morena*, but this too was left incomplete. Heeding the advice of his friends and the dictates of his conscience, he returned to the composition of piano music. From 1905 to 1908 he wrote his masterpiece, *Iberia*, a collection of 12 'impressions' (as the work was subtitled) in four books, wherein he captured and immortalized the sounds and rhythms of his native country. Whereas the first two books of *Iberia*, though difficult in certain aspects, emphasize colour, the remaining pieces show a greater density of texture and an

Isaac Albéniz

increased demand for virtuoso technique, a change in style that can be attributed to the pianist Joaquín Malats (winner of the prestigious Diémier prize in 1903). Deeply impressed by Malats's interpretation of *Triana* from *Iberia*, Albéniz composed the last two books under the direct influence of his esteemed compatriot's phenomenal abilities, creating music of extreme technical difficulty. Albéniz attempted the orchestration of the first book of *Iberia*, but not satisified with the results he asked Arbós to accomplish the task. Arbós ultimately orchestrated *Triana* and *El Albaicín* (and *Navarra*, which was originally conceived as part of *Iberia*) as well. (The remaining numbers of the work were later orchestrated by Carlos Surinach.)

In 1908 Albéniz set more Coutts poems, which were ultimately published as *Quatre mélodies*. His final composition, *Azulejos* for piano, was left unfinished at his death. His remains are buried in the cemetery in Montjuïc in Barcelona.

Throughout his virtuoso career Albéniz's playing was admired for its clarity and its exquisite delicacy of tone, qualities that were particularly lauded in his interpretations of Scarlatti. Although he made no commercial recordings, three improvisations on privately owned wax cylinders do survive and have been made available on *The Catalan Piano Tradition* (VAI Audio/International Piano Archive 1001, *c*1992).

Through his activities as a conductor, impresario, performer and composer within Spain as well as abroad, Albéniz, one of Spain's foremost musicians, not only contributed to the rebirth of Spanish nationalism but also gained international recognition for Spanish music. Where Pedrell used folk music in his works as a basis for a national style, Albéniz preferred to suggest, rather than quote, rhythms and melodic elements to evoke the Spanish landscape. He achieved popularity at the beginning of his compositional career with salon music. With his dramatic works, his writing gained depth. By the end of his life he was creating dense polyphonic textures that combined underlying diatonic harmonies (freely mixing major and minor tonalities with modal elements), animated by vibrant ostinato rhythms, overlaid with basically simple melodic lines and gestures embroidered with chromatic filigree.

Founded in 1987 by Paloma O'Shea, the Fundación Isaac Albéniz is dedicated to promoting and aiding musical activities in Spain; it administers the International Piano Competition of Santander (founded in 1972) and also acts as a resource centre for Albéniz research in particular and Spanish music in general.

WORKS

published in Madrid unless otherwise stated

Most surviving MSS are in *E-Bbc*, *Boc* and the Museu de la Música, Barcelona. Opus numbers do not necessarily reflect the chronology of compostion, and also contain gaps and duplications; some works were published under two different titles and opus numbers, and some unpublished works were re-used for later pieces.

PIANO SOLO

2 Caprichos, 2 Caprichos andaluces, Grande estudio de concierto, Marcha nupcial, Suite morisca (mentioned by Guerra y Alarcón, all lost); Marcha militar (?1869); Nelly, 1879, unpubd; Pavana-capricho, op.12 (Barcelona, 1884), also arr. 2 pf; Primera barcarola, op.23 (Barcelona, 1884); 6 peqeuños valses, op.25 (Barcelona, 1884), nos.3 and 5 also pubd as Valses de salon; Sonata no.1, A♭, op.28, scherzo pubd (Barcelona, 1884) [used as Scherzo of Suite característica], ?other movts lost

Suite española (1886): Granada, serenata, Cataluña, corranda, Sevilla, sevillanas [also arr. 2 pf], Cádiz, saeta [=op.181, added 1898; also arr. 2 pf], Asturias, leyenda [=op.232/1, added ?1898], Aragón, fantasía [=op.164/1, added ?1898; also arr. 2 pf], Castilla, seguidillas [=op.232/5, added ?1898; also arr. 2 pf], Cuba, capricho; Serenata árabe (1886) [used as int for The Magic Opal]; Deseo, estudio de concierto, op.40 (1886)

Suite ancienne, op.54 (1886): Gavota, Minuetto; Estudio impromptu, op.56 (1886); Diva sin par, mazurka (1886); Balbina Valverde, polka (1886); Suite ancienne no.2, op.64 (1886): Sarabande, Chaconne; 7 estudios en los tonos naturales mayores, op.65 (1886) [no.3 also pubd as Romance sans paroles (London, *c*1890)]; 6 mazurkas de salón, op.66 (1886): Isabel, Casilda [also pubd as op.140, no.1 (London, 1890)], Aurora, Sofía, Christa [also pubd as op.140, no.2 (London, 1890)], María; Sonata no.3, A♭, op.68 (1886); Angustia, romanza sin palabras (1886); Tercer minuetto (1886); Recuerdos de viaje (1886–7): En el mar [also pubd as On the Water (London, 1891)], Leyenda-barcarola, Alborada [op.71], En la Alhambra, Puerta de Tierra, bolero [also pubd as Andalucia (London, ?1889)], Rumores de la Caleta, malagueña, En la playa; Sonata no.2, op.60 (?pubd 1887), lost

Sonata no.4, A, op.72 (1887) [3rd movt also pubd as Celebre Minuet (London, 1892)]; Arbola-pian, zortzico (San Sebastián, 1887); Suite ancienne no.3 (1887): Minuetto, Gavotta; 6 danzas españolas (1887); Cotillon, album de danses de salon: no.1 Champagne (carte blanche), vals (*c*1887) [also arr. pf 4 hands (London, 1889), lost]; Recuerdos, mazurka, op.80 (Barcelona, 1887); Mazurka de salón, op.81 (Barcelona, 1887)

Sonata no.5, G♭, op.82 (1888) [2nd movt also pubd as Minuetto del gallo (1888)]; Pavana fácil para manos pequeñas, op.83 (1888); 12 piezas características, op.92 (1888): Gavotte sur un thème de Mlle Irene Landauer, Minuetto a Sylvia, Barcarola (Ciel sans nuages), Plegaria, Conchita, polka, Pilar, vals, Zambra, Pavana, Polonesa, Mazurka, Staccato, capricho, Torre Bermeja, serenata; 2 mazurkas de salón (1888): Amalia, op.95, Ricordati, op.96

Suite espagnole no.2 (1889): Zaragoza, Sevilla; Cadix-gaditana (London, 1889); Zambra granadina (London, 1889); 2 morceaux caractéristiques: Spanish national songs, op.164 (London, 1889), Jota aragonesa, Tango; España, op.165 (London, 1890): Prélude, Tango, Malagueña, Serenata, Capricho catalan, Zortzico; L'automne valse, op.170 (London and Barcelona, 1890) [also orchd, unpubd]; Sérénade espagnole, op.181 (London, 1890) [also orchd, ?unpubd]; Rêves, op.101 (London and Paris, 1891): Berceuse, Scherzino, Chant d'amour; Mallorca, barcarolle, op.202 (London, 1891)

Album of Miniatures (London, 1892): Spring, Summer, Autumn, Winter [also pubd as Les saisons, op.201 (Paris, 1893): Le printemps, L'été, L'automne, L'hiver]; Chant d'Espagne, op.232 (Barcelona, 1892): Prélude, Orientale, Sous le palmier, Córdoba [added 1898], Seguidillas [added 1898]; Menuet (Paris, 1894); Sonata no.7, op.111, minuetto pubd between 1900 and 1914, ?other movts lost; The Alhambra Suite: no.1; La vega [Fantaisie espagnole] (San Sebastián, ?1898), Espagne (Souvenirs): Prelude, Asturies (Barcelona, *c*1899); Yvonne en visite, in Album pour enfants (Paris, 1905)

Iberia, 4 bks: 1 Evocation, El Puerto (orchd 1907, unpubd], Fête-Dieu à Séville (Paris, 1906), 2 Rondeña, Almería, Triana (Paris, 1907), 3 El Albaicín, El polo, Lavapiés (Paris, 1907), 4 Málaga, Jerez, Eritaña (Paris, 1908); Navarra, inc., completed by D. de Séverac (Paris, 1912); Azulejos, inc., completed by Granados (Paris, 1911)

DRAMATIC

El canto de salvación, ?end of 1881 (zar, 2), lost

¡Cuanto más viejo …! (zar, 1, Zapino), Bilbao, Feb 1882, lost

Catalanes de Gracia (zar, 1, R.L. Palomino de Guzmán), Madrid, Salón Eslava, 25 March 1882, lost

The Magic Opal (comic op, 2, A. Law), London, Lyric, 19 Jan 1893, vs (London, 1893); rev. as The Magic Ring, London, Prince of Wales, 11 April 1893; as La sortija, Madrid, Zarzuela, 23 Nov 1894

Mar i cel, 1893–5 (after A. Guimerá), inc.

San Antonio de la Florida (zar, 1, E. Sierra), Madrid, Apolo, 26 Oct 1894, vs (Barcelona, 1894); in Fr. as L'ermitage fleuri, Brussels, Monnaie, 3 Jan 1905

Henry Clifford (3, Mountjoy [F.B. Money-Coutts]), in It. as Enrico Clifford, Barcelona, Liceo, 8 May 1895, vs (Barcelona, 1895); also known as Les deux Roses

Pepita Jiménez (lyric comedy, 1, Money-Coutts, after J. Valera), in It. trans., Barcelona, Liceo, 5 Jan 1896; rev. in 2 acts, Ger. trans., Prague, Neues Deutsches, 22 June 1897, fs and vs (Leipzig, 1897); rev., Fr. trans., Brussels, Monnaie, 3 Jan 1905, fs and vs (Leipzig, 1904); new Fr. trans., Paris, OC (Favart), 18 June 1923, vs (Paris, 1923); rev. P. Sorozábal in 3 acts, Sp. trans., Madrid, Zarzuela, 6 June 1964, vs (Madrid, 1963); rev. J. Soler in 2 acts, new Sp. trans., Peralada, Palace Garden, 27 July 1996, fs (1996)

King Arthur [Le roi Arthus] (trilogy, F. Coutts, after T. Malory: *Morte d'Arthur*), also known as La table ronde

Merlin, 1898–1902 (3), Barcelona, Tívoli, 18 Dec 1950, vs (Paris, 1906); in orig. Eng., Madrid, Auditorio Nacional, 20 June 1998 (concert perf.)

Lancelot, 1902–3 (3), inc., Guenevere (4), not comp.

La sérénade, 1899 (lyrical drama, 1), inc.

La real hembra, 1902 (zar, 3, C. de Castro), inc.

La morena, 1905 (lyrical drama, 4, A. Mortier), inc.

Song of Songs (after play by F. Coutts), *c*1906, inc., also known as Le cantigue des cantigues

Numbers for Incognita (F.C. Burnand, after C. Lecocq: *Le coeur et la main*), London, Lyric, 6 Oct 1892, vs for 'Oh! Horror! Horror!' (London, 1892); numbers for Poor Jonathan (after C. Millöcker: *Der arme Jonathan*), London, Prince of Wales, 15 June 1893, unpubd

VOCAL

Songs: 3 romanzas, Catalan, 4 romanzas, Fr. (mentioned by Guerra y Alarcón, all lost); [5] Rimas de [G.A.] Bécquer (1888): Besa el aura, Del salón en el ángulo oscuro, Me ha herido recatándose, Cuando sobre el pecho inclinas, ¿De dónde vengo?; 6 baladas (Marquesa de Bolaños) (1888): Barcarola, La lontananza, Una rosa in dono, Il tuo sguardo, Morirò!!!, T'ho riveduta in sogno; 6 melodías (A. de Musset) (?1889), lost; Chanson de Barberine (Musset), *c*1889 (1947) [?from 6 melodías]; Conseil tenu par les rats (J. de la Fontaine), ?1890s, inc. (Barcelona, 1998)

To Nellie (F.B. Money-Coutts), 6 songs (Paris, 1896): Home, Counsel, May-Day song, To Nellie, A Song of Consolation, A Song; Art thou gone for ever, Elaine (Money-Coutts), 1896 (Barcelona, 1998); Laugh at loving (Money-Coutts), 1896, frag. (Barcelona, 1998); Il en est de l'amour (C. de Beauregard) (Paris, 1897); 2 morceaux de prose de Pierre Loti (Saint-Sebastián, ?1898): Crépuscule, Tristesse; 6 Songs (Money-Coutts), lost except no.2 Will you be mine?, 1897, no.3 Separated, 1897 (both Barcelona, 1998); 2 Songs (F. Coutts) (Paris, 1913): The Caterpillar (La chenille), 1903, The Gifts of the Gods (Les dons de dieux), 1897; Quatre mélodies (F. Coutts) (Paris, 1909): In Sickness and Health (Quand je te vois souffrir), Paradise Regained (Le paradis retrouvé), The Retreat (Le refuge), Amor, summa injuria

Other vocal: El Cristo (orat), early 1880s, lost; Salmo sexto del oficio de difuntos, SATB, 1885 (1994); Lo llascó, poema sinfónico (A. Mestres), S, Mez, T, Bar, chorus, orch, 1896, inc.; Guajira (chant populaire cubain), solo v, orch, 1905, inc.

OTHER WORKS

Orch: Rapsodia española, pf, orch, op.70, arr. 2 pf (1887), pf solo (1922) [orchd by G. Enescu, 1911]; Pf Conc. no.1, a, op.78, arr. 2 pf (*c*1887), also known as Concierto fantástico; Escenas sinfónicas, 1888, unpubd: En la aldea (used as ov. in The Magic Opal), pubd for pf as La fiesta de aldea (1973), Idilio, Serenata, Final: Baile campestre; Suite característica, ?1889: Scherzo, En la Alhambra, Rapsodia cubana [no.3 arr. pf, op.66 (1886) (also used as ballet music in The Magic Opal)]; Pf Conc. no.2, E♭, 1892, inc.; The Alhambra (sym. poem, after F.B. Money-Coutts), 1896–7, inc.: La vega (completed for solo pf), Generalife (completed for solo pf as Prelude of Espagne), other movts not composed; Catalonia, suite populaire, movt 1 (Paris, 1899), movt 2 inc.; Aventura de los molinos (after Cervantes: *Don Quixote*), ?1890s, inc.

Chbr: Pf trio, F, early 1880s, lost; Serenata, vn, pf, *c*1883, lost [?used for 3rd movt of Escenas sinfónicas]; Suite de concierto, 2 vn, va, vc, db, pf, *c*1883, lost [?orig. version of Suite característica, orch]; Berceuse, vc/vn, pf, op.102 (London, 1891); Poèmes d'amour (Légendes bibliques), fl, ob, hn, str, hmn, pf, 1892, unpubd [written to accompany Tableaux vivants by C. Godebski after poems by A. Silvestre]

FRANCES BARULICH

Albéniz, Mateo (Antonio) Pérez de (*b* Spanish Basque region, *c*1755; *d* San Sebastián, 23 June 1831). Spanish composer and theorist. After serving as *maestro de capilla* in San Sebastián, he took up the same post in Logroño collegiate church during the French invasion (1795). Five years later he returned to San Sebastián as *maestro de capilla* at S María la Redonda, where he remained until 1829. He composed a large number of sacred works, which enjoyed great success throughout northern Spain during his lifetime, in particular masses, Vespers, the Office for the Dead, motets and villancicos, many of which survive in manuscript at the churches which he served. He also wrote some piano music (of which a sonata is edited in J. Nin's *Classiques espagnols du piano*, i, 1925) and a 133-page theoretical work, *Instrucción*

metódica, especulativa, y prática, para enseñar á cantar y tañer la música moderna y antigua (San Sebastián, 1802), which relies on Antonio Soler for an explanation of Renaissance notation. But Albéniz was no blind traditionalist harking back to old styles; he extolled both Haydn and Mozart, and was the first in Spain to print extended examples from them for students to imitate. The operetta *Los enredos de un curioso* sometimes attributed to Albéniz is the work of Carnicer, Saldoni, Francesco Piermarini and Albéniz's son Pedro Albéniz y Basanta.

ROBERT STEVENSON

Albéniz y Basanta, Pedro (*b* Logroño, 14 April 1795; *d* Madrid, 12 April 1855). Spanish pianist, composer and teacher. He was the son of Mateo Pérez de Albéniz, a keyboard player and composer, from whom he received his first music lessons. Later he went to Paris for further training; he studied piano with Henri Herz and composition with Friedrich Kalkbrenner, and became a friend of Rossini. Upon his return to Spain he was organist at the church of S María in San Sebastián, and later at a church in Logroño. When Queen María Cristina founded the Madrid Conservatory he was appointed a professor, on 17 June 1830, and in 1834 he became organist of the royal chapel. He gave private instruction to Queen Isabel II, and was the first to introduce modern methods of keyboard technique and pedagogy into Spain. Although his compositions are of little interest, and are generally inferior to his father's sonatas, he wrote a *Método completo para piano* (Madrid, 1840), which was the official textbook of the Madrid Conservatory.

ANTONIO IGLESIAS

Alber [Alberus], **Erasmus** (*b* Bruchenbrücken, nr Friedberg, before 1500; *d* Neubrandenburg, 5 May 1553). German theologian and hymn writer. Related to the noble house of Reiffenstein, he studied in Mainz about 1517, and in Wittenberg from 1518 to 1520 with Luther, who later became a friend. From 1522 to 1527 he was a schoolmaster in Oberursel and from 1528 to 1539 a minister in Sprendlingen, bringing the Reformation to surrounding districts. There, too, he met academics and printers from Hessen, including Eobanus Hessus, Adam Krafft and Christian Egenolff. Thereafter he appears to have travelled frequently: in 1537 he was in Küstrin, later he visited Wittenberg and other cities, and in 1548 he went to Magdeburg. He was forced to leave in 1551 because of his strong Lutheran views. He was appointed senior minister in Neubrandenburg on 19 October 1552, and died there a few weeks after his arrival in March 1553.

Alber left an extensive corpus of writings including several volumes of fables freely adapted from Aesop, printed between 1534 and 1550, and a German dictionary, *Novum dictionarii genus* (Frankfurt, 1540/*R*). In these works he vividly portrayed the traditional music of his country, described instruments, and expressed his opinions on music-making and musical instruction in schools. He was a prolific hymn writer: in 1550 he wanted Egenolff to publish 40 hymns by him, and he must already have made a considerable contribution to the presumed first edition of Egenolff's hymnal of about 1535. The texts of about 30 hymns and other sacred or confessional songs are securely attributable to Alber, and others have been tentatively ascribed to him. Several of his hymns (e.g. *Christe, du bist der helle Tag* and *Wir danken Gott für seine Gab'n*) became well known. He wrote or arranged at least some of the melodies, and for others adapted existing tunes; the four-part setting of *Ihr lieben Christen, freut euch nun* (1546) may be his work, and it is likely that he composed further polyphonic settings of hymns by other writers.

HANS-CHRISTIAN MÜLLER/HANS-OTTO KORTH

Alberch i Ferrament alias Vila, Pere [Alberch i Vila, Pere; Albercio Vila, Petro; Albert Vila, Pere; Villa, Petro] (*b* Vich, 1517; *d* Barcelona, 16 Nov 1582). Catalan composer and organist. He was the most distinguished member of an extended family of organists; he became organist of Barcelona Cathedral in 1536, thanks to an agreement by which his uncle, Pere Vila (1465–1538), established an endowment to restore the cathedral organ and supplement the salary of the organists in return for securing the position for his descendants. Alberch was mentioned in Bermudo's *Declaración de instrumentos* (1555) as being among the best Spanish organists of the time, and whose keyboard music was worth studying. He was made a canon in 1559. In 1580 he employed his young nephew Lluís Ferran i Ferrament alias Vila as an assistant, and was succeeded by him two years later. According to the obituary in the *Llibre de algunes coses asanyalades* (Barcelona, 1583, ed. J. Puiggarí, Barcelona, 1878), Pere Alberch tuned the organ in Barcelona like no other instrument in Spain and invented a 'certain kind of music', known as 'regalias', combining the different voices of the organ; his reputation attracted musicians from France, Italy and the rest of Spain to the city.

He composed two volumes of *odas*, neither of which survives complete. The *Odarum . . . liber primus* (1561) contains 39 settings of Spanish, Italian and Catalan lyrics for three to six voices; the *Liber secundus* (1560) contains ten short sacred works, for four, six and eight voices. A five-voice motet (the cantus having been added by Juan Orich, who is only otherwise known for another motet on the same text in *E-Boc* M.8), a three-voice Lamentation, two *ensaladas* and two keyboard tientos are also by him. A *Magnificat*, ascribed to 'Villa' in the index of *E-TZ* 2 and to 'Vila' on the folios containing the work, now at Barcelona Cathedral, has been attributed to Pere Vila (Gregori, 1986), but is probably by Pere Alberch. A book of tientos formed part of the library of João IV of Portugal; Figueras's doubt about its existence (1971) was mistaken.

EMILIO ROS-FÁBREGAS

Alberdi Recalde, Lope (*b* Gauteriz de Arteaga, Vizcaya, 25 Sept 1869; *d* Barcelona, 19 March 1948). Spanish organ builder. He began his career as an apprentice in the workshops of Aquilino Amezúa in Barcelona in 1885, and was active for more than 50 years. In 1895, on the retirement of Amezúa, Alberdi became director of the firm, and in 1896 the owner. His sons, Antonio and Luis Alberdi Aguirrezábal, assisted him in the workshop, which was the most productive in Spain, building nearly 200 organs (in particular those at the monastery of Montserrat, the Jesuit church in Madrid and the cathedrals of Gerona and Santiago). Alberdi's construction methods were extremely advanced: he incorporated many of the best techniques of the time and invented others. His innovations included mixed mechanical systems and he was especially noted for using systems without sliding valves; later he abandoned the troublesome pneumatic machinery and exploited the possibilities of electricity. He always employed the best of the various methods and systems available. Organs from his workshop were built for use in South America and the Philippines.

JOSÉ LÓPEZ-CALO

Alberga, Eleanor (*b* Kingston, 30 Sept 1949). British composer of Jamaican origin. She played the guitar with the acclaimed Jamaican Folk Singers while still at school. In 1970 she moved to London to study the piano and singing at the RAM, where her teachers included Richard Stoker. Her early musical career involved working as a concert pianist as well as dancing with the African dance company Fontom From. In 1978 she began to work for the London Contemporary Dance Theatre as pianist, composer and musical director. In 1988 she became a freelance pianist and composer, playing with Nanquindo (four players on two pianos) and in the violin and piano duo Double Exposure.

Alberga's music is always strongly structured, with a powerful rhythmic drive. Her earlier works, such as the three-movement orchestral piece *Sun Warrior* (1990) or the dramatic *Hill and Gully Ride* for four players on two pianos (1990), are firmly rooted in a tonal language and make much use of repeated rhythmic patterns. Later works, such as the two string quartets (1993 and 1994), employ a much greater degree of dissonance while retaining a characteristic sense of energy. The chamber work *Nightscape: the Horniman Serenade* incorporates jazz elements, while the large-scale entertainment *Snow-White and the Seven Dwarfs* (for narrators and orchestra) produces a riot of rich and effective colour. (*FullerPG*)

SOPHIE FULLER

Albergati (Capacelli), Pirro (*b* Bologna, 20 Sept 1663; *d* Bologna, 22 June 1735). Italian composer. Born of noble parents, Marcantonio Albergati Capacelli and Vittoria Carpegna, he soon took a lively part in Bolognese musical life, and was a friend (and perhaps pupil) of G.A. Perti and Corelli. The dedication of Albergati's op.5 to Leopold I led Eitner to assume that he was in that emperor's service, but this thesis is unsupported. Although Albergati accepted a post as *maestro di cappella* in Puiano in 1728, his chief musical activity besides composition was that of enlightened dilettante and patron of other composers. G.M. Bononcini and Giuseppe Jacchini both dedicated works to him. The Albergati palace in Bologna, according to the chronicles, was the scene of many festive serenatas, academies and cantatas. Between 1682 and 1731 Albergati was elected 24 times to the governing body of Bologna, the Anziani. From 1701 to 1708 he served six times as gonfalonier of justice. In 1721, at the age of 58, he married a woman of 21, Elisabetta della Porta of Gubbio; she died only six years later.

Although never a member of the important Accademia Filarmonica, Albergati was a prolific composer, publishing 15 sets of instrumental works, sacred music and

cantatas. He also made significant contributions to the Bolognese oratorio, though mostly only the librettos of his works survive, as do those for several theatrical works. Albergati's ties with the Bolognese instrumental school of the late 17th century are evident in the sonatas and dance pieces (especially the sonata for trumpet and strings), though they lack the skill shown by his more famous contemporaries. He was at his best in vocal music: the solo cantatas and oratorios show considerable vocal virtuosity, dramatic vigour and interesting instrumental settings. His fast movements are written in an idiosyncratic manner in which fugal passages are frequently interrupted by rests, producing an abrupt style. In both fast and slow movements he frequently employed the term *spicco* (detached, accentuated) for notes separated by rests in all parts. The mass and psalm settings of op.4 show him firmly rooted in the Bolognese tradition of concerted sacred music established by his contemporaries, G.P. Colonna and Perti. Two of his letters to Perti are extant (in *I-Bc*).

ANNE SCHNOEBELEN

Alberghi, Paolo Tommaso (*b* Faenza, bap. 31 Dec 1716; *d* Faenza, 12 Oct 1785). Italian violinist, composer and teacher. He studied with Tartini, probably between 1730 or 1731 and 1733, by which date his name appears in the list of musicians at Faenza Cathedral, as third (and last) violinist under the direction of his brother, Don Francesco Alberghi, *maestro di cappella*. In 1742 he was referred to in Faenza chronicles as 'Paolo Alberghi, Professore', and both his virtuosity and his compositions – sonatas and violin concertos – were extravagantly praised. In 1753 he became first violinist and, on his brother's death in 1760, *maestro di cappella* as well; he retained both positions until his death. Alberghi supplemented his small salary from the cathedral by playing for civic festivities and for the two academies of Faenza, and by composing and teaching; among his pupils were Bernardo Campagnoli, Antonio Bisoni, Cristoforo Babbi and possibly Giuseppe Sarti (unconfirmed). A portrait of Alberghi in the Biblioteca Comunale of Faenza (which, together with the Archivio Capitolare del Duomo, contains much biographical material in manuscript) indicates that he was blind in one eye.

Alberghi was granted the civic position of *Depositario all'ordinario* in 1747, holding it intermittently until his death. In this post he was responsible for collecting taxes and paying wages, including his own. In his last years he was evidently in ill health and began to delegate an increasing portion of his responsibilities to his students and sons.

Alberghi was essentially a late Baroque composer. The structural designs, harmonic treatment and idiomatic violin writing in his instrumental works, of which only a small portion are extant, are characteristic of mid-18th-century practices and reveal strong links with Tartini's music prior to 1760. Most of the solo sonatas and trios are in three movements, but there are a few two-movement works and some early four-movement trio *sonate da chiesa*. Individual movements are often monothematic. The solo sonatas are more technically demanding than

the trio sonatas and were clearly intended for Alberghi's own performance. The works focus on rhythmic and melodic detail, technical finesse and passionately expressive melodic lines.

Alberghi's concertos also follow Tartini's three-movement model: the opening movements are in ritornello form, the slow movements are instrumental arias, accompanied by two violins and cello only, and concluding movements are often dance-like and *galant* in character and suggest a folksong influence. The violin writing, especially in the concertos, bears out Alberghi's reputation as a virtuoso: he used extensive ornamentation integrated into the melodic structure, with chains of trills, intricate dotted rhythms, long sequences of figuration, often with patterns that require rapid string crossing. Later works call for performance in 7th position and long passages in multiple stops, often with two melodies carried simultaneously. In the concertos the solo passages become increasingly elaborate during the course of each movement, culminating in extremely difficult caprices, and usually ending with improvised cadenzas.

Alberghi's extant sacred music is generally more conservative in style than his instrumental music: the textures are consistently contrapuntal, with overlapping phrases and flowing, rhythmically animated melodies. Careful attention is paid to text declamation. In his later works, the counterpoint becomes more complex, but the style is freer and the melodic lines smoother and increasingly expressive. The melodic style and vocal treatment in the *Gloria* and incomplete *Veni creator spiritus*, both composed after 1765, suggest the aria style of the contemporary *dramma giocoso*.

His son (Angelo) Ignazio Alberghi (bap. Faenza, 17 Dec 1758; *d* ? Bologna, after 1836) was a tenor *di mezzo carattere* and a church composer. He sang in most of the major theatres in north Italy, Rome and Naples, and between 1785 and 1795 divided his time between Italy and Germany, performing in operas in both countries, serving as *maestro di cappella* of Faenza Cathedral, 1787–96, and for 20 years in the service of the Elector of Saxony in Dresden. His only extant work is a cantata, dated 1797, for solo voice and orchestra, celebrating the birth of Prince Frederick August (in *D-Dl*).

GLORIA EIVE

Albericus Archiepiscopus Bituricensis [Alberic of Reims] (*d* 1141). French ecclesiastic. He was a celebrated scholar who headed the cathedral school at Reims from about 1114 to 1136, when he became Archbishop of Bourges. One polyphonic piece in the Codex Calixtinus (*E-SC*), *Ad superni regis decus*, is attributed to him. Since an earlier version of this piece appears (late 11th century) in the 'Saint-Martial' repertory as *Noster cetus psallat letus*, the attribution to Alberic would appear to apply to the new text, rather than to this redaction of the music. The status of attributions in this manuscript is, in any case, uncertain. (*See* SANTIAGO DE COMPOSTELA; see also J. López-Calo: *La musica en la Catedral de Santiago*, v: *la edad media* (La Coruña, 1994), pp.307–17, 342.)

SARAH FULLER

Albero [Alvero] **y Añaños, Sebastián Ramón de** (*b* Roncal, Navarra, 10 June 1722; *d* Madrid, 30 March 1756). Spanish composer and organist. He was a member of the choir of Pamplona Cathedral from 1734 to 1739. In 1748 he was made first organist of the Spanish royal chapel, an appointment that placed him in the orbit of Domenico Scarlatti for a period of at least eight years. It is possible that he was in Madrid before then.

Albero's extant music survives in two undated manuscripts: *Sonatas para clavicordio* (*I-Vnm* It. IV 197b/9768) and *Obras, para clavicordio, o piano forte* (*E-Mc* 4/1727(2)). The first of these was probably taken to Italy by the castrato Farinelli when he left Spain in 1759. The Madrid source is possibly the earliest Spanish manuscript to indicate the pianoforte in its title. It is apparent that Scarlatti and his sonatas influenced Albero's style, and that José Elías, principal organist at the convent of the Descalzas Reales and Albero's teacher by 1749, also had a profound influence on the younger composer's contrapuntal music. The Venice manuscript contains 30 sonatas, mostly in *galant* style. The Madrid source, copied between 1746 and 1756 and dedicated to King Fernando VI, has

18 pieces arranged in six groups, each consisting of a *recercata*, a fugue and a sonata. The *recercatas* are in a free, improvisatory style without bar-lines, recalling the *préludes non mésurés* of 17th-century French clavecinistes. The fugues are quite fetching, but suffer from the Spanish trait of excessive sequences. Many of the sonatas smack of Scarlatti, with folk influences, hand-crossing and acciaccaturas.

The contents of the Madrid manuscript have been published in *Nueva biblioteca española de música de teclado de los siglos XVI al XVIII* (vols. i, ii, iv–vi, ed. A. Baciero, Madrid, 1977–80); the Venice sonatas have been edited by G. Gálvez (Madrid, 1978).

LINTON POWELL

Albersheim, Gerhard (Ludwig) (*b* Cologne, 17 Nov 1902; *d* Basle, 19 Oct 1996). American musicologist and pianist of German origin. After schooling in Cologne he was awarded a music teacher's diploma by the Austrian State Commission in 1930. He studied musicology at the University of Vienna (1933–8), and took the doctorate in 1938 with a dissertation on acoustical psychology. He also studied privately with Schenker. In 1940 he emigrated to the USA, later becoming an American citizen, and was active as a conductor, teacher, accompanist and répétiteur. He held teaching posts at the Los Angeles Conservatory of Music and Art (1947–53) and the University of California at Los Angeles (1953–6) before his appointment in 1956 as professor of music at the California State University at Los Angeles, where he taught until his retirement in 1970 as professor emeritus. He frequently served as accompanist to distinguished singers such as Elisabeth Schumann, Pinza and Fischer-Dieskau, and assisted Lotte Lehmann in her art-song courses. Albersheim was one of the first to write on the importance of the theories of Heinrich Schenker, whose influence is occasionally reflected in his writings. He wrote mainly on acoustics and the psychology of hearing, as well as its relationship to musical aesthetics.

SAUL NOVACK

Albert (i), Prince Consort [Francis Charles Augustus Albert Emmanuel; Franz Karl August Albert Emanuel, Prince of Saxe-Coburg-Gotha] (*b* Rosenau, Coburg, 26 Aug 1819; *d* London, 14 Dec 1861). German musician, consort of Queen Victoria. Music formed a regular part of his early education and appears prominently in the rigorous programme of study which he drew up for himself at the age of 13. He became proficient in singing, played the piano and organ (Mendelssohn admired his organ playing) and began to compose before he was 18. In 1839 he sang the bass solo in a performance of Beethoven's *Der Preis der Tonkunst* at Dresden. After he married Queen Victoria in 1840 he made his mark on the court's musical life by expanding the private band into a fair-sized orchestra capable of taking part in the first English performances of Schubert's Symphony no.9, Bach's *St Matthew Passion* and Mendelssohn's *Athalie* and *Oedipus at Colonos*, given either at Windsor Castle or Buckingham Palace under the prince's organization. His enthusiasm for contemporary music was counterbalanced by an interest in earlier music and instruments. During his year as director of the Concert of Ancient Music he organized a programme in 1845 of Renaissance music, some of it sent from Brussels by Fétis for the occasion.

As a composer the prince showed a distinct talent in smaller forms; his melodic gifts were not matched by harmonic variety or adventurousness. In general, the music bears the stamp of the German Romantic school; in the later works the clearest influence is Mendelssohn. The prince left some 40 completed songs set to German words, with others in draft apparently dating from the late 1830s. Two songs have cello obbligato, and the *Lied des venezianischen Gondoliers* has a charming accompaniment for flute, basset-horn and bassoon. For his wedding Albert wrote a rapturous though over-long duet, *Die Liebe hat uns nun vereint*. Only one instrumental piece survives, a melody for violin and pianoforte. The church music, dating partly from the 1840s, is in vocal score only; his *Te Deum* in C was scored for choir, solo voices and orchestra by Ernst Lampert in 1845. The cantata *Invocazione all'armonia* is perhaps his best large-scale work. Albert's songs survive in manuscript (*GB-Lbl*) and in print. Various anthologies of his songs, mostly in bilingual versions, appeared in the latter half of the 19th century. An edition of his compositions, by W.G. Cusins and including 30 songs, church music and other pieces, was published in London (?1882/*R*).

Albert was not the only composing member of the house of Gotha and Coburg. His great-grandmother Duchess Maria Charlotte Amalie (1751–1822) is credited with many compositions including *12 Lieder einer Liebhaberin* (1786) and a symphony. Her musical effects were sold at auction in New York in 1857; only an inconsequential *Anglaise* survives. His grandfather Emil Leopold August (1772–1822) published a set of

songs from *Des Knaben Wunderhorn* (1807). The compositions of his elder brother Prince Ernst (1818–93) include songs and two operas, and his youngest daughter, Princess Beatrice (1857–1944), a talented songwriter, set poems by Disraeli.

Albert (ii). Australian firm of publishers. It was started about 1890 in Sydney when Jacques Albert (*b* Fribourg, 1850; *d* at sea, 1914) began importing violins. In 1894 he was joined by his son Michel François [Frank] (1874–1962), who became sole proprietor in 1896. He continued to trade as J. Albert & Son and in the early 1900s negotiated Australian publishing rights with overseas music houses for both the American Annuals and Sixpenny Pops series. The firm extended its merchandise to orchestral and brass band instruments but sold this stock in 1932 to Allan's in Melbourne. Shortly afterwards, J. Albert & Son Pty Ltd was formed to control the music publishing interests of the family. About 1970 the firm began the Albert Edition catalogue of predominantly Australian classical compositions, which now exceeds 500 titles and includes works by Ross Edwards, Margaret Sutherland, Wesley-Smith and Butterley. Alexis François Albert (1904–96) succeeded his father, Michel, as head of the firm, with his son Edward (*d* 1990) as Managing Director. Publishing interests, particularly in local contemporary music, were expanded and a record label, Albert Productions, was established. Following the death of Alexis in 1996, the company is now administered by his remaining sons, Robert and Anthony Albert. (*AusDB*, vii)

KENNETH R. SNELL/R

Albert, Charles Louis Napoléon d' (*b* Menstetten, nr Altona, Hamburg, 25 Feb 1809; *d* London, 26 May 1886). French dancing-master and composer, father of Eugen d'Albert. He was the son of a captain of cavalry in the French army, on whose death in 1816 d'Albert and his mother emigrated to England. D'Albert received piano tuition in London from Kalkbrenner and composition lessons from S.S. Wesley. After a period with the ballet in Paris (with Saint-Georges he wrote the libretto for Adam's ballet-pantomime *La jolie fille de Gand*, 1842) he became ballet-master at the King's Theatre, London, and Covent Garden, but gave up the stage in order to compose and teach. Eventually he settled at Newcastle upon Tyne and married there in 1863. His dance music was very popular, particular favourites being the *Bridal Polka*, *Sweetheart's Waltz*, *Sultan's Polka* and *Edinburgh Quadrille*. He also published *Ballroom Etiquette* (Newcastle upon Tyne, 1835).

A.J. HIPKINS/DAVID CHARLTON

Albert, Eugen [Eugène] **(Francis Charles) d'** (*b* Glasgow, 10 April 1864; *d* Riga, 3 March 1932). German composer and pianist. D'Albert's ancestry was as colourful as his life. Although it is natural to note the presence of the composers Giuseppe Matteo Alberti (1685–1751) and Domenico Alberti (*c*1710–40) among his ancestors, an equally interesting predecessor was his grandfather François (Franz) Bénédicte d'Albert, an adjutant of Napoleon I, who followed Marshall Davout to Hamburg and settled there out of sympathy for the German way of life. Although Franz's son Charles Louis Napoléon d'Albert earned his greatest fame as a local Johann Strauss in Britain, his son Eugen acquired an early enthusiasm for German culture and music. Hearing *Tristan und Isolde* had a greater influence on him than the education he received from his father or from Arthur Sullivan, Ernst Pauer and Ebenezer Prout at the National Training School for Music in London. In 1881, after attracting the praise of Anton Rubinstein and Clara Schumann, the young d'Albert was persuaded by Hans Richter to travel to Vienna, where he met Liszt. A year later he went to Weimar to study with the keyboard virtuoso. It was in Weimar that he met the first of his six wives, the most famous of whom was the pianist Teresa Carreño and the most long-lasting the singer Hermine Finck. D'Albert found it difficult to settle in Germany, however, and was increasingly drawn to Italy. This caused him some embarrassment on Italy's entry into World War I, which threatened to separate him from his central European public; eventually he settled in Switzerland.

D'Albert's career as a piano virtuoso reached its height in the last two decades of the 19th century. Liszt considered him to be one of his most important pupils. His repertory extended beyond that of the conventional 19th-century virtuoso, however. Attracted as much to Beethoven's music as to Liszt's, d'Albert acquired a reputation for his performance of absolute music. Although he played some part in introducing the music of Debussy to German audiences, d'Albert was fundamentally an interpreter of German repertory from Bach to composers of his own day. He was the recipient of a number of dedications, the most significant of which was Richard Strauss's *Burleske*. The style of his own keyboard works shows models as varied as Baroque pastiche (Suite, op.1) and Brahms (*Acht Klavierstücke*, op.5). Indeed his creative development led him into close contact with Brahms, whose piano concertos he performed with the composer conducting. As a result, d'Albert's own piano concertos, which represent the best of his non-operatic music, reflect stylistic influences from Schumann and Brahms in formal contexts more reminiscent of Liszt. His transcriptions and editions of Bach were often ranked as equal in importance to Busoni's by such contemporaries as Oscar Bie. Busoni himself regarded d'Albert as one of the most significant pianists of his time but like many others felt that he faltered in the new century as his career as an opera composer took over. (This estimate of his operatic works can be gauged from Busoni's reference to him as 'd'Alberich'.)

Although d'Albert was initially drawn to the theatre through Wagner, whose influence is clearly detectable in such early works as *Ghismonda* and *Gernot*, his choice of subjects and styles was diverse enough to justify Pfitzner's description of him as an eclectic. As early as his first opera, *Der Rubin* (1893), d'Albert showed an interest

in the exotic and magical, placing him more in the context of composers such as Peter Cornelius and Karl Goldmark than Wagner. This classification is exemplified by his taste for comic opera, in particular the one-act *Die Abreise* (1898), in which he anticipates the domestic comedy of Strauss's *Intermezzo*. After 1900, exotic settings (*Scirocco*) and an often unconvincing mystical element (*Die toten Augen* and *Der Golem*) tend to predominate in d'Albert's works, though historical and comic themes persist as well (most obviously when combined, such as in *Flauto solo*, with its plot from the court of Frederick the Great). Like Cornelius, Goldmark and Wolf, d'Albert retained elements of Wagnerian through-composition (most convincingly in *Kain*) but found that his melodic style adapted well to self-contained numbers which reflect 19th-century Italian practice.

D'Albert's masterpiece, *Tiefland* (*c*1903), is formally quite conservative, containing solo and duet numbers that seem modelled as much on late Verdi as on Puccini, Mascagni and Leoncavallo. In its original three-act version, *Tiefland* keeps closely to the spirit of Angel Guimerá's play, but the opera's relative lack of success caused d'Albert to cut several scenes. The ending of the opera replaced *verismo* with a species of Wagnerian transfiguration that is suggestive of d'Albert's musical beginnings. The highlands into which hero and heroine retreat take on the colour of a pure refuge that is at once mystic symbol and exotic alternative to the suffocating lowlands in which the drama of love and murder is played out. The influence of Wagner is also observed in the dramatic use of musical motives, but even more in the chromatic harmonies which illustrate the heroine's sufferings and the oppressive atmosphere of corruption. No less central to the success of the work, however, is the operetta-like facility with which d'Albert handles the elements of local colour. Such facility is the best argument against the view that he was primarily a pianist and only secondly a composer. If his music lacks the originality of such contemporaries as Strauss and Puccini, it possesses an undoubted theatrical effectiveness as well as some memorable themes.

JOHN WILLIAMSON

Albert, Eugène (*b* Brussels, 26 April 1816; *d* Brussels, 11 May 1890). Belgian woodwind instrument maker. He is known chiefly for his clarinets. His three sons Jean-Baptiste (-Gustav) (1845–99), Jacques (-Emile) (1849–1918) and Joseph-Eugène (known as E.J. Albert; 1860–1931) were also woodwind instrument makers specializing in clarinets. Eugène Albert is recorded as a maker from 1839. He was so successful that the model of clarinet that he made is widely known (especially in the USA) as the 'Albert System' although it was basically Iwan Müller's 13-key clarinet augmented by the two rings (*brille*) added to the lower joint by Adolphe Sax. Albert's instruments were exceptionally well made and finely tuned. They were particularly popular in England, where his agents were Louis Jullien and then Samuel Arthur Chappell; the leading English clarinettist Henry Lazarus owned eight of his instruments. When Boosey and Co. began to make clarinets in about 1880 Albert visited London to assist them.

Virtually all the clarinets made by Eugène Albert were built to the high pitch (*a′* = *c*452), so that few were in use other than by amateurs after World War I. On the other hand E.J. Albert, whose independence as a maker dates from 1895, made proportionately far more instruments at *a′* = 440, so that his reputation survived long after his death, and some of his instruments remained in use to the end of the 20th century. E.J. Albert made a wider variety of clarinets (both Boehm-system and simpler models) than his father.

NICHOLAS SHACKLETON

Albert, Heinrich (*b* Lobenstein, 8 July 1604; *d* Königsberg [now Kaliningrad], 6 Oct 1651). German composer and poet. His formal musical training began in 1622, when he

moved to Dresden and worked for his cousin Schütz. While a law student in Leipzig from 1623 to 1626 he began to compose arias, some of which he later included in his published collections; he was influenced by Schein, then Kantor at the Thomaskirche. He moved to Königsberg in 1626. In 1627 he set out for Warsaw with some Dutch diplomats and was taken prisoner by the Swedes for a year. He was not an altogether innocent bystander in the Thirty Years War, for when he returned in 1628 he was involved with the science of fortification. From December 1630 he seems to have given up his earlier profession, to become a full-time musician in Königsberg for the rest of his life. He became organist at the cathedral and studied with Johann Stobaeus. In 1634 he renewed contact with Schütz in Copenhagen and remained in touch with him.

Albert's main achievement lies in his eight volumes of *Arien*. The 170 songs, sacred and secular, reflect the political and artistic life of Königsberg: they were written for various occasions, such as weddings, funerals, anniversaries and the visits of important persons, as well as for the private enjoyment of friends. The dedications accompanying each song, with specific details of its purpose and a precise date, provide a valuable record of life in Königsberg. The songs show the influence of Schein's *Musica boscareccia*; a few for solo voice and basso continuo are arrangements of arias for two or more voices that were originally published separately. Nearly all are short, strophic and syllabic. A few are more elaborate, with ritornellos and melismas for word-painting, and there is some contrapuntal interest among the songs for several voices. The longest work (ii, no.20) was written in honour of Opitz's visit to Königsberg in 1638: numerous recitative verses alternate with instrumental passages, and it ends with a chorus. The poems, 18 of which are by Albert himself, are fine examples of the work of the Königsberg school; the poet he most frequently set was SIMON DACH, like him a leading figure in the Kürbs-Hütte literary group; other poets whose work he set include Andreas Adersbach, Johann Peter Titz, Robert Roberthin and Christoph Kaldenbach. Albert also set three poems by Opitz, whose reforms were their guiding principles. He based 25 songs on foreign tunes that he admired, mostly from France, Italy and Poland. His songs were extremely popular, and at least 25 of his tunes became chorales.

Mattheson was probably the first to point to the prefaces of the first two volumes as important for the study of basso continuo practice in the early Baroque period. Albert stated that continuo playing should not be 'like hacking cabbage'. He gave nine rules to guide the beginner in the proper realization of a figured bass, which in general should be light in texture – triads without much doubling; at imitative entries triads should not be brought in until all the voices have entered. The prefaces are also important for other suggestions about performance: it is pleasant, he said, if a violin is added for ornamentation, and when the voice part is recitative the words should be sung slowly and clearly without regular accents. In the *Musicalische Kürbs-Hütte*, he again provided useful material about performance. He presented the songs in score as an aid to the choir director and particularly to the organist, who could learn more easily how to realize a figured bass from this method. He also allowed for ornamentation of the parts as printed.

WORKS

Arien, 8 vols., all pubd in Königsberg: i (1638), ii (1640), iii (1640), iv (1641), v (1642), vi (1645), vii (1648), viii (1650); several songs were pubd separately and repr. in later anthologies; ed. in DDT, xii–xiii (1903–4/*R*)

Musicalische Kürbs-Hütte, 3vv, bc (Königsberg, 1645)

Further songs in Seladons weltliche Lieder (Frankfurt, 1651), 1651[4], 1653[6], 1656[6] and the Clodius Liederbuch (*D-Bsb* Ger.Oct.231)

4 motets: Gott, sei uns gnädig, 1632; Wohl dem, den du erwählt, 1646; Herr, wer wird wohnen, 1647; So wird dein Licht in Finsternis ausgehen; Te Deum, 1647: *RU-KA*

*c*50 other works, some lost, including 2 dramatic allegories for which only the texts (S. Dach) survive (Cleomedes, 1635; Prussiarchus, oder Sorbuisa, 1645), *D-Bsb*, *Kl*, *RU-KA*

JOHN H. BARON

Albert, Karel (*b* Antwerp, 16 April 1901; *d* Liedekerke, 23 May 1987). Belgian composer. He studied with Marinus de Jong at the Antwerp Conservatory. He was musical adviser and conductor of Het Vlaams Volkstoneel (a travelling Flemish theatre company) from 1924 to 1933, and assistant director with the NIR (Belgian National Broadcasting Service – Flemish Section) in Brussels until 1961. Later his activities were limited to music reviews (*Het toneel*) and composition. He became known for his modern stage music for Vlaams Volkstoneel and Théâtre du Marais. At first his musical style ranked him with the Expressionist school, but during World War II he turned to a more traditional, simple and comprehensible style, which slowly evolved from Expressionism into neo-classicism. Later on he experimented with atonal and serial music.

WORKS

CORNEEL MERTENS/DIANA VON VOLBORTH-DANYS

Albert, Stephen (Joel) (*b* New York City, 6 Feb 1941; *d* Truro, MA, 27 Dec 1992). American composer. His musical training began as a youngster with piano, french horn and trumpet lessons. At the age of 15 he began composition studies with Siegmeister. He later studied with Darius Milhaud, Bernard Rogers, Karl-Birger Blomdahl, Joseph Castaldo and George Rochberg. He completed the BM degree at the Philadelphia Musical Academy in 1962. An appointment at the Juilliard School numbered among his several teaching positions. His many commissions included works for the Chicago SO, National SO, Philadelphia Orchestra, New York PO, Chamber Music Society of Lincoln Center, Library of Congress, and the Fromm and Ford foundations. From 1985 to 1988 he served as composer-in-residence of the Seattle SO. He was awarded the 1985 Pulitzer Prize for his symphony *RiverRun* and received a posthumous Grammy Award for his Cello Concerto.

In the mid-1960s, influenced by the music of Mahler and Brahms, Albert turned from serialism to modified 19th-century compositional techniques. He sought to discover new connections with the music of the past and to capture the gestures of Romanticism within a 20th-century idiom inspired by Bartók, early Stravinsky and Sibelius. His powerfully dramatic and colourful music characteristically integrates melodic and harmonic structures through the exploitation of selected scale patterns and intervallic relationships. Together these interwoven patterns create a unified, freely flowing musical environment with a strong sense of direction and inevitability. Another favourite technique, the juxtaposition and gradual unification of fragmentary musical ideas, is first evident in early works such as *Cathedral Music* (1971–2) and *Voices Within* (1975).

The works of James Joyce provided the stimulus for four of Albert's mature compositions. Albert's first major work, *To Wake the Dead* (1977–8) is a large-scale song cycle inspired by *Finnegans Wake*. Employing both straightforward and surrealistic styles, the music complements, counterbalances and occasionally elucidates Joyce's fragmented and dissociated texts. The author's Irish sentiment and bawdy zest for living are captured in fragmented marches, children's songs, music-box tunes and raucous pub songs. Allusions in *Finnegans Wake* to the legend of Tristan and Isolde prompted Albert to write *TreeStone* (1983–4), a song cycle incorporating themes of humanity's fall from innocence and the cyclic nature of history, as well as archetypes from Jungian psychology. Albert won the Pulitzer Prize with his symphony *RiverRun* (1983–4), an instrumental adaptation of *TreeStone*, which deals abstractly with Joyce's recollections of the Liffey River, from its origin as driving morning rain to its final surge to sea at dusk. *Flower of the Mountain* (1985), inspired by *Ulysses*, is the most lushly romantic of Albert's works. In the work, Molly Bloom poignantly recalls her husband's marriage proposal of 16 years earlier; *Sun's Heat* (1989), a companion piece, reveals Leopold Bloom's version of the betrothal. *Distant Hills* (1989) is a pairing of these two monologues. Also intrigued by Greek myths, the hard-edged soundworlds Albert creates in the two *Bacchae* works (1967 and 1968) and *Into Eclipse* (1986) reflect the emotional atmosphere of their terror-filled texts.

During the last five years of his life, Albert composed much instrumental music, including concertos for the violin, cello and clarinet. The epic Cello Concerto (1990), written for Yo-Yo Ma, reveals Albert at the height of his creative powers. Its sophisticated, abstract instrumental style is imbued with the melodic breadth of his vocal works. Traditional structural forms are used in novel ways that become integral to the motivic development. At the time of his death, Albert had just finished a detailed short score for his Symphony no.2, commissioned by the New York PO for its 150th anniversary.

MARY LOU HUMPHREY

Albertarelli, Francesco (*fl* 1782–99). Italian bass. He spent the early part of his career mainly in Rome. For the 1788–9 season he was a member of the *opera buffa* company in Vienna. He made his début on 4 April 1788 as Biscroma in Salieri's *Axur, re d'Ormus*, sang the title role in the first Vienna performance of Mozart's *Don Giovanni* on 7 May 1788, and created the role of the Marchese in Weigl's *Il pazzo per forza*. Mozart contributed an aria for him (K541) in his role of Don Pompeo for the 1788 version of Anfossi's *Le gelosie fortunate*. Albertarelli's final role in Vienna was Brunetto in Da Ponte's pasticcio *L'ape*

musicale in March 1789. Later that year he appeared in Milan and Monza. The remainder of his career was centred in Italy, but he also sang in London (1791), Madrid (1792) and St Petersburg (1799). According to Benedetto Frizzi, Albertarelli was well suited in appearance to a *buffo caricato*. His acting was polished and expressive and his singing and recitative were stylish. He made up for a lack of formal musical training through hard work and good judgment.

DOROTHEA LINK

Albertet de Sestaro [Sestairo, Sestarron, Terascon; Albert de Sestaro, Terascon] (*fl* *c*1194–1221). Troubadour. According to his *vida*, he was born in the neighbourhood of Gap (Hautes-Alpes), the son of a jongleur called Asar. He was renowned as a singer, and for the originality of his melodies but not for his texts. He remained for many years in Orange but worked also in Italy from 1210 to 1221. He finally returned to Sistaron where he died. Of the 23 songs ascribed to him only two have complete melodies and a further one (*En mon cor*) is partly notated. One of the unnotated songs, the descort *Bel m'es oimais* (PC 16.7a) may have been the model for Colin Muset's strophic lai *Bel m'est li tans* (R.284) but this is also without melody in its single source. Too few complete songs have survived to verify the extent of Albertet's melodic originality. *Mos coratges* is conventional in form but, as recorded in the Ambrosiana manuscript, extremely ornate in style. The surviving portion of *En mon cor* gives the impression of a through-composed form with some *AAB* features. *A! mi no fai chantar* is, however, more complex. Subtle variation conceals an underlying structure of $ABaA^1C^1\ A^2BaDEF$. Though simple in style it is unusual in its combination of intervals and range of phrases.

IAN R. PARKER

Alberti, Antonio degli (*b* Florence, *c*1358; *d* Bologna, 1415). Italian poet. The son of the wealthy merchant Nicolaio (*d* 1377), he inherited his father's business and properties, including the famous country villa 'Il Paradiso'. He took an active part in the Florentine government. In 1401, however, he and his brothers were charged with taking part in a conspiracy against the rival Albizzi family and were banished from Florence. His brothers went to Paris, whereas Antonio spent the rest of his life in Bologna, teaching algebra at the Studio. Another member of the exiled branch of the family in France and Antonio's nephew, the poet Francesco d'Altobianco, is now thought to have brought on his way back to Florence (in about 1426–7) the exemplar for the manuscript now the Chantilly Codex (*F-CH* 564), which belonged to him in 1461.

Giovanni da Prato, writing in about 1425–6 his fictional narrative known as *Il Paradiso degli Alberti*, celebrated Antonio's Arcadian villa and his renowned guests, among which he mentioned intellectuals, poets and musicians such as Francesco Landini. Antonio himself held a poetical correspondence with poets such as Franco Sacchetti and Giovanni Bonafede, the latter putting together in his autograph (*I-Sc* I.IX.18, dated 1410) his own rime and those of Alberti. As a result, the attribution of a madrigal and two ballatas is contended between the two, whereas the madrigal *I'fu' gia' bianc'uccel con piuma d'oro*, of which a two-part setting by Donato da Cascia survives, is ascribed to Alberti in a less trustworthy source (*I-Fl* Ash.569).

The Alberti family was recalled and praised also by the famous architect and writer Leon Battista Alberti (1404–72) in his *Libri della famiglia*. He also wrote (in his *Vita*) of Antonio being a skilled singer and organist, although this is not reflected in his impressive and heterogeneous oeuvre (see R. Fubini and A. Nenci Gallorini, *Rinascimento*, 2nd ser., xii, 1972, pp.21–78).

GIANLUCA D'AGOSTINO

Alberti, Domenico (*b* Venice, *c*1710; *d* Rome, 14 Oct 1746). Italian composer, harpsichordist and singer. Alberti's claim to historical recognition rests traditionally on his harpsichord sonatas, in which the arpeggiated bass that lent his name a posthumous notoriety is a prominent feature (*see* ALBERTI BASS). In his lifetime, however, Alberti was equally famous as a singer and as a performer (sometimes as self-accompanist) on the harpsichord. His amateur status was perhaps unfairly seized upon by his detractors, for his reported early training in singing and counterpoint under A. Biffi and A. Lotti does not suggest an inadequate grounding; it may, however, account for the restricted quantity and scope of his output. Of his non-musical career little is recorded except that he served the Venetian ambassador, Pietro Andrea Cappello, as a page on a visit to Spain about 1736, provoking Farinelli's admiration of his singing, and subsequently joined the household of Marquis Giovanni Carlo Molinari in Rome. His harpsichord sonatas are generally believed to date from these last years. He is buried in S Marco, Rome.

Alberti's sonatas survive in manuscripts as complete works and isolated movements and it is not yet possible to state accurately how many survive, although the number probably exceeds 40. Eight sonatas, constituting the so-called op.1, were published by Walsh in 1748 in

response to an act of flagrant plagiarism by Alberti's former pupil, the castrato Giuseppe Jozzi (*c*1710–*c*1770), which became a *cause célèbre*. (Jozzi continued the deception after his removal to Amsterdam.) All Alberti's sonatas follow the two-movement scheme popular with contemporary Italian keyboard composers. The two movements are contrasted in character rather than tempo; although both are cast in binary form, that of the first often prefigures sonata form, whereas the second retains the modest proportions and uncomplicated design of a dance movement. Alberti's *galant* idiom, much admired as a novelty in its day, proves an adequate vehicle for musical thought that is sometimes facile and short-winded, though not lacking in taste and workmanship.

Alberti's vocal works, which have so far received little attention, include two serenatas written for amateur performance in Venice, a *Salve regina* and numerous arias (some of which are settings of texts from Metastasio's *Temistocle* and *L'Olimpiade*) that may have originated as concert arias, contributions to pasticcios or *arie di baule* for individual singers.

MICHAEL TALBOT

Alberti, Gasparo [Albertis, Gaspare de; Albertus, Gaspare; Gaspare bergomensis; Gaspar de Padua] (*b* Padua, *c*1489; *d* Bergamo, *c*1560). Italian composer. His entire career was spent at S Maria Maggiore, Bergamo, where he appeared as cleric in 1503, was ordained in 1514, became chaplain in 1515, and was listed as singer in 1517 and *maestro di cappella* by 1536. As the basilica's principal composer, he copied nine or ten choirbooks, beginning in 1524. When the famous music theorist Pietro Aaron was admitted to the monastery of S Leonardo, Bergamo, in 1536, he was received by Alberti, who with 22 singers performed Vespers *a cori spezzati*. When forced into retirement in 1550, Alberti retained the manuscript choirbooks he had copied until he was reappointed in 1552 for another two years. In 1559 he made a living donation of all of his goods to S Maria Maggiore in return for a pension. Three composite choirbooks mostly copied by him are now in the Biblioteca Civica and are the only manuscript sources of Alberti's creative production. Three of his masses were published in partbooks in Venice in 1549. A short motet is reproduced in Giuseppe Belli's portrait of the composer (see illustration).

All of Alberti's surviving compositions are liturgical vocal polyphony. His musical style ranges from the northern-style polyphony of the masses to the Italian *falsobordone* of the Passions, Lamentations and litany. Motet styles include imitative and non-imitative polyphony, canon and cantus planus. Alberti was one of the first composers of music for *cori spezzati*. His polychoral works show a wide variety of textural and formal procedures including *falsobordone*, imitative polyphony and *cori spezzati* technique; two late *Magnificat* settings substitute motivic echoing for the classic *cori spezzati* block sonorities. Alberti's Passions further extend polychoral practice by setting the turba and *vox Christi* roles for separate polyphonic groups.

Only the *Missa de Sancto Roccho* (1524) and two *Magnificat* settings (1541, 1542) are dated in the manuscripts, and the 1549 print contains works probably composed some time earlier. Both manuscript and documentary evidence suggests that the manuscript masses, some motets, a *Magnificat*, and other Vespers music were completed soon after 1524. More motets, Holy Week music (including the first two Passions), psalms for *cori spezzati*, and other office music appeared by 1530. The 1530s brought more Holy Week music and possibly the *Missa 'Queramus cum pastoribus'*. The 1540s saw the second St John Passion, more Holy Week music, office

Gasparo Alberti: portrait by Giuseppe Belli, 1547 (Accademia Carrara di Belle Arti, Bergamo)

music including two *Magnificat* settings for *cori spezzati*, and probably the last two printed masses.

In spite of Alberti's eager embrace of innovation, he appears to have been the product of influences, rather than a disseminator of them: one important exception is his 1549 book of masses, the first such print entirely devoted to the works of a single Italian composer. The distribution of surviving copies (Castell'Arquato, Montserrat, Munich) suggests widespread interest. Alberti's elegant humanistic declamation, imaginative use of cantus firmus and polyphony, and innovative polychoral techniques all testify to his important place in Italian religious music in the period before Palestrina.

WORKS

Editions: *Italia sacra musica*, ed. K. Jeppesen (Copenhagen, 1962) [J]
Opera omnia Gasparis de Albertis, ed. D. Crawford and G. Towne, CMM, cv (Neuhausen-Stuttgart, forthcoming)

MASSES

Missa de Beata Virgine, 7vv; Missa de Sancto Roccho, 6vv; Il primo libro delle messe (Venice, 1549): Missa 'Queramus cum pastoribus', 5vv, J iii; Missa 'Italia mia', 6vv, J i; Missa 'Dormend'un giorno', 6vv, J ii

OTHER LITURGICAL MUSIC

Passion according to St Matthew, 2–4vv, 4vv with 5vv motet, J iii; Passion according to St John, 3–4vv, 4vv; Passion according to St John, 2–6vv, 2–6vv with 4vv motet
3 Lamentations cycles for entire Easter Triduum, 4–5vv; 2 Lamentations cycles for Maundy Thursday, 4vv, 1 in J iii; 1 fragmentary Lamentations cycle for Good Friday, 4vv
2 cycles of 5 Vespers psalms, 4vv, 4–6vv; 2 cycles of 4 Compline psalms, 2–4vv; 5 settings of Psalm l, Miserere, 4vv; 3 other psalm settings, 2–4vv; 2 psalm settings for 2 choirs, inc. (7 of the psalms are unattrib. but probably by Alberti)
7 Magnificat, 4–8vv; 7 other canticles, 4–8vv; 1 Hymn, Ave maris stella, 2–5vv
1 Litany, 4vv

MOTETS

for four voices unless otherwise stated

Ad te levavi; Christus Jesus splendor patris, J i; Domine exaudi orationem (doubtful); Gaudete in Domino; Legem divinam meditans, 6vv; Nativitas tua Dei genetrix (canon); Ne reminiscaris; O beate confessor Roche (doubtful); O admirabile comertium, J i; Oremus fratres carissimi, J i; Populus Syon; Puer natus; Sepulto Domino; Tribulationes civitatum; Vivat nomen tuum (from portrait by Giuseppe Belli)

VICTOR RAVIZZA/GARY TOWNE

Alberti, Giuseppe Matteo (*b* Bologna, 20 Sept 1685; *d* Bologna, 18 Feb 1751). Italian composer and violinist. He studied the violin with Carlo Manzolini, and counterpoint with P.M. Minelli and Floriano Arresti. He became a member of the Accademia Filarmonica, Bologna, in 1705, and from 1709 played the violin in the orchestra of S Petronio. His first set of concertos, published in 1713, were first performed under the composer's direction at the house of Count Orazio Bargellini. In 1721 Alberti was chosen president (*principe*) of the Accademia Filarmonica, a post to which he was re-elected in 1724, 1728, 1733, 1740 and 1746. A set of violin sonatas, op.2 (1721), was followed by a further set of concertos, collectively entitled 'Sinfonie', and issued by Le Cène in 1725 – presumably without the composer's authorization as they are incorrectly designated op.2. (This possibly inadvertent duplication of an opus number led to the renumbering of the violin sonatas as op.3 when published by Walsh shortly afterwards.) From 1726 until his death Alberti was *maestro di cappella* of S Giovanni in Monte, Bologna, and from 1734 he deputized for G.A. Perti as *maestro di cappella* of S Domenico.

The success enjoyed by Alberti's concertos, particularly in England, doubtless owed much to their clarity of expression, tautness of construction and moderate technical requirements. They were among the first concertos by an Italian composer to show Vivaldi's direct influence, which is seen most clearly in op.1 in the five examples with an obbligato principal violin part. The distinction between ritornello and episode in their outer movements is a notable feature. Similar general qualities characterize the violin sonatas, which remain, however, firmly in the post-Corellian mould.

MICHAEL TALBOT/ENRICO CARERI

Alberti, Innocentio (*b* Treviso, *c*1535; *d* Ferrara, 15 June 1615). Italian instrumentalist and composer. He came from a family of North Italian musicians that had lived in Treviso since the mid-15th century. His father was the town trumpeter; his uncle and brother were musicians in the courts of Ferrara and Munich respectively. He was one of the three young men brought to the newly founded Accademia degli Elevati in Padua in 1557 as music tutors under Francesco Portinaro. His first published madrigals appeared, together with madrigals by Rore, Portinaro and other members of the group around Rore, in Rore's fourth book of madrigals for five voices (RISM 1557[23]). In 1560 the Accademia degli Elevati was dissolved and Alberti went to work for the Este court at Ferrara. He remained on the salary rolls there, listed among the instrumentalists as 'Innocentio del Cornetto', until the dissolution of the court early in 1598. In 1568 he prepared a manuscript collection of madrigals for Henry, Earl of Arundel. In an autograph letter of 1607 (in *I-MOs*)

Alberti appealed for financial relief to the Duke of Modena; an accompanying letter states that Alberti was 'very poor and, what is worse, old, weak, and unable to earn his way'.

The perusal of a handful of Alberti's madrigals from the 1580s indicates that he was a composer of minor importance, whose style was conservative and serious and whose craftsmanship was above average. The final three books of madrigals for four voices, published in the first decade of the 17th century, are almost certainly collections of madrigals written 10 to 30 years earlier. (*EinsteinIM*; *NewcombMF*)

WORKS

SACRED

Salmi penitenziali armonizzati, libro primo, 6vv (Ferrara, 1594)
Motetti, libro secondo, 6vv (Ferrara, 1594)

Il secondo libro de madrigali, 4vv (Venice, 1604)
Terzo libro de madrigali, 4vv (Venice, 1607)
Further madrigals, 4, 5vv, 1557[23], 1560[20], 1582[5], 1586[10], 1591[9], 1592[14]
22 madrigals, 1568, *GB-Lbl* Roy.App.36–40; 4 madrigals, after 1580, *I-MOe* Mus.F.1358
Canzoni, 5vv, lost; cited in catalogue *FEc*

ANTHONY NEWCOMB

Alberti, Johann Friedrich (*b* Tönning, Schleswig, 11 Jan 1642; *d* Merseburg, 14 June 1710). German composer and organist. A versatile man, he studied theology at Rostock, intending to enter the ministry. Dogged by ill-health he read law instead at Leipzig University, concurrently studying music with Werner Fabricius to such good purpose that Duke Christian I of Saxony appointed him organist at his court and at Merseburg Cathedral. Alberti also studied with Vincenzo Albrici. An apoplectic stroke caused paralysis, which incapacitated him for the last 12 years of his life.

Although Alberti apparently wrote much sacred and keyboard music, unfortunately only four chorale compositions survive (they are in various manuscripts, mainly in libraries in Berlin, and they have been included in several modern anthologies of organ music such as *Orgelmeister des 17. und 18. Jahrhunderts*, ed. K. Matthaei, Kassel, 1933; *80 Choralvorspiele des 17. und 18. Jahrhunderts*, ed. H. Keller, Leipzig, 1937; and EDM, 1st ser., ix, 1937; for some lost works see Seiffert in *AMw*, ii, 1920, p.371).

In both *Herzlich lieb hab' ich dich, O Herr* and *Gelobet seist du* the first chorale line alone is stated in skilful association with two contrasting countersubjects, giving, particularly in the former, a sense of singular intimacy. The two-movement *Te Deum* consists of a ricercare-like double fugue on the first two chorale lines, followed by another on the first line combined with an animated free countersubject. The three variations of *O lux beata Trinitas* treat only the first line of the chorale, the second variation being notable for the fourfold repetition of the theme accompanied by its double diminution. The high quality of these works makes regrettable the loss of 12 ricercati by Alberti which, according to Mattheson, explored every facet of contrapuntal art.

G.B. SHARP

Alberti, Juraj [Giorgio] (*b* Split, 1603; *d* after 1619). Croatian theorist. He was a descendant of the Alberti-Matulić family, and his father Matija was an eminent Croatian writer. He studied music for a short time in Venice with Romano Michaeli and Martio Valinea, who, according to the title-page of Alberti's treatise, was 'gentilhuomo d'Urbino, musico straordinario in San Marco'. Alberti was only 15 years old when he wrote his treatise, the *Diologo per imparare con brevità à cantar canto figurato* (Venice, 1619). It was published not long after he had completed his studies, and comprises 40 pages of basic hints on music for beginners keen to learn so that they could 'con tanta liberta & sicurezza solfegiando ... li magrigali'. It is the earliest Croatian treatise to have been printed as a book in its own right, and is a valuable source of the performing practice of early Baroque monody in Dalmatia.

ENNIO STIPČEVIĆ

Alberti, Leon Battista (*b* Genoa, 14 Feb 1404; *d* Rome, 3 April 1472). Italian humanist, architect and writer. His formal studies began at the *gymnasium* of Gasparino Barzizza at Padua, where he became friends with Tommaso Parentucelli (later Pope Nicholas V). He went to Bologna, probably in 1421, to study law but became increasingly interested in mathematics, and met the polymath Paolo Toscanelli. In 1431, Alberti joined the Papal civil service in Rome, becoming Papal inspector of monuments (1447–55). He held various ecclesiastical posts, becoming successively prior of S Martino in Gangalandi at Signa, near Florence, rector of Borgo San Lorenzo and canon of Florence Cathedral.

Early in his career, Alberti was influenced by Filippo Brunelleschi, to whom he dedicated the *De pictura* (1435). While in Rome, Alberti expanded his knowledge of classical architecture and sculpture through his survey of the city's monuments (*Descriptio urbis Romae*, *c*1450). His literary works also include a play (*Philodoxeus*, 1424), poems, short stories and various treatises on aspects of painting, sculpture, mathematics, philosophy, public speaking and horse training (for further information see Borsi).

Alberti's importance in the history of music lies in his adoption of musical proportions (customarily taught in the *quadrivium*) in order to place artistic studies, formerly considered crafts, among the liberal arts. This was first

evident in *De pictura* (1435), where he described the use of mathematical proportions (book I, chapter 18). This was later expanded into a general theory of beauty (*pulchritudo*) based upon the elegant joining of diverse elements (*concinnitas*), which in turn produce proper musical proportions (*proportiones*). The theory was fully expounded in book IX of *De re aedificatoria* (*c*1452; fully published in 1485), especially chapters 5 and 6.

CHARLES E. BREWER

Alberti, Pietro (*fl* 1697–1706). Italian composer, violinist and organist, active in northern Europe. At one time he was in the service of the Prince of Carignan (a small town in the French Ardennes) and in this capacity appeared as a violinist before Louis XIV in 1697. About 1703 he was organist of the monastery at Kranenburg, on the present Dutch–German border. He published *XII suonate a tre, duoi violini e violone col basso per l'organo* op.1 (Amsterdam, 1703). One of the two surviving copies (*US-CHua*) bears the date 1706 on one partbook and the signature 'Alberti' on all four; a copy in Sweden (*S-L*) is also signed. The contents are all church sonatas, and each contains between six and eight movements, all in the same key. They are stolid, old-fashioned, rather uninspired works, competently written for the most part but using only the simplest imitative techniques and frequently becoming homophonic. The part for violone, which for Alberti meant 'cello', is sometimes quite elaborate, creating a genuine four-part texture.

ROBIN BOWMAN

Alberti bass. Left-hand accompaniment figure in keyboard music consisting of broken triads whose notes are played in the order: lowest, highest, middle, highest (see ex.1),

Ex.1 Duphly: 'La De Drummond'
Quatrième livre de pièces de clavecin (Paris, 1768)

and taking its name from Domenico Alberti (*c*1710–1746). Research has suggested that, obvious as this little figure may seem, Alberti was in fact the first to make frequent use of it. The term ought to be restricted to figures of the shape described and not extended loosely to other types of broken-chord accompaniment.

DAVID FULLER

Albertini, Gioacchino (*b* Pesaro, 30 Nov 1748; *d* Warsaw, 27 March 1812). Italian composer and conductor, active in Poland. The earliest reference to his activities in Warsaw dates from 12 April 1773, when King Stanisław August Poniatowski paid him a fee for a concert. From the middle of 1782 for about two years he was the king's *maître de chapelle*, during which time his main duty was to direct concerts at both the Royal Castle and the Orangerie Theatre in the gardens of Łazienki Palace (both in Warsaw). On 17 September 1784 he conducted J.D. Holland's opera *Agatka* at the court of Karol Radziwiłł in Nieśwież, and in the autumn of the same year he tried to promote an opera of his own in Vienna, but without much success. In 1785 he presented his opera *Circe und Ulisses* in Hamburg, and from about the middle of 1785 until the beginning of 1803 he was in Rome, where he composed and performed three operas. After this he returned to Warsaw. In his later years he gave singing lessons while living on a modest pension provided (in 1795) by Stanisław Poniatowski, the nephew of King Stanisław August Poniatowski.

Albertini had a good understanding of stagecraft and was able to orchestrate well. According to Elsner, if he had worked harder to develop his talent he would have had a more distinguished career. Arguably, his most important opera was *Don Juan, albo Ukarany libertyn* ('Don Juan, or The Libertine Punished'), which was often performed in Warsaw, Vilnius, Kalisz and Poznań. In this work he used sung recitative (both secco and accompagnato), which at that time was little known in Poland. Other novelties were the greater number and the character of his arias.

BARBARA CHMARA-ŻACZKIEWICZ

Albertini, Giuliano (*fl* 1699–1738). Italian alto castrato. His first known appearance was in Livorno in 1699. Probably from Florence, he had a long career there, singing in 24 operas, including works by Orlandini, Gasparini and Albinoni, 1701–38. He was employed by the Cardinal and later the Grand Duchess of Tuscany. He sang in Venice in 1705, 1709 (two operas by Lotti and Handel's *Agrippina*) and 1718–19, in Naples in 1707–9 (four operas, including A. Scarlatti's *Teodosio*), Bologna in 1711, Modena in 1716 and Rome in 1729. In *Agrippina* he played the freedman Narcissus, a part that makes slight demands on range and skill; its compass is *a* to *d''*.

WINTON DEAN

Albertini [Albertino], **Ignazio** (*b* ?Milan, *c*1644; *d* Vienna, 22 Sept 1685). Italian composer and musician. He is first heard of in a letter of 6 September 1671 in which the Prince-Bishop of Olomouc, Karl Liechtenstein-Kastelkorn, told J.H. Schmelzer that he need not have apologized for some apparent bad behaviour on Albertini's part, since he himself in any case had a good opinion of him. At the time of his death (he was murdered) Albertini was chamber musician in Vienna to the dowager Empress Eleonora. He himself prepared for publication his printed collection of sonatas and signed the dedication to Leopold I, but it did not appear until seven years after his death (the delay may have been due to the cost of engraving, towards which the emperor had granted a subsidy as early as 1686). The 12 sonatas have no regular pattern or number of movements. Most of the opening and closing movements are adagios; two sonatas begin with a separate movement marked 'Praeludium' characterized by figuration over a supporting bass. The form of each movement stems as a rule from freely varied development of phrases – usually, but not always, the initial one – which reappear in new guises and thus with a fresh impulse. Larger sections are never repeated literally. In a few of the sonatas there are thematic connections between several (though never between all) movements. Sonata no.9 is a passacaglia whose theme is presented at the beginning and end as a canon at the 5th and whose formal sections sometimes overlap with the statements of the ostinato theme. Double stopping appears conspicuously in the last sonata, which consists entirely of imitative movements.

WORKS

Sonatinae XII [XII sonate], vn, bc (Vienna and Frankfurt, 1692)

Intrada, allemanda, courante, gavotte, sarabande, gigue e finale, a 4, 1683; lost, formerly *A-Wn*

THEOPHIL ANTONICEK

Albertini, Thomas Anton (*b* *c*1660; *d* Olomouc, 3 Oct 1735). German composer. After 1690 he came to Olomouc from Vienna and entered the services of the Olomouc chapter; in 1691 he became musical director at the cathedral. In 1696 he married Magdalena Cecilie Zindel, daughter of the cathedral organist. Although his salary was raised from 100 to 300 florins by 1702, Albertini complained throughout his life of the low pay and engaged in continual battles with the chapter, which refused to meet his demands and blamed him for the decline of music in the cathedral. In 1708 Albertini requested special leave to perform his compositions before the Emperor Joseph I in Vienna; he overstayed his leave and the chapter gave him notice, which was revoked only after the emperor's direct intervention. In spite of perpetually strained relations with the chapter Albertini remained in his post until his death. He was probably related to the Ignaz Albertini who applied for a musical post in Olomouc as early as 1671. Thomas Albertini's son Reymund (*b* Olomouc, bap. 23 Jan 1701) was a musician in the orchestra of Count Rottal in Holešov (*c*1734–7) and later with Count Leopold Dietrichstein in Brno. All that survive of Albertini's extensive works are two orchestral suites from the year 1694, dedicated to the Bishop of Olomouc, a pastoral sonata for strings, a mass and a *Te Deum* (*A-Wn*, *CZ-Bm*, *Kr*).

Albertis, Gaspare de. *See* ALBERTI, GASPARO.

Albertsen, Per (Hjort) (*b* Trondheim, 27 July 1919). Norwegian composer, organist and teacher. A qualified architect (1943), he studied the organ with Ludvig Nielsen, Arild Sandvold and Per Stenberg, and also had lessons with Tarp in Copenhagen, Ralph Downes in London and Jelinek in Vienna. He worked as an organist in Trondheim (1947–68) and as a lecturer in music at Trondheim University (1968–72) before his appointment as director of the conservatory in the city (1972). His music shows the influences variously of Palestrina, Haydn, Les Six and Bartók; national elements occur, but they are not striking.

WORKS
(*selective list*)

Orch: Concertino, op.7, 1948; Sym. Prelude, op.10, 1951; Gunnerussuite, op.11, 1952; Minor Suite, op.14, 1955; Presentation, op.20, 1958; Notturno e danza, op.22, 1960; Conc. piccolo, op.23, vn, str, 1961; Conc., op.33, pf, school orch, 1969; Tordenskioldiana, op.39, 1972

Sacred vocal: Cant., op.15, 1953; Christmas Mass, op.24, 1961; Summer Mass, op.28, 1966; unacc. choral pieces

NIKOLAI PAULSEN

Albertus, Gaspare. *See* ALBERTI, GASPARO.

Albertus cantor. *See* ALBERTUS PARISIENSIS.

Albertus Magnus (*b* Lauingen, Swabia, *c*1195; *d* Cologne, 15 Nov 1280). German theologian, canonized in 1931. While studying at Padua he joined the Dominican order (1222–3). He taught principally at the Dominican Stu-

dium Generale, Cologne, where Thomas Aquinas was his pupil. Although he did not create the scholastic union of theology and philosophy that Thomas achieved, he brought together the scriptures, the Church Fathers, earlier medieval scripture exegesis and scholastic writings, as well as much of the newly accessible writings of Aristotle and Arab philosophers. In addition his intense interest in scientific observation and experiment expressed itself in his specifically scientific works, as well as in innumerable remarks elsewhere in his writings. He rejected music of the spheres as 'ridiculous', on the grounds that if it existed it would be more destructive and unbearable than thunder, and that observation showed that the movement of the heavens could not generate sound (*De coelo et mundo*, bk 2; Borgnet, iv, 193). A *Summa de scientia musicali* and a commentary on Boethius's *De musica* are known only from an early 15th-century list.

Albertus wrote that a balance of proportions in music is delightful and a lack of it distasteful: 'there is sweetness in the ear from a minor 6th as [in painting] from much white together with a little red' (*Summa de creaturis*, ii; Borgnet, xxxv, 196). He stated further that just as the beauty of the universe consists of antithesis, so in music 'when rests are interposed in singing, it becomes sweeter than continuous sound' (*Summa theologiae*, ii; Borgnet, xxxii, 601). He felt that in worship singing expresses sublime spiritual joy (*Super Isaiam*, chap.5.1, Geyer, xix, 68, and, for example, *Commentarius in psalmos*, xlvi.6, Borgnet, xv, 692), while, through his commentary on the *Psalms*, instrumental music stands for mortification. His view of the relationship of chant to the different parts of the Mass can be seen in *Liber de sacrificio missae*. In his exposition of Pseudo-Dionysius's *De ecclesiastica hierarchia* (Borgnet, xiv, 652ff) Albertus developed its concepts of the purifying effects of liturgical chant and reading; he maintained that chant acts at three subjective levels, according to the three hierarchical actions – totally purging the energumens, illuminating the baptized to contemplate and participate in the realities of the sacraments, and nourishing the perfect through holy contemplations and 'perfecting' them in God.

The richest source of his musical observations is Albertus's commentary on Aristotle's *Politics* (viii), where his magisterial summaries are glossed with Christian texts. He held that music serves three purposes: game, purification and recreation (chap.6). In recreation, he said, men expect music suited to their tastes, whether good or depraved; here professional musicians, who have to provide a service, can be distinguished from people with real taste, whose interest in music can be 'liberalis et honesta' (chaps.2, 4; cf *Super Lucam*, chap.7.32). Yet singing of music within their powers is an appropriate education for young men provided it does not weaken them for military or political life. Song is a means of expressing heartfelt feelings on special occasions (chap.4; cf *Super Lucam*, chap.7.32, and *Super IV Sententiarum*, Borgnet, xxix, 633: 'I do not think it matters what melody you have then, because on these occasions it has to be something light'). Here he not only testified to an unscripted tradition, but showed that lyricism had a place in medieval popular music, analogous to the more spiritual joy of scripted liturgical chant (but cf Corbin, 80ff). He also recognized that intense joy could be expressed in gesture and music together (chap.3), and quoted Pseudo-Pythagoras's *De tripudio*, which he probably knew from Arab sources. The Dorian mode is stabilizing, he said, the Phrygian disturbing (chap.6). Glossing the term 'raptus' in a Christian sense, he found that sacred music 'shows to men a realm of innocence', and, acting like a medicine, soothes the passions through the pleasure it gives.

EDWARD BOOTH

Albertus Parisiensis [Albertus Stampensis] (*fl* 1146–1177). French cantor. He was probably from Estampes originally, but from about 1146 to 1177 he was cantor at Notre Dame, Paris. He left a substantial bequest of liturgical books to the cathedral. The sole, uncorroborated, trace of his compositional activity is a two-voice conductus, *Congaudeant catholici*, attributed to him in the 12th-century Calixtine manuscript (*E-SC*). A third voice, inscribed in red neumes on the bottom staff of the unique source, cannot be original for it has been added in a hand distinct from the main scribe's. This voice evidently constitutes a plainer alternative to the original rather florid discant.

SARAH FULLER

Alberus, Erasmus. *See* ALBER, ERASMUS.

Albicastro, Henricus [Weissenburg, Johann Heinrich von; Weissenburg, Johan Handrik van] (*b* ?Bieswangen, Bavaria, *c*1660; *d* ?*c*1730). Dutch composer and violinist of German extraction. The name Henricus Albicastro is a Latin-Italian translation of his true name, Johann Heinrich von Weissenburg. The designation 'del Biswang' on the title-pages of some of his works presumably refers to Bieswangen as his place of birth (there is, moreover, a town called Weissenburg nearby). There is nothing to corroborate Walther's statement that he was Swiss, but many details about his life are still unclear. His compositions adhere closely to the Italian style in string music with continuo, but there is no way of telling whether this results from study with an Italian composer in Italy or elsewhere, or from the study of Italian music available north of the Alps.

Albicastro was registered as 'musicus academiae' at the University of Leiden in 1686, meaning that he became head of the modest musical establishment there, a position he may have held until 1691 when someone else was appointed. (Confusingly, he was registered as 'Viennensis'.) His op.1 sonatas (1701) are dedicated to the Leiden burgomaster Coenraad Ruysch, confirming the Leiden connection. After his days there he may have gone to the southern Netherlands where he was involved in a publication project set up by François Barbry, a musical amateur who had obtained a privilege for publishing 'Italian music', though not all the composers mentioned are Italian. As well as Albicastro, Sebastian Scherer is named; he was from Ulm, not far from Bieswangen, and may have been a relation of Albicastro, perhaps even his teacher. It is not known how much of the project was realized. Only one work by Albicastro has survived, an op.3 part i; nothing is known about any corresponding opp.1–2. During the years 1701–06 Estienne Roger of Amsterdam issued nine volumes of music by Albicastro, each containing 12 works: the trio sonatas opp.1, 4 and 8, solo sonatas opp.2, 3, 5, 6 and 9 and concertos op.7. (No exemplars of opp.2, 6 and 9 are known.) Their publication in rapid succession may indicate that they were largely composed beforehand. The title-pages of the Bruges op.3 and the Amsterdam op.1 call him expressly 'amatore', meaning that he did not earn his living as a musician; this designation was dropped later. In 1708 he was appointed captain in the Dutch cavalry; he thus served during the later years of the War of the Spanish Succession, and may have been in the army before that date. The title-pages of his opp.3 and 4 (both 1702) call him 'cavaliero'. His name is listed in the army administration up to 1730, and he perhaps died that year.

Apart from a single motet in manuscript (possibly emanating from his southern Netherlands period) all his music is for one or more string instruments with basso continuo, sometimes with an independent string bass part. Everything he wrote is thoroughly italianate in style – a close copy, in fact, of Albinoni and Corelli, but sometimes (perhaps because of his German background) less predictable, less schematic and less polished than his Italian models. Although his status as a musician cannot yet be fully understood, his compositions show nothing of the amateur but conform to the professional norms one would use in assessing the quality and the character of the music. The fact that none of his works was ever reissued or reprinted is probably due to the subtly germanophone and conservative dialect of his Corellian idiom. His tribute to the German way of treating the violin is reflected in the remark Quantz made in his autobiography (1755), that in his youth he diligently studied Albicastro's music along with that of Biber and J.J. Walther, the two leading figures in 17th-century German violin playing.

RUDOLF A. RASCH

Albin, Roger (*b* Beausoleil, Alpes Maritimes, 30 Sept 1920). French conductor and cellist. He studied the cello with Umberto Benedetti, and attended the Paris Conservatoire until the age of 15. He returned there after the war to follow courses in fugue with Noël Gallon, composition with Büsser and Milhaud and analysis and musical aesthetics with Messiaen. He also studied conducting with Roger Desormière, Carl Schuricht and Hans Rosbaud. He began his career as a cellist, touring and recording both as a soloist and with the pianist Claude Helffer from 1949 to 1957. His career as a conductor started at the Opéra-Comique, where he was chorus master for three years; he then went to Nancy (director of music at the theatre), Toulouse (Théâtre du Capitole) and finally Strasbourg, where he became conductor of the Strasbourg RSO (1966–75). He later joined the Orchestre Nationale de France as a cellist (1978–81) before becoming a professor at the Strasbourg Conservatoire (1981–7).

Albin conducted the Classical and Romantic repertories with equal ease, as well as contemporary and avant-garde works. His compositions include two symphonies, a cello concerto, a suite for cello solo, short pieces for piano, a cantata for soprano and women's choir, and *Sonata, Cantata, Toccata*, a piece written for the Percussions de Strasbourg and performed at the 1972 Marais Festival.

CHRISTIANE SPIETH-WEISSENBACHER/JOSÉ BOWEN

Albini [Albino], **Filippo** (*b* Moncalieri, nr Turin, probably between 1580 and 1590; *d* 1626 or later). Italian composer and musician. He came of a long-established family whose members had included painters and a royal doctor. He became a musician in the service of the court of Savoy at Turin. In 1619 a number of students destined for careers in music or the church were assigned to his care. During the next few years he deputized for Sigismondo d'India, director of court chamber music who was often absent, as a composer of occasional music for court use which he published in his op.2 of 1623. In that year d'India left the court, but Albini did not succeed him. He soon became instead a musician to Cardinal Maurizio, son of the Duke of Savoy, Carlo Emanuele I. This position, which he held when his op.4 appeared in 1626, probably necessitated his spending most of his time in Rome. His surviving music is contained in two similar volumes: *Musicali concenti* op.2, for one, two and four voices and continuo

(Milan, 1623/*R*1986 in ISS, iv), and *Il secondo libro dei musicali concenti* op.4, for one and two voices and continuo (Rome, 1626). As well as the contents of op.2, some pieces in op.4 were written for court occasions. This volume comprises a few madrigals and sonnet settings and several strophic arias (one a setting of a French text). Several of the latter are quite attractive, but some of the other music is rather stiff and overladen with embellishments.

NIGEL FORTUNE

Albini, Srećko (Felix) (*b* Županja, 10 Dec 1869; *d* Zagreb, 18 April 1933). Croatian composer, conductor and publisher. In Graz he studied music, where, in keeping with the family tradition, he was also required to finish business college. From 1893 to 1895 he was conductor at the joint theatres of the Graz municipality. He then conducted opera at the new theatre in Zagreb (the Croatian National Theatre) until 1903, when the company's activities were suspended, and returned to the opera as both director and conductor in 1909 having spent the interim years composing in Vienna; this was the only period when Albini was actively engaged in composition. He remained at the opera until 1919, and thereafter founded and directed the Croatian Copyright Centre as well as his own publishing house. Consequently, he laid fthe oundations for modern music publishing in Croatia.

Albini's composition focussed almost entirely on music for the stage, particularly operetta. Combining Croatian folk motifs, his exuberant melodic invention and skilful sense of drama, he transcended the musical and dramatic limitations characteristic of operetta of his time. He achieved greatest success and international reputation with *Madame Troubadur* and *Barun Trenk* (1908).

IVAN ZIVANOVIĆ

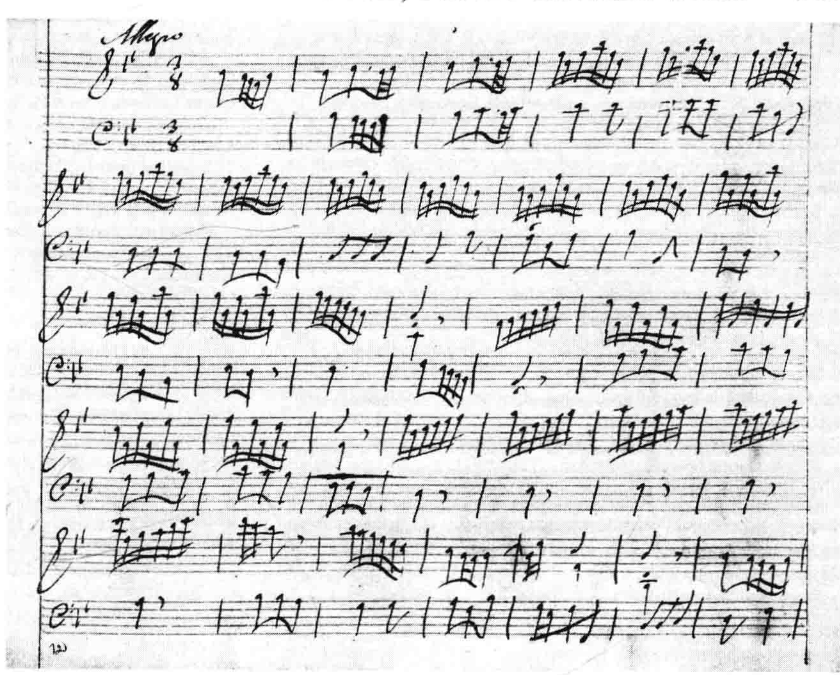
Albinoni, Tomaso Giovanni [Zuane] (*b* Venice, 8 June 1671; *d* Venice, 17 Jan 1750/51). Italian composer. His father, Antonio Albinoni, was a stationer and manufacturer of playing cards who owned several shops in Venice and some landed property. As well as completing his apprenticeship as a stationer, Tomaso, the eldest son, learnt the violin and took singing lessons; his teachers are not known. Despite his talent he was not tempted on reaching adulthood to seek a post in church or court, preferring to remain a *dilettante* – a man of independent means who delighted himself (and others) through music. As a composer he first had an unsuccessful flirtation with church music. A mass for three unaccompanied male voices is the sole survivor of this episode (the *Magnificat* in G minor ascribed to him is of dubious authenticity); juvenile infelicities abound, yet it clearly shows his penchant for contrapuntal pattern-weaving. In 1694 Albinoni had two successes in fields for which his musical training had probably better prepared him: an opera (*Zenobia, regina de' Palmireni*) was staged at the Teatro di SS Giovanni e Paolo at the beginning of 1694, and his op.1, 12 trio sonatas, was published by Sala. Instrumental ensemble music (sonatas and concertos) and secular vocal music (operas and solo cantatas) were to be his two areas of activity in a remarkably long career as a composer which terminated 47 years later with a prematurely entitled 'oeuvre posthume' (six violin sonatas, *c*1740) and the opera *Artamene* (1741).

It has been suggested that Albinoni briefly served Ferdinando Carlo di Gonzaga, Duke of Mantua, as a chamber musician immediately before 1700, but the only biographical evidence is Albinoni's description of himself on the title-page of his *Sinfonie e concerti a cinque* op.2 (1700) as 'servo' of the duke, the work's dedicatee. Albinoni more probably used the word for an honorary or even merely idealized attachment; he may have met Ferdinando Carlo on one of the duke's frequent visits to the Venetian opera houses. Albinoni's theatrical works soon began to be staged in other Italian cities, the first

1. Tomaso Albinoni: portrait by an unknown artist

being *Rodrigo in Algeri* (Naples, 1702). He visited Florence to direct performances, as leader of the orchestra, of a new opera, *Griselda*, in 1703, and may have stayed there for a time, as another opera, *Aminta*, followed later in the year. In 1705 Albinoni married in Milan (perhaps against his family's wishes) the operatic soprano Margherita Raimondi, a native of Verona but raised in Venice. In 1699, when she was about 15, she had appeared in Draghi's *Amor per vita* at S Salvatore, Venice. After her marriage she continued to appear intermittently on the stage (despite raising six children) and travelled as far as Munich, where she sang in Torri's *Lucio Vero* in 1720. She died in 1721.

In 1709 Antonio Albinoni died. Under the terms of his will (1705), Tomaso inherited a token share of the family business (one shop), the principal management being left to two younger brothers, who had to give him a third of the revenue. This renunciation of an elder son's normal rights and responsibilities reflects Tomaso's total commitment to music by this date. From *c*1710 Albinoni styled himself 'musico di violino', as if to emphasize his independence. According to Caffi he ran a flourishing school of singing, but exactly when, and for how long, is not known. He can have derived little income from his family after 1721, when the business was acquired after a lawsuit by an old creditor of his father.



In 1722 Albinoni's career reached its zenith. He had just composed a set of 12 concertos – his most imposing to date – and had dedicated them to the Elector of Bavaria, Maximilian II Emanuel. Now he was invited to Munich to superintend performances of his opera *I veri amici* and a smaller stage work, *Il trionfo d'amore*, both in celebration of the marriage of Karl Albrecht, the electoral prince, to Maria Amalia, younger daughter of the late Emperor Joseph I (Mattheson received a glowing report of the opera from a member of the audience, who was at pains to establish that the Albinoni present at the festivities was the 'real' one, and not an impostor who had been touring Germany and eventually departed for Sweden). From the 1720s Albinoni's operas were frequently performed outside Italy, though in many cases they were adapted or supplemented to suit local needs. *Pimpinone*, a set of comic intermezzos which had originally appeared with *Astarto* in 1708, was especially popular. However, Albinoni gradually composed fewer new works in both operatic and instrumental fields. He seems to have retired after 1741. His death notice dated 17 January 1750/51 states that he had been confined to bed for about two years.

Albinoni's association with other musicians was remarkably limited at all times during his career. A violin sonata dedicated to J.G. Pisendel (and two further violin sonatas acquired by him) point to a meeting between the two men in 1716, when Friedrich August, electoral prince of Saxony, visited Venice. Operatic collaborations, including one with Gasparini for *Engelberta* (1709), were probably mediated by theatre managements. Albinoni did not even pay other composers the compliment of borrowing their musical ideas, though he did borrow from himself in a cunningly inconspicuous fashion. His relationships with a representative section of European nobility, doubtless motivated by thoughts of personal advancement, seem to have been more consequential. Besides those already mentioned one may cite Corelli's patron, Cardinal Pietro Ottoboni (dedicatee of op.1); Prince Ferdinando of Tuscany (op.3); Ferdinando's uncle, Cardinal Francesco Maria de' Medici (op.4); Count Christian Heinrich von Watzdorf, a Saxon cabinet minister and noted music lover resident in Rome (op.8); Don José Patiño, a Spanish military commander (op.10). For the name days of Emperor Karl VI and his wife, Elisabeth Christine von Braunschweig-Wolfenbüttel, Albinoni composed the serenata *Il nome glorioso in terra, santificato in cielo* (1724) and a 'componimento pastorale', *Il nascimento de l'Aurora* (*c*1710).

His output was immense. The libretto of his penultimate opera *Candalide* (1734) describes it as his 80th. Only 50 or so 'public' operas are known from librettos or the few scores that have survived, but the balance may well have been made up from intermezzos and more intimate stage works for private performance, for which librettos were not published. The solo cantatas total nearly 50. 100 sonatas for between one and six instruments and continuo composed in church, chamber or mixed styles, 59 concertos and 8 sinfonias (found independently of larger works) are extant. Many attributions to Albinoni in 18th-century sources are doubtful, despite their over-eager endorsement by certain scholars and editors in modern times.

Albinoni's reputation has fluctuated, but is probably higher now than at any time since his own age, when his instrumental music was much in demand all over Europe, particularly among amateurs, and was ranked with that of Corelli, Vivaldi and (in France) Mascitti. The solo cantatas were scarcely less popular, though a smaller proportion was published. J.S. Bach, who based four keyboard fugues on subjects taken from Albinoni's op.1 (BWV946, 950, 951, 951*a*), is known to have used other works as teaching material. J.G. Walther transcribed two concertos from op.2 for organ. Albinoni's earlier instrumental works in particular were reissued and reprinted as much as any in the first three decades of the century; extracts, usually rather mutilated, abound in contemporary instruction manuals for the violin. He was less of an innovator in the field of the string concerto than Quantz thought 50 years later. Passages for solo violin in his concertos play no structural role, which is why they are unpredictable in length or often altogether missing. However, he was probably the first composer to use the three-movement cycle consistently, and may have been influential in popularizing fugal finales which, for his purposes, he took almost ready-made from sonata models. His oboe concertos of op.7 were the first of their kind by an Italian composer to be published. There are interesting parallels to be drawn between Albinoni's treatment of the oboe (or, in half the cases, two oboes) and his treatment of the voice in arias, in respect of both the melodic idiom, which emphasizes conjunct movement in contrast to the arpeggiated manner of his writing for violin, and the use of a motto opening. His sonatas, which (with two exceptions) are in four movements, are conservative in layout.

Some general assessments of Albinoni's music have been harsh: he has been taxed with dryness and a lack of harmonic finesse. In recent studies he has been charged with an over dependence on certain formal stereotypes of his own devising (such as the immediate, literal repetition of the opening phrase of a period in a different key as a simple means of modulating) coupled with a lack of receptivity to outside stimuli (except perhaps in the 1710s,

2. *Autograph manuscript of the finale of Albinoni's Violin Sonata in B♭, c1716 (D-Dl)*

when he temporarily came under the Vivaldian spell); neither of these last points is easy to refute. In compensation, Albinoni possessed remarkable melodic gifts (which kept him in demand as a composer of operas long after the popularity of his contemporaries faded), had a sure judgment of medium, and achieved a classic poise second to none among the neo-Corellians, to whom he is more akin, in many respects, than to his fellow Venetians, Gentili excepted. This equilibrium of form and content is perhaps most perfectly realized in the works of his early maturity such as the ballettos (or chamber sonatas) op.3 and the concertos op.5. In the later works, especially op.10, the same formal stereotypes, devised in the 1700s, prove less satisfactory when used with a more sophisticated, even *galant*, melodic-harmonic idiom. Some partisans have exaggerated his skill as a 'pure' as opposed to 'applied' contrapuntist: his fugal and canonic movements, always in quick tempo, are more remarkable for their rhythmic buoyancy than for any true contrapuntal ingenuity.

Albinoni's strongest asset is the pronounced individuality of his music, to which the insularity of his life may have contributed. His output may be largely mass-produced, but his ideas are all his own. If the instrumental music seems certain to survive, the same cannot yet be said of his vocal music despite its equal historical importance. The cantatas are rather too formalized for modern tastes and the operas are too inert dramatically. Viewed as absolute music, however, they reveal no less than the hand of a skilled craftsman.

dm – *dramma per musica*

Zenobia, regina de' Palmireni (dm, 3, A. Marchi), SS Giovanni e Paolo, carn. 1694, *US-Wc* (facs. in IOB, xv, 1979), arias *A-Wn*
Il prodigio dell'innocenza (dramma, 3, F.M. Gualazzi), SS Giovanni e Paolo, carn. 1695
Zenone, imperator d'oriente (dm, 3, Marchi), VC, aut. 1696
Il Tigrane, re d'Armenia (dm, 3, Marchi), VC, carn. 1697
Primislao, primo re di Boemia (dm, 3, G.C. Corradi), VC, aut. 1697
L'ingratitudine gastigata (dm, 3, F. Silvani), VC, carn. 1698; as Alarico, Piacenza, Ducale, 1712
Radamisto (dm, 3, Marchi), VA, aut. 1698, arias *F-Pc*, *GB-Lgc*
Diomede punito da Alcide (dramma, 3, A. Aureli), VA, aut. 1700
L'inganno innocente (dm, 3, Silvani), VA, carn. 1701, arias *B-Bc*; as Rodrigo in Algeri, addns by J. -B. Stuck, Naples, S Bartolomeo, Dec 1702
L'arte in gara con l'arte (dm, 3, Silvani), VC, carn. 1702
Griselda (dm, 3, A. Zeno), Florence, Cocomero, carn. 1703, arias *I-Mc*; as L'umiltà esaltata, Naples, S Bartolomeo, 1734
Aminta (dramma regio pastorale, 3, Zeno), Florence, Cocomero, aut. 1703
Il più fedel tra i vassalli (dm, 3, Silvani), Genoa, Falcone, aut. 1705
La prosperità di Elio Sejano (dm, 3, N. Minato), Genoa, Falcone, carn. 1707
La fede tra gl'inganni (dm, 3, Silvani), VA, carn. 1707
La fortezza al cimento (melodramma, 2, Silvani), Piacenza, Ducale, 1707
Astarto (dm, 3, Zeno and P. Pariati), VC, aut. 1708, arias *D-MÜs*, *SWl*, *GB-Ob*
Pimpinone (3 comic int, Pariati), VC, aut. 1708, *A-Wn*, *D-MÜs* (Int 1 only), aria *SWl*; as La serva astuta, Bologna, Formagliari, spr. 1717; ed. in RRMBE, xliii (1983)
Engelberta [Acts 1-3] (dm, 5, Zeno and Pariati), VC, carn. 1709, *A-Wn*, *D-Bsb*, arias *GB-Ob* [Acts 4 and 5 by Gasparini]
Il tradimento tradito (dm, 3, Silvani), VA, carn. 1709
Ciro (dm, 3, Pariati), VC, carn. 1710, arias *D-WD*
Il tiranno eroe (dm, 3, V. Cassani), VC, carn. 1711, arias *B-Bc*, *D-WD*
Il Giustino (dm, 5, Pariati, after N. Beregan), Bologna, Formagliari, spr. 1711
La pace generosa (dm, 3, Silvani), Genoa, Falcone, aut. 1711
Le gare generose (dm, 3, A. Zaniboni), VC, aut. 1712, arias *D-SWl*
Lucio Vero (dm, 3, Zeno), Ferrara, S Stefano, spr. 1713
I rivali generosi (dm, 3, Zeno), Brescia, Nuovo, 1715
L'amor di figlio non conosciuto (dm, 3, D. Lalli), VA, carn. 1716
Eumene (dm, 3, A. Salvi), S Giovanni Grisostomo, aut. 1717, arias, *F-Pc*, *I-Bc*
Meleagro (dm, 3, P.A. Bernardoni), VA, carn. 1718
Cleomene (dm, 3, Cassani), VA, carn. 1718

Gli eccessi della gelosia (dm, 3, Lalli), VA, carn. 1722, arias *D-Hs*, *GB-Lbl*, *US-Wc*; as La Mariane, addl music by G. Porta, VA, carn. 1724 and 1725, arias *D-SWl*, *F-Pc*
I veri amici (dm, 3, Silvani, rev. Lalli, after P. Corneille), Munich, Hof, Oct 1722, arias *GB-Ob*
Eumene (dm, 3, Zeno), VM, carn. 1723, aria *Lbl*
Ermengarda (dm, 3, A.M. Lucchini), VM, aut. 1723, aria *I-CF*
Antigono, tutore di Filippo, re di Macedonia (tragedia, 5, G. Piazzon), VM, carn. 1724, collab. G. Porta, aria *D-ROu*
Scipione nelle Spagne (dm, 3, Zeno), S Samuele, Ascension 1724, arias *F-Pc*
Laodice (dm, 3, A. Schietti), VM, aut. 1724, arias *I-CF*
Didone abbandonata (tragedia, 3, P. Metastasio), VC, carn. 1725
Alcina delusa da Ruggero (dm, 3, Marchi), VC, aut. 1725; rev. as Li evenimenti di Ruggero, VM, carn. 1732
Statira (dm, 3, Zeno and Pariati), Rome, Capranica, carn. 1726, *A-Wn* (microfilm), arias *GB-Cfm*, *Lbl*
Malsazio e Fiammetta (comic intermezzos), Rome, Capranica, carn. 1726
Il trionfo di Armida (dm, 3, G. Colatelli, after T. Tasso: *Gerusalemme liberata*), VM, aut. 1726
L'incostanza schernita (dramma comico-pastorale, 3, Cassani), S Samuele, Ascension 1727, arias *F-Pc*, *GB-Lbl*, *Ob*; as Filandro, VM, carn. 1729; as L'infedeltà delusa, Vicenza, Grazie, May 1729
Le due rivali in amore (dm, 3, Aureli), VM, aut. 1728
Il Satrapone (comic intermezzos, Salvi), Parma, Omodeo, 1729
Li stratagemmi amorosi (dm, 3, F. Passerini), VM, carn. 1730
Elenia (dm, 3, L. Bergalli), VA, carn. 1730
Merope (dramma, 3, Zeno), Prague, Sporck, aut. 1731 [music largely by Albinoni]
Il più infedele tra gli amanti (dm, 3, Schietti), Treviso, Dolfin, aut. 1731
Ardelinda (dramma, 3, B. Vitturi), VA, aut. 1732, arias *I-Bas*
Candalide (dm, 3, Vitturi), VA, carn. 1734
Artamene (dm, 3, Vitturi), VA, carn. 1741
Arias, presumably from ops, in *D-SWl*, *E-Mn*, *I-CF*, *Nc*, *S-L*

Shorter dramatic works: Il nascimento de l'Aurora (componimento pastorale), ?Venice, Austrian ambassador's residence, *c*1710, *A-Wn*; Il trionfo d'amore (componimento poetico per servire ad un carosello, Pariati), Munich, 4 Nov 1722; Il nome glorioso in terra, santificato in cielo (serenata, Cassani), Austrian ambassador's residence, 4 Nov 1724, *Wn*; Il concilio de' pianeti (serenata, G. Baruffaldi), French ambassador's residence, 16 Oct 1729, *F-Pn* (autograph)

MICHAEL TALBOT

Albion Band [Albion Country Band, Albion Dance Band], **the.** British folk-rock group. It was created by the bass player ASHLEY HUTCHINGS after his departure from Steeleye Span in 1971, when he put together a group of musicians to back Shirley Collins (to whom he was then married) on her album *No Roses* (Pegasus, 1971). It proved so successful that several of them, including guitarist Richard Thompson and accordion player John Kirkpatrick, joined Hutchings in recording a selection of amplified morris dance tunes, *Morris On* (1972). Hutchings fused English traditional music with rock sounds in subsequent versions of the band, whose repertories included contemporary songs (some by Hutchings) and traditional material. The group has featured some of the finest British folk musicians, including Martin Carthy, Shirley Collins, John Kirkpatrick, Simon Nicol, John Tams and Richard Thompson. Different line-ups have played both amplified and acoustic material and have been documented in albums such as *Live at the Cambridge Folk Festival*. By 1998 the group consisted of Hutchings, Neil Marshall (drums), Gillie Nicholls and Ken Nicol (guitars), and Joe Broughton (fiddle), and had recorded the album *Happy Accident*.

ROBIN DENSELOW

Albisi, Abelardo (*b* 1872; *d* Switzerland, Jan 1938). Italian flute maker, flautist and composer. He was a flautist at La Scala, Milan, from 1897. In 1910 he invented his 'Albisiphon', a vertically-held, Boehm-system bass flute in C, with a T-shaped head, which he described in his *Albisiphon: flauto ottava bassa* (Milan, 1910). It was used by, among others, Mascagni in *Parisina* (1913), and Zandonai in *Melenis* (1912) and *Francesca da Rimini* (1914). The Dayton Miller Collection (Library of Congress, Washington, DC) possesses two models of an 'albisiphon baritono' in C and a tenor in F. There is also an example of another invention which Miller termed 'half flute in C' (that part of a regular flute played by the left hand, with a wooden handle for right hand) for which Albisi composed a concerto. He also made flutes in collaboration with the Milanese maker Luigi Vanotti in about 1913. He taught in Geneva in 1919–23. Albisi also composed studies for solo flute, suites for flute trio, as well as other chamber works for woodwinds.

Albisiphon. A bass flute invented by Abelardo Albisi in 1910. *See* FLUTE, §II, 3(v).

Albonesi, Afranio degli. Italian 16th-century cleric who invented the PHAGOTUM.

Alboni, Marietta [Maria Anna Marzia] (*b* Città di Castello, 6 March 1826; *d* Ville d'Avray, 23 June 1894). Italian contralto. She studied at the Liceo Musicale, Bologna, with Alessandro Mombelli. Rossini coached her in the principal contralto roles in his operas. She made her début at Bologna in 1842 as Clymene in Pacini's *Saffo*, and then sang Maffio Orsini in *Lucrezia Borgia*. In the same year she first appeared at La Scala, as Néocle in *Le siège de Corinthe*; during that season and the next she also sang Rizzardo in Marliani's *Ildegonda*, Léonore in *La favorite*, Adalgisa, and Pierotto in *Linda di Chamounix*. She created Mirza in Salvi's *Lara* (1843) and Berenice in Pacini's *L'ebrea* (1844). She made a very successful Vienna début in 1843 as Pierotto, and spent the winter of 1844–5 in St Petersburg, where she sang Pierotto, Maffio Orsini, Gondi in Donizetti's *Maria di Rohan* and Arsace in *Semiramide*. During the next two years she toured Germany and eastern Europe, appearing as Tancredi in Berlin and as Anziletto in the first performance of G.B. Gordigiani's *Consuelo* in Prague (1846). She made her London début on 6 April 1847, as Arsace in the performance of *Semiramide* that opened the first season of the Royal Italian Opera at Covent Garden, and scored an immense personal triumph. She also sang Smeton (*Anna Bolena*), Malcolm (*La donna del lago*), Pierotto, Maffio Orsini, Cherubino, Rosina (*Il barbiere*), Isabella (*L'italiana in Algeri*) and Don Carlo (the baritone role) in *Ernani*. She returned to Covent Garden in 1848 to sing Urbain (*Les Huguenots*; see illustration), Cenerentola and Tancredi, then in 1849 she moved to Her Majesty's Theatre, where she continued to sing until 1858.

Alboni made her Paris début at the Théâtre Italien on 2 December 1847, again as Arsace, and then sang the title

Marietta Alboni (right) as Urbain and Pauline Viardot as Valentine in Meyerbeer's 'Les Huguenots', Act 1 scene ix, Covent Garden, London, 1848: lithograph by John Brandard from a contemporary sheet-music cover

role of *La Cenerentola*. In 1849 she sang in Brussels and in 1850 she made a tour through the French provinces, singing in Donizetti's *La fille du régiment*, *La favorite* and Halévy's *La reine de Chypre*. On her return to Paris she appeared at the Opéra for the first time, as Fidès in Meyerbeer's *Le prophète*, returning in 1851 as Zerline in the first performance of Auber's *Zerline, ou La corbeille d'oranges*. She next made a tour of Spain and from June 1852 undertook a very successful year-long tour of the USA. Later, she married and settled in Paris. She sang a duet from Rossini's *Stabat mater* with Patti at the composer's funeral in 1868. She toured with his *Petite messe solennelle* through France, Belgium and the Netherlands, giving the first of 64 performances on 24 February 1869 in Paris, and singing the work in London in 1871. Her final appearance was at the Théâtre Italien in 1872, as Fidalma in Cimarosa's *Il matrimonio segreto*.

Alboni's voice was considered a true contralto, rich and even from *g* to *c‴*, though she also sang several soprano roles, including Anna Bolena, Norina in *Don Pasquale* and Amina in *La sonnambula*. Her singing was thought by some to lack fire; nevertheless, the beauty of her voice and the perfection of her technique made her one of the great representatives of classical Italian bel canto.

Alborada (Sp.: 'dawn song'). A morning serenade or song performed in honour of an individual or to celebrate a festival; it is similar to the *albada*, an open-air concert performed at daybreak under the balcony or windows of an honoured individual. In the mid-15th century it was customary for the instrumentalists of noble Spanish households to perform the *alvorada* at dawn on the most solemn festival days of the religious calendar and on other important days. For example, in the household of Miguel Lucas de Iranzo, the Constable of Castile, the instrumentalists, playing 'softly', would perform the alborada, placing the loudest instruments, such as the trumpets and kettledrums, on the floor above the Constable's bedroom and the remaining instruments and the singers at his door.

Alboradas abound in the Spanish folk repertory. Throughout the 19th and 20th centuries they were sung in villages at dawn on the day of a wedding, accompanied by local instruments; they were dedicated to the bride and groom and occasionally also to the best man. On other occasions, the alborada took the form of a personal chant dedicated to Jesus or to a specific saint; it was sung by the women standing close to the venerated image, which was carried through the streets in a dawn procession. In the marshes of Valencia, 'aubades' (alboradas) were popular strophic songs accompanied by the dulzaina (oboe) and tamboril (small drum); the text and melody of one such song – three stanzas and a refrain – survives in *La trulla*, an *ensalada* by the mid-16th-century composer Bartolomé Cárceres.

The popularity of the alborada is reflected in the fact that Ravel entitled one of the five pieces from *Miroirs* (1904–5) *Alborada del gracioso*; it is an Impressionist composition which, aside from its title, bears little resemblance to the popular alborada. Rimsky-Korsakov gave the title 'alborada' to the first and the third sections of his *Spanish Capriccio* (1887).

MARICARMEN GÓMEZ

Alborea, Francesco [Francischello, Franciscello] (*b* Naples, 7 March 1691; *d* Vienna, 20 July 1739). Italian cellist. He attended the Conservatorio di S Maria di Loreto in Naples and was a pupil of Gian Carlo Cailò. In 1725 Quantz heard him in Naples at a concert in honour of Prince Lichtenstein, in which Farinelli sang. In Rome, Francischello (as he was widely known) accompanied Niccolini in a cantata of Alessandro Scarlatti with the composer at the keyboard, and Geminiani remarked on his expressive playing. Berteau was reputed to have given up the viol for the cello after hearing him. In 1726 he was appointed chamber virtuoso to Count Uhlenfeld in Vienna where Franz Benda played trios with him and the count. Benda remarked after hearing him play that his only desire was to imitate on the violin the playing of Francischello on the cello. According to Gerber (but doubted by Fétis) he later went to Genoa where Duport (*b* 1741) went to meet and hear him. His date of death has been surmised (by van der Straeten and others) as about 1771, probably on the basis of Gerber's account. The earlier date is given by Köchel. A portrait by Martin von Meytens (Mytens), court painter at Vienna from 1732, shows him playing his cello; a copy of an engraving by Haid, after Meytens, is reproduced by van der Straeten (vol.i, pl.xxii). A caricature by Pier Leone Ghezzi is in the Codex Ottoboni (*I-Rvat*). Two serenatas attributed to Francischello survive in manuscript in the library of the National Museum, Prague.

MARY CYR

Albrecht. German family of musicians, active in Russia.

(1) Karl (Franzovich) Albrecht (*b* Posen [now Poznań], 27 Aug 1807; *d* Gatchina, nr St Petersburg, 24 Feb/8 March 1863). Conductor and composer. He began his musical career in Breslau, where from 1823 he studied harmony and counterpoint with Joseph Schnabel. From 1825 he played first violin in the Breslau theatre orchestra, and ten years later took up an appointment as répétiteur in Düsseldorf. At about this time he produced several compositions, including a ballet, *Der Berggeist* (in Russian, *Gorniy dukh*, 'The Spirit of the Mountains', 1825), a mass, three string quartets and a number of vocal pieces. After directing a travelling opera company, he decided to leave Germany and move to Russia, where he was engaged as conductor of the St Petersburg theatre orchestra in 1838. Subsequently he directed the German opera in St

Petersburg before becoming director of the Russian opera; there he conducted the first performance of Glinka's *Ruslan and Lyudmila* (1842). Three years later he composed another ballet score, *Dve tyotki* ('Two Aunts'). From 1850 he taught music and singing at the orphanage in Gatchina.

(2) **Konstantin Karl** [Karlovich] **Albrecht** (*b* Elberfeld, 4 Oct 1836; *d* Moscow, 14/26 June 1893). Teacher and administrator, son of (1) Karl Albrecht. From 1854 he was a cellist in the orchestra of the Moscow Bol'shoy Theatre. He was a close friend of Tchaikovsky, who dedicated his Serenade for Strings to him, and of Nikolay Rubinstein, whom he assisted both in the formation of the Russian Musical Society in 1860 and in the foundation of the Moscow Conservatory; there he was an inspector and taught singing and elementary theory (1866–89). He had an enthusiasm for choral music, and founded the Moscow Choral Society in 1878; he also produced a handbook on choral singing. Albrecht's transcriptions include music by Tchaikovsky and Bortnyansky, although he is most noted for a series of thematic catalogues of selected chamber music by Beethoven, Haydn, Mendelssohn, Mozart, Schubert and Schumann, as well as a thematic catalogue of Glinka's vocal and operatic music. (*EIT 1892–3 502–3*)

WRITINGS

Rudovodstvo k khorovomu peniyu po tsifernoy metode Sheve [A guide to choral singing, using Chevé's number system] (Moscow, 1866, 2/1885)

Tematicheskiy perechen' romansov, pesen i oper M.I. Glinki v khronologicheskom poryadke s oboznacheniyem metronoma[Thematic catalogue of Glinka's ballads, songs and operas in chronological order and with metronome markings] (Moscow, 1891)

(3) **Eugen Maria** [Yevgeny Karlovich] **Albrecht** (*b* St Petersburg, 4/16 July 1842; *d* St Petersburg, 28 Jan/9 Feb 1894). Instrumentalist, teacher and administrator, son of (1) Karl Albrecht. From 1857 to 1860 he studied at the Leipziger Konservatorium, where his principal teachers were Ferdinand David (violin), Moritz Hauptmann (composition) and Karl Brendel (history of music). He also studied briefly with Ignaz Moscheles, who was professor of piano at the Conservatory. In 1860 he was appointed violinist in the orchestra of the Italian Opera at St Petersburg and from 1862 to 1887 he played second violin in the quartet of the St Petersburg branch of the Russian Musical Society. He was well known as a music teacher, and taught several members of the imperial family; his elementary guides to violin and cello playing were published in 1871 and 1872 respectively. He helped to institute the St Petersburg Society for Quartet Music (1872), which was renamed the Society for Chamber Music (1878). He served as librarian of the Central Music Library from 1892, and as inspector of music in the St Petersburg theatres from 1877 until his death. Like his brother (2) Konstantin Karl Albrecht he was concerned with problems of music education; this is reflected in several of his writings, and his expertise in this area was officially recognized in 1872, when he was appointed to a committee set up to devise a system of teaching music in military academies. During his period of presidency of the St Petersburg Philharmonic Society (1881–6) he wrote an important survey of the activities of the society, detailing its history and its patronage of the leading Russian composers of the day. (*EIT 1893–4*, 447)

(4) **Ludwig (Karlovich) Albrecht** (*b* St Petersburg, 15/27 May 1844; *d* Saratov, 1899). Cellist, son of (1) Karl Albrecht. He studied the cello with Carl Schuberth and Karl Davïdov at the St Petersburg Conservatory. After graduating in 1865, he moved to Moscow, where he taught at the Conservatory (1878–89). He and his brother (3) Eugen Maria Albrecht were among the founder members of the St Petersburg Society for Chamber Music. He composed several cello pieces and wrote a two-volume cello tutor, *Shkola dlya violoncheli* (Moscow, 1872).

GEOFFREY NORRIS (with NIGEL YANDELL)

Albrecht, Alexander (*b* Arad, Romania, 12 Aug 1885; *d* Bratislava, 30 Aug 1958). Slovak composer, conductor and teacher. He acquired his early musical education from various teachers, including Karol Forstner, organist of the cathedral of St Martin, Bratislava. From 1895 to 1903 he studied at the Royal Catholic Gymnasium in Poszony (now Bratislava), becoming friends with Bartók and Ernő Dohnányi, with whom he took an active part in the musical life of the school and of the town. From 1904 to 1908 he attended the Liszt Academy of Music in Budapest, studying composition with Koessler, the piano with Thomán and then Bartók, conducting with Ferenc Szandtner and chamber music performance with Popper. During his studies Albrecht enjoyed considerable success as a pianist, though he later decided to devote his time fully to composition. From 1908 he was organist at the cathedral in Bratislava and a teacher at the municipal music school. In 1921 he was appointed conductor and director of the St Martin's Church Music Society. Within a couple of years the performing standard of this ensemble improved considerably; its repertory grew on account of Albrecht's desire to perform masterpieces from the classical choral tradition as well as contemporary works (they performed works by Reger and Albrecht and gave the first performance of Szymanowski's *Stabat mater*). In a similar manner, by working with a local orchestra, he studied the symphonic repertory. After the Church Music Society was dissolved in 1952, the same year in which the municipal music school also ceased to exist, Albrecht concentrated more on composition. However, even after his public teaching activities ended he remained in contact

with younger musicians, widening their artistic horizons and influencing composers such as Parík and Martinček.

Albrecht was one of the first representatives of a modern Slovak music. Before the 1930s his work was unparalleled in Slovakia; other modernist composers – among them Suchoň, Cikker and Moyzes – only rose to prominence during the 1930s. Until the 1940s, in fact, Albrecht was the only active Slovak composer whose music found recognition abroad. The decisive factor in Albrecht's compositional career was his ability to react swiftly to new developments. His wider European outlook manifested itself in his receptiveness towards a wide spectrum of stimuli. Having freed himself from an overbearing Romanticism, he combined elements of this language with contemporary trends and individual features of his own. This resulted in a unique musical vocabulary that was progressive for its place and time.

Albrecht's early works (up to 1925) were based on the German Romantic tradition, above all on Brahms, but already betrayed the impact of contemporary influences, including Reger and elements of Impressionism and Expressionism. The Classical structure of these compositions was counterbalanced by chromatic alterations, rich counterpoint and adventurous harmonies. His works, even on a small scale, reveal a highly individual compositional technique based fundamentally on thematic development and variation. While chamber music is a key area of his early output, the development of his musical language in its broadest sense can best be traced in his extensive song legacy which, while close in some respects to the Romantic style of Schubert and Schumann, employs more progressive harmonic sequences, verging at times on atonality, as in *Rosenzeit* and *A Szépség himnusza – Hymne an die Schönheit*.

Works from the period 1925–45 are more contrapuntal and contain daring harmony (e.g. augmented 4ths, or oscillations of 7th and 9th chords over a sustained bass). At times they tend towards atonality and a new sense of realism, as in the Sonatina for 11 instruments (1925), the symphonic poem *Tobias Wunderlich* (1935) and the Trio for two violins and viola (1943). After 1946 Albrecht simplified his musical language, incorporating, at first, elements of neo-classicism and folklore; traces of Slovak folk music can be heard in the cantata *Šuhajko* ('Young Man', 1950) and the Concerto Suite for viola and piano (1952). During his later years he also transcribed and revised earlier compositions and wrote a number of pedagogical works.

A learned man in most subjects, Albrecht admired and respected popular achievements in both science and art (his interest in natural history, in particular, acted as a permanent source of inspiration). His numerous writings, published in the daily press and broadcast on radio, offer a valuable insight into his composition and aesthetic principles.

ASTRID RAJTEROVÁ

Albrecht [Albright], **Charles** (*b* Germany, 1759/60; *d* Montgomery, PA, 28 June 1848). American piano maker of German birth. He was active in Philadelphia as a piano maker by the 1790s, probably arriving there on the ship *Hamburgh* in October 1785. (His marriage to Maria Fuchs is listed in the records of St Michael's and Zion's Lutheran Church, Philadelphia, for 17 June 1787; they had no children.) His name appears in tax records, census entries and city directories from 1788 until his death in 1848. First described as a 'joiner', he is listed in newspapers and real estate documents as 'Musical Instrument Maker' at the address of 95 Vine Street from 1791 to at least 1824, when he retired from piano making but continued to purchase property in Philadelphia and the surrounding counties. Albrecht made some of the earliest surviving American square pianos, over 20 of which are still extant (four are at the Smithsonian Institution, Washington, DC; the date of 1789 on the nameboard of the square piano at the Historical Society of Pennsylvania, Philadelphia, is doubtful). All have handsome cabinet work and a range of from five to five and a half octaves (*F'* to *c''''*), with knee levers or hand stops or one pedal. Most are fitted with English single action, several have German *Prellmechanik*, while the later examples (dated 1812 and 1814 inside, under the keyframe) have English double action. While inscriptions inside some instruments indicate the collaboration of Joshua Baker or Albrecht's nephew Charles Deal, no evidence of a relationship between Charles Albrecht, C.F.L. Albrecht and Albrecht & Co. has been established.

CYNTHIA ADAMS HOOVER

Albrecht, Christian Frederick Ludwig (*b* Hanover, 6 Jan 1788; *d* Philadelphia, March 1843). American piano

maker of German birth. He emigrated to the USA, arriving in Philadelphia on 17 October 1822, and from 1823 to 1824 ran a business there at 106 St John Street; from 1830 to 1843 his address was 144 South 3rd Street. On his death his small business was bequeathed to his wife Maria. His pianos exhibit excellent craftsmanship; pianos by him (one upright and one square) at the Smithsonian Institution, Washington, DC, are in empire style and have six octaves. No relationship between Christian Albrecht, Charles Albrecht and Albrecht & Co. has yet been established.

CYNTHIA ADAMS HOOVER

Albrecht, Georg von (*b* Kasan, Russia [now Uzbekistan], 7/19 March 1891; *d* Heidelberg, 15 March 1976). German composer of Russian birth. His composition teachers included Heinrich Lang (Stuttgart, 1911–13), Aleksandr Taneyev (Moscow, 1914–15), Glazunov (Petrograd [St Petersburg], 1918), Vitols (Petrograd, 1918) and Ewald Strässer (Stuttgart, 1922). He taught at the Moscow Musiktechnikum, the Stuttgart Conservatory (where he also served as vice-director) and the Heidelberg Musikhochschule, among others. His many honours include the Glinka Prize of the Belyayev Foundation, Bonn (1962), the Stamitz Prize of the Künstlergilde, Esslingen (1966), and a posthumous Russian-German Cultural Prize, awarded jointly with his son (1991).

Inspired by the music of other cultures, Albrecht's *Liturgie des Johannes Chrysostomus* (1924–6) reveals Byzantine and ancient Greek elements. Hebrew folklore is found in his *Das Lied der Lieder* (1964) and Gregorian influences are audible in the Mass (1968–9), Requiem (1974), *Te Deum* (1975) and *Der Sonnengesang des heiligen Franziskus* (1976). Pentatonic melodies forge additional connections with Asian musics, and Russian and Lithuanian influences combine an Eastern European musical sensitivity with Western European formal structures. Folk material manifests itself most explicitly in his many short piano pieces.

Albrecht experimented early with polytonality, polyrhythms, musical polarity and mirror symmetry. By the time he met Skryabin and Rebikov, and acted as music critic for the *Donaueschinger Musiktage*, he had already adopted many of the innovations of modern musical organization. His 24 Préludes for piano, op.42 (1934) and op.61 (1959) use the overtone and so-called 'undertone' series as if they were natural major and minor scales. 12-note techniques are employed with logical consistency in some of the later works, acquiring a remarkable melodic fluidity. Albrecht's book *Vom Volkslied zur Zwölftontechnik* (Frankfurt, 1984) provides insights into the composer's personal theory of music and into early 20th-century music history more generally.

WORKS
(selective list)

Edition: *Gesamtausgabe: Quellen und Studien zur Musikgeschichte*, ed. M. von Albrecht and others (Frankfurt, 1984–91), 11 vols. [A]

STAGE

Ritter Olaf (miniature op, 4 scenes, L. Nikulin, after H. Heine), op.14, 1920; Das Vaterunser (op), op.50, 1938–40; Der Teufel mit den drei goldenen Haaren (fairy tale, after J.L.C. and W.C. Grimm), op.48b, 1941–2

INSTRUMENTAL

Orch: Vorspiel zu einer ernsten Feier, op.15, 1921–3; Präludium, Tempestoso und Fuge, op.37, 1932–3; Vn Conc., op.60, 1956–8; several works for chbr orch

Chbr: Str Qt, op.31, 1926–7; Pf Trio, op.32, 1928; Sonata, op.33, vn, pf, 1929; Sonata, E♭, vn, 1945; Str Qt, op.52, 1947; Präludium und Fuge, op.59, fl, pf, 1952; Sonata, op.56, vn, 1955–6; Metamorphosen einer Zwölftonreihe, op.63, vn, 1962; Wind Qnt, op.74, 1967; Str Trio, op.79, 1970; Sonata, op.82, va, pf, 1972

Kbd: Spiel der Widerspiegelungen, op.7, pf, 1914; Pf Sonata no.1, op.34, 1929; Pentatonische und polytonale polyphone Studien, op.36, pf, 1931; 5 gregorianische Choralmelodien, op.28b, org, 1933; Préludes, op.42, pf, 1934; Pf Sonata no.2, op.53, 1944; Préludes, op.61, pf, 1959; Passacaglia und Tripelfuge, op.71, org, 1964; Pf Sonata no.3, op.72, 1964; Pf Sonata no.4, op.80, 1971

VOCAL

Choral: Liturgie des Johannes Chrysostomus, op.29, 1924–6; Das Vaterunser, op.50, 1938, rev. 1976; Das Lied der Lieder, op.70, 1964; Psalmen-Motette, op.77a, 1968; Mass, op.77, 1968–9; Requiem, op.84, 1974; Te Deum, op.85, 1975; Der Sonnengesang des heiligen Franziskus, op.86, 1976

Numerous songs (R. Tagore, J.W. von Goethe, G.E. Lessing, Horace, M.Y. Lermontov, A.S. Pushkin, G. von der Vring), 1v, pf

ELLIOTT ANTOKOLETZ

Albrecht, Gerd (*b* Essen, 19 July 1935). German conductor, son of Hans Albrecht. He studied conducting under Brückner-Rüggeberg at the Hamburg Musikhochschule (1955–8), and musicology at the universities of Kiel and Hamburg. He won the international conductors' competitions at Besançon (1957) and Hilversum (1958) and was principal conductor at the Mainz Stadttheater (1961–3). Albrecht was Generalmusikdirektor at Lübeck (1963–6) and Kassel (1966–72), and principal conductor at the Deutsche Oper, Berlin (1972–9). He was director of the Zürich Tonhalle from 1975 to 1980, and was appointed Generalmusikdirektor in Hamburg in 1988 and music director of the Czech PO in 1994. He has also appeared as a guest conductor with most leading European orchestras, including the Berlin PO and the Orchestre de Paris, and as an operatic conductor in Vienna, Munich, Edinburgh (where he made his début in 1983), London, Copenhagen, San Francisco and Buenos Aires. His repertory ranges from Classical to contemporary works, and he has conducted numerous premières, including Henze's *Telemanniana* (1967) and *Barcarola* (1980), Fortner's *Elisabeth Tudor* (1972), Reimann's *Lear* (1978)

and *Troades* (1986), Schnittke's *Historia von D. Johann Fausten* (1995) and Zemlinsky's *König Kandaules* (1996). Albrecht's many recordings include Dvořák's *Dimitrij*, Schumann's *Das Paradies und die Peri* and the first recordings of *Lear* and Schreker's *Der Schatzgräber*. He has written *Wie eine Opernaufführung zustande kommt* (Zürich, 1988).

RUDOLF LÜCK/R

Albrecht, Hans (*b* Magdeburg, 31 March 1902; *d* Kiel, 20 Jan 1961). German musicologist. He studied at the Essen Conservatory (1913–21), at the University of Münster and (1921–5) at Berlin with Wolf, Abert, Sachs and von Hornbostel. From 1925 to 1937 he held various teaching posts, organized music festivals in Bremen (1929), Essen (1931) and Aachen (1933), and was active in the Reichsverband Deutscher Tonkünstler und Musiklehrer. After a short period as choral adviser to the Reichsministerium für Volksaufklärung und Propaganda, he joined the Staatliche Institut für Deutsche Musikforschung, Berlin, in 1939, becoming professor there in 1940 and director in 1941. In 1942 he was elected a member of the Senate of the Preussische Akademie der Künste, representing on that body the interests of musicology.

After the war he became director of the Landesinstitut für Musikforschung, Kiel, in 1947, where he remained until his death, becoming professor at the University of Kiel in 1955. He also held the posts of director of the Johann-Sebastian-Bach-Institut, Göttingen (1951–61), and of the Deutsches Musikgeschichtliches Archiv, Kassel (1954–9). In addition he was editor of the periodicals *Die Musikforschung* (1948–60) and *Acta musicologica* (1957–60), and of the series Documenta Musicologica (1951–60), Das Erbe Deutscher Musik (1953–9) and Organum (1950–58).

ERIC BLOM/MALCOLM TURNER

Albrecht, Johann Lorenz (*b* Görmar, nr Mühlhausen, 8 Jan 1732; *d* Mühlhausen, 1773). German writer on music and composer. He was a *magister* of philosophy, an honorary member of the German Society of Altdorf University, and an imperial poet laureate. His writings include an original work on theory, contributions to the current discussions of Rameau's theories which he favoured, and translations and editions of works of others. In addition, he published an important article on the state of music in Mühlhausen, two in defence of music in the church, and one on the German language. His compositions, consisting largely of sacred vocal works to his own texts, were mostly written for the Marienkirche in Mühlhausen, where he was Kantor and music director. They include a setting of the Passion and a yearly cycle of cantatas (texts published in 1764), as well as two published collections of keyboard and vocal pieces intended for students. Only a sacred song *Herr Gott, dich loben wir* (Berlin, 1768) and the cantata *O Traurigkeit, O Herzeleid* (manuscript in *B–Bc*) are extant.

WRITINGS

HOWARD SERWER

Albrecht, Otto E(dwin) (*b* Philadelphia, 8 July 1899; *d* Philadelphia, 6 July 1984). American musicologist and music librarian. He studied Romance languages and literature at the University of Pennsylvania, where he received the BA in 1921, the MA in 1925 and the PhD in 1931, and at the University of Copenhagen from 1922 to 1923. He taught both French and music at the University of Pennsylvania from 1923 until 1970, when he retired as emeritus professor of music. From 1937 he was curator of the university library, which was renamed the Otto E. Albrecht Music Library on his retirement. He also held several government positions, serving on the Intergovernmental Committee on Refugees for Bavaria (1945–6), as chief of the publications section for the United States Military Government in Hesse (1947) and in Russia as specialist in musicology for the Department of State (1961).

Albrecht's historical interests included music in America to 1860 and lieder. He also compiled several important bibliographies, including *A Census of Autograph Music Manuscripts*, an indispensable guide to European manuscripts in the United States, and the catalogue and descriptions of the Mary Flagler Cary Music Collection of the Pierpont Morgan Library, New York. He twice served as vice-president of the Music Library Association, and from 1954 to 1970 he was treasurer of the AMS. In 1971 he was elected an honorary fellow of the Pierpont Morgan Library. A Festschrift in his honour was published in 1980 (*Studies in Musicology in Honor of Otto E. Albrecht*, ed. J.W. Hill, Kassel, 1980).

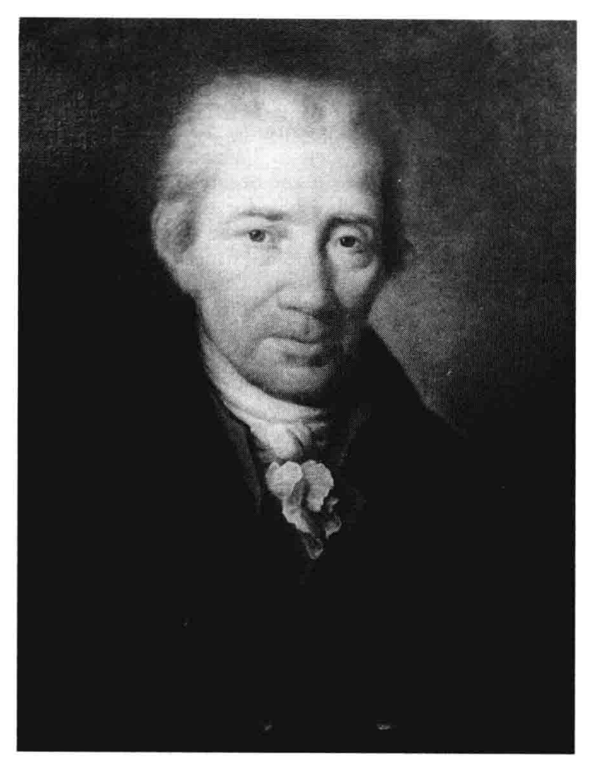
PAULA MORGAN

Albrecht & Co. American firm of piano makers. Charles Albright (Albrecht by 1864) is listed in Philadelphia city directories from 1863. He was in partnership with Frederick Riekes (as Albrecht & Riekes, 1864–5), with Riekes and Richard T. Schmidt (as Albrecht, Riekes & Schmidt, 1866–74), and with Riekes and Edmund Wolsieffer (as Albrecht & Co., 1875–86). From 1887 to 1916 the firm was owned by Blasius & Sons, which in turn was owned by Rice-Wuerst & Co., a manufacturer based in Woodbury, New Jersey, from around 1916; Albrecht pianos were listed by Rice-Wuerst until 1920. Although some advertisements for Albrecht & Co. stated that the firm was established in 1789, there is no evidence to support this claim; no relationship between Albrecht & Co., Charles Albrecht and Christian Albrecht, all piano makers active in Philadelphia, has been established.



CYNTHIA ADAMS HOOVER

Albrechtsberger, Johann Georg (*b* Klosterneuburg, nr Vienna, 3 Feb 1736; *d* Vienna, 7 March 1809). Austrian composer, teacher, theorist and organist. From the age of seven he served as a choirboy for the Augustinians in Klosterneuburg, where he learnt the organ and figured bass from the dean, Leopold Pittner. His studies in composition under G.M. Monn (if accurately reported by Albrechtsberger's pupil Johann Fuss) must have taken place during this period. As a student and choirboy at Melk Abbey from 1749 until 1754, he received a thorough training in composition and organ from Marian Gurtler, the *regens chori*, and Joseph Weiss, the abbey's organist. After a year of study at the Jesuit seminary in Vienna he worked as an organist in various provincial localities: Raab (now Győr, Hungary), 1755–7; Maria Taferl, near Melk, 1757–9; and Melk Abbey, 1759–65, where he succeeded his former teacher Weiss. His precise place of employment in 1766 remains unknown, but Melk sources indicate that he left the abbey voluntarily in November 1765 to join his brother Anton in the service of a Baron Neissen in Silesia (perhaps at what is now Nysa, Poland).

Albrechtsberger's activities can be traced from his parents' home in Ebersdorf (near Melk) in 1767 to Vienna, where he married in May the following year. From 1772 he served both as *regens chori* for the church of the Carmelites (later known as St Joseph's) and as organist in the imperial court orchestra. In addition he was appointed assistant to the Kapellmeister Leopold Hofmann at the Stephansdom in 1791, a position arranged for him by his friend and predecessor Mozart. All of these duties were set aside when he became Kapellmeister following Hofmann's death in 1793. He retained this post – the highest in the empire for a church musician – for the remainder of his life.

Albrechtsberger was a prolific composer of some 284 church compositions, 278 keyboard works and over 193 works for other instruments. His most interesting and original music was composed during his years as a provincial organist before settling permanently in Vienna. He cultivated a modern, homophonic idiom in the instrumental works of this period and used unusual instrumentation with special effects such as scordatura and slow movements marked 'con sordino'. The church music is more contrapuntal in conception and occasionally experimental in its treatment of the voices (e.g. alternating solo quartet and chorus, and the use of recitative). Some of his best vocal music is in the early oratorios, several of which belong to the Austrian tradition of Easter *sepolcro*. At Melk he was considered 'a most commendable artist in this genre', although there seems to have been no occasion for him to write oratorios after 1781.

After his imperial appointment in 1772 he became increasingly preoccupied with the composition of fugues – over 240 for instruments in addition to numerous examples in the sacred music. His two-movement *sonate* (slow homophonic, fast fugal), of which he wrote over 120 for various instrumental combinations after 1780, developed out of the Baroque church sonata but were intended for chamber rather than church performance. They had little influence on the already mature sonata form. His approach to Viennese church composition tended, as Weissenbäck noted, towards formal sectional-

Johann Georg Albrechtsberger: portrait by an unknown artist (Gesellschaft der Musikfreunde, Vienna)

ization or polarization of homophonic and polyphonic textures. In spite of their technical refinements, these late works seem less imaginative than those of his earlier years.

Eye-witness accounts by critics such as Maximilian Stadler, Burney, Nicolai and Pasterwitz leave little doubt that Albrechtsberger was an extraordinarily talented organist. Mozart, the most reliable judge of all, considered his playing the standard by which other organists were to be measured (letter to Constanze, 16 April 1789). Towards the end of his life he was recognized as 'perhaps the greatest organist in the world'.

Nevertheless it was through his teachings and theoretical writings that Albrechtsberger exerted the strongest influence on his contemporaries and succeeding generations of composers. He began attracting students as early as 1757 (Franz Schneider), and by the time of his death he was the most sought-after pedagogue in Europe. Haydn regarded him as 'the best teacher of composition among all present-day Viennese masters' and unhesitatingly sent Beethoven to him for instruction (1794–5). The fugues of Beethoven's last years, particularly op.133, owe much to his teachings. His international reputation as a theorist rested on his extremely popular treatises on composition (1790) and figured bass (*c*1791). In place of innovatory theoretical concepts these works contained a skilful combination of elements borrowed primarily from Fux and Marpurg. His principal achievement in this area was to formulate 18th-century theory in a language and format which were practical and suitable to the needs of contemporary instruction.

As a champion of the contrapuntal tradition Albrechtsberger occupied a unique position among composers of the Viennese Classical school. His intensive study of polyphonic writing – as shown by music examples in his theoretical works, and by his copies and arrangements – extended from Palestrina to Mozart (K228/515*b*). He copied most of the fugues in Bach's '48' and collected canons by other north German Protestant composers (Mattheson, C.P.E. Bach, Kirnberger, Marpurg and C.F.C. Fasch). By perpetuating this tradition into the second half of the 18th century, he helped to create the atmosphere in which Baroque polyphony and mid-century homophony fused to form mature Classicism. Unfortunately his own music remained largely unaffected by this stylistic synthesis.

ROBERT N. FREEMAN

Albrici, Bartolomeo (*b* ?Rome, c1640; *d* ?London, after 1687). Italian keyboard player and composer, brother of Vincenzo Albrici. He is listed in January 1650 as a soprano at the Cappella Giulia of S Pietro, Rome. The same list includes his uncle Alessandro Costantini, an organist. Still as a boy soprano Bartolomeo travelled with his father and brother to Lombardy, then to Germany, Flanders and Sweden. All three were employed, with 13 other Italian musicians, at the Swedish court of Queen Christina from 30 November 1652 to 1 March 1653; some stayed on until the queen's abdication in 1654. From August 1655 to early 1656 Bartolomeo served as court musician in Stuttgart, and from September 1656 he appears in Dresden court documents as an organist in Prince Johann Georg II's musical ensemble. He was also active as a composer in Dresden; court diaries report that he contributed masses and psalm settings to the repertoire of the court chapel. He left Dresden with his brother Vincenzo in August 1663. By 1666 at the latest he was in London, where he worked at the court of Charles II and then in the chapel of James II. He became well known in London as a performer and teacher of the harpsichord. Two of his pieces were printed in the *Scelta di canzonette italiane de piu autori* (London, 1679).

GLORIA ROSE/MARY E. FRANDSEN

Albrici [Alberici], **Vincenzo** (*b* Rome, 26 June 1631; *d* Prague, 8 Aug 1690 or 1696). Italian composer and organist, brother of Bartolomeo Albrici. He was born into a musical family that originated in Senigallia, in the

province of Ancona. His uncles Fabio and Alessandro Costantini were composers, and his father Domenico Albrici was an alto singer who settled in Rome. Vincenzo entered the Collegio Germanico, Rome, on 12 May 1641, where he seems to have remained for five years, receiving payments as an organist there throughout most of 1646. His whereabouts from the end of 1646 until late in 1652 are uncertain: he may have become *maestro di cappella* of the Chiesa Nuova in 1647, at age 16, but Pitoni put this appointment more than a decade later. In November 1652 Albrici arrived in Stockholm as the assistant director of Queen Christina's troupe of Italian musicians and actors, whose members included his father and brother Bartolomeo. All three left Sweden on Christina's abdication in June 1654. Vincenzo and Bartolomeo may have spent some time during the period 1654–5 at the Wittelsbach court in Neuburg, but were certainly at the Stuttgart court for some months between 1655 and 1656; their father returned to Italy. The two brothers probably arrived in Dresden sometime in 1656; a roster of Dresden court musicians from September 1656 includes the first specific reference to both men at the electoral court. An undated contract seen by Fürstenau, now lost, was probably Albrici's first contract as Kapellmeister to the new elector Johann Georg II in 1656; it stipulated that Albrici was responsible for all of the music at court, unless Schütz or Bontempi was specifically asked to serve.

Albrici may have left the court briefly in 1658 to join Queen Christina in Rome. He had returned to Dresden by 6 January 1659, when he directed the music in the castle chapel, but he travelled to Frankfurt again in June of that year. He seems to have been in Christina's retinue one last time in autumn 1660, when she attended the funeral of her cousin King Karl X on 7 November. He was back in Dresden in December, sharing responsibilities with Bontempi for the music in the court chapel from 23 December 1660 to 6 January 1661. In August 1661 he travelled to Hamburg, but returned before the end of September. Throughout 1662, Albrici composed most of the music performed in the court chapel on Sundays, feast days and special occasions. He clearly enjoyed special status as a favourite of the elector, who in February 1662 stood as godfather to Albrici's infant son, also named Johann Georg.

In August 1663 both Vincenzo and his brother received court passes enabling them to travel to England, where they joined their sister Leonora in the court musical establishment of Charles II. In February 1667 Samuel Pepys heard music directed by Albrici at Lord Bruckner's. Albrici left the English court in 1668 and his name reappears in Dresden documents in April 1669, when he directed the *Tafelmusik* at the banquet following Johann Georg's investiture into the English Order of the Garter. Court records for 1670 make few references to musicians, and none to Albrici. However, there is ample documentation of his service during the early 1670s, including Johann Kuhnau's report, while studying in Dresden, that Albrici had praised his compositions and allowed him to attend rehearsals of the court musical ensemble. He served as Maestro di cappella at the Oratorio dei Filippini in Rome from 8 October 1673 until October or November 1675. A court diary reports that on 3 September 1676 'the new Kapellmeister Vincenzo Albrici directed the music for the first time' in the chapel, having returned to the service of Johann Georg II for the last time.

Upon the death of Johann Georg II in 1680, the new elector Johann Georg III dismissed all the Italian musicians. Albrici left Dresden for the last time early in 1681 to become organist of the Leipzig Thomaskirche, where he converted to Lutheranism; he converted back to Catholicism the following year, when he left Leipzig to assume the post of organist at an Augustinian church in Prague, where he remained until his death.

Judging from the number of works mentioned in Dresden court documents, less than one third of Albrici's compositional output has survived. These are mainly sacred concertos, along with a few settings of psalms and liturgical texts, all of which illustrate the sweeping stylistic changes that Albrici and his Italian colleagues effected at the Dresden court. His sacred concertos show a close relationship to the Roman motet of the mid-17th century, as represented by the works of Carissimi and Graziani. The majority of Albrici's concertos are composite in nature, with sections in concertato, arioso and aria style, crafted from texts that include biblical quotations, free prose and strophic poetry. This expansion of the stylistic boundaries of the sacred concerto, particularly with the aria, is common to the works of both Albrici and Marco Gioseppe Peranda, as well as to those of Roman-schooled German composers such as Johann Caspar Kerll and Kaspar Förster. The works of Albrici and Peranda exerted a strong influence upon the German composers of the Dresden and Stockholm circles; from the mid-1660s onwards, David Pohle, Christoph Bernhard, Christian Geist and Constantin Christian Dedekind included arias in their concertos. Albrici in turn felt the influence of the contemporary German musical practices that he encountered in Dresden, as evidenced by his incorporation of instrumental sinfonias and ritornellos in most works, which seldom appear in the works of his Roman forebears. In contrast to the works of his mentor Carissimi and his predecessor Heinrich Schütz, all of Albrici's compositions stand as examples of early tonal harmony.

Albrici appears to have been the first to compose concertos with aria (or concerto-aria cantatas), long thought to be German in origin; court documents cite performances of his concertos with aria as early as 1660. Fully one third of his extant works fall into this form. Some of his concertos with aria represent the simplest manifestation of the form, and comprise only an aria framed by two presentations of a concerto. Others involve additional statements of the concerto between strophes of the aria, and at times also include passages in arioso style. These latter passages, which are dramatic in nature, probably occasioned Bernhard's inclusion of Albrici as an exponent of the *stylus theatralis* in his *Tractatus compositionis augmentatus*.

MARY FRANDSEN

Albright, Charles. *See* ALBRECHT, CHARLES.

Albright, William (Hugh) (*b* Gary, IN, 20 Oct 1944; *d* Ann Arbor, MI, 17 Sept 1998). American composer, organist and pianist. He attended the Juilliard Preparatory Department (1959–62), the University of Michigan (1963–70) and the Paris Conservatoire (1968–9), studying composition with Ross Lee Finney, George Rochberg and Olivier Messiaen, and the organ with Marilyn Mason. His many commissions and honours included two awards from the Koussevitzky Foundation, the Queen Marie-José Prize (for his *Organbook I*) and an award from the American Academy of Arts and Letters. In 1979 he was selected to represent the USA in UNESCO's International Rostrum of Composers. He joined the composition department at the University of Michigan in 1970, where, as associate director of the electronic music studio, he pursued research into live and electronic modification of acoustic instruments. Through his own modern rag compositions and his performances and recordings of classical ragtime, stride piano and boogie-woogie, which include a recording of the complete works of Scott Joplin, Albright was a principal figure in the revival of interest in ragtime and stride masters. He gave many first performances of organ and piano works by American and European composers and commissioned a series of organ works that has substantially enriched the contemporary repertory for that instrument.

Although Albright's early organ works reflect the influence of Messiaen in their colourful registration and chromaticism, his later works, in a variety of mediums, combine a complex rhythmic and atonal style with elements of American popular and non-Western music. Albright's compositional philosophy stresses the value of music as communication and the supremacy of intuition, imagination and beauty of sound. Much of his music displays exuberant humour and a fresh improvisatory spirit. A section of *Organbook III* (1977–8) briefly evokes 'a wandering improvisation by an inebriated Sunday School organist'; *The King of Instruments* (1978) affectionately parodies the composer's own world of the pipe organ, with admonitions to the organist to add 'the funniest sounding stop', to perform 'in Chicago Blues style', and, with samba rhythms, to 'keep repeating ad nauseam'. *Seven Deadly Sins* (1974) subtly satirizes contemporary musical styles and concludes with a *grand galop* finale. Albright's seeming spontaneity and his shifts from Romantic ebullience to nostalgic lyricism are held firmly in balance by rigorous formal concision and control. In the virtuoso *Five Chromatic Dances* for piano (1976), for example, opening pitches outline the tonal centres and harmonic direction for a large-scale structure filled with contrasting textures, colours and moods. His concern for the spiritual resulted in such works as the *Chichester Mass* (1974), commissioned for the 900th anniversary of Chichester Cathedral, the oratorio *A Song to David* (1983), *Sphaera* (1985), commissioned by MIT, and *Chasm*(1989), written for the American Composers Orchestra.

WORKS

DRAMATIC

Alliance, 3 pts, orch, 1967–70; Beulahland Rag, nar, jazz qt, improvisation ens, tape, film, slide projections, 1967–9; Tic, soloist, 2 ens, tape, film, 1967; Seven Deadly Sins (after C. Marlowe and W. Dunbar), opt. nar, 7 players, 1974; Cross of Gold, chorus, insts, actors, 1975; Full Moon in March (incid music, W.B. Yeats), 1978; The Magic City (op, G. Garrett), 1978, inc.

VOCAL

An Alleluia Super-Round, 8 or more vv, 1973; Chichester Mass, chorus, 1974; Mass, D, chorus, congregation, org, perc, 1974; 6 New Hymns, unison vv, kbd, 1974–83; Pax in terra, A, T, chorus, 1981; David's Songs (Pss cxlix, cxvi, cxxxvii), (S, A, T, B)/SATB, 1982; A Song to David (C. Smart), solo vv, 2 choruses, org, 1983; Take up the Song (E. St Vincent Millay), S, SATB, pf, 1986; Antigone's Reply (Sophocles), S, Bar, SATB, pf, 1987; Deum de Deo, SATB, org/pf, 1988; 6 More New Hymns, SATB, pf/org, 1990; Dona nobis pacem, SATB, pf, 1992; Missa brevis, S, org, 1996

INSTRUMENTAL

Orch: Foils, wind, perc, 1963–4; Night Procession, chbr orch, 1972; Gothic Suite, str, org, perc, 1973; Heater, a sax, band, 1977; Bacchanal, org, orch, 1981; Chasm (Sym. Frag.), orch, 1989; Conc., hpd, str, 1991

Chbr and solo: Frescos, ww qt, 1964; 2 Pieces, 9 insts, 1965–6; Caroms, 8 players, 1966; Marginal Worlds, 12 players, 1969–70; Danse macabre, fl, cl, vn, vc, pf, 1971; Take That, 4 perc, 1972; Introduction, Passacaglia and Rondo capriccioso, tack pf, wind, perc; Doo-dah, 3 a sax, 1975; Jericho, tpt, org, 1976; Peace Pipe, 2 bn, 1976; Saints Preserve Us, cl, 1976; Shadows, gui, 1977; Romance, hn, org, 1981; The Enigma Syncopations, fl, db, org, perc, 1982; Brass Tacks, ragtime march, brass qt, 1983; Canon, D, db, hpd, 1984; Sonata, a sax, pf, 1984; Qnt, cl, str qt, 1987; Abiding Passions, ww qnt, 1988; Valley of Fire, sax qt, org, 1989; The Great Amen, fl, pf, 1992; Pit Band, a sax, b cl, pf, 1993; Rustles of Spring, 1994, fl, a sax/cl, vn, vc, pf, 1994; Fantasy Etudes, sax qt, 1995

KEYBOARD

Org: Juba, 1965; Pneuma, 1966; Organbook I, 1967; Organbook II, org, tape, 1971; Stipendium peccati, org, pf, perc, 1973; Dream and Dance, org, perc, 1974; Organbook III, 1977–8; De spiritum, org, 2 pfmrs, 1978; Halo, org, metal insts, 1978; The King of Instruments (E. Haun, W. Albright), nar, org, 1978; That Sinking Feeling, 1982; In memoriam, 1983; 1732: In memoriam Johannes Albrecht, 1984; Chasm, org, opt. echo inst, 1985; Sym. org, 1986; Flights of Fancy (ballet), org, 1992; Cod Piece, org, 1996; Bells in the Air, carillon, 1996; Chorale Prelude 'Nun Komm der Heiden Heiland', org, 1997

Other (pf, unless otherwise stated): Pianoàgogo, 1965–6; 3 Original Rags, 1967–8; Grand Sonata in Rag, 1968; 3 Novelty Rags, 1968; The Dream Rags, 1970; Sweet Sixteenths, 1975; 5 Chromatic Dances, 1976; 4 Fancies, hpd, 1978; Sphaera, pf, 2/4-track tape, 1985; 3 New Chestnuts, hpd, 1986; 4 Dance Tributes, 1987–96; The Machine Age, 1988; New Leaves, 1991

Principal publishers: Peters, Elkan-Vogel, Jobert, Marks

DON C. GILLESPIE

Album. The term was first applied to a colection of 78 r.p.m. discs used to record a long work, such as a symphony, that would not fit onto a single disc; these collections were presented in a format resembling a family album, although containing sleeves for discs rather than pages for photographs. The term was later adopted for long-playing records of over 30 minutes of music, and later again also denoted the aesthetic qualitites of the music contained within. In the mid-1960s albums were often a collection of songs organized around one central theme; thus artists such as the Small Faces, the Mothers of Invention, the Moody Blues, the Who and the Beatles were described as making 'concept' albums. These consisted of a selection of songs either unified by one pivotal idea, for example the work of the Moody Blues, which centred around eastern mysticism and spirituality, or built around a narrative sequence, as in the cases of the Who's *Tommy* and Genesis' *The Lamb Lies Down on Broadway*. Album-based music invited admiration for its technical excellence and studio craft. The album as a portfolio or representative selection of work is shown in the popularity of 'Best Of' and 'Greatest Hits' compilations. Certain big-selling acts such as Pink Floyd and Led Zeppelin, who seldom, or never, released single material, were thought of as 'album artists', and the late 1960s saw the rise of progressive rock labels such as Deram, Harvest, Virgin and Charisma, which depended predominantly on album sales for their success. The importance of cover art work and packaging to this market is shown by Hipgnosis' designs for Pink Floyd.

Album-Oriented Rock (AOR) was used as a marketing term by the industry to describe American stadium acts such as the Eagles, Toto, Foreigner and Styx, who made music designed to cater for those in their 20s and 30s. This music became the staple of American FM radio in the 1970s and was one of the standards new wave artists were to react against later in the decade. With the rise of the compact disc in the early 1980s the term album was often used interchangeably with CD. Musicians would record a 'new album', even if the resulting phonograph was almost exclusively disseminated via the media of the compact disc. The album remains the most lucrative format within the music business, as record labels target those over 25, whose spending power ensures a high demand for both old products in the form of reissues and new.

DAVID BUCKLEY

Albumleaf (Ger. *Albumblatt*; Fr. *feuille d'album*). A composition originally written in the album of a friend or patron and usually dedicated to him or her. The style was therefore simple and the dimensions slight. Examples are Schubert's Albumblatt in G, D844, written for Anna Hönig, and Liszt's Adagio in C, based on a theme from his *Après une lecture du Dante* (*Années de pèlerinage*, book 2) and written into the album of an unidentified female acquaintance in 1841. But the form of the albumleaf was undefined, and in time its original purpose was lost sight of: substantial pieces such as Beethoven's *Für Elise* were dedicated to friends but no longer written in albums. During the 19th century 'albumleaf' became merely a convenient title among many others. Sometimes series of such pieces were published as albums: Schumann, besides his Albumblätter, op.124, composed an *Album für die Jugend*, op.68, Tchaikovsky an *Album pour les enfants*, op.39, consisting of 24 pieces, and Anton Rubinstein two separate albums of 12 and 6 pieces respectively. Over the course of time such a piece was simply called 'Blatt'; thus Schumann's well-known *Bunte*

Blätter, op.99, Reger's *Löse Blätter* op.13 and *Bunte Blätter* op.36 lack the prefix 'Album'.

Other albumleaves are by Busoni (Drei Albumblätter, 1917–21, entitled 'Zürich', 'Rome', 'Berlin'), Dvořák (three albumleaves, 1880, and Albumleaf in E♭, 1888), Grieg (Albumblade op.28 and Albumblatt op.47 no.2) Liszt (Albumblatt in E, *c*1841), Chopin (Albumblatt in E, 1843), Mendelssohn (op.117 in E minor, also entitled 'Lied ohne Worte'), Poulenc (*Feuillets d'album*, 1933) and Saint-Saëns (op.169). There is an Albumblatt in D, op.19 no.3, by Tchaikovsky and an albumleaf called 'Méditation' by Musorgsky (1880). Wagner wrote several such pieces, and his one-movement Album Sonata for Mathilde Wesendonck is his most ambitious keyboard work. At first albumleaves were composed exclusively for piano solo, but Beethoven's 'Ich denke dein' WoO74 is a song with variations and with accompaniment for piano duet; it was written in an album belonging to Josephine Deym and her sister Therese von Brunsvik. Wagner composed an Albumblatt for violin and piano, and Saint-Saëns (op.81) and Florent Schmitt (*Feuillets de voyage* op.26) wrote similar pieces for piano duet.

MAURICE J.E. BROWN/KENNETH L. HAMILTON

Albuquerque, Armando (Amorim de) (*b* Porto Alegre, 26 June 1901; *d* Porto Alegre, 16 March 1986). Brazilian composer. Largerly self-taught as a composer, he studied the violin at the Instituto de Belas Artes, Porto Alegre, graduating in 1923. Except for brief visits to São Paulo and Rio de Janeiro early in his career, he lived all his life in his native city, where he was active as a producer at Rádio da Universidade and as a professor of composition, harmony and counterpoint at the Federal University of Rio Grande do Sul. A founding member of the Brazilian chapter of the ISCM, he was also a member of the Academia Brasileira de Música. The music of Albuquerque is freely atonal, with no references to Brazilian folk and popular music. His compositions are organized as a series of random juxtapositions of disjunct episodes. They can be divided into four periods: the early miniature piano pieces of 1926 to 1939, composed in an aggressive style influenced by the Brazilian poet and novelist Oswald de Andrade; the declamatory songs of the 1940s, inspired by Augusto Meyer and Athos Damasceno, modernist poets of Porto Alegre; the mature style of the 1950s and 60s, which generated large-scale symphonic works and chamber music; and the experimental compositions of the 1970s, including Albuquerque's only opera and his last piano pieces and chamber music.

WORKS
(*selective list*)

Op: Ópera da Lua (1, J. Prévert), 1968–84, unperf.

Orch: Suite breve, 1954; Peça 1963, str, 1963; Evocação de Augusto Meyer, 1970; Caleidoscópio, 1978

Chbr: Sonata, vn, pf, 1941; Trip, pf qnt, 1947; Movimentos encadeados, str qt, 1949; Sonatina, fl, pf, 1949–65; Música, vc, pf, 1955; Str Trio, 1966; Divertimento, 2 pf, 1975

Pf: Pathé-Baby, 1926; A mastigação do bárbaro, 1928; Uma idéia de café, 1928; Quase-noturno, 1939; Motivação, 1945; Suíte bárbara infantil, 1945–65; Tocata, 1948; Suíte 1952, 1952; Peça para pianao 1964, 1964; Sonho III, 1974

CELSO LOUREIRO CHAVES

Albuzio, Giovanni Giacopo [Albutio, Joan Jacomo, Hans Jacob von Mailandt] (*b* Kleve; *fl* Milan, 1536). German lutenist, viola player and composer, active in Italy. He apparently resided in Milan long enough to acquire the epithet 'from Milan' and to be counted among the foremost musicians and composers of that city. His extant music consists of two lute fantasias which first appeared in Giovanni Antonio Casteliono's *Intabolatura de leuto de diversi autori* (Milan, 1536/*R*; ed. R. Smith Brindle, Milan, 1978) and were reprinted in collections of lute music published in Nuremberg, Leuven (both 1552) and Venice (1563). They are characterized by a continuous unfolding of musical ideas within broad phrases that subvert any attempt at a cadence. G. Lefkoff's *Five Sixteenth Century Lute Books* (Washington DC, 1960) contains transcriptions of Albuzio's two fantasias.

ARTHUR J. NESS

Alcaeus [Alkaios] (*b* Lesbos, *c*620 BCE; *d* after 580 BCE). Greek lyric poet. The earlier tradition of sung poetry on Lesbos had been choral, religious, impersonal; now choral lyric faced the challenge of monody. In contrast to the impersonality of the earlier poets, Alcaeus wrote as an individual, describing in an intensely personal manner his chequered political fortunes. Many of his poems, however, were amatory or convivial, consisting of drinking-songs and after-dinner verses (*skolia*); the range of subjects even included monodic hymns. His favourite metre was the compact four-line stanza which bears his name, although he also used the sapphic stanza. Like his compatriot and friend Sappho, Alcaeus wrote in the distinctive Aeolic dialect of Lesbos.

References to musical instruments show considerable diversity. He seems to have composed an address to the trumpet (*salpinx*), poeticized as a sounding conch (Edmonds, frag.85). He once mentioned the *pēktis* (Diehl, frag.71), and in two lost poems he evidently used the term *chelys* (Edmonds, frags.1.3; 4.9). (For both terms *see* SAPPHO.) Nevertheless, the string instrument specially associated with Alcaeus, as with Sappho, was the BARBITOS; a red-figure kalathoid (Munich, Staatliche Antikensammlungen und Glyptothek, 2416; 5th century BCE) shows both Sappho and Alcaeus holding the instrument. Alcaeus referred to it only once, using the term *barmos*, in the extant poetry (Edmonds, frag.70.3). The barbitos chiefly differed from the lyra proper in having longer, outcurving arms. Since it had a greater string length than either lyra or kithara, it probably sounded a lower basic pitch, thereby providing a distinctive accompaniment for Aeolic lyric.

WARREN ANDERSON/THOMAS J. MATHIESEN

Alcaide, Tomás (de Aquino Carmelo) (*b* Estremoz, 16 Feb 1901; *d* Lisbon, 9 Nov 1967). Portuguese tenor. He studied at the University of Coimbra, at the same time taking singing lessons in Lisbon, and in Milan (1925), where he made his début in 1926 as Wilhelm Meister (*Mignon*) at the Teatro Carcano. He sang in various Italian cities, then made his début at La Scala in 1930 as Mascarillo in Felice Lattuada's *Le preziose ridicole*, followed in 1931 by M. le Bleau (Wolf-Ferrari's *La vedova scaltra*) and the King's Son (*Königskinder*). In 1931 he also sang Edgardo (*Lucia di Lammermoor*), the Duke of Mantua and Pinkerton at Monte Carlo; Alfredo (*Traviata*) in Rome; and Ernesto (*Don Pasquale*) at Salzburg. He sang Rodolfo and Cavaradossi at the Opéra-Comique, Paris (1936), and appeared at the Théâtre de la Monnaie (1937–8). His French roles included Werther, Des Grieux (*Manon*), Nadir and Faust. His final stage appearance was as Rossini's Almaviva at São Paulo in 1948. A fine actor, he had a beautiful lyric voice, with easy top notes and excellent breath control. His memoirs, *Um cantor no palco e na vida*, were published in Lisbon in 1961.

ELIZABETH FORBES

Alcalay, Luna (*b* Zagreb, 21 Oct 1928). Austrian composer of Hungarian birth. She studied at the Vienna Musikhochschule (1951–7), where her teachers included Bruno Seidlhofer (piano) and Alfred Uhl (composition). Upon the completion of her studies, she received a year's scholarship for study in Rome. She has taught members of the Vienna Boys' Choir (from 1959) and the piano at the Musikhochschule (until 1994). Her honours include prizes from the International Gaudeamus (1963–4), ISCM (1967) and Graz 'musikprotokoll' (1972) competitions, an award for graphic notation (Berlin, 1967) and numerous commissions.

In touch with the international avant garde from early in her career, Alcalay attended the Darmstadt summer courses, where she attracted attention for *aspekte* in 1962. As a result of this exposure, Maderna conducted the première of her *una strofa di Dante* in 1968. Remarking that 'a non-conformist attitude to music and musical tradition' is an important factor in her work, she has developed a system that employs musical language as signalled communication. Her most frequently performed piece, *ich bin in Sehnsucht eingehüllt*, is a setting of love poems by Selma Meerbaum, who died at the age of 18 in a German concentration camp.

WORKS

LOTHAR KNESSL

Alcaraz, Alfonso Flores d'. *See* FLORES, ALFONSO.

Alcaraz (i Solé), Jordi (*b* Sant Feliu de Llobregat, 10 June 1943; *d* Barcelona, 11 June 1985). Catalan organist and composer. He studied the organ with Torrent, Rilling, Germani, J. Reiberger and Peeters. In 1973 he became an organ teacher at the Barcelona Conservatory. He studied composition with Bernhardt Rovenstrunck and achieved the highest commendation. He attended courses at Santiago de Compostela, Granada, Darmstadt and the Seminary of American Studies in Salzburg (1976). He was awarded the Diploma of Merit by the Accademia Chigiana in Siena and received prizes from the Spanish Vocational Foundation and the municipality of Barcelona. He also won prizes at the Avila and Pau Casals international composition competitions for his organ and choral pieces respectively.

His music reflects a preoccupation, typical of the 1960s, with creating a new musical language. However, his experimentation, carried out with methodical precision, is tempered by a desire to communicate. He is the author of the book *El órgano* (Lleida, 1998).

F. TAVERNA-BECH

Alcaraz, José Antonio (*b* Mexico City, 5 Dec 1938). Mexican musicologist, writer and critic. He studied at the Conservatorio Nacional de Música under Armando Montiel, Esperanza Pulido and José Pablo Moncayo. He was also a pupil of Otto Mayer-Serra. At the beginning of his career he dedicated himself to composition, which led him to take courses at the Paris Conservatoire as well as spending time in Darmstadt, Venice and London, where he took instruction from Daniel Lesur, Pierre Boulez, Bruno Maderna and Pierre Wissmer. Among his most important compositions are works for stage and film, which have earned him several prizes. Nevertheless, his most important work is in the fields of criticism and research, although his valuable contributions in the fields of theatre and opera production must also be remembered. As a critic, Alcaraz has played a fundamental role in making diverse repertories known in Mexico, ranging from ancient to contemporary music. He has insistently disseminated and analysed the Mexican repertory, particularly that of the 20th century. His knowledge, combined with a keen sense of humour and a stance legendary for being radical and uncompromising, has made him into one of the most authoritative and recognized critical voices in Mexico and Latin America. As a musicologist, Alcaraz has occupied himself with the discussion and assessment of the Mexican school of the 20th century. His works on composers such as Carlos Chávez, Rodolfo Halffter and José Pablo Moncayo are fundamental, as are his numerous essays on authors such as Rolón, Carillo, Huízar, Revueltas, Sandi, Galindo Dimas, Enríquez and Estrada. As a music critic, he has written for over 20 years (since 1976) for the weekly journal *Proceso*, as well as regularly contributing to many other Mexican magazines and newspapers. Alcaraz has also written a number of children's stories (among them, several dedicated to reconstructing episodes of the childhood of composers such as Schubert, Bruckner and Moncayo). He is a research scholar with the Carlos Chávez National Centre for Musical Research, Documentation and Information (CENIDIM).

RICARDO MIRANDA-PÉREZ

Alcarotto [Alcarotti, Algarotti], **Giovanni Francesco** (*b* Novara, *c*1535; *d* 8 May 1596). Italian composer and organist. Of a well-to-do family, he travelled widely in his youth. He spent some years in Rome, where he probably completed his studies in theology. He served as parish priest at S Stefano, Novara, and S Giovanni Battista, Milan. After serving from 1570 to 1577 as organist at Como Cathedral, he returned to Novara on his nomination as prior at the cathedral there. Sometime between 7 October 1587 and May 1589, Alcarotto journeyed to the Holy Land; though he stayed only 16 days, he published an account of his journey, *Del viaggio in Terra Santa* (Novara, 1596), that is of interest for its description of music and musical instruments of the region.

GLENN WATKINS/SERENA DAL BELIN PERUFFO

Alcedo [Alzedo], **José Bernardo** (*b* Lima, 20 Aug 1788; *d* Lima, 28 Dec 1878). Peruvian composer. He received his musical education in the convents of S Agustín and S Domingo of Lima, as was customary during the vice-regal period. Thus from the beginning of his career he inclined towards sacred music. In 1821 he took part in a contest for the composition of a national march. Thanks to General San Martín's enthusiasm his work was selected and it soon became the Peruvian national anthem. As a result Alcedo has not suffered the oblivion of some of his contemporaries. A strong supporter of the independence movement, he served in the army as *músico mayor* (1823–8) and was stationed in Chile. There he remained, providing music for Santiago Cathedral (1829–41) and becoming *maestro de capilla* at the cathedral in 1846. On his return to Peru in 1864 he was appointed general director of the army bands.

In his treatise *Filosofía elemental de la música* (Lisbon, 1869) he praised his contemporary musicians and wrote enthusiastically about the folksongs of highland Peru. Alcedo is an important representative of the transitional period from the viceroyalty to the republic, when cultural life was not fundamentally altered. He wrote numerous masses, motets, villancicos and liturgical pieces for all occasions. Some of his religious works were criticized as being 'operatic rhapsodies' because they were sung in Spanish and not in Latin. Alcedo interpreted such a view as an overt opposition to the contemporary style.

CÉSAR ARRÓSPIDE DE LA FLOR

Alchevs'ky, Ivan [Jean] **Olexiyovych** (*b* Kharkiv, 15/27 Dec 1876; *d* Baku, 27 April/10 May 1917). Ukrainian tenor. He studied in St Petersburg and from 1901 to 1905 was a soloist at the Mariinsky Theatre there. In 1906 he sang in London, as Lensky; he later appeared in the Beecham season of Russian opera, 1913–14. At the Paris Opéra (1908–10) he sang Shuysky in the local première of *Boris Godunov* as well as French roles (Gounod's Romeo, Faust, Raoul). He returned to Russia to sing at the Bol'shoy, Moscow (1910–14). Among his other roles were Lohengrin, Siegfried and Radames; he was also active in the promotion of Ukrainian music and he directed Gulak-Artemovsky's *Zaporozhets za Dunayem* ('Cossack beyond the Danube') at the Bol'shoy in 1915 and in Odessa the next year.

VIRKO BALEY

Alcman (*fl c*630 BCE). Greek lyric poet. He was possibly a native of Sardis in Lydia. Alcman spent his entire professional life in Sparta. This city was then startlingly different from the grim barracks state that it had been and would again become: its citizens cultivated art, poetry, music and the dance with intensity and brilliance. The poet himself commented on this: 'To play well upon the lyre weighs evenly with the steel', that is, military valour (Edmonds, frag.62).

As the trainer of a choir of girls who sang and danced at Spartan religious festivals, Alcman wrote maiden-songs (*see* PARTHENEIA), which brought him particular fame. Extensive portions of one of these have survived (*PLouvre E3320*); the lines recreate with great immediacy the half-humorous, half-impassioned rivalry of his young choristers. For solo performance he composed *proöimia*, preludes to the recitation of Homeric poetry (*see* TERPANDER); and several vivid fragments of amatory verse also survive. He described the sleep of nature in a passage remarkable for its subtly musical gradations of vowel and consonant (frag.36).

Alcman referred to himself as a professional performer on the kithara, and characterized its clear, sharp sound (frags.37, 82). But he also twice mentioned aulos playing (frags.79, 80), with specific reference to its associations with Asia Minor. In one passage (frag.143) he spoke of the many-stringed Asiatic *magadis*. According to Pseudo-Plutarch (*On Music*, 1135f–1136a = frag.83), he described Apollo himself as playing the aulos; the ascription may be evidence of an early desire for a native Dorian tradition in which the foreign aulos has gained acceptance.

WARREN ANDERSON/THOMAS J. MATHIESEN

Alcock, John (i) (*b* London, 11 April 1715; *d* Lichfield, 23 Feb 1806). English organist and composer, father of John Alcock (ii). He was a chorister of St Paul's Cathedral when, in his own words (*GB-Lcm* 1189), he and Boyce were 'Schoolfellows and Bedfellows' under Charles King. Afterwards he was apprenticed to John Stanley. In the early years of the 18th century, growth in the number of organs in large provincial parish churches afforded new professional opportunities, and Alcock is an early example of an organist who reached a cathedral position through posts in parish churches – in his case St Andrew's, Plymouth (1737), and St Laurence's, Reading (1742). He was admitted vicar-choral and organist of Lichfield Cathedral in January 1750. He took the BMus degree at Oxford in 1755 and the DMus there in 1766. The cathedral documents fail to make clear exactly when he ceased to be organist, but this was certainly by September 1765. By the cathedral statutes, the organist held a place as vicar-choral, which constituted a freehold, and this Alcock continued to hold for the rest of his life, living in the cathedral close and doing duty in the choir. He was organist of Sutton Coldfield parish church, Warwickshire, from 1761 to 1786 (part of this time while still organist of Lichfield Cathedral), and of Tamworth parish church from 1766 to 1790. He was also private organist to the Earl of Donegal.

In the dedication of his Service in E minor in 1753 Alcock stated that sometimes only one priest vicar and one lay vicar attended the cathedral services, and he also alluded to ridiculous criticism of his organ accompaniments. In 1758 trouble arose between him and the men of the choir, who accused him of mockery and of 'splenetic tricks upon the organ to expose or confound the performers'. Alcock's fiery temperament is revealed in his semi-autobiographical novel, *The Life of Miss Fanny Brown* (published pseudonymously, under the name of John Piper, in 1761), in which these events are described. That Alcock considered himself hard done by as a result of his conditions of work at Lichfield is abundantly clear from his argumentative preface to his anthems published in 1771. It is possible that, far away in the Midlands yet having troubled to take a doctorate (for what it was then worth), he felt he lacked the status which his contemporary Boyce and others enjoyed. For that reason, perhaps, it was a gratification to him when visiting London in his old age to be invited to join the Musical Graduates' Meeting established by Samuel Arnold (whom he helped with his *Cathedral Music*, 1790).

In the course of his work Alcock became impressed by the 'numberless Mistakes' in manuscript copies of older cathedral music, and in 1752 he issued a prospectus of a plan for a quarterly publication of a service engraved in score. He proposed to start with Tallis's Dorian Mode

Service, Byrd's Short Service and Gibbons's in F (all of which it is interesting to note that he proposed to transpose up a tone), and working through to Charles King. Apparently for lack of response nothing came of this, though Alcock issued his own Service in E minor as a specimen of the engraving. When he heard of Greene's proposal to publish an anthology of cathedral music he presented him with the materials already gathered. Greene's plan, as is well known, eventually came to fruition in Boyce's *Cathedral Music*. Alcock had antiquarian interests, scoring for himself some of Tallis's and Byrd's Latin church music and Morley's canzonets and balletts (*Lbl* Add.23624 and *Lcm* 952–3). He once owned the Tregian anthology, the 'Sambrooke MS' (now *US-NYp* Drexel 4302). It is to him that the story of Byrd's contact with Philippe de Monte is owed.

Alcock's own music has a good general level of competence in an idiom adhering to that prevailing in his early manhood. No doubt his instrumental music derived from Stanley, but without the master's freshness and vigour. His anthems are in similar mould to those of Greene, whose general style they share, and in fact in his aforementioned preface he felt it necessary to anticipate possible charges of plagiarism from both Croft and Greene. But only the Service in E minor, of all his church music, ever attained any currency, and this is too lacking in character to have survived. As published it is a slightly revised form of the original composed in 1732. Alcock's output includes several large-scale anthems with orchestra, including *We will rejoice*, which he contributed to the Worcester Music Meeting of 1773. He cultivated the art of catch and canon writing, and won Catch Club prizes in 1770, 1772 and 1778.

In connection with the organ accompaniment to cathedral music, Alcock made some remarks that are worth mentioning. To the anthem *Unto thee have I cried* he supplied an organ part in full (virtually a short score), in order to prevent people, when the vocal bass part rests, from 'keeping a continual Roaring upon the Full-Organ, by striking Chords, or, at least, Octaves, with the Left-hand, to every Note'. And in relation to his E minor Service he said:

> As in *Cathedral Music* the usual Method is to play the *Treble* [voice-part] uppermost, I have left out those *Figures* which are of Course expressed in that *Part* ... they being quite unnecessary ... [In verses] the *Notes* in the upper *Parts* [are] play'd just as they are wrote, (except when the *Contra-Tenor*, and *Tenor Parts* are uppermost, which are often performed eight Notes above) and not as in *Through Bass*, which is the Reason why I have not *figured* most of the *Verses*.

WORKS

printed works published in London unless otherwise stated

SACRED VOCAL

A Morning [Communion] and Evening Service, e, 3–6vv, org, 1732 (1753) [with important ded.]

Six and Twenty Select Anthems ... a Burial Service ... and part of ... the 150th Psalm, 1–8vv, org, 1732–71 (1771 [with preface], 2/*c*1775)

Miserere, 4vv, 1756 (Lichfield and London, 1771)

3 anthems, 1778–9, in Six New Anthems, 2–4vv, 2 ob, bn, org (*c*1790) [remainder by John Alcock (ii)]

Chants and psalm tunes in: Psalmody, or a Collection of Psalm Tunes ... with Several Festival Hymns (Reading, ?1749); Divine Harmony (Birmingham, 1752); The Pious Soul's Heavenly Exercise (1756) [with preface]; The Harmony of Sion (1779, 2/1816); The Harmony of Jerusalem (1801)

Services, *GB-Lsp*, *LF*: Verse Service, B♭, 1771; Third Service, F, 1788; services in C, E♭, a; setting of Commandments etc.

WATKINS SHAW (with PETER MARR)

Alcock, John (ii) (*b* Plymouth, bap. 28 Jan 1740; *d* Walsall, bur. 27 March 1791). English organist and composer, eldest son of John Alcock (i). As a chorister under his father at Lichfield Cathedral, he deputized for him from the age of 12, and from 1758 to 1768 he was organist and master of the song school at Newark. In 1766 father and son both went to Oxford, the former to take the DMus degree and the latter the BMus degree which he gained with a setting of Pope's *Messiah* (in *GB-Ob*). His final appointment, at St Matthew's, Walsall, followed in 1773, not long after his father had opened a new organ there. Alcock's published compositions include church music, songs and cantatas, together with convivial and instrumental music (including a duet for two bassoons or cellos). A volume of anecdotes, *The Instructive and Entertaining Companion* (Wolverhampton, 1779;

?unique copy in *US-U*), shows that he had inherited some of his father's literary propensities.

PETER MARR

Alcock, Sir **Walter (Galpin)** (*b* Edenbridge, 29 Dec 1861; *d* Salisbury, 11 Sept 1947). English organist. One of the most able cathedral organists of his day, Alcock had the unique distinction of having played in Westminster Abbey at the coronation of three English kings: Edward VII, George V and George VI. After studying under Sullivan and Stainer, he was successively organist at the Chapel Royal, assistant to Sir Frederick Bridge at the Abbey, and then organist of Salisbury Cathedral for 30 years (from 1917 until his death). Much in demand as a recitalist, he was one of the famous ABC trio (Alcock, Thalben-Ball and G.D. Cunningham) who jointly opened the BBC Concert Hall organ in 1932. Two years later he oversaw the rebuilding, with minimal alteration, of the Salisbury 'Father Willis' organ at a time when many Willis organs were being completely revoiced. H.C. Colles wrote of 'his finished technique, cleanness of phrasing and impeccable taste'; he made numerous recordings, many of which were reissued in the 1990s. He had considerable influence as a teacher at the RCM and composed a number of organ and choral works, now rarely performed. He was knighted in 1933.

STANLEY WEBB/PAUL HALE

Alcorn, Michael (*b* Belfast, 22 Jan 1962). Northern Irish composer. He attended the University of Ulster (BMus 1985) where he studied matrix composition, a technique used in many of his works, with David Morriss, and the University of Durham (PhD 1992) where he studied with John Casken and Peter Manning. In 1989 he became the composer-in-residence at Queen's University, Belfast, and in 1990 was appointed to a lectureship there, also serving as the director of the electronic music studio. The composition of *Making a Song and Dance ...* (1989) marked the beginning of a fascination with Irish folk music, the modal qualities of which Alcorn finds particularly interesting. He has also acknowledged the influence of a number of postwar British and Scandinavian composers.

A small but significant part of Alcorn's output is electro-acoustic music. Flexible modes of interaction between electronically generated sounds, conventional instrumental timbres and, occasionally, visual images, hold a particular appeal for him. *The Old Woman of Beare* (1994), for example, allows computer-generated sounds to respond to the performance of a live string quartet through automated score-following techniques.

WORKS

MICHAEL RUSS

Alcorta, Amancio (*b* Santiago del Estero, 16 Aug 1805; *d* Buenos Aires, 3 May 1862). Argentine composer. He studied harmony, the violin and the flute with Cambeses at the Colegio de Monserrat, Córdoba. He also distinguished himself as a scholar, Latinist and economist, and held important state posts in Argentina including that of senator in the National Congress in Buenos Aires. His highly expressive compositions include works for voices and organ, trios, quartets and other chamber music as well as many songs. Some of his works are strongly influenced by the Rossinian style. He also published a two-volume *Colección de composiciones para piano* (Paris, 1869–83). With Alberdi and Esnaola he was one of the pioneers of Argentine music.

SUSANA SALGADO

Alcuin [(Flaccus) Albinus] (*b* Northumbria, *c*735; *d* Tours, 19 May 804). Anglo-Saxon scholar, writer and poet. Little is known about Alcuin's early years, but he was educated at the cathedral school in York, which, under the guidance of *magister*, and later archbishop, Aelberht (*d* 780), became one of the foremost centres of learning in England during the second half of the 8th century. Alcuin remained at York as Aelberht's assistant, becoming *magister* himself in 767, and several times travelled to the Continent, especially Gaul and Italy, in search of books for the cathedral library. It was on one such visit that Alcuin met Charlemagne (reigned 768–814), who, in 781, invited him to join the scholars of the Frankish court. In Francia Alcuin became one of the leading members of the court school. He is known to have been the personal tutor of Charlemagne and is generally considered to have been the architect of many of the king's educational reforms, including those in the *Admonitio generalis*.of 789, in which the curriculum of church schools was laid out. In 796 Alcuin became Abbot of St Martin's in Tours where he continued to teach, instructing many of the most important scholars of the next generation. During his time in Francia Alcuin wrote at least 300 letters, over 200 poems and about 25 treatises on subjects including biblical exegesis and the liberal arts. At Charlemagne's request he also revised the text of the Vulgate, correcting mistakes in orthography and punctuation, and selecting which of the many Latin translations to use; his revision became the standard biblical text until the 13th century.

According to an anonymous *Vita Alcuini* written between 821 and 829, Alcuin composed a treatise on music (ed. A. Arndt, MGH, *Scriptores*, xv/1, Hanover, 1887, p.194), and a 9th-century library catalogue from Fulda lists a volume under his name containing works 'de dialectica, de rethorica, de musica'. However, while treatises on dialectic and rhetoric by Alcuin are extant, no treatise on music is known, nor is there any indication in Alcuin's own writings or those of his contemporaries that he ever wrote one. A brief account of the eight chant tones is ascribed to Alcuin in a number of manuscripts from the 13th century onwards. However, this text, printed in *GerbertS* (i, 26–7) under Alcuin's name (*Musica Albini*) and entitled *De octo tonis*, also appears anonymously in various forms in several earlier manuscripts,

especially tonaries. Its origins can be traced at least as far back as the composition of the *Musica disciplina* by AURELIAN OF RÉÔME (*fl* 840s), but there is no concrete evidence linking this text with Alcuin. (For a positive consideration, see Möller; on the *De octo tonis*, see also M. Huglo: *Les tonaires: inventaire, analyse, comparaison*, Paris, 1971, pp.47–56.)

Alcuin's significance in the history of medieval music lies chiefly in his role in the educational reforms instituted by Charlemagne as part of the wider reorganization of the Frankish Church. Alcuin's treatises on grammar, rhetoric and dialectic, as well as many of his letters, argue for the acceptance of the liberal arts of the ancient world as a fundamental part of Christian learning. His justification for the inclusion of such pagan material in a Christian context drew upon ideas in works such as Augustine's *De ordine* and *De doctrina christiana*, Cassiodorus's *Institutiones*, Isidore of Seville's *Etymologiae* and Boethius's *De consolatio philosophiae*, all of which are known to have been present in Charlemagne's court library at Aachen. Although scholars and teachers during the late 8th century at first had only limited sources of information concerning the liberal art of music, within the next few decades were discovered the more detailed acounts in Martianus Capella's *De nuptiis* and the *De institutione musica* by BOETHIUS.

Alcuin's role in the reform of the liturgy of the Frankish Church, which in older books is portrayed as especially significant, has been lessened in the light of more recent research. In particular, the Supplement to the *Hadrianum* – the Gregorian sacramentary sent by Pope Hadrian I to Charlemagne to be the model for the Frankish liturgy – is now generally recognized to have been the work not of Alcuin but of Benedict of Aniane (*d* 821). In fact Alcuin seems to have disagreed with Charlemagne's policy of introducing yet another sacramentary into the already confused liturgical situation in Francia. During his abbacy at Tours Alcuin composed a 'missal' (*c*800) for the abbey and over 20 votive Masses; the latter subsequently became immensely popular. A revision of the lectionary is also ascribed to him (probably mistakenly) in many medieval sources, and Svövérffy listed ten hymn texts under his name.

Alcuin's many writings include valuable details about the Frankish celebration of the liturgy and its music during the curucial period of the late 8th century. In one letter to Bishop Eanbald of York, Alcuin advises that pupils should have different teachers for each subject, including for instruction in 'cantilenae'. This advice reflects the practice at the Frankish court where, according to one of Alcuin's poems, boys were taught 'modulamine sacro' by the cantor (MGH, *Poetae latini*, i, Berlin, 1881/*R*, p.246).

JANE BELLINGHAM

Alda [Davies], **Frances (Jeanne)** (*b* Christchurch, 31 May 1883; *d* Venice, 18 Sept 1952). New Zealand soprano. After the death of her parents, she was brought up by her maternal grandparents in Australia. Her first engagements were in light opera at Melbourne. She then went to Paris and studied with Marchesi, who suggested that she adopt the name Alda; she also arranged Alda's debut as Manon at the Opéra-Comique in 1904. After successful appearances at the Monnaie in Brussels (1905), Covent Garden (1906) and La Scala (1908), where she met Toscanini and Gatti-Cassazza, she was engaged by the Metropolitan (début, December 1908), where she sang until her retirement in 1930. In 1908 Gatti-Cassazza left La Scala to become director of the Metropolitan; he married Alda in 1910. Her pure, lyrical voice, technically almost faultless, was ideally suited to such roles as Gilda, Violetta, Desdemona, Manon (Massenet), Louise, Mimi and Cio-Cio-San. She created the leading soprano roles in Damrosch's *Cyrano de Bergerac*, Victor Herbert's *Madeleine* and Henry Hadley's *Cleopatra's Night*. She is well represented on record.

ALAN BLYTH

Aldana, José Manuel (*b* Mexico City, 1758; *d* Mexico City, 7 Feb 1810). Mexican violinist and composer. As a boy, he studied at the Mexico City Cathedral Colegio de Infantes, a choir school where Nicolás Gil de la Torre taught him the violin. On 27 January 1775 the cathedral authorities appointed him a violinist in the cathedral orchestra at 200 pesos annually; on 12 January 1784 his yearly salary was raised from 300 to 400 pesos. In 1786 he was second violinist of the theatre orchestra at the Mexico City Coliseo, a post that conflicted with his cathedral duties to such an extent that on 9 January 1788 the chapter asked him to resign one post or the other. Choosing the Coliseo, he was in the 1790–91 season promoted to leader of the orchestra. In 1808 he headed the Mexico City choir school while still continuing as leader at the Coliseo.

A critic writing in the 18 December 1806 issue of *Diario de México* compared Aldana favourably with Antonio Lolli (*d* 1802) and rated him the best Mexican-born composer of the day. Aldana pioneered in composing devotional music honouring the Mexican protomartyr, San Felipe de Jesús (1575–97). His Mass in D does not approach the quality of his Office for the Dead vesper psalms with full orchestra accompaniment.

ROBERT STEVENSON

Alday [Aldaye, Aldée]. French family of musicians. Considerable confusion surrounds the members of the Alday family, as several have the same first initial; both *Grove5* and RISM have attributed many of the works of the various Aldays incorrectly. The first known musician in the family, Alday *le père* (first name unknown, *b* Perpignan, 1737), was a violin teacher and composer. According to Fétis's unsupported story, he learnt the mandolin in Italy while secretary to a *grand seigneur*, and was married in Avignon. Choron and Fayolle reported that he settled in Paris as a professor of the mandolin. His sons were (1) François Alday *l'aîné* and (2) Paul Alday *le jeune*.

(1) **François Alday** [*l'aîné*] (*b* Mahón, Menorca, *c*1761; *d* ?Lyons, after 1835). Violinist, organist, teacher and music director. He was the older son of Alday *père*. The Alday name, presumably referring to François, first appeared in the Parisian press in 1771 after a performance at the Concert Spirituel: 'M. Aldaye fils, âgé d'environ dix ans, a joué sur la mandoline avec autant de rapidité que de précision' (*Mercure de France*, April 1771, ii, 182). He does not appear to have been an outstanding soloist; the name 'Aldée' is listed last in the second violin section of the Concert Spirituel in 1786, and probably refers to him rather than to his brother Paul. In 1797 he was a music teacher and 'premier violon du spectacle' in Lyons. In 1810 he founded the Cercle Harmonique, a concert society comprising the best musicians in that city. As its director, he played an important role in the musical life of Lyons; he encouraged the performance of contemporary music, including the first performance in that city of Beethoven's *Prometheus* overture. From 1823 to at least 1826 he directed private *soirées lyriques*, and as late as 1830 he, or possibly his son (3) Francisque Alday, played a subscription series of five *matinées musicales*. In about 1830 he was the organist at the chapel of the *lycée*. The last contemporary reference to him is in the Lyons *Almanach commercial* of 1835. He is best known for his *Grande méthode pour l'alto* (*c*1827), which includes 25 exercises, ten *leçons élémentaires*, three duos for the violin and viola, and three *Fantasies ou rondeaux*. Ignace Pleyel made several arrangements of his chamber works.

Alday's four sons, including (3) Francisque Alday, were active musically in Lyons: Auguste, probably the eldest, was a violinist (first violinist at the Grand Théâtre) and violin teacher; Philibert, the third son, played the double bass at the Grand Théâtre and was a professor of music; Joseph, the youngest, performed on the violin with his father, (3) Francisque and Philibert in March 1818.

WORKS

Geneviève de Brabant (oc, 3, A.J. Leroy de Bacre), Paris, Louvois, 23 Nov 1791, lost
Orch: Concerto à violon principale E♭ (Paris, *c*1785); Concerto de société, G, vn solo, op.16 (Lyons, *c*1815); Va Conc. (Lyons, 1818), lost
Chbr: 9 str qts in 2 sets (Paris, 1799 and later); 6 str qts in 2 sets (Lyons, n.d.); 6 duos, 2 vn, op.21 (Lyons, before 1825), lost; 6 duos, 2 vn (Lyons, before 1825), lost; 3 duos, vn, va, op.23 (Lyons, *c*1820)

Pedagogical: Grande méthode pour l'alto (Lyons, *c*1827)

(2) **(Jérôme) Paul (Bonaventure) Alday** [*le jeune*] (*b* Perpignan ? or Paris, *c*1763; *d* ? Dublin, 1835). Violinist and composer, brother of (1) François Alday. He studied with Viotti in 1785 and between 1783 and 1790 performed no fewer than 25 times at the Concert Spirituel in his own works as well as those by J.A. Fodor, Giornovichi, Mestrino and Viotti. In 1789 he performed a symphonie concertante with 'Vauthy' (Viotti) in Lyons. Fétis placed Alday *le jeune* in England after 1791. His stay in London was apparently short: an account in *Jackson's Oxford Journal* announced that he performed in Oxford in May 1793. In the same year, he married a harpist 'lately arrived from Paris', Adélaïde Rosalie Delatouche (1768 or 1769–1835), in Oxford. He remained there until at least 1796, when he gave a benefit concert. Gerber placed him in Edinburgh in 1806 as a music director and professor of music. According to Carr (*Grove5*) he went to Dublin in 1809, bought a music business in 1811, opened a music academy in 1812 and was still listed as a professor of the violin as late as 1820. He was a more celebrated violinist than his brother, and his violin concertos enjoyed considerable popularity in both Paris and Berlin; according to Gerber, his fourth violin concerto was performed in Berlin in 1792 and 1797.

WORKS

Orch: 4 vn concs. (Paris, *c*1785–1789); Symphonie concertante, C, 2 solo vn, *c*1788 (Paris, 1800)
Chbr: 1 set of airs variés, vn, ?b (Paris, 1786); 1 set of airs variés, vn, va (Paris, 1787), lost; 1 set of airs variés, vn, b (Paris, 1788); Variations on 'God Save the King', 2 vn (London and Oxford, 1795); 3 Str Qts (London, *c*1795); A Grand Pastoral Overture, pf, vn, vc (?London, *c*1795); 3 Trios, 2 vn, vc (London, n.d.); Duos, 2 vn (Paris, n.d.); Mélanges, 2 vn (Paris, n.d.)

(3) **Francisque Alday** (*b* Lyons, *c*1800; *d* Lyons, after 1846). Violinist and music director, second son of (1) François Alday. A talented violinist, he performed at the Cercle Harmonique in 1818. He wrote *Vingt-huit études pour le violon* op.4 (Lyons, before 1825) and contributed significantly to the *Grande méthode élémentaire pour le violon dédiée à leur père et composée par les fils Alday* (Lyons, *c*1824), a work which is probably the Aldays' chief contribution to music history: it achieved widespread recognition, and was reprinted throughout the 19th century; as late as 1907 J.M. Bay, professor of violin at the Lyons Conservatoire, published in Lyons a *Méthode de violon après la célèbre méthode des fils Alday*. In 1828 and 1830 Francisque Alday played second and first violin,

respectively, in the orchestra of the Grand Théâtre. Like his father, he was influential in the musical life of Lyons, assuming the directorship of its Société Philharmonique in 1836. Contemporary accounts indicate that he was active until at least 1846.

(4) **Ferdinand Alday** (*b* Lyons, *c*1830; *d* ?Lyons, after 1875). Musician, son, or possibly nephew, of (3) Francisque Alday. The following appearances of the name Alday may refer to Ferdinand: in 1862 an Alday appeared on the list of second violins in the orchestra of the Lyons Grand Théâtre; in 1872 an 'F. Alday' was professor of the piano at the Lyons Conservatoire, a post he gave up between 1875 and 1882; in 1875 an organist named Alday was employed at the Eglise de la Charité.

WORKS

Vocal: Ma mandoline (J.F.D.), vv, org (Paris, 1857); La sylphide (E. Cousineau), légende, vv, pf (Paris, 1858); Noël (J.C. Bert), solo vv, 2 choruses, pf (Paris, 1862); La noce et l'orage, 4vv (Paris, 1865); 2 cantiques, 2, 3vv (Lyons, n.d.); La petite chapelle, 6 motets, 2–3vv, hmn (Lyons, n.d.)

BARRY S. BROOK, RICHARD VIANO

Alday, Edward. *See* ALLDE, EDWARD.

Aldeburgh Festival. Annual music festival inaugurated in 1948 and held each June. It was established around Benjamin Britten and based on the small Suffolk coastal town where he lived from 1947 (and which is the historical setting for his *Peter Grimes*). Britten's taste, imagination and personality helped to give it a distinctive character. His own music has always formed an important but not preponderant element in the programmes, which regularly include new and recent works by other British and occasionaly foreign composers. A variety of greater and lesser classics is customarily performed by leading British and foreign artists.

The festival was born from a suggestion by Peter Pears and set out to provide a focus of cultural events in East Anglia. It also secured an outlet for productions by the English Opera Group, which Britten and Pears helped to found. Britten and Pears were named as artistic directors in 1955. The team was later expanded to a panel which included, at various times, Imogen Holst, Philip Ledger, Colin Graham, Steuart Bedford, Murray Perahia, Mstislav Rostropovich and Oliver Knussen; since 1987 Bedford and Knussen have been artistic directors. The English Chamber Orchestra has generally served as resident festival ensemble since 1961.

Pears's original idea of 'concerts by friends' has continued to be the basis of festival programmes. Britten and Pears regularly performed at the festival, the former often appearing as conductor as well as pianist. They collaborated with a number of visiting foreign composers, including Copland, Henze, Kodály, Lutosławski and Poulenc. Fruitful friendships were established in the early years with such artists as Kathleen Ferrier and Dennis Brain; later with Julian Bream, Dietrich Fischer-Dieskau and others, and especially with a group of Soviet artists including Rostropovich and Galina Vishnevskaya, Sviatoslav Richter and Shostakovich (whose Symphony no.14, dedicated to Britten, had its British première at the 1970 festival). During the 1980s a composers-in-residence scheme was introduced; the composers have included Takemitsu, Dutilleux, Lukas Foss, Elliott Carter and Magnus Lindberg.

For several years the festival's scope was restricted by the available buildings. Even opera productions were confined to the Jubilee Hall which, after extensions in 1960, seats about 350. Besides Aldeburgh parish church the festival scheme has at different times been extended to neighbouring churches at Blythburgh, Framlingham and Orford (notably for the premières of Britten's church parables) and to Ely Cathedral. When a 19th-century malthouse in the nearby village of Snape became available, it was converted into a multi-purpose concert hall and open-stage auditorium seating nearly 800. Snape Maltings, formally opened by Queen Elizabeth II on 2 June 1967, was destroyed by fire on the opening night (7 June) of the 1969 festival; it was rebuilt and reopened in time for the following festival on 5 June 1970. From 1977 its buildings also housed a School of Advanced Musical Studies.

The fine acoustic qualities of the Maltings have encouraged its additional use as a studio for television, radio and recording, and its availability enabled festivals to be planned on a larger scale than previously; but rising costs meant that, from 1982, performances were presented under professional direction with students from the courses at the School of Advanced Musical Studies. The operas have included works by Britten and other composers as well as the premières of John Tavener's *Mary of Egypt* (1992) and *The Wildman* by Nicola LeFanu (1995). In 1972 a modification of festival policy led to events being organized at different times of the year, rather than concentrated in a single summer period; these have included concerts at Easter, a Snape Maltings Proms season, an October Britten festival and, in 1994, an Early Music Festival directed by Philip Pickett.

The following works by Britten were given first performances at the festivals noted: *Saint Nicolas* (1948); *Let's Make an Opera*, incorporating *The Little Sweep* (1949); *Lachrymae* for viola and piano, and a new realization of *The Beggar's Opera* (1950); Six *Metamorphoses after Ovid* for solo oboe (1951); a Variation on 'Sellenger's Round' (1953); *Noye's Fludde* (1957); *Songs*

Interior of the Snape Maltings, Aldeburgh

from the Chinese (1958); *A Midsummer Night's Dream* (1960); Cello Sonata (1961); *Curlew River*, and *Nocturnal* for guitar (1964); *Songs and Proverbs of William Blake*, Suite no.1 for Solo Cello and *Gemini Variations* (1965); *The Burning Fiery Furnace* (1966); *The Golden Vanity* and Overture, *The Building of the House* (1967); *The Prodigal Son* and Suite no.2 for Solo Cello (1968); Suite in C for Harp (1969); Canticle IV: *The Journey of the Magi* (1971); *Death in Venice* (1973); String Quartet (1975); Cantata, *Phaedra*, and the first British production of *Paul Bunyan* (1976).

NOËL GOODWIN

Aldée. *See* ALDAY family.

Alden, Christopher (*b* New York, 16 Sept 1949). American director, twin brother of DAVID ALDEN. After a brief period in the Broadway musical theatre, he was an assistant to Jean-Pierre Ponnelle from 1978 to 1982. Since then he has staged operas in many American cities, and has been director of production at the Long Beach Opera (California) and associate director of Opera at the Academy in New York City. For these two smaller companies, which encourage innovation, Alden has pursued an enlivening approach that has proved controversial but seldom dull; his version of Purcell's *Dido and Aeneas* was presented as a cautionary tale of the flesh for British schoolgirls, while Offenbach's *La vie parisienne* was updated to reflect the drug culture of present-day New York. The results may sometimes be controversial, but they invariably show a questing spirit, a lively theatrical imagination and genuine love for the work at hand. Alden's productions for other companies have included the première of Stewart Wallace's *Harvey Milk* (1995, Houston), *Turandot* for the ENO, *Faust* for the WNO and an acclaimed post-modernist *Fliegender Holländer* for the Canadian Opera Company, Toronto (all 1996).

PETER G. DAVIS/R

Alden, David (*b* New York, 16 Sept 1949). American opera producer, twin brother of CHRISTOPHER ALDEN. His early productions in America in the late 1970s were well received but gave no hint of the Brechtian, often violent bent that later characterized his stagings in Europe. A new production, using Caspar Neher's existing sets, of *Wozzeck* at the Metropolitan in 1980 led to a new staging of the same work for Scottish Opera later that year that was hailed as 'far more exciting' (*Opera*, 1980, festival issue, 40) than anything seen in Europe that summer. This was a reversal of the disdain which had greeted his *Rigoletto* for the same company in 1979. A punk *Rake's Progress* (1982, Amsterdam) led to a notorious *Mazepa* (1984), his first work for the ENO, which with its chain-saws and strip lighting entered local operatic folklore as an extreme of director's folly. This, however, made his name, and his ENO *Simon Boccanegra* (1987) and *Un ballo in maschera* (1989), both designed by David Fielding, were seen as creating a new house style that, though controversial and alienating, was both musical and dramatically stimulating. Subsequent acclaimed productions for the ENO have included *Oedipus rex*, *Duke Bluebeard's Castle*, *Ariodante*, *Tristan und Isolde* and *La damnation de Faust*. He has also worked with the Long Beach company and the New Israeli Opera. He has staged the American première of Matthus's *Judith* (1990, Santa Fe) and the world premières of Bolcom's *Casino Paradise* (1990, Philadelphia) and Tal's *Josef* (1995, Tel Aviv), among other works.

Alden's preference for abstract settings, often using images of pendulums, chairs and narrow slopes, worked more effectively with 18th- and 19th-century operas which were perceived as ripe for reinterpretation, than with modern works which required clarification rather than obfuscation. Among his most admired opera productions were *Ariodante* (ENO co-production with WNO, 1992), *Tannhaüser* (Munich, 1994), *Tristan und Isolde* (ENO, 1996) and *Faust* (Vienna Volksoper, 1997).

PATRICK O'CONNOR

Alder [Alderinus], **Cosmas** (*b* Baden, 1500; *d* Berne, 1550). Swiss composer. He attended the school attached to St Vincent's, Berne, until 1511, and in 1524 became Kantor there. After the Reformation the post was discontinued and Alder held various clerk's positions in Berne that gave him financial security. In 1534 he became a house owner and in 1538 a member of the Great Council. He died of the plague.

Alder left few compositions, but those that remain show that he was a competent minor composer. Of his sacred works the 57 hymns printed in 1553 deserve special mention: they follow the traditional liturgical

order while using texts adapted for Protestant congregations by Wolfgang Musculus. He also wrote several Latin motets, two occasional motets (one on the death of Zwingli in 1531) and, more important, a few German motets that were included in the popular dramas of the Bernese writer Hans von Rüte. Alder's motets show the influence not only of his contemporary Senfl, but also of Josquin in their expressiveness: he often used duo sections and interrupted contrapuntal writing with sections of homophony, resulting in a clear formal structure. He tended to emphasize the highest part and liked canonic passages. These are found, along with other techniques, in Alder's *Da Jacob nun das Kleid ansah*, a four-voice motet often misattributed to Senfl. When using a chorale melody as the cantus firmus, as in his hymn settings, he generally presented it in an expressive rhythm rather than in the regular rhythmic values of *contrapunctus fractus* found in the work of Sixt Dietrich and other German composers. Of Alder's five polyphonic settings of secular lieder the most noteworthy is *Innsbruck, ich muss dich lassen*, in which the 'melody' lies principally in the top voice rather than the tenor. The remaining songs fall within the normal range of style and quality for Gesellschaftslieder of the second quarter of the 16th century.

WORKS

MOTETS

Hymni sacri numero LVII (Berne, 1553); 1 in 1568[7]

Cum Rex gloriae, 4vv, *D-Z* 73; De profundis, 4vv, *Kl* Mus.4° 24; Floreat Ursine gentis (Musicorum Bernensium catalogus), 4vv, *CH-Bu* F.X 5–9; Inclytus antistes, 4vv, *Bu* F.II 35, ed. in *Zwingliana*, ii (1907), 139 (on Zwingli's death); Nisi Dominus, 4vv, *D-Kl* Mus.4° 24; Veni electa mea, 5vv, *CH-Bu* F.X 5–9, ed. A. Geering, *Psalmen und geistliche Gesänge von Johannes Wannenmacher und Cosmas Alder* (Geneva, 1934)

Ach Herr vernimm min kläglich Stimm, 4vv, *Bu* F.IX 32–5, ed. ibid. (doubtful); Da Jakob nun das Kleid ansah, 4vv, *Bu* F.X 5–9 (anon. in *PL-WRu* 10; attrib. Senfl in *D-Rp* A.R.891, A.R.940–42, C 93), ed. in DDT, xxx–iv (1908/*R*) (Senfl); Wie Joseph in Egyptenland, 4vv, *CH-Bu* F.X 5–9 (doubtful)

SONGS

Ein armer Mann, Für all auf Erd, O du armer Judas, 4vv, 1536[8], ed. H.J. Moser, *65 deutsche Lieder ... nach dem Liederbuch von Peter Schöffer und Matthias Apiarius* (Wiesbaden, 1967)

Ich weiss ein' stoltze Müllerin, Innsbruck ich muss dich lassen, 4vv, *Bu* F.X 5–9, Innsbruck, ed. in *IMusSCR II: Basle 1906*

MARTIN STAEHELIN/JOHN KMETZ

Aldobrandini, Pietro (*b* Rome, 31 March 1571; *d* Rome, 10 February 1621). Italian ecclesiastic and patron of music. Nephew of Pope Clement VIII, who created him cardinal in 1593, he acquired a leading role in the papal court by negotiating the reversion of the Duchy of Ferrara to the papacy (1598) and a treaty between France and Savoy over the disputed marquisate of Saluzzo (1601). Until his uncle's death (1605), he was among Rome's most influential patrons of music and art; among the composers who dedicated publications to him were Palestrina, Monte, Cavalieri and Luzzaschi, and his protégés included both members of the papal chapel (e.g. Felice Anerio, Ruggiero Giovanelli and Girolamo Rosini) and instrumentalists from the disbanded Ferrarese establishment (the Piccinini brothers and Rinaldo Dall'Arpa). Pietro's influence declined during the pontificate of Paul V; the last great beneficiary of his patronage was Frescobaldi, who dedicated to him the *Recercari, et canzoni franzese* of 1615.

CLAUDIO ANNIBALDI

Aldomar, Pedro Juan [Pere Joan] (*fl* 1506–9). Iberian composer. A native of Barcelona, he became *maestro de capilla* at the cathedral there on 19 January 1506. By 1 March 1508 he was appointed singer in the Aragonese royal chapel of Ferdinand V. He appears to have stayed there less than six months and in summer 1509 he succeeded the theorist Juan de Espinosa as 'master of music' at Toledo Cathedral; he held this position for only about a year, after which his name disappears from the records. Three villancicos by him appear in the Cancionero Musical de Palacio. It is interesting that these songs are copied in close proximity to two pieces by Pedro de Lagarto, another composer active at Toledo Cathedral. At least one of Aldomar's songs, *¡Ha Pelayo, qué desmayo!*, enjoyed considerable popularity: a four-voice version is found in a collection printed in Venice in 1556. His song style is typical of that of the villancico in about 1500: melodious and essentially chordal in texture.

Aldric, Jean-François (*b* Mirecourt, 28 April 1765; *d* Paris, 1843). French violin maker. One of the third generation of a Mirecourt family of violin makers, he settled in Paris in 1785, firstly at 16 rue des Arcis, moving to 30 rue de

Bussy about 1807, and finally to 71 rue de Seine in 1820. The fine quality of his work places him in the forefront of French violin makers. His instruments are patterned after the Stradivari model but tend towards more fullness in both outline and archings. The varnish, generally of a red-brown colour, can be very attractive, but often falls a little short of achieving clarity and elasticity; heavily varnished instruments have a broad checking, which is not at all unattractive. Those varnished a lighter golden-yellow or orange-brown appear to belong to a lesser category. Tonally, Aldric's instruments are among the best produced by the French; his cellos are quite outstanding and are much sought after as concert instruments. Aldric used a variety of different labels; the printed ones usually have a decorative border while the manuscript labels are plain and appear rather carelessly turned out. He was the first French violin maker to buy some of the fine Italian instruments that were brought to Paris by Luigi Tarisio in 1827. He was succeeded by his nephew Jacques Aubry in 1840; a violin label from the period states: 'Aubry neveu et successeur d'Aldric, Paris 1841'.

JAAK LIIVOJA-LORIUS/SYLVETTE MILLIOT

Aldrich, Henry (*b* Westminster, London, Jan 1648; *d* Oxford, 14 Dec 1710). English scholar, composer and music collector. He matriculated at Christ Church, Oxford (after early training in mathematics at Westminster School), in 1662, receiving the BA, MA and DD degrees in 1666, 1669 and 1682 respectively. He took holy orders and was assigned the rectorate at Wem, Shropshire, but chose to remain at Christ Church, becoming a canon in 1681 and dean (a unique position in Oxford as head of both college and cathedral) in 1689, also serving as vice-chancellor of the University of Oxford, 1692–5. He was a leader of the Oxford resistance to James II's Catholic advances, and under William III he became one of the chief defenders of High Church practices, publicly opposing both the comprehension of non-Anglicans and revisions to the prayer book. He was an industrious and practically minded scholar, producing books on logic, heraldry and architecture, designing a number of Oxford buildings, serving as draftsman and engraver for the Oxford Almanacks, and producing a sizable body of compositions for the English cathedral service. His account of Greek music survives in manuscript (*GB-Och*). He ordered in his will the destruction of his personal papers upon his death, but he bequeathed his collection of music (estimated at 8000 compositions by Bumpus) to Christ Church. He is buried in the cathedral there.

Aldrich may have received musical training from Edward Lowe, although there is no direct evidence of this. His interest in working with borrowed material, unparalleled in England at the time, probably derived from his classical education, grounded in the imitation of venerable models. His activity as a composer may have begun with his writing odes for the Oxford Act as early as 1672; 18th-century inscriptions in several of the sources suggest that these works were largely crafted of borrowings from Carissimi. His anthems and services were circulating beyond Oxford by at least the late 1670s: extant partbooks from Westminster Abbey and the Chapel Royal copied by William Tucker (*d* 1679) include the Service in E minor and *If the Lord himself*. In the first years of the 18th century John Church, who probably came under Aldrich's influence while a student at Oxford (Church's hand appears in several Christ Church manuscripts), added many more of his works to the Chapel Royal repertory.

By 1670 Aldrich had acquired the foundation of his music collection, taking ownership of the books of the Hatton family, which included numerous Italian prints. He later had these items bound and catalogued, along with other prints he himself had collected, including two books of Palestrina motets, music by Carissimi and other recent Italians, sacred works by Byrd, and English madrigals. A circle of Oxford musicians formed around Aldrich in the 1680s, and he augmented his print collection with manuscripts copied by them and by himself. He was interested in engraving and printing, and from the 1690s survive two unique examples of music printed in score (both in *Och*), both instigated by Aldrich: one comprises 16 pages of music, including Aldrich's *Have mercy upon me* and *Give the king thy judgments*, and Orlando Gibbons's *Behold thou hast made my days*, using a movable typeface created in Oxford by Peter de Walpergen, then the university type founder; and the other contains seven copies, now bound together, of an engraved print, *Dr Aldrich his Service in G*, which also includes his *O give thanks*. Aldrich may have engraved the plates himself.

He sang regularly with the choir at Christ Church, and seems to have been its unquestioned authority. Hayes, among others, credits him with the general elevation of performance standards of cathedral choirs at the time. Weekly music meetings held at his Christ Church lodgings combined serious rehearsal with informal performances of various music, presumably from his collection. Catches, including Aldrich's familiar *O the bonny Christ Church bells* (1673[4]) and *Good indeed the herb's good weed* (1685[4]), were probably performed on occasion. The social aspects of these meetings were apparently incentive for regular and punctual attendance; as Hayes notes, latecomers were given 'nothing to drink, except Small-Beer'.

Authoritative scores for most of Aldrich's sacred music are found in two autograph volumes (*Och* Mus.16 and 19). In addition to the four services, which are rather routine in style, there are several original anthems and a large number of recompositions, including anthems adapted from motets by Palestrina, Carissimi, Tallis, Byrd and others, and adaptations of English anthems, often with fewer musical alterations than the motets. Aldrich comes across as a highly competent composer (and in the recompositions, an imaginative borrower), well-versed in stylistic details. His full anthems (*Out of the deep* is a fine example) display well-designed points of imitation and are typical of the period in mixing the *stile antico* with the style of the time. The verse anthems, such as *Give the king thy judgments*, with its picturesque bass solos, are also typical, the solo writing often guided by word-painting and the chorus frequently relegated to brief punctuating statements.

The recompositions have sometimes been misjudged as a form of plagiarism, but Aldrich seems not to have passed such works off as original compositions (ascriptions in contemporary sources typically name both Aldrich and the original composer), and it is not surprising that

he devised such derivative compositional procedures, given how heavily the educational practices of the day relied on the translation of original texts. In recomposing polyphonic models, particularly the motets of Palestrina, Aldrich often worked by means of cuts and insertions, truncating imitative points and inserting new homophonic passages based on motifs from the original. In working with later music, such as that of Carissimi, he often used a pastiche technique, bringing sections of several works together in the manner of a verse anthem, and arranging or repeating the various segments in ways that give a new structure to the recomposition, one not necessarily suggested by the model. Aldrich's goal may have been to refashion these Italian motets in the guise of English anthems, as Hawkins noted, to make 'their works our own'.

ROBERT SHAY

Aldrich, Putnam C(alder) (*b* Swansea, MA, 14 July 1904; *d* Cannes, 18 April 1975). American musicologist and harpsichordist. After receiving the BA from Yale University in 1926, Aldrich went to Europe, where he studied the piano with Matthay in London and the harpsichord with Landowska in France. He returned to the USA to take the MA at Harvard in 1936 and the PhD there in 1942, working with Apel and Leichtentritt. From 1936 to 1944 he was director of the Boston Society of Ancient Instruments.

He began his teaching career in 1942 at the University of Texas, where he taught until 1944. He was on the staff of Western Reserve University (1946–8) and Mills College, Oakland, California (1948–50). In 1950 he was appointed professor of music at Stanford University, where he taught until his retirement in 1969.

Aldrich combined his scholarly interests with an active career as a harpsichordist. In particular he wrote on the performing practice of early music and the musical ornamentation of the 17th and 18th centuries. His study of the rhythm of 17th-century Italian monody examines notational problems encountered by present-day performers and editors of this music and furnishes provocative, sometimes controversial solutions.

PAULA MORGAN

Aldrich, Richard (*b* Providence, RI, 31 July 1863; *d* Rome, 2 June 1937). American critic. He was educated at Harvard University, where he studied music under J.K. Paine, graduating in 1885. In the same year he became music critic to the *Providence Journal*, after serving his apprenticeship in general journalism. In 1889 he became private secretary to US Senator Dixon, and at the same time held the post of music critic to the *Evening Star*, Washington. In 1891 he relinquished both posts to join the staff of the *New York Tribune*, on which paper he held various editorial posts, particularly that of assistant critic to H.E. Krehbiel, until 1902, when he became music editor of the *New York Times*; he retired in 1923, remaining on the editorial staff in an advisory capacity.

Throughout his career Aldrich was notable for the breadth of his musical knowledge and the soundness of his judgment; in general he was sympathetic to modern music, though vehemently opposed to extreme trends. As one might expect from a member of the National Institute of Arts and Letters he was distinguished for the excellence of his style and for the wit and urbanity of his writing. He collected an important library of books on music, which he catalogued during the leisure of his later years; it remained intact in the possession of his heirs until 1955, when it was donated by his son to Harvard University.

Aldrovandi, Clelia. *See* GATTI-ALDROVANDI, CLELIA.

Aldrovandini [Aldovrandini, Aldrovandin, Aldrovandon, Altrobrandino], **Giuseppe** [Gioseffo] **Antonio Vincenzo** [Giuseppe Maria] (*b* Bologna, 8 June 1671; *d* Bologna, 9 Feb 1707). Italian composer. He studied composition and counterpoint with Perti, probably while the latter was *maestro di cappella* of S Pietro, Bologna. In 1695, after at least two of his oratorios had been performed in the city's churches, he became a member of the Accademia Filarmonica, and in 1701 was elected its *principe*. His name appears in librettos from 1702 as honorary composer to the Duke of Mantua and *maestro di cappella* of the Accademia dello Spirito Santo, Ferrara. Contemporary accounts indicate that he was a man of intemperate habits, which perhaps accounted for his lack of professional preferment and for his habitual poverty despite the recognition of his talent. He drowned in the canal port in Bologna as he was preparing to leave for Venice.

Aldrovandini was highly valued as a teacher of singing in Florence, and Prince Ferdinand sent his *virtuosi* to him for further training. As a composer he belonged stylistically to the late 17th-century Bolognese school of vocal and instrumental composers, though he possessed a degree of original brilliance that has not yet been fully assessed. His operas were widely performed not only in north Italy but in Naples as well. Three of his first four operas are important in the history of *opera buffa*, since they point to an early regional development of the genre independent of the Neapolitan school. *Gl'inganni amorosi scoperti in villa*, in Bolognese dialect except for the leading romantic roles, was performed several times up to 1759, although the first production was suspended by church authorities until some *doubles entendres* had been excised from the text. Dramaturgically the work is more sophisticated than its earliest Neapolitan dialect counterparts, with more clearly planned spacing between recitative passages and set numbers. As in the serious operas of the time, the first two acts end with arias rather than ensembles, although duets and trios appear frequently within acts. In form the arias appear to alternate freely between da capo structures and shorter songs. The music of this work, as well as that of Aldrovandini's other dialect comedy, *Amor torna in s'al so'*, and of *Dafni*, an elegant pastoral comedy, has disappeared, but its style can perhaps be inferred from the comic episodes and intermezzos of the surviving *Cesare in Alessandria* (Naples, 1699). The failure of these comic operas to inspire successors in Bologna until G.M. Buini's time was probably due less to lack of public interest (Goldoni commented on the Bolognese appetite for comedy) than to the severe view of comedy taken by the archiepiscopacy. The high point of his short career is probably represented by works to Venetian librettos by Francesco Silvani (*La Fortezza al cimento*) and Apostolo Zeno (*Pirro*).

A number of Aldrovandini's serious operas were successful enough to be revived outside their cities of origin. He wrote their arias – almost without exception in da capo form – according to the motto principle; the second sections of da capo arias often use the same formal device. Although the serious operas are not formally innovatory their music is of impressive quality. Harmonic schemes are by no means merely stereotyped but are dictated by the expressive turns of the text; vocal melismas are included not just for display but are reserved for emotionally heightened words. In addition Aldrovandini was imaginative in his use of the orchestra. At a time when the continuo provided the standard accompanimental texture to arias he sometimes varied it by specifying 'violone solo'; elsewhere he scored more fully, employing wind and brass as well as strings, not only as accompaniment but also in concertato textures with the voice parts.

WORKS

OPERAS

drammi per musica in three acts unless otherwise stated

NB – *Naples, Teatro di S Bartolomeo*

Gl'inganni amorosi scoperti in villa (scherzo giocoso, 3, L.M. Landi), Bologna, Formagliari, 28 Jan 1696

Dafni (favola boschereccia, prol., 3, E. Manfredi), Bologna, Malvezzi, 18 Aug 1696

Ottaviano (N. Beregan), Turin, Regio, carn. 1697

Amor torna in 's al 'so, over L'nozz dla Checha e d' Bdett (scherzo drammatico rusticale, A.M. Monti), Bologna, Formagliari, carn. 1698; as Amor Torna in 's al 'so, over L'nozz dla Flippa e d' Bdett, Bologna, Marsigli-Rossi, carn. 1733 [the erroneous title Amor torna in 5 al 50 first appeared in *AllacciD*]

La fortezza al cimento (F. Silvani), Venice, S Salvatore, Feb 1699

Cesare in Alessandria (F.M. Paglia), NB, sum. 1699, *D-Dl* (scena buffa and int Mirena e Floro), *F-Pn*, *I-Nc* (1700, with int Mirena e Lesbina and Mirena e Floro)

Le due Auguste (P.P. Seta), Bologna, Formagliari, 16 Aug 1700

Semiramide (?G.A. Moniglia), Genoa, Falcone, carn. 1701, *D-Dl* (scena buffa), *F-Pn*, *I-Nc*

JAMES L. JACKMAN/SERGIO DURANTE

Aleado (Sp.). *See under* ORNAMENTS, §2.

Aleatory. A term applied to music whose composition and/or performance is, to a greater or lesser extent, undetermined by the composer.

1. Introduction. 2. History. 3. Aleatory composition. 4. Mobile form. 5. Indeterminate notation. 6. Graphics. 7. Texts. 8. The role of the performer. 9. The aesthetics of chance.

1. INTRODUCTION. As defined above, the term 'aleatory' ('aleatoric' is an etymological distortion) applies to all music: it is impossible for a composer to prescribe every aspect in the realization of a composition; even the sound result of a tape playback will depend on the equipment used and the acoustic conditions. However, the term is usually restricted to music in which the composer has made a deliberate withdrawal of control, excluding certain established usages which fall within this category: for example, keyboard improvisation, the cadenza, the *ossia*, the *ad libitum*, unmeasured pauses, alternative scorings and the provision of sets of potentially independent pieces (e.g. the Goldberg Variations). Three types of aleatory technique may be distinguished, although a given composition may exhibit more than one of them, separately or in combination: (i) the use of random procedures in the generation of fixed compositions (see §3); (ii) the allowance of choice to the performer(s) among formal options stipulated by the composer (see §4); and (iii) methods of notation which reduce the composer's control over the sounds in a composition (see §§5–7). The liberty offered by these various means can extend from a choice between two dynamic markings to almost unguided improvisation. Some theoretical considerations and practical consequences are outlined in §§8–9.

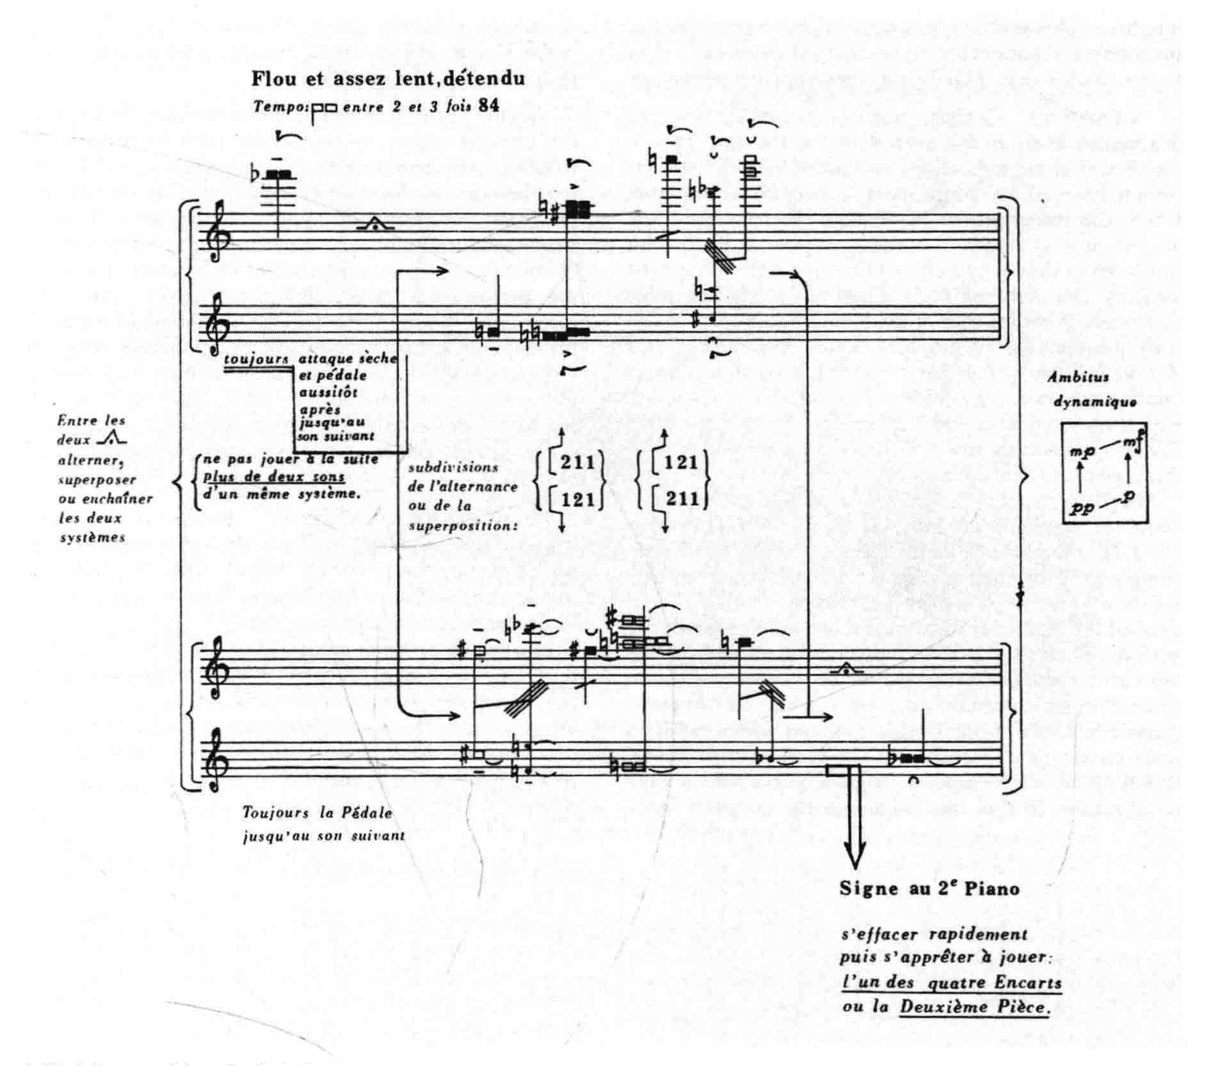
2. HISTORY. Until the mid-20th century Western composers were constantly seeking notational developments that would enable them to determine sounds with greater exactness, an attitude entirely opposed to the aleatory. There were, however, some trivial examples of aleatory music in the 18th century, when schemes were published for generating simple pieces in response to the results of dice throws. These games usually left only one aspect to guided chance: the ordering of bars supplied with the scheme, for instance, or the melody to be placed over a given rhythmic-harmonic pattern. Mozart and Haydn were sometimes claimed as authors, but probably without any more than commercial justification. One might also consider the art of keyboard improvisation as a precursor of aleatory music, but here the creator and the performer are identical; once an improvisation is published for performance by others, it has to be respected as much as any other printed score. In most aleatory music, on the other hand, the creator provides a score which gives a degree of freedom to any performer. Similarly, other improvised musics, such as jazz and folk traditions, were not initially the most important influences on aleatory music.

The first composer to make a significant use of aleatory features was Ives, whose scores include exhortations to freedom, alternatives of an unprecedentedly important character, and unrealizable notations which silently invite

the performer to find his own solution. From the 1930s Cowell followed Ives's lead in such works as the String Quartet no.3 'Mosaic' (1934), which allows the players to assemble the music from fragments provided. He used other 'elastic' (his own word) notations to introduce chance or choice into the performance, occasionally instructing the performers to improvise a certain number of bars or *ad libitum*. His sometime pupil Cage began to use what he called 'chance operations' in composition during the early 1950s, notably in the *Music of Changes* for piano (1951). At first Cage's work had most influence on his immediate associates: Feldman wrote a number of 'graph' pieces, such as the *Intersection* and *Projection* series, in which notes are replaced by boxes, determining pitch only relatively; and Brown abandoned all conventional notation in, for example, *December 1952*, consisting of 31 black rectangles printed on a single sheet.

European composers were more hesitant in taking up aleatory techniques. Such early examples as Stockhausen's *Klavierstück IX* (1956) and Boulez's Piano Sonata no.3 (1956–7) allow the player no more than limited freedom in the ordering of composed sections. By this time Cage had gone much further in abandoning the control exercised by the composer, or even the performer(s), reaching an extreme point in *4′ 33″* (1952), whose only sounds – those of the environment – are quite unpredictable. About 1960 purely verbal scores were introduced by LaMonte Young and others, and the following decade saw the pursuit of aleatory methods to a wide range of ends throughout the world. Composers such as Henze and Lutosławski used aleatory incidents in otherwise determined compositions, while Rzewski, Globokar, Stockhausen and others produced scores that give only a few specifications to stimulate improvisation.

After an explosion of interest in the late 1960s, coinciding with a revolutionary period in Western culture generally, aleatory music became a dead or at least dormant issue. Stockhausen returned to conventional notation in his *Mantra* (1970). Boulez began to write fully determined works again, and even to rescind some of the freedoms of earlier pieces, such as his *Improvisation sur Mallarmé III* (1959), whose revised score, made in the 1980s, removes alternatives of material and flexibilities of ordering. And though Cage remained true to non-intention, even he went back to staff notation in *Cheap Imitation* (1969) and many later works. A kind of superficial looseness (represented, for example, by *ad libitum* repeats of figures, or by 'time-space' notation, in which duration is determined by length on the staff) remained as part of the lingua franca of moderate modernism, and improvisation continued as the mainstay of experimental music. But Cage's later music is unusual in the period for the precision of its invitations to chance.



3. ALEATORY COMPOSITION. As here defined, aleatory composition involves the use of random procedures in determining musical aspects that are to be notated; unless other aleatory techniques are also used, the resultant score is no less fixed than a conventional composition. Chance procedures in composition have been most fully and diversely exploited by Cage. In producing the *Music of Changes*, for example, he tossed coins to decide how he should make choices from charts of pitches, durations, intensities and other sound aspects, deriving his chance operations from the 'I Ching', the Chinese book of changes. Similar methods were used in assembling *Williams Mix* for tape (1952) and in notating the parts for 12 radio receivers in *Imaginary Landscape no.4* (1951). (The latter work is inevitably unusual, in that the sounds heard in performance are out of the control of both composer and players, depending on the broadcasts that happen to be received.) Other random techniques employed by Cage include placing notes on imperfections in the music paper (Music for Piano, 1952–6) and using templates drawn from maps of the constellations (*Atlas eclipticalis*, 1961–2). An example of random composing combined with other aleatory features is Cage's *Winter Music* (1957), in which from one to 20 pianists may use any quantity of the chance-composed score.

Atlas eclipticalis is one of the few Cage scores from between the mid-1950s and the end of the 1960s to use traditional notation. When Cage returned to such notation, it was with new chance procedures, such as the use of 'time brackets' to define not specific durations but rather the intervals during which sounds must start or stop.

Xenakis's principle of 'stochastic' composition is different. In such works as *ST/4* for string quartet (1956–62), he used a computer in producing music modelled on stochastic processes, where events on the smallest scale are indeterminate though the shape of the whole is defined. Thus randomness is introduced as a necessary part of a willed product, and Xenakis retained the right to modify the computer result. Few composers other than Cage have made much use of true aleatory composition.

4. MOBILE FORM. By contrast with Cage and his chance operations in composition, other composers have avoided introducing any randomness into their composing or notation, but have permitted the performer some flexibility in realization by means of the provision of alternative orderings. Sometimes, as in Stockhausen's *Klavierstück XI*, the player is instructed to pick from the alternatives on the spur of the moment; other works, such as Boulez's Piano Sonata no.3, suggest a more considered choice. The sonata is in five parts which may be played in any of several permutations, and each part contains sections which may be variously ordered and/or omitted. Fig.1 shows the 'Troisième texte', one of the tiniest satellites of Boulez's mobile-form *Structures II* for two pianos (1956–61); note that the ordering of events is to some extent free, and that durations and dynamics are variable. Other notable works of mobile form include Boulez's *Pli selon pli* for soprano and orchestra (1957–62), Stockhausen's *Momente* for soprano, chorus and instruments (1962–4) and Pousseur's 'fantaisie variable genre opéra' *Votre Faust* (1960–67), which draws the audience, too, into the decision-making. All of these works provide comprehensive rules for the assembling of a performance, whereas when Cage used formal variability, as in *Winter Music* or the Concert for Piano and Orchestra (1957–8), he left options as open as possible: any amount of the solo part of the Concert may be omitted, as may any or all of the orchestral parts, and the piece may be performed simultaneously with others by the composer.

5. INDETERMINATE NOTATION. The types of aleatory music so far described use conventional notation to determine sounds, although, in compositions of mobile form, new signs may be necessary to guide performers in choosing a route. Many composers have introduced new notations which render the sounds themselves indetermi-

1. *'Troisième texte' from Boulez's 'Structures II', 1956–61*

nate, frequently by abandoning traditional signs for graphics or texts, each of which is considered below. But it is possible to use conventional notation in an indeterminate manner. An early example is Stockhausen's *Zeitmasse* (1955–6), whose tempos depend on the physical capacities of the five wind players: the duration of a single breath, or the fastest speed possible.

The composer can also allow flexibility in the interpretation of conventional symbols by giving alternatives or by specifying sound aspects in only relative terms. Alternative tempos, dynamic degrees and so on have been extensively used by Boulez. Relative notation has often been employed to specify a more or less narrowly defined register rather than a determined pitch, particularly in vocal music. Boulez's *Structures II* contains an analogously imprecise notation of durations (fig.1), and Boulez has frequently specified a range of tempo rather than a definite figure, so setting limits to a fluctuating rubato.

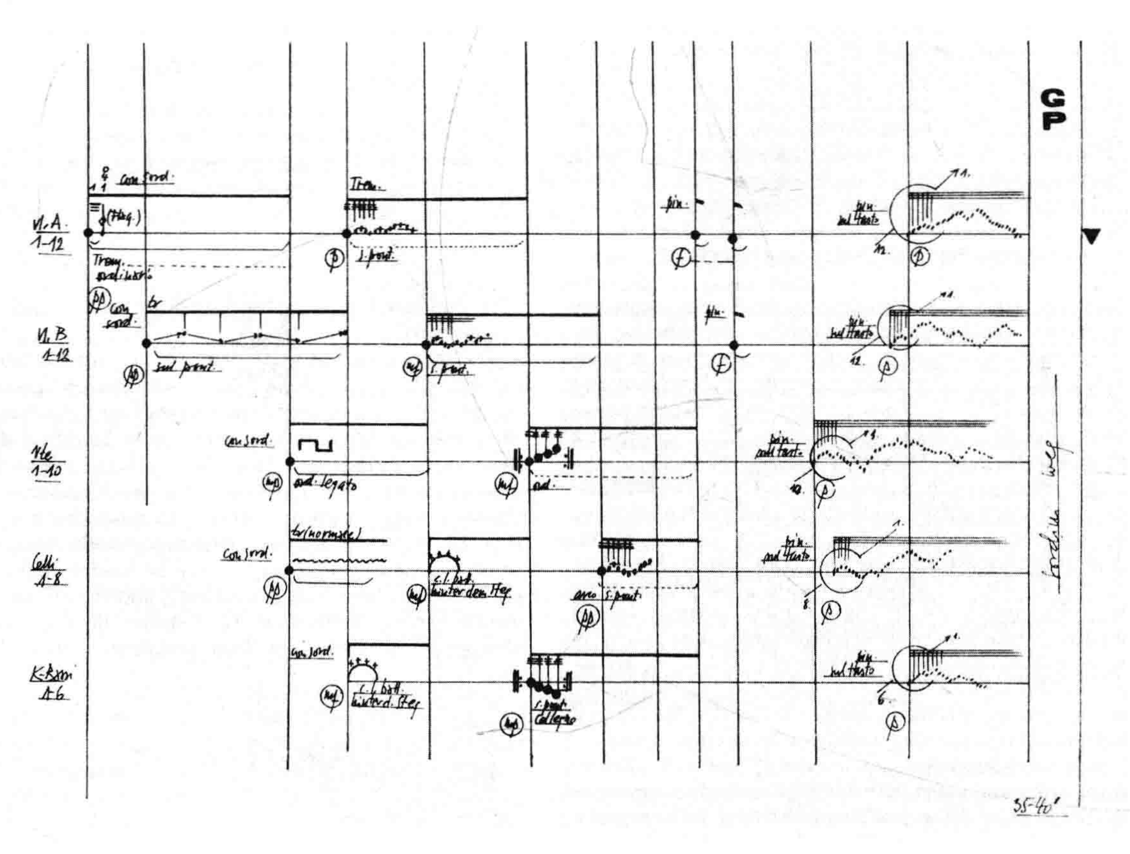
Greater indeterminacy is introduced, still with conventional notation, when performers are asked to improvise on the basis of given pitches or rhythms, to interpret a given pitch sequence with any rhythm, to interpret a given rhythm with any pitches, and so on. All these possibilities have been used by composers as different as Kagel and Lutosławski.

The most systematic use of newly invented symbolic notations is to be found in Stockhausen's 'process' compositions, which specify how sounds are to be changed or imitated rather than what they are to be. The first of these compositions was *Plus-Minus* (1963), whose title indicates the two principal signs that Stockhausen introduced for these purposes: the plus sign means that a sound is to be increased in some 'parameter' with respect to some preceding sound (i.e. it may be louder, higher in pitch, longer, more subdivided etc.), and the minus sign has the reverse significance. Fig.2 shows this notation in a fragment of *Spiral* for solo performer (1969). The

POLY + + + + | − = = = | + (E) = | + + + (AKK) + + + | G = + − + + + (BAND)

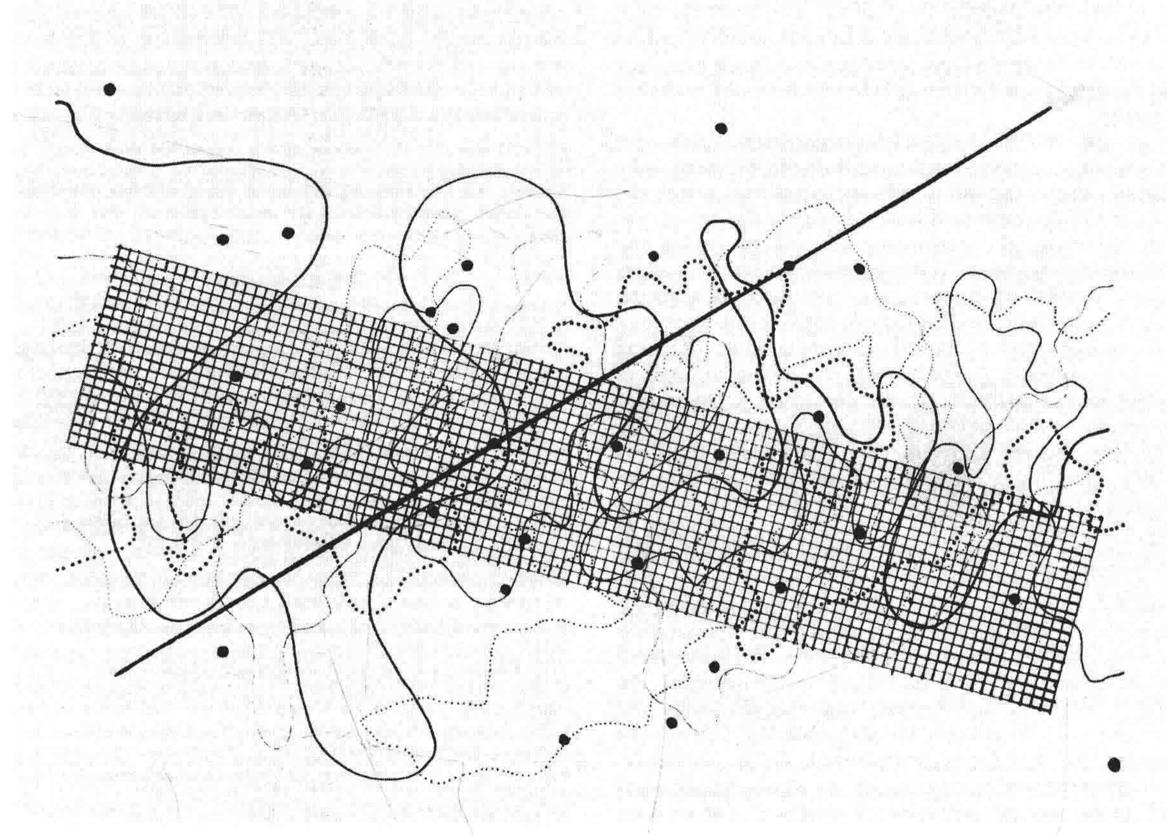
2. *Plus-minus notation in a fragment from Stockhausen's 'Spiral', 1969*

number of plus and/or minus signs in any 'event' indicates the number of parameters to be changed; other signs refer to articulation (e.g. 'POLY' indicates a polyphonic event).



6. GRAPHICS. Graphic notation – which may be distinguished from the preceding by the fact that it signifies, if at all, by analogy instead of by symbol – has been employed to supplement conventional notation where the latter proves inadequate. For example, the 'shape' of a glissando (i.e. the variation of pitch with time) can be shown by a curved line on a staff; though the aleatory character of such notations is an inevitable concomitant rather than a deliberate addition. A more truly aleatory use of graphics occurs in Stockhausen's *Zyklus* for solo percussionist (1959), a compendium of quasi-conventional graphic notation used in conjunction with traditional signs. Fig.3, from Haubenstock-Ramati's *Tableau II* for orchestra (1970), shows some examples of this type of graphic notation.

Alternatively, graphics may be used as a total replacement for standard symbols, as in Brown's *December 1952*. Logothetis, Cardew (in *Treatise*, 1963–7) and other composers continued in this direction, raising graphic notation to the level of visual art, but beyond the level of musical intelligibility, since such scores often provide the performer with little or no information as to how the signs are to be interpreted, and the possibilities for sound realization are exceedingly diverse. Fig.4 is an example of graphic notation from Cage's *Fontana Mix* (1958), a score consisting of transparent sheets to be superposed, and used by the composer originally to make a tape composition. In this case, although the notation looks enigmatic, the rules given with the design offer exact (though chance-determined) means by which sounds are to be chosen and assembled.



7. TEXTS. Like graphics of this latter sort, verbal texts can be used to give the performer a very large degree of freedom in determining both form and content. The text may be a straightforward instruction for action – often a far from conventionally musical action, as in Young's *Composition 1960 no.5*, whose principal requirement is 'Turn a butterfly (or any number of butterflies) loose in the performance area'. Other text scores are more inscrutable; Young's *Piano Piece for David Tudor no.3*, for example, consists of the text: 'most of them were very old grasshoppers'. More usually, texts have been used to give a more or less clearly stated basis for ensemble improvisation; notable examples include Rzewski's *Love Songs* (1968) and Stockhausen's *Aus den sieben Tagen* (1968).

8. THE ROLE OF THE PERFORMER. Aleatory music implies a quite new inventive role for the performer, and its evolution has been closely linked with the technical innovations and accomplishments of individuals, such as Tudor or Boulez, and of ensembles.

In some respects, compositions of mobile form introduce the fewest new problems, since the material can be fully composed. It is significant that the earliest European efforts in this direction – Stockhausen's *Klavierstück XI* and Boulez's Piano Sonata no.3 – are each for a solo player, who is in a position to make spontaneous or rehearsed decisions about the ordering of the music.

3. Aleatory graphic notation from Haubenstock-Ramati's 'Tableau II', 1970

4. Enigmatic graphic notation from Cage's 'Fontana Mix', 1958

When more performers are involved and when the composer does not want an anarchic result, either the performers must make all decisions in advance, as in Stockhausen's *Momente*, or else the composer must supply a system of cues and other signals. This was the procedure adopted by Boulez in writing for two pianos (*Structures II*), for chamber ensemble ('. . .*explosante-fixe* . . .') and for orchestra in several works (*Pli selon pli*, *Eclat*, *Domaines*) which expand the conductor's function.

Where the notation, or lack of it, renders the music still more indeterminate, the performer's responsibility becomes weightier. It is often difficult for the composer to make his intentions clear without hampering the player more than he wishes, so aleatory scores have frequently to be understood against the background of a composer's more determinate work or within an implicit cultural milieu; but a performer may choose to take the score out of that background or milieu – as, for example, when the English composer Gavin Bryars made a realization of Stockhausen's *Plus-Minus* with fragments from Schubert's C major String Quintet and a pop song – and so draw attention to the new division of labour between composer and executant.

The common reaction to this problem in the 1960s was the establishment by composers of performing traditions within their own ensembles, of which the Sonic Arts Union (consisting of the four composers Ashley, Behrman, Lucier and Mumma) and the Stockhausen Ensemble were prominent. Such groups were able to develop collective qualities of reaction previously rare outside long-established string quartets, and composers in turn made use of these group characteristics. Sometimes this meant that very little had to be specified in the score – Stockhausen's *Aus den sieben Tagen* texts represent an extreme case. Other composers welcomed the extreme variability with which minimally notated scores may be interpreted, and made no attempt to form a tradition of performance. Their interest was, rather, in exciting the players to awareness of their own and their colleagues' potentialities, a position exemplified by Wolff's work.

Some performing ensembles dispensed even with this unassuming stimulus from a composer, and engaged in 'free improvisation', though most continued to play composed music as well. Among the groups which had some success in this field were Musica Elettronica Viva (Rzewski and others) and New Phonic Art (Globokar and others). It was only at this point that other improvisatory musics had much direct influence on aleatory practice in Western art music, and some players, among them Michel Portal and Barry Guy, involved themselves concurrently in jazz and 'free improvisation'.

9. THE AESTHETICS OF CHANCE. The introduction of chance into a work of art undermines the notion that creation requires, at each moment and on every level, a definite choice on the part of the artist. One implication of Mallarmé's *Un coup de dés*, a work that had a great influence on European aleatory composers, is that each creative decision gives rise to a multiplicity of possible continuations, and in the projected *Livre* he was to provide for alternative continuations to be realized. But

in general the Western work of art was, until the mid-20th century, supposed to have an ideal identity, and, in the case of performed arts, a performance might be judged by the extent to which it was held to correspond with that identity.

In the works of most European composers, the operation of aleatory technique does not fundamentally disturb that conception. The composition is still the product of an individual mind, though some aspects are left indefinite; the performer has still to realize the composer's intentions. (One problem in aleatory music is that of whether the performance should communicate the fact of indeterminacy. The flexible features of a work may not be perceived as such if the listener does not hear frequent different performances, still less if the work is heard most usually in a single recording. In some disc issues, such as that of Pousseur's *Votre Faust*, the difficulty has been tackled by having the listener take decisions about operating balance and volume controls during the playing.) And the roots of the aleatory in European music are principally within the European tradition itself. If composers were impressed by the freedom of performance in oriental musics, their reaction was to attempt to establish some equivalent in Western terms. In doing so, they found more immediate stimulus in literary parallels (particularly Mallarmé and Joyce) and in the principle of serialism as it had been developed in Europe up to the mid-1950s. This development had brought about the avoidance of large-scale formal processes, and so the ground was laid for forms in which sections could be moved about without disrupting the whole. In addition, the permutational character of serialism was seen as implying permutable forms. Yet another field of activity within European music which stimulated aleatory innovations was electronic music: first, composers had observed that a sound is partly determinate and partly indeterminate (Boulez was to write of the main parts of his Piano Sonata no.3 as its 'formants'), and second, there was the desire to achieve in instrumental music what had proved obstinately unobtainable in electronic music, namely variability with performance.

Aleatory music in Europe might, in general, be considered as a matter of choice rather than chance, and the most significant choices have usually remained with the composer, whether he exercised them in notating a score or in directing a performance. In either event, the criteria for judging the result as a work of art are barely altered. Even improvisation groups in Europe customarily retained a traditional regard for achievement, finish and the expression of defined ideas (whether musical or political), although few succeeded in establishing a code of practice, such as exists in most jazz, within which their improvisations may be understood.

Cage's use of chance was, from the first, more destructive of the traditional notion of a work of art (just as, previously, his 'automatic' procedures had been). Influenced by Zen Buddhism as well as by the musics of the east, his aim was to remove the barrier of his discrimination: any sound was to be admitted, freed to 'be itself'. It was a persistent search for means of avoiding willed choice that led him to investigate procedures that took music out of the control of both composer and performer. Although certain of Cage's associates, notably Brown and Feldman, found a parallel for their ideas in the work of visual artists (Calder's mobiles and Pollock's action paintings, for example), the central Cagean idea was to remove from music any reference to tradition or any trace of subjectivity, and chance, not choice, was the obvious means. This extreme aleatory position was stated at its most exact in Cage's lecture 'Indeterminacy':

> Finally I said that the purpose of this purposeless music would be achieved if people learned to listen; that when they listened they might discover that they preferred the sounds of everyday life to the ones they would presently hear in the musical program; that that was alright as far as I was concerned.

PAUL GRIFFITHS

Alectorius, Johannes. *See* GALLICULUS, JOHANNES.

Alegramente. *See* ALLEGRO.

Alegría. Flamenco-style Andalusian gypsy song and dance form. *See* FLAMENCO, Table 1.

Alegría, José Augusto (*b* Évora, 27 Dec 1917). Portuguese musicologist. He studied music at the Évora Seminary and in Rome at the Pontificio Istituto di Musica Sacra, where he obtained the licentiate in 1951. From 1940 he taught music and conducted the choir at the Évora Seminary; he also taught at the Centro de Estudios Gregorianos, Lisbon, where in 1966 he succeeded Mario Sampayo as conductor of the Polyphonia, a choir devoted to the interpretation of early music (particularly Portuguese). In 1974 he resigned from both posts. He was made canon of the Évora Cathedral Chapter, where he was active as *mestre da capela*, in 1957 and was granted the honorary doctorate by the University of Évora in 1988. He has contributed to the encyclopedia *Verbo* and to various national journals, and has taken part in many conferences, both national and international. His publications may be divided into three fields: transcriptions of Portuguese polyphonic music, catalogues of Portuguese musical archives, and diverse writings on the history of Portuguese music, particularly in the cathedrals. His transcriptions are always extremely accurate and faithful to the originals and, at the same time, practical for choral use. His catalogues, though seldom including musical incipits, are complete, detailed and clear, and form the greatest list of musical sources in Portugal.

JOSÉ LÓPEZ-CALO

Aleksandrov, Aleksandr Vasil'yevich (*b* St Petersburg, 1 April 1883; *d* Berlin, 8 July 1946). Russian composer and conductor. He studied with Glazunov and Lyadov at the St Petersburg Conservatory and with Vasilenko at the Moscow Conservatory. From 1918 he taught at the Moscow Conservatory, where he was made head of the choral conducting department in 1925. Choral music gradually became the centre of his attention; most of it was composed for the Soviet Army Song and Dance Ensemble, which he founded in 1928 and which he led to great success in the USSR and abroad. After his death the ensemble was named after him.

Aleksandrov's choral songs are of various types: rousing, heroic, lyrical and comic. They are simple in style, always linked with Russian folksong and sometimes show delicate polyphonic writing. *Svyashchennaya voyna* ('A Holy War', text by Lebedev-Kumach) was written in the first few days of fighting against German invasion in June 1941 and became something of a musical symbol for the Soviet people in World War II. Aleksandrov's works also include about 60 other songs, about 70 folksong arrangements, operas, instrumental pieces and the national anthem of the USSR.

GALINA GRIGOR'YEVA

Aleksandrov, Anatoly Nikolayevich (*b* Moscow, 13/25 May 1888; *d* Moscow, 16 April 1982). Russian composer. He studied with Taneyev and Vasilenko (composition) and Igumnov (piano) at the Moscow Conservatory (1910–16), where from 1923 until 1964 he was a composition professor. He was awarded the title People's Artist of the USSR. In general his music is characterized by emotional depth and colourfulness, and by its close links with 19th-century Russian traditions. He composed in most genres, but the works for piano are among his best compositions. At first his piano style was influenced by Skryabin, Medtner and Rachmaninoff; later he developed an individual manner marked by colour and rich inventiveness. There is a particular delicacy and refinement in his songs, many of which have entered the Russian repertory. His six operas, which span his creative career, are lyrical, melodic and expressively direct with flexible and varied vocal parts. These works incorporate folk melodies and employ leitmotif technique. Among his numerous incidental scores, that for Paustovsky's film *Severnaya povest'* ('Northern Tale') was notably successful.

GALINA GRIGOR'YEVA

Aleksandrov, Boris Aleksandrovich (*b* Bologoye, 22 July/4 Aug 1905; *d* Moscow, 17 June 1994). Russian composer and conductor, son of ALEKSANDR VASIL'YEVICH ALEKSANDROV. He studied at the Moscow Conservatory with Glier, graduating in 1929, and worked as a music director in Moscow clubs (1923–9), music director of the Red Army Theatre (1930–37), lecturer at the Moscow Conservatory (1933–41) and leader of the Soviet Radio Song Ensemble (1942–7). From 1937 to 1946 he was deputy director of the Aleksandrov Red Army Song and Dance Ensemble, which was founded by his father and, after the latter's death, came under his direction. He received the State Prize (1950) and the title People's Artist of the USSR (1958). In *Dva p'yesï* ('Two Pieces') op.1 (1928) for piano he developed a compositional system synthesizing the principle of the 12-note series (with inversions and permutations) with a harmonic set technique and mirror symmetry. Later works, such as the well-known musical comedy *Svad'ba v Malinovke* ('Wedding in Malinovka'), exploit the tonal harmonies of Ukrainian folk music or exotic pentatonic harmony (as in the *Kitayskaya syuita*, 'Chinese Suite').

WORKS
(*selective list*)

Musical comedies: Svad'ba v Malinovke [Wedding in Malinovka] (L. Yukhvid), 1937; Sotïy tigr [The 100th Tiger] (L. Tarsky and M. Triger), 1939; God spustya [A Year Later] (V. Tipot), 1940; Devushka iz Barselonï [A Girl from Barcelona] (I. Nazarov, A. Sofronov and G. Yaron), 1942; Moya Gyusel (E. Pomeshchik and N. Rozhkov), 1946; 101-ya zhena [The 101st Wife] (Tipot and Sh. Dadiana), 1954
Ballets: Levsha [The Left-Handed Man] (P. Abolimov, after N. Leskov), 1954; Druzhba yunïkh [Youthful Friendship] (Abolimov, after A. Butkevich), 1954–5
Vocal-orch: Songs from Svad'ba v Malinovke, vv, jazz orch (1941); Molodost' mira [The World's Youth], vv, orch (1953); Soldat oktyabrya zashchishayet mir [The October Soldier Defends Peace] (orat), spkr, solo vv, chorus, orch (1970); Delo Lenina bessmertno [Lenin's Acts are Immortal] (orat) (1973)

DETLEF GOJOWY

Aleksandrov, Nikolay Ivanovich (*b* *c*1818; *d* *c*1884). Russian guitarist and composer. He was a colonel in the Russian army and lived in St Petersburg, but left military service in the 1860s in order to devote himself to guitar. Aleksandrov was one of the best pupils of Andrey Sychra; judging from the fact that numerous compositions of Sychra are dedicated to him, it appears that their relationship went beyond formal studies. The text of one such dedication, 'to my benefactor Nikolay Ivanovich Aleksandrov', also suggests that the pupil helped his teacher in times of financial hardship.

From the 1860s onwards Aleksandrov studied music theory and composition with N.A. Tivol'sky, who also edited his compositions for publication. About 40 studies of varying complexity and some 30 original miniatures are left by Aleksandrov. He also published guitar transcriptions of Russian *romansï* and Schubert's lieder. Although they can be classified as 'salon music', Aleksandrov's original works often exhibit genuine beauty and elegance, while his études are among the best written for any guitar. Together with Sarenko and Zimmerman, Aleksandrov belonged to the generation of Russian guitarists who for the most part ignored variations on Russian folk themes, a genre of much greater importance to their predecessors.

OLEG V. TIMOFEYEV

Alekseyev, Ėduard Yefimovich (*b* Yakutsk, 4 Dec 1937). Russian ethnomusicologist. He studied musicology with Mazel' at Moscow Conservatory, graduating in 1956, and from 1961 to 1965 taught at the Yakutsk School of Music. Subsequently he was a postgraduate at the All-Union Research Institute for the Arts in Moscow, where he was taught by Viktor Belyayev. After completing his studies he remained at the institute as a research fellow (1966–96), and during this time was head of the section specializing in the general theory of musical folklores of

the peoples of the USSR (1989–91). He was awarded the *Kandidat* degree in 1970 and the doctorate in 1996. A member of the Russian Federation Union of Composers, he led from 1972 to 1991 its associated folk music commission, organizing a number of conferences and concerts of authentic folk music. He is editor of a series From the Folklorist's Collection, which contains songs from the Russian, Mordvinian, Gagauz and Tatar Mishar traditions, and was the scriptwriter for a film depicting the history of Yakut traditional music. In 1991 he became vice-president of the Academy of Spirituality of the Republic of Sakha.

Alekseyev's research is concerned with the traditional vocal music of the Yakuts, particularly the principles of intonation in their music, and the future prospects of folkloric music in modern culture. He has studied the origins of music and in so doing has become involved in comparative music studies. Instead of carrying out his own acoustic measurements of sound, he has included in his systemization of the forms of early folk music intonation musical phenomena that are, in part, already noted in Western ethnomusicology. He has, however, developed a particularly effective graphic method of his own for presenting these intonations, which allows him to identify melodies that are often unrecognizable to the European ear.

Alekseyev, Konstantin Sergeyevich. *See* STANISLAVSKY, KONSTANTIN SERGEYEVICH.

Alemana (It.). *See* ALLEMANDE.

Alemanno [Alemann], **Johanan** (*b c*1435; *d* after 1504). Italian philosopher and biblical exegete. He wrote briefly on music in his *Ḥesheq shelomoh* ('Solomon's desire'), a commentary on the *Song of Solomon*, written during the period 1488–92 at the request of Giovanni Pico della Mirandola. Music is discussed in relation to Hebrew poetics, then classified for its varieties and described for its powers. Under poetics, Alemanno notes that the word *shir* ('song') applies to poetry and music and, within music, to both vocal and instrumental types; he then discerns its usage in three species of poetry: metric and rhymed; non-metric and non-rhymed; and metaphorical. In accordance with the Latin music theorists Alemanno recognizes three kinds of music: natural, artificial and theoretical; the first two refer respectively to vocal and instrumental music and the third (*nigun sikhli*) to what other Hebrew theorists designate as *ḥokhmat ha-musiqah* ('the science of music'). On the effect of music, Alemanno notes its power to awaken love on both earthly (or secular) and divine (or sacred) planes, which correspond to what he conceives as the two exegetical planes – the literal and the allegorical – for interpreting the *Song of Solomon*. Practical testimony to the effect of music is given in Alemanno's account of a performance by the blind German organist Conrad Paumann in Mantua about 1470: 'What happened to me is what happens to those who eat sweets made of honey and nectar: I was so conquered by his lovely playing that all spirits within me reached out to the sweetness of his sound'.

DON HARRÁN

Alembert, Jean le Rond d' (*b* Paris, 16 Nov 1717; *d* Paris, 29 Oct 1783). French philosopher, mathematician and music theorist. He was abandoned by his mother as a child, and raised in a modest household by an artisan's wife. A precocious child, he received a good education at a Jansenist school, and went on to study medicine and law. His true passion, though, was mathematics, and he soon abandoned his legal studies in order to devote all his energies to the subject. His particular interest lay in the field of rational mechanics, an important discipline in the 18th century, in which physical problems and phenomena were analysed in the abstract, using mathematics and geometry. D'Alembert submitted his first paper to the Royal Academy of Sciences in 1739, and published his important *Traité de dynamique* in 1743; his fame rose rapidly. One of his most important contributions lay in the development of partial differential equations, partly inspired by his study of the vibrating string in 1747 (although his findings were hotly disputed by Daniel Bernoulli and Leonhard Euler).

D'Alembert's interests were wide-ranging, and he agreed to help Diderot edit and produce the great *Encyclopédie* project. He penned its celebrated *Discours préliminaire* in 1751, ambitiously mapping out the entire development and current state of human knowledge, as well as prescribing a general method of inquiry that relied upon both deductive and empirical components. While responsible mainly for writing and editing the articles on science, d'Alembert also supervised work on a number of other topics, including Rousseau's articles on music. He was one of the most free-minded of the *philosophes*, and his polemical article 'Geneva', published in 1757, led to a storm of protest from orthodox quarters, and caused a temporary suspension of the project, as well as d'Alembert's own resignation. While he continued to publish on mathematical topics until the end of his life (though this material was of distinctly less consequence than his earlier work), he devoted his main energies to literary activities, joining the Académie Française in 1754, and becoming its permanent secretary in 1773.

D'Alembert's first exposure to music theory came in 1749 when he reviewed for the Academy of Sciences a *Mémoire* submitted by Rameau. (The *Mémoire* was apparently written with the help of Diderot, and became the basis of Rameau's *Démonstration du principe de l'harmonie* of 1750.) Impressed by the strongly deductive

character of Rameau's theory, which he always saw as the ideal scientific model, d'Alembert wrote a glowing review on behalf of the Academy. Two years later, he attempted to reinforce more strongly this synthetic structure in a comprehensive résumé of Rameau's ideas, the *Elémens de musique théorique et pratique suivant les principes de M. Rameau*. He also used the occasion to purge Rameau's theory of scientific arguments he deemed insupportable or extravagant.

Drawing largely upon Rameau's *Démonstration* (but also upon the *Génération harmonique* of 1737 for the rules of composition in Part 2), the *Elémens* was a stunning example of d'Alembert's talent for conceptual synthesis and clarity; it quickly became the most widely read source for information of Rameau's theory, both in France and in Germany (where it appeared in translation by Marpurg in 1757). Yet the *Elémens* is not an entirely faithful account of Rameau's thought. Despite the composer's initial gratitude, d'Alembert's penchant for reduction ironically did a disservice to the empirical richness and musical sophistication of Rameau's theory. Rameau eventually turned on his erstwhile advocate in the course of voicing his increasing dissatisfaction with Rousseau's *Encyclopédie* articles on music, which lead to a series of bitter exchanges between the two tempestuous personalities. In a lengthy preliminary discourse to the revised second edition of the *Elémens* in 1762, d'Alembert attempted a definitive rebuttal to Rameau's arguments, summarizing the major issues of dispute.

While d'Alembert was certainly correct in calling Rameau to order for the latter's more extravagant claims on behalf of his theory (concerning particularly the degree of scientific demonstration possible in a music theory, and Rameau's suggestion that all the arts and sciences are based on musical principles, since each partakes of proportions), he failed to comprehend many of the more subtle accommodations of Rameau to empirical practice (conceptions of chord root, rules governing the motion of the fundamental bass, etc.). While Rameau has traditionally been regarded as the most Cartesian musical thinker of the 18th century, it was ironically d'Alembert who in many cases displayed the more rationalist stubbornness in their argument, with his insistence upon rigorous rules of inference and deduction.

D'Alembert's aesthetic views on music were largely conservative and in accord with the received orthodoxies of his day. He held instrumental music to be inferior to vocal music since its imitative motivation was necessarily less clear. His views on opera, however, were by and large more progressive. His belated contribution to the Querelle des Bouffons (*De la liberté de la musique*, 1759) was one of the most balanced of the entire controversy, acknowledging merits in both French and Italian operatic practice.

THOMAS CHRISTENSEN

Aleotti, Bonaventura. *See* ALIOTTI, BONAVENTURA.

Aleotti, Raffaella (*b* Ferrara, *c*1570; *d* after 1646). Italian composer and organist. One of the five daughters the Ferrarese court architect Giovanni Battista Aleotti acknowledged in his 1631 will, she was prioress of the musically renowned Augustinian convent of S Vito, Ferrara, from 1636 to 1639. A 1621 guide to Ferrara's churches by M.A. Guarini describes her as 'most knowledgeable about music' and alludes to her well-received publication of motets and madrigals. A collection of her motets for five, seven, eight and nine voices and instruments was published by Amadino in 1593. Its dedication to Ippolito Bentivoglio is thought by Bowers to imply that she would willingly have left S Vito to enter Bentivoglio's service. Her motets show a thorough mastery of contrapuntal technique, rhythmic vitality and sensitivity to the meaning of the texts.

Aleotti last appears in a document of S Vito on 2 August 1640, but according to Gasparo Sardi she was still alive in 1646. Carruthers-Clement, Bridges and Ossi believe her to have been identical with the Vittoria Aleotti whose *Ghirlanda de madrigali a quattro voci* was also published in 1593, with a dedication to Ippolito Bentivoglio signed by the composer's father.

WORKS

SUZANNE G. CUSICK

Aleotti, Vittoria (*b* Ferrara, *c*1575; *d* after 1620). Italian composer, possibly identical with RAFFAELLA ALEOTTI. Daughter of Ferrarese architect Giovanni Battista Aleotti, she first learned music by overhearing lessons intended for an older sister. Astonishing her parents and her sister's teacher, Alessandro Milleville, by her harpsichord performance at about age six, she was taught directly by Milleville for at least two years before he recommended that she be educated at the musically renowned convent of S Vito, Ferrara. According to her father, Vittoria 'chose to dedicate herself ... to the service of God' when she was 14. Sometime after that her father obtained madrigals from G.B. Guarini for her to set to music. He gave the results to Count del Zaffo, who had the music printed by Vincenti in Venice, as *Ghirlanda de madrigali a quattro voci*, in 1593. They represent a range of late 16th-century styles, from simple canzonettas to serious efforts at exploiting dissonance to express images of amorous longing or distress. Occasional awkward handlings of imitation or of text declamation suggest that the madrigals of *Ghirlanda* were still student works. Nothing more is known about Vittoria Aleotti. Carruthers-Clement, Bridges and Ossi believe that she took the name Raffaella when she professed vows as a nun at S Vito, because there is no record of a Vittoria at S Vito, and because her father's will mentions a daughter named Raffaella but not one named Vittoria.

Alessandra, Caterina. *See* ASSANDRA, CATERINA.

Alessandrescu, Alfred (*b* Bucharest, 2/14 Aug 1893; *d* Bucharest, 18 Feb 1959). Romanian composer, pianist and conductor. He studied with A. Castaldi, D. Dinicu, D.G. Kiriac and E. Saegiu at the Bucharest Conservatory (1903–11), completing his education with two periods of study in Paris (1913–14, 1923–4), where he studied with d'Indy at the Schola Cantorum and with Paul Vidal at the Conservatoire. A remarkable accompanist, he worked with Enescu, Thibaud, Mainardi, Moodie and others during the period 1919–45. As a conductor he always achieved a soberly balanced performance; he conducted more than 1500 performances at the Romanian Opera in Bucharest (1921–59), where he specialized in the French repertory. In his capacities as conductor of the Romanian Philharmonic Society (1926–40) and artistic manager of the Romanian RSO (1933–59) he did much to encourage Romanian composers. He was also active as a music critic for Romanian and French reviews. Much of his compositional work was done during his student years; Debussy was a major influence on his lyrical and evocative style.

VIOREL COSMA

Alessandri, Felice (*b* ?Rome, 24 Nov 1747; *d* Casinalbo, nr Modena, 15 Aug 1798). Italian composer. According to Manferrari, he was born at S Damaso, near Modena. He studied in Naples and had his first large work, the oratorio *Il Tobia*, performed in Rome in 1765. Having gained recognition as a harpsichordist and conductor in Turin and in Paris at the Concert Spirituel, he visited Verona and Venice to prepare his first operas, *Ezio* and *Il matrimonio per concorso*, for Carnival 1767. At about this time he married the *buffa* singer Maria Lavinia Guadagni (*b* Lodi, 21 Nov 1735; *d* Padua, *c*1790), sister of the celebrated castrato Gaetano Guadagni; both were employed by the King's Theatre, London, for which Alessandri composed the comic operas *La moglie fedele* (1768) and *Il re alla caccia* (1769). Although he must have visited Vienna for the première of his opera *L'argentino* (1768), he was again in London as a harpsichordist in 1770.

Alessandri's career has not been thoroughly investigated. Simonetti stated that he was summoned from Genoa to Dresden in 1773 to direct his *L'amor soldato*, but this opera was probably written by a composer with whom he is sometimes confused: Alessandro Felici. From 1773 until April 1775 he was mainly in Turin, where he had three operas performed. A *Medonte* (Carnival 1774, Milan) is attributed to Luigi Alessandri in a printed libretto in the Brera library, Milan, but to Felice in the *Gazzetta di Milano* of 28 December 1774. Two comic operas composed for Venetian theatres (not for London as stated by Fétis) received first performances later in 1775, *La sposa persiana* and *La novità*, and another for

Lucca, *Sandrina* (not composed with Sacchini as claimed by Gerber).

During the following summer Alessandri was invited by Joseph Legros to share his direction of the Concert Spirituel and to compose for the Concerts des Amateurs in Paris. He lived in Legros's house and served these organizations for two years (1777–8). In December 1778 his opera *Calliroe* was staged at Milan's new Teatro alla Scala; his ballet *Venere in Cipro* was performed there soon after. During the next few years he had other operas staged in various Italian cities, including Padua, where he was highly regarded by the director of the Teatro Nuovo. In 1783 the nobility of Padua commissioned him to set the cantata *Le virtù rivali* honouring Alvise Mocenigo, the retiring governor.

Hoping for an appointment as composer to the Russian court, Alessandri went to St Petersburg in 1786. As he found only the post of a singing teacher, he moved in autumn 1789 to Berlin where he was named assistant director of the court opera, reportedly at the instigation of the prima donna Luisa Todi. The works he composed were not well received, however. Gerber reported that his first opera, *Il ritorno di Ulysse a Penelope* (1790), was generally admired, and yet the composer encountered difficulties with J.F. Reichardt and other colleagues and displeased his patron Friedrich Wilhelm II with his second opera, *L'ouverture du grand opéra italien à Nankin* (1790). His next opera, *Dario* (1791), proved a disaster, as did his last effort, a pasticcio entitled *Vasco di Gama* (1792). Finally, the king withdrew the *scrittura* for another opera, *Alboino*, and dismissed him (4 July 1792).

Alessandri remarried and returned in autumn 1792 to Italy, where his opera *Virginia* was performed (1793, Venice). He rejected an offer to compose a *Medea* for the Paris Opéra, but travelled to Vienna and Berlin in 1794 in search of commissions. Later that year his operas *Zemira* and *Armida* received great applause in Padua, and he was named honorary member of the Accademia Filarmonica Modenese. His last opera, of unknown title, was given at the Teatro Rangoni, Modena, shortly before his death.

Alessandri participated in efforts at a Franco-Italian synthesis through his opera *Alcina e Ruggero* (1775, Turin) and his setting of Verazi's revisionist libretto *Calliroe* for the opening of La Scala (1778). *Alcina* is a magic opera with dances, choruses and a multitude of special effects; it also contains an early action ensemble finale. His success with this opera may have recommended him for the La Scala commission. Typical of Verazi's librettos, *Calliroe* contains lavish spectacle with chorus and pantomime, extensive scene complexes unbroken by exit arias, and many ensembles, some of which fluctuate in number of personnel or incorporate action like a comic opera finale. The sinfonia is programme music for a city under seige and the entr'acte ballets are related to the plot. Probably as a result of his work with Verazi, Alessandri was called to Florence to do a refurbished *Attalo re di Bitinia* (1780), featuring yet another beseiged city, a finale with some action and an extensive aria with chorus. Two years later he returned to Milan to write an updated setting of the 50-year-old Metastasian libretto *Ezio*, which had been modernized with an *introduzione* and several new ensembles and choruses. His *opere serie* of the 1790s reflect the transformation taking place in the genre. Choruses, ensembles, scene complexes and even pantomime dance were becoming commonplace along with an increased tolerance for staged deaths and tragic endings. Pepoli's tragedy *Virginia* remains one of the more shocking of these plots, in which a father kills his daughter to save her from the tyrant Appius Claudius, who is then assassinated by her bridegroom with the approval of a crowd thirsty for vengeance. Alessandri's comic operas are *drammi giocosi* with semi-serious aspects. However, he was most widely known in northern Italy for *buffo* entertainments such as *La finta principessa*, with productions in about 27 cities within a decade, and *Il vecchio geloso*, with 15 productions in as many years. Alessandri's music shows a flair for the dramatic. He uses chromaticism, harmonic effects and modal contrasts more readily than most of his contemporaries and enlivens his scores with programmatic orchestral effects, wind colour and strong contrasts in dynamics and tempo.

WORKS

OPERAS

Ezio (os, 3, P. Metastasio), Verona, Filarmonica, carn. 1767, Milan, Scala, carn. 1782, *F-Pn*, *I-Mc*

SVEN HANSELL, MARITA P. McCLYMONDS

Alessandri & Scattaglia. Italian firm of music and general engravers and publishers, music and print sellers. The firm was active in Venice at the sign of the Beata Vergine della Pace on the Rialto from about 1770 to at least 1803. It was founded by the engravers Innocente Alessandri (*b* Venice, *c*1740), a pupil of Francesco Bartolozzi, and Pietro Scattaglia. From about 1770, during the years of publication of their joint magnum opus, *Animali quadrupedi* (Venice, Carlo Palese, 1771–5, illustrated with 200 plates designed, engraved and hand-coloured by themselves), they also worked as engravers and selling agents for the music publisher Luigi Marescalchi; on at least one title-page they are also described as his printers, which may have been another of their regular responsibilities. Together with Marescalchi they were associated with the revival of music publishing in Italy after 70 years of almost total inactivity. The fact that their names appear on almost all title-pages of Marescalchi's Venice editions has often led cataloguers and bibliographers to ascribe to them publications that should properly be regarded as Marescalchi's, resulting in numerous errors in RISM, the *British Union Catalogue* and other reference works. It is probable that Alessandri & Scattaglia did not publish an edition of their own until after Marescalchi had closed his Venice business about 1775; even after that date their status is often described merely as selling agent on title-pages of editions whose publishers are not specified (it must, however, be recognized that modern definitions of the respective titles and functions of publisher and distributor are not rigidly applicable to the music-publishing trade in late 18th-century Venice).

Of the handful of editions that bear Alessandri & Scattaglia's unquestioned imprint, the outstanding one is the full score of Bertoni's *Orfeo* (*c*1776); it was only the second complete opera to be published in full score in Italy since 1658. A reissue from the same plates, but without an imprint, was published for the opera's revival at the Venice Carnival (1782–3). After about 1785 the firm gradually did less music engraving, but the premises on the Rialto were retained at least until late 1803. Music of every type was sold there, including manuscript copies of numbers from the latest operas, dressed up within decoratively engraved paper wrappers. The majority of the publications with which the firm was associated are in oblong format and have ornamental title-pages of uncommon elegance. (*SartoriD*)

RICHARD MACNUTT

Alessandri Chiapetta, Giulio d' (*b* Milan, 29 June–6 Aug 1647; *d* Milan, 2 Sept 1712). Italian composer and tenor. His family was originally from Centonara, in the province of Novara, where the surname Chiapetta (Chiappetta, Chiappetti, Ciapeta, Ciapetta) was so common that 'de Alessandri' was used to identify the branch to which the composer belonged. It was because of these origins that his contemporary L.A. Cotta included him in a list of Novara musicians, describing him as 'Giulio de Alessandri Chiapetta di Centonara in Riviera di S Giulio'. The documents which refer to him and his compositions use both surnames separately, and so 'Giulio d'Alessandri' and the 'Canon Chiapetta' have been identified as two different composers. He was ordained priest on 6 April 1669. On 10 December 1676 he was appointed a tenor and *vicemaestro di cappella* of Milan Cathedral. During this period he collaborated with P.F. Tosi, who worked at Milan Cathedral from July 1681 until his dismissal on 8 August 1685. Alessandri was acting *maestro di cappella* there from April 1684 but had to step down from the post when he failed to pass the competitive examination won on 5 December 1684 by C.D. Cossoni. On 14 December 1684 Alessandri Chiapetta wrote an account of the circumstances surrounding the competition, which he felt had not been run correctly. On 12 April 1685 he became a canon at S Nazaro, Milan, where he remained until his death. In 1711 Antonio Caldara, visiting Milan, asked for his opinion on a piece written for S Gaudenzio, Novara, Alessandri Chiapetta being considered 'virtuosissimo' in the profession of composer. From his will, dated 20 August 1712, it appears that he owned three harpsichords, including one built by Celestini, and that he left his music library to Count Carlo Sanvitali, first minister of the Duke of Parma.

Alessandri Chiapetta's principal compositions are two oratorios: *Santa Francesca romana* and *La Bersabea*. The former was performed on 9 November 1823 in the house of Kiesewetter, who found the melody refined and expressive, the modulations daring and the conterpoint well handled, allowing weighty characterization and achieving particular dramatic effects. The two-part oratorio *La Bersabea* was composed in 1686 and performed in 1689 at the court of Francesco II d'Este, Modena. Here contrapuntal skill is in perfect union with the pathetic style, which reaches a high point in the aria 'Delizie e tormenti' on an ostinato bass. The melodic and harmonic ideas are evocative, always tied to the sense of the words, and never predictable. Alessandri Chiapetta never sought an easy effect: both parts of the oratorio close with a

recitative, choruses are entirely missing, and the accompanied arias are mostly in the first part. He also collaborated with other musicians, active mostly in the musical institutions of Milan, in the creation of two pasticcios: *L'Arione* and *L'Etna festivo*, both dedicated to the Duchess of Sesto, Isabella Maria della Zerda e Aragon, and printed by Francesco Vignoni.

Alessandro, Charles-Guillaume. *See* ALEXANDRE, CHARLES-GUILLAUME.

Alessandro [Alessandri], **Gennaro d'** (*fl* 1739–40). Italian composer. In the document recording his appointment as *maestro di cappella* of the Ospedale della Pietà, Venice, in 1739 he is called 'Alessandro Gennaro Napolitano', which indicates that he was born or educated or both in the Neapolitan region. Fétis stated that he was born in Naples in 1717, but no confirmation of this is known. He was in service at the Pietà from 21 August 1739 to 13 May 1740 when he was dismissed for lack of diligence. Within that period he was not entirely idle, however, for he presented his opera *Ottone* at the Theatro S Giovanni Grisostomo, Venice, during Carnival 1740 and his serenata *Il coro delle muse* at the Ospedale on 21 March of the same year, performed by the pupils themselves. Both compositions were in honour of the Electoral Prince of Saxony, Friedrich Christian. Goldoni, who wrote the words of the serenata, said in his memoirs (*Delle commedie di Carlo Goldoni*, Venice, 1761) that he adapted them to music that Alessandro had written for three preceding cantatas with texts by Goldoni, *La ninfa saggia*, *Gli amanti felici* and *Le quattro stagioni*. It is presumed that these three cantatas were also composed during the period 1739–40. No information on Alessandro's movements after his dismissal from the Ospedale has come to light.

Little of his music remains. The catalogue of *I-Bc* lists an aria from *Ottone*, 'Se brami la mia morte', while that of *B-Bc* mentions another aria, 'Già' per te non sento amore'. L. de La Laurencie recorded six sinfonias by Alessandro in *Inventaire critique du fonds Blancheton de la Bibliothèque du Conservatoire de Paris*, i (Paris, 1930). (*SartoriL*)

MICHAEL F. ROBINSON/FRANCESCA SELLER

Alessandro, Raffaele d' (*b* St Gall, 17 March 1911; *d* Lausanne, 17 March 1959). Swiss composer, pianist and organist. He began his music studies in Zürich in 1932, for the most part teaching himself; from 1934 to 1937 he studied in Paris with Dupré, Paul Roës and Nadia Boulanger, and returned to Switzerland in 1940. Settling in Lausanne, he worked as a concert pianist, composer, music critic and broadcaster. His eclectic style took elements from the varied musical currents of the time, but he retained a basis of sonata form and tonal harmony. He favoured driving rhythms and his writing is complex and compact. (L. Marretta-Schär: *Raffaele d'Alessandro: Leben und Werk*, Winterthur, 1979)

LUISE MARRETTA-SCHÄR

Alessandro Mantovano (*fl* early 16th century). Italian composer, singer and possibly organist. There are two or perhaps three musicians in Mantua with this name active in the late 15th and early 16th centuries. The first, an organist, was in the service of Marchese Federico Gonzaga by 1480. In 1490, he began to work for Isabella d'Este. This Alessandro had died by July 1506. The second musician, 'Alessandro cantore', was paid three ducats by the Mantuan Cathedral in 1509 for his 'singing and composing'. In May 1510, in the services of Isabella, he visited Rome. This may be the same musician called 'Alessandro degli organi' in 1524, when Marchese Federico II Gonzaga forgave one of his debts, or this Alessandro may be a different musician altogether.

At least the second Alessandro was a composer, and it must be this Alessandro who, identified as 'Alexandro Mantuano', contributed between 11 and 13 works to Andrea Antico's *Canzoni, sonetti, strambotti et frottole, libro tertio* (Rome 1513; reprinted with slightly different ascriptions in 1518 and 1520). There are four *strambotti*, three or four *barzellette*, one villotta, and three *cinquecento* madrigals. One *barzelletta*, attributed in 1513 to Cara but in the reprints to Alessandro, is also probably by him. A sonnet, *Di più varii pensier*, ascribed to Alessandro in the 1513 edition but to Cara in the reprints, is probably by the latter composer. Of particular interest are Alessandro's settings of poems in the form of madrigals: all are basically through-composed, in the manner typical of the later musical madrigal. His *Fra quelle luci altere* also elides many of the lines according to the content, rather than the form of the poem, and thus displays traces of the new 'Bembo-like' manner of reading

the poem for syntactical content rather than purely for structure. All of Alessandro's works are edited in A. Einstein: *Canzoni sonetti strambotti et frottole, libro tertio (Andrea Antico, 1517)*, SCMA, iv (1941).

WILLIAM F. PRIZER

Alessandro Romano [Da Roma; Alexander Romanus; Alexander De Urbe; Don Giulio Cesare; Julius Caesar Romanus] (*b* Rome, ?1533; *d* Castellone, Formia, 1592). Italian composer, singer and viola d'arco virtuoso. He was long confused with other musicians active in Rome in the same period, including the papal singer Alessandro Merlo and Palestrina's pupil Romano da Siena. He was first *maestro di musica* of the Accademia Filarmonica di Verona (1552–3 and 1556–7) before becoming an Olivetan Benedictine monk with the name of Giulio Cesare (1571–92). The engraved portrait in his first book of motets (Rome, 1580) reads, 'D. Julius Caesar sive Alexander Romanus Annum Agens XXXXVII', suggesting a birthdate of about 1533. A self-proclaimed pupil of Willaert and Rore (in the dedication of *Le Sirene*, 1577), Alessandro may also have served as a singer, intermittently, in the Cappella Sistina – as Lancellotto asserted – and at S Giovanni Laterano, as suggested by the appearance of the name 'Alexander Romanus' in the church's payment lists from 1571 onwards. However, the beginning of the novitiate of the 38-year-old 'Julius Caesar Romanus' at the Olivetan monastery of S Bartolomeo in Rovigo also began in 1571. His name appears for the last time in the 1592 list of *Defuncti* in the *Liber professorum et mortuorum* in association with the monastery of S Erasmo di Castellone, Formia.

Alessandro's works are important examples of the early absorption of Rore's style. In his ambitious and successful first collection, *Le vergine* (1554), he set four texts already famous in settings by Rore, including Petrarch's *Vergine bella* and the 'partenza' *Anchor che col partire*. Rore's influence is discernible throughout the book, particularly in the effective musical expression of the text. The homage to his 'teacher' is even more explicit in Alessandro's *Primo libro di madrigali a cinque voci*, published in the year of Rore's death (1565), where he openly declared having composed one of these madrigals 'in imitation of Cipriano'. This madrigal, *Di virtù, di costumi*, is a sophisticated parody of Rore's setting of the same text; Alessandro attempted to emulate his teacher, while distinguishing himself by simplifying the writing and the harmonic progressions, repeating and freely developing rhythmic and melodic material, taking the already daring expressive solutions to their extremes and subjecting the original cadential sequence to unexpected alterations. His last published collection of madrigals, *Le Sirene* (1577), shows the composer striving for an original voice, both in the choice of texts and musical style. However, the presence of the usual compositional models is still evident, and his attempt to distance himself from them results in a sparely expressive manner.

The influence of the madrigal is evident in Alessandro's *Canzoni alla napolitana* (1570) and *Napolitane* (1571), both for five voices, and in the subsequent *Villanelle* for four voices (1577). Like other collections of the period, these include not so much Neapolitan 'villanelle' in the strict sense, as particularly simple short madrigals and canzonas in a freer form. The first two are among the first examples of the adoption of the five-voice texture for this genre. Both in his choice of text and his musical style, Alessandro seems to belong to the Venetian strain inaugurated by Willaert in his *Canzone villanesche all napolitana* (1545) and continued in the 1550s and 60s by his disciples Baldassare Donato, Perissone Cambio and Giovanni Nasco. The use of 'Neapolitan' dialect is sporadic, and the traditional strophic-ritornello form tends to be abandoned in favour of freer, more concise shapes, without repetition. The writing is predominantly homophonic and chordal (similar to that typical of Donato) and is characterized by lively syncopated rhythms, recurring harmonic schemes and tonal clarity.

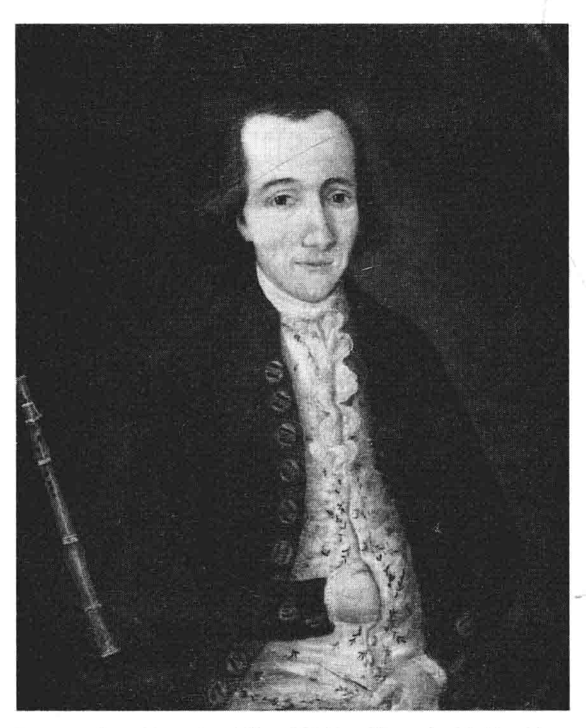
STEFANO LA VIA

Alevi, Giuseppe. *See* ALLEVI, GIUSEPPE.

Alexander. German family firm of wind instrument makers. The business, located in Mainz, was established in 1782 by Franz Ambros Alexander (*b* Miltenberg, 22 July 1753; *d* Mainz, 1 Dec 1802), who was described in a Mainz Cathedral report of the same year as a wood-turner and wind instrument maker. Portraits depict Franz Ambros and his son Philipp (1787–1864) with clarinets (see

illustration). After his death, Alexander's business was continued by his widow and two of his sons, Claudius (1783–1816) and Philipp, later joined by a third, Kaspar Anton (1803–72). Under the direction of Philipp and Kaspar Anton the firm became known as Gebrüder Alexander, the name it still bears. Kaspar Anton's two sons Franz Anton (1838–1926) and Georg Philip (i) (1849–97) became the third generation to direct the company. Woodwind instruments, mainly for military use, were the firm's main products until the mid-19th century. By that time, however, band instrumentation had become more brass orientated; after Philipp's death in 1864 Georg Philipp (i) was sent to Saxony, Vienna and Prague to study brass instrument making, with a view to extending the firm's production in that direction.

In 1862 Wagner, who was living nearby in Biebrich, visited the firm several times to examine improvements made to the tenor and baritone tubas he intended to use in the *Ring*. Although Moritz of Berlin is thought to have supplied the first set of Wagner Tubas for the première of *Das Rheingold*, Alexander Brothers certainly made a second set for Bayreuth in 1890, and the firm continued to make improvements to these instruments during the next 100 years; most of the world's orchestras possess a set of Wagner tubas built by Alexander. The firm has also made significant improvements to the bass trumpet and the contrabass trombone. Since 1900 it has produced brass instruments only.



In the fourth generation control of the firm was assumed by two sons of Georg Philipp (i): Friedrich Sebastian Anton (1873–1913) and Georg Philipp (ii) (1879–1916). In 1906, following innovations made by Kruspe, they introduced a compensating double horn in F and B♭. In 1909 the firm was granted an imperial patent for a full double horn (Model 103); this instrument, which employs a unique thumb valve with six ports in the same plane, has consistently maintained its popularity with players. After the premature deaths of the two brothers of the fourth generation, the firm was managed by their widows and Franz Anton until Friedrich Sebastian Anton's son, Philipp Johann Christoph (1904–71), was able to assume control. The factory was destroyed by bombing in World War II, but Philipp Johann Christoph salvaged tools and patterns and continued business from the cellar; the factory was rebuilt on the same site, in the Bahnhofstrasse, after the war. Philipp Johann Christoph was succeeded by his two sons, Anton Julius (*b* 1935) and Hans Peter (*b* 1948). Anton Julius became sole manager of the company in 1971 and his son Georg Philipp (iii) (*b* 1969) later joined the firm.

CHRISTOPHER LARKIN

Alexander, Charles McCallom (*b* Meadow, TN, 24 Oct 1867; *d* Birmingham, England, 13 Oct 1920). American revivalist and publisher. He attended Maryville College, Tennessee, and the Moody Bible Institute, Chicago; in 1893 he assisted Moody in his revival at the World's Colombian Exposition in Chicago. From 1908 he toured with J. Wilbur Champman through the USA, Great Britain, Australia and missionary areas of East Asia. He was noted for his skill in inspiring a congregation to sing enthusiastically and in conducting large choirs. He published a number of revival songbooks and owned the copyrights of several popular gospel hymns, such as Charles H. Gabriel's *His eye is on the sparrow* (1905). *See* GOSPEL MUSIC, §I, 1(iv).

HARRY ESKEW

Alexander, Haim (Heinz) (*b* Berlin, 9 Aug 1915). Israeli composer of German birth. His studies at the Stern Conservatory were halted in 1936 as a result of the Nazi persecution, and in the same year he emigrated to Palestine. There he studied composition with Wolpe and the piano with Irma Wolpe-Schoenberg and Ilona Vince-Kraus. As a student he made his living as a café jazz pianist in Jersualem and established himself as an excellent improviser. From 1945 until his retirement he was a professor at the Rubin Academy of Music, Jerusalem. A highly versatile musician, he taught the piano, the harpsichord, theory, composition and improvisation. He also lectured in the musicology departments of Tel-Aviv University, the Hebrew University, the Institut Jaques-Dalcroze, Geneva, and New York University.

One of the diverse group of composers who emigrated from Europe to Palestine during the 1930s, Alexander experienced the tension between the ideological pressure to create a new national style with a nebulous Middle Eastern and folklike orientation, and the urge to keep abreast of current Western music. This tension is reflected in the contrast between the post-Romantic chromaticism of *Variations* (1947) and the folk-inspired *Six Israeli Dances* (1949–51), and in the combination of diatonic folk choral style and imitative motet technique in his choral song *Ve'kibatzti etkhem* ('I Will Even Gather You') (1952) composed for the Zimriah, the international chorus festival. In the 1950s Alexander attended the Darmstadt summer courses, following which, in works such as *Merubaim, Rubaiyat* (1963) and *Tavniot* (1973), he added dodecaphonic and other serial techniques to his vocabulary. In 1971 he was commissioned to transcribe traditional Jewish songs at the National Sound Archives in Jerusalem, many of which he then arranged for instruments in the manner of *Gebrauchsmusik*. His prolific output has continued to be dominated by pluralism and by a deliberate adoption of stylistic strategies according to context and expression, from dense Berg-like atonal expressivity (*Shirei Ahavah ve'Tzippia*, 1985) to folk-style lyricism (*Shirei teva*, 1988), Arabic dance-tunes (*Nabut*, 1971) and modal neo-classicism (Piano Concerto, 1982). He has also retained an attachment to traditional German culture, as is demonstrated in *Mein blaues Klavier* (1990). He has won several important national awards, including the Engel Prize (1956), the Artur Rubinstein Prize (1973) and the ACUM 1996 Golden Feather Prize for his life-work.

JEHOASH HIRSHBERG

Alexander, Josef (*b* Boston, MA, 15 May 1907; *d* Seattle, WA, 23 Dec 1990). American composer. He graduated from the New England Conservatory in 1925 and the following year received a postgraduate diploma. At Harvard University (BA 1938, MA 1939) he was a composition pupil of Piston; his other teachers there included E.B. Hill and Leichtentritt (orchestration) and Apel (musicology). Alexander also studied with Boulanger in Paris and with Copland at the Berkshire Music Center. He taught at the St Rosa Convent, Boston College, Harvard, and Brooklyn College, CUNY (1943–77). A spokesman for American composers, he received numerous awards, including both a Naumburg and a Fulbright fellowship.

Although he wrote in nearly every instrumental and non-dramatic vocal medium, Alexander concentrated on works for solo piano, mixed chamber ensembles and large orchestra. He took a middle ground stylistically between staunch conservatism and unrelenting modernity or complexity, refusing to be influenced by any particular school or current trend of composition. Many of his works are programmatic, but they are never too literally explicit. With the musical portraits in *Epitaphs* (1947) he sought 'to capture an essence and cross section of humanity'. He often chose colourful and unusual combinations of instruments, as in *Triptych* for cornet, marimba and guitar, and *Dyad* for four tubas.

BARBARA A. PETERSEN/MICHAEL MECKNA

Alexander, Meister [Der wilde Alexander] (*fl* mid- to late 13th century). German poet-composer. He is not attested in official documents or mentioned in contemporary literature. The only biographical clues are certain allusions in his poetry to historical events between 1285 and 1288 but more recent study shows additional allusions to events from 1247 to 1252. In two manuscripts he is named 'der wilde Alexander', perhaps because of his unusual style or his restless itinerant life, and in the Jena manuscript he is called 'Meister Alexander'. But the Meistersinger did not regard him as one of the 12 masters.

Alexander was one of the most important Minnesinger and composers of *Sprüche* (*see* SPRUCH) after the time of Walther von der Vogelweide. In the surviving sources he is represented mainly by 24 *Spruch* strophes (in only one *Ton*), but also by two Minnelieder and one *Leich*. The principal themes of his *Spruch* poetry are admonition and criticism of the times, with reference both to the life of the individual and to religious and political circumstances. The themes of his Minnesang are still those of the chivalrous *hohe Minne*; yet the repertory of motifs in classical Minnesang, with its tendency to idealize, is given new life by his highly personal, adventurous and passionate manner. Alexander's lyric poetry has much of the formal style of classical courtly poetry, but is characterized by his own powerful, dark, allegorical style. The originality and forward-looking form of his melodies reflect his poetic skill. Alexander's musical style is similar to that of classical Minnesang; but at the same time the melodies show a more modern and refined stylistic intent, and some suggest early 14th-century style in their extensive melismas.

BURKHARD KIPPENBERG/LORENZ WELKER

Alexander, Roberta (Lee) (*b* Lynchburg, VA, 3 March 1949). American soprano. She graduated in voice studies at the University of Michigan, and continued her training at the Royal Conservatory, The Hague (with Herman Woltman), and the Netherlands Opera Studio, with which she made her début in *La cambiale di matrimonio* (Rossini). Making her home in Amsterdam, she sang a variety of roles with the Netherlands Opera, one of them in the première of Ullmann's *Der Kaiser von Atlantis* (1975). Her European engagements also included performances in both East and West Berlin. She made her American operatic début at Houston in 1980 as Pamina; she sang Strauss's Daphne at Santa Fe (1981) and Zerlina at the Metropolitan Opera (1983), where she later sang Bess (Gershwin), Jenůfa and Mimì. Her British operatic début was at Covent Garden as Mimì (1984), and her Viennese début (1985) as Cleopatra (*Giulio Cesare*) at the Theater an der Wien; she later appeared as Donna Elvira at the Staatsoper (1986). She sang a highly acclaimed Jenůfa at Glyndebourne in 1989. Alexander is an accomplished actress with a smoothly produced soprano of wide expressive range. Her operatic recordings include Mozart's Elvira (1990, with Harnoncourt), Electra (1991, with Colin Davis), the title role in Goldschmidt's *Beatrice Cenci* and Stella in his *Der gewaltige Hahnrei* (1994–5). She also has a flourishing concert career and is a notable interpreter of Mahler and various American composers. She has recorded discs of Ives and Bernstein songs, and works for soprano and orchestra by Barber and Gershwin.

NOËL GOODWIN

Alexandra, Liana (Moraru) (*b* Bucharest, 27 May 1947). Romanian composer. She studied composition at the Bucharest Academy of Music (1965–71) with Tudor Ciortea and Tiberiu Olah. She took up a career in university education, teaching orchestration, musical form and composition. She is a prolific composer, in her element with orchestral and chamber music, employing repetitive and evolving techniques, with melodic lines which suggest lyricism and meditation. Her instrumentation uses a palette of delicate, pastel colours.

Her confident handling of minimalist techniques is shown in chamber works such as *Colaje* ('Collages', 1977) and *Incantații II*, no.2 ('The Enchanted'). Certain works combine mathematical thought with the spontaneity of Byzantine song and Romanian folk music. Virtuosity is an important feature of her concertos, including those for clarinet (1974), viola and flute (1980) and piano four hands (1993).

OCTAVIAN COSMA

Alexandre. French firm of reed organ makers. It was founded in 1829 by Jacob Alexandre (*b* Paris, 1804; *d* Paris, 11 June 1876) for the manufacture of accordions; in 1834 he exhibited a small reed organ (two sets of reeds) in Paris. With the purchase in 1841 and 1845 of reed organ patents (among them percussion and prolongement effects) from Alexandre Martin of Provins, the firm soon became one of the leading harmonium makers in the country, although their instruments were first called 'orgue-mélodium' to avoid conflict with the patents of A.-F. Debain. These early instruments had four sets of reeds, a five-octave keyboard, couplers, a Grand Jeu, and an Expression stop which bypassed the reservoir to allow control of intensity through the blowing treadles. The firm was awarded a bronze medal for the instrument in the Paris exposition of 1844; this was the first of many awards, including gold medals and culminating in grand prizes in Brussels (1897) and Paris (1900).

Jacob Alexandre was joined in the 1850s by his son Edouard (*d* 1888), the firm becoming known as Alexandre Père et Fils, and later by Louis-Pierre Alexandre Martin. By the 1860s they had a large factory in Ivry-sur-Seine, said to have employed some 600 workers. In 1872 the firm reorganized with Edouard as Director-General. He was succeeded in 1884 by his son-in-law Edmond Sechs. Alexandre organs were exported to England, and to the USA, where they were patented in 1859. By 1898 the firm's catalogue contained a variety of models for home and church use from the portable four-octave *orgue à cent francs* to instruments of two manuals and pedal with 5½ sets of reeds. It also offered a church model of 7½ sets enclosed in a swellbox, an instrument combining pipes and reeds, pedal-boards for pianos, practice claviers and a tiny table-sized reed organ called the *Mélodiflûte*. By 1901 the firm claimed to have made 131,123 instruments, but demand was declining, and by 1914 Alexandre and several other makers had been absorbed by the large piano consortium of Fortin, which produced a small number of reed organs under the Alexandre name until 1974.

BARBARA OWEN

Alexandre [Alessandro], **Charles-Guillaume** (*b* *c*1735; *d* Paris, late 1787 or early 1788). French composer and violinist. His first names are undoubtedly Charles-Guillaume (given by La Borde, 1780) rather than Claude-Guillaume (from the report of his wife's death in *Annonces*, 14 August 1792). He is first mentioned in *Les spectacles de Paris* as a violinist in the orchestra of the Opéra-Comique from 1753 to 1755. By 1756 he had composed music for at least two *spectacles à machines* at the Théâtre des Tuileries (La Borde claims a third). The *Annonces, affiches et avis divers* of 15 September 1760 referred to him as first violin and *maître de musique* at the music school of Sieur Dubugraire; in the announcement of his *Six trio* op.4 (1762) he is described as the first violin of the Duc d'Aiguillon, a prominent patron in the French capital. Soon afterwards he began to take advantage of the expanding bourgeois musical life in Paris and for almost three decades he made his living as a composer, arranger and violin teacher. Although he is known to have been a violinist, his name does not appear as a soloist nor as a member of any Parisian orchestra after 1755: in the *Almanach musical* (1775–9) he is listed as a composer. He must have died shortly before 27 March 1788, when a sale of his personal musical effects was advertised in the *Annonces*.

Alexandre wrote three *opéras comiques* and collaborated with various composers on a fourth, *Le tonnelier*, one of the most popular works given by the Comédie-Italienne during the 1770s and 80s. His own operas met with a more modest success. *Le petit-maître en province*, which exposed the morals of 18th-century society, was performed 12 times in the first month and was praised by the *Mercure de France* for being in the French taste, although Grimm (*Correspondance littéraire*, October 1765) found the composer 'a fabricator of notes ... without having a single musical idea'. Most of Alexandre's printed works were arrangements of popular opera *airs* for small ensembles, including 30 quartet arrangements of such successes as Gluck's *Alceste*, Grétry's *Richard Coeur-de-Lion* and Dalayrac's *Nina*. These, and his original compositions, were tailored to the limited performing skills of his market and the announcement of his *Six quatuors* (1778) in the *Annonces* of 28 June 1779 shows their purpose: 'These quartets have a simple and agreeable melody: they will suit all classes of amateurs, who will find enough difficulties in them to exert themselves and enough simple traits to make their execution continually seem brilliant'. Alexandre went further in this field than most of his contemporaries by writing violin concertos based on popular *airs*, and these works enjoyed considerable popular appeal. His *Sei sinfonie* op.6 are well-constructed pieces demanding a high level of technical proficiency and fusing Italian, Mannheim and French traits.

WORKS

printed works published in Paris

STAGE

first performed in Paris

Le triomphe de l'amour conjugal (spectacle orné de machines, 5, G.N. Servandoni), Tuileries, 16 March 1755 (1755), lost

La conquêt du Mogol par Thamas Kouli-Kan, Roi de Perse, et son triomphe (spectacle à machines, 5, Servandoni), Tuileries, 4 April 1756 (1756), lost

Georget et Georgette (oc, 1, Harny de Guerville), Foire St Laurent, 28 July 1761 (1761)

Le tonnelier (oc, 1, N.-M. Audinot and A.F. Quétant), Comédie-Italienne (Hôtel de Bourgogne), 16 March 1765 (*c*1767), collab. Ciapalanti, Gossec, Kohaut, F.-A.D. Philidor, Schobert and J.-C. Trial

Le petit-maître en province (comédie avec des ariettes, 1, Harny de Guerville), Comédie-Italienne (Hôtel de Bourgogne), 7 Oct 1765 (*c*1765)

L'esprit du jour (oc, 1, Harny de Guerville), Comédie-Italienne (Hôtel de Bourgogne), 22 Jan 1767, airs pubd in contemporary anthologies

Godefroy de Bouillon (spectacle à machines, Servandoni), Tuileries, cited by La Borde

BARRY S. BROOK, RICHARD VIANO/ELISABETH COOK

Alexandru, Tiberiu (*b* Ilimbav, Sibiu, 14 May 1914; *d* Bucharest, 20 April 1997). Romanian ethnomusicologist. He studied at the Bucharest Royal Academy of Music (1931–6) and became Brăiloiu's closest collaborator, working with him at the folklore archive of the Society of Romanian Composers (1935–49); he continued his research appointment there when the archive was incorporated in the Institute of Ethnography and Folklore (1949), undertaking several field studies and collecting numerous examples of Romanian folksong, some of which have been recorded. He was Brăiloiu's successor in the folklore department of the Royal Academy of Music (1943–8), where he held various posts before becoming professor (1954–9). In 1956 he did research in China and from 1965 to 1967 he was the folklore expert of the Ministry of Culture of the United Arab Republic in Cairo, where he made recordings of Egyptian and Nubian folksong. In 1979 he was the folklore expert in Sudan. In his writing on folk music he concentrated on instruments and the work of important individuals. His recordings include the six disc *Antologia muzicii populare româneşti* (1960–62). In 1957 he became a member, and in 1971 an executive member, of the IFMC. The Romanian Academy awarded him the Ciprian Porumbescu Prize in 1957. He became an honorary life member of the European Seminar on Ethnomusicology in 1984.

VIOREL COSMA

Alexanian, Diran (*b* Constantinople, 1881; *d* Chamonix, 27 July 1954). Armenian cellist. He studied with Grützmacher and while a student played chamber music with Brahms and Joachim. At the age of 17 he appeared as the soloist in Strauss's *Don Quixote* with the composer conducting and scored a triumph; he was then invited to play concertos with Nikisch and Mahler. In 1901 he settled in Paris, where Casals saw some of his fingerings and recognized that Alexanian shared his own, then revolutionary, ideas on technique and interpretation. Many years' collaboration followed, leading to the publication in 1922 of their joint treatise *Traité théorique et pratique du violoncelle* and in 1929 of Alexanian's analytical edition of the solo cello suites of Bach. Alexanian was professor of the Casals class at the Ecole Normale de Musique from 1921 to 1937, when he left for the USA. His classes in Paris, Baltimore and New York attracted artists and students from all over the world, and his influence extended far beyond his own pupils (among them Maurice Eisenberg and Antonio Janigro) to such cellists as Feuermann, Cassadó, Piatigorsky and Fournier. He was also a conductor of distinction.

DOROTHY C. PRATT

Alexeyev, Dmitry (*b* Moscow, 10 Aug 1947). Russian pianist. He studied at the Central School of Music in Moscow and later at the Moscow Conservatory with Dmitry Bashkirov. A familiar and quietly formidable figure on the international competition circuit, he achieved major successes in Paris (second prize in the 1969 Marguerite Long Competition), Bucharest (first prize in the 1970 George Enescu Competition), Moscow (fifth prize in the 1974 Tchaikovsky Competition) and Leeds (first prize in the 1975 competition). He made his US début in Chicago in 1976 and has subsequently played with most of the world's great orchestras and conductors, including Ashkenazy, Boulez, Giulini, Tennstedt and Temirkanov. His earliest recordings were of Brahms's late piano works and concertos by Grieg, Schumann, Rachmaninoff, Prokofiev and Shostakovich. He has also recorded Rachmaninoff's Preludes and six *Moments musicaux*, a two-piano recital of music by Medtner and Rachmaninoff with his compatriot Nikolay Demidenko and, most enterprisingly, Medtner's First Piano Concerto and Piano Quintet.

BRYCE MORRISON

Aleyn (*fl c*1400). English composer. He was the composer of two works in the Old Hall Manuscript. One is a Gloria (no.8), ascribed to 'Aleyn' without initial; it is a homorhythmic setting in score, notable for its sprightly text declamation. The other piece, also in score, is an erased descant setting of Sarum Agnus Dei no.3 (Old Hall, no.128), where the remains of the ascription appears to read 'W. Aleyn' (not 'W. Typp', as reported in D. Fallows: *A Catalogue of Polyphonic Songs, 1415–1480*, Oxford, 1999). If his initial was indeed 'W.', identification with the composer of the motet *Sub Arturo plebs*, JOHANNES ALANUS, cannot stand.

Alfano, Franco (*b* Posillipo, Naples, 8 March 1875; *d* San Remo, 27 Oct 1954). Italian composer. After studying the piano privately with Alessandro Longo, and harmony and composition with Camillo de Nardis and Serrao at the Conservatorio di S Pietro a Majella, Naples, he moved in 1895 to Leipzig, where he completed his composition studies with Jadassohn. In 1896 he went to Berlin and launched himself as a pianist, though he did not continue this activity systematically for long: in later life he appeared in public only as a song accompanist and chamber music player, mainly in his own works. From 1899 until about 1905 he was based in Paris, but travelled as far afield as Russia. He then settled in Milan, moving in 1914 to San Remo, which remained at least his summer home for the rest of his life. From 1916 he taught composition at the Liceo Musicale, Bologna, which he directed from 1918. While there (1920), he helped to found the society Musica Nova, which in some ways paralleled Casella's more important Società Italiana di Musica Moderna. Alfano was appointed director of the Liceo Musicale (later Conservatory) of Turin in 1923, remaining there until 1939. During 1940–42 he was superintendent of the Teatro Massimo, Palermo, subsequently becoming for a few months professor of operatic studies at the Conservatorio di S Cecilia, Rome. From 1947 to 1950 he served as acting director of the Liceo Musicale, Pesaro.

Although generally known outside Italy only as the composer who completed Puccini's *Turandot*, Alfano was far from being a mere Puccini disciple. It is true that he won his first major success with an opera in the Puccini–Giordano tradition, *Risurrezione*, which had many revivals, reaching its 1000th Italian performance by 1951. But the best of his subsequent operas were much less conformist, and consequently less popular. The original version of *L'ombra di Don Giovanni*, though uneven and a bit inchoate, shows an awareness both of the more complex, radical aspects of Debussy and of the Strauss of *Salome* and *Elektra*, without being slavishly imitative of either. The harmonic vocabulary sometimes has coincidental affinities with that of the more troubled music of Bax.

La leggenda di Sakùntala, unquestionably Alfano's most important stage work, fulfilled most of what *L'ombra* had promised. The earlier opera's rather diffuse turbulence is replaced, however, by a poised, luminous though still very complex texture, saturated with the scented atmosphere of the Indian legends on which the libretto is based, yet without 'exoticisms' of the more direct and obvious kind. De'Paoli aptly compared the intricate, colourful orchestral fabric to 'certain oriental carpets'. The influence of Debussy remains fundamental; yet the rich harmonic palette is no less individual than in *L'ombra*. Moreover, the lyrical impulse is still recognizably Italian, notably in such highlights as Sakùntala's monologue 'O nuvola' in Act 2, one of Alfano's most inspired passages. The operas after *Sakùntala* show a decline. Alfano seemed to lose the courage of his convictions, and showed signs of trying to meet the big public half way. As a result these later operas contain much that is conventional and rhetorical, despite an orchestral imagination which remains rich and distinctive. Some scenes, it is true, exhibit clear signs of renewed inspiration, usually now in a picturesque or lighter vein, with Ravel's influence tending to replace Debussy's (see, for instance, the opening ensemble in *L'ultimo lord*, set in a toy-shop). Nevertheless, the last parts of Acts 2 and 4 in the uneven *Cyrano de Bergerac* show that he was still capable, on occasion, of a truly moving pathos.

Alfano's output of songs is dominated by the four main groups of Tagore settings: chips from his operatic workshop, often profoundly Debussian in conception, yet with personal touches. Although not all equally successful, these songs have rightly retained a foothold in the Italian repertory. As an orchestral composer Alfano first came to prominence, shortly before World War I, with the picturesque *Suite romantica* (later renamed *Eliana*) and the sumptuous, long-winded First Symphony, which both, in their different ways, represent transitional stages between the styles of *Risurrezione* and *L'ombra di Don Giovanni*. The war years and the 1920s saw the composition of his most important chamber works, among which the agitated, improvisatory Violin Sonata and the more mellow and contemplative Cello Sonata are outstanding (the former especially in its unrevised first version, for all its heavy-textured prolixity). Both pieces, in their different ways, spring from the same creative roots as *Sakùntala*, and the Cello Sonata is arguably his instrumental masterpiece.

By the 1930s, when Alfano returned to 'pure' orchestral composition after an interruption of 20 years, he was showing signs of neo-classical tendencies: the Second Symphony is more succinct and economical in texture than the First, and more diatonic and trenchant in its themes, though it too has moments of padding and leaves one unconvinced that he was a born symphonist. His most successful later instrumental work is the Divertimento, whose bright, kaleidoscopic outer movements represent his neo-classical phase at its best.

Taken as a whole, Alfano's achievement, though less than Pizzetti's, Casella's, G.F. Malipiero's or Respighi's, rates near enough to theirs to give some justification to the Italian practice of sometimes mentioning the five men together as the leading Italian composers of their generation.

WORKS
(*selective list*)

STAGE

Miranda (op, A. Alfano, after Fogazzaro), 1896, unperf., unpubd
La fonte di Enschir (op, L. Illica), 1898, Breslau, 8 Nov 1898, unpubd
Napoli (ballet), 1900, Paris, Folies-Bergères, 1900, unpubd
Lorenza (ballet), 1901, Paris, Folies-Bergères, 1901, unpubd
Risurrezione (op, C. Hanau, after L. Tolstoy), 1902–3, Turin, Vittorio Emanuele, 30 Nov 1904
Il principe Zilah (op, 2, Illica), 1907, Genoa, Carlo Felice, 3 Feb 1909
I cavalieri e la bella (op, G. Adami and T. Monicelli), 1910, unfinished
L'ombra di Don Giovanni (op, 3, E. Moschino), 1913, Milan, Scala, 2 April 1914, rev. as Don Juan de Manara, Florence, 1941
La leggenda di Sakùntala (op, 3, Alfano, after Kalidasa), 1914–20, Bologna, Comunale, 10 Dec 1921; orch score destroyed in World War II, reconstructed as Sakùntala, Rome, Reale, 9 Jan 1952
Eliana (Suite romantica) (ballet, R. Pantini), Rome, 1923
Madonna Imperia (op, 1, A. Rossato, after H. de Balzac), 1927, Turin, Torino, 5 May 1927
L'ultimo lord (op, 3, M. Falena and Rossato, after U. Falena), 1930, Naples, S Carlo, 19 April 1930
Vesuvius (Hic est illa Napolis) (ballet, V. Viviani) [? after 3 unpubd songs, 1931 or earlier], San Remo, 1933; rev. concert version, chorus ad lib, orch (1949)
Cyrano de Bergerac (op, 4, H. Cain, trans. C. Meano and F. Brusa, after E. Rostand), 1933–5, Rome, Reale, 22 Jan 1936
Il dottor Antonio (op, 3, M. Ghisalberti, after G. Ruffini), begun 1941, Rome, 30 April 1949
Completion of G. Puccini: *Turandot*, 1925, Milan, Scala, 26 April 1926 [pubd version with cuts]; London, Barbican, 3 Nov 1982 [original complete version]

INSTRUMENTAL

Orch: Pf Conc., A, *c*1900, unpubd, lost; other pieces, *c*1900, unpubd, lost; Suite romantica (Eliana), 1907–9; Sym. no.1, E, 1908–10, rev. 3rd movt omitted (1923), rev. as Sinfonia classica, 1953; Danza e finale di Sakùntala (1923); 2 intermezzi [after middle movts of Str Qts nos.1 and 2], str, 1931; Sym. no.2, C, 1931–2; Divertimento, small orch, pf obbl, 1934; Una danza, 1948
Chbr: Str Qt no.1, 1914–18; Sonata, vn, pf, 1922–3, rev. 1933; Sonata, vc, pf, 1925; Str Qt no.2, 1926; Conc., pf trio, 1929; Pf Qnt, 1936; Giorno per giorno, vc, pf (1941) [arr. of no.3 of 3 liriche, 1928]; Str Qt no.3, 1945; smaller pieces
Pf: mostly early pieces, before 1904

VOCAL

Choral: Himno al libertador Simon Bolivar 1830–1930, unison vv, orch, 1930
Songs: 3 poemi di Rabindranath Tagore, 1918, orchd (1943); 6 liriche di autori diversi, 1919–22; 3 liriche (Tagore), 1928; Nuove liriche tagoriane, 1934, orchd (1943); 3 nuovi poemi (Meano, L. Orsini), 1939; È giunto il nostro ultimo autumno (M. Bona) (1943); 5 nuove liriche tagoriane, 1947; *c*20 others

JOHN C.G. WATERHOUSE (bibliography with VIRGILIO BERNARDONI, JOHANNES STREICHER)

Alfaro Güell [Alfagüell], **Mario** (*b* San José, 1948). Costa Rican composer. He studied the piano and composition at the National Music Conservatory. From 1976–80 he studied composition at the Staatliche Hochschule für Musik in Freiburg with Klaus Huber and Ferneyhough, taking a postgraduate degree in composition. He attended courses and seminars on early and contemporary music, Gregorian chant and musical education in Mexico, Costa Rica, Spain, Argentina and Switzerland. He also studied the piano, theatre and history. He was appointed a lecturer in musical appreciation, music history, composition and analysis at the National University Music School. He has also taught at the University of Costa Rica and was a guest professor in the United States, at Lock Haven University of Pennsylvania and Penn State University.

Alfaro Güell has composed various experimental didactic works for piano, chorus, orchestra, instruments and the voice, often using themes from European composers and Latin American folk music. These come together to provide a new aesthetic approach which has earned him national and international recognition and performances. He has been awarded the Ancora de Oro award by the newspaper *La nación*, the Jorge Volio Arts Prize by the School of Lecturers and Teachers and the Aquileo J. Echevarria National Music Prize. In 1994 he took part in the Sixth Caribbean Composers' Forum in San José, Costa Rica, with his *Cinco estructuras de temporal*, with text by his relative, the poet Fernando Centeno Güell. Some of his works were published, along with a brief biography, in *Música poética costarricense* (San José, 1993–4).

WORKS
(*selective list*)

†in M. Alfagüell [Alfaro Güell]: Música poética costarricense (San José, 1993–4)

Ballet: Cocorí (2, after J. Gutiérrez), solo vv, chorus, orch

JORGE LUIS ACEVEDO VARGAS

Alfieri, Pietro (*b* Rome, 29 June 1801; *d* Rome, 12 June 1863). Italian musicologist and composer. Ordained a Roman priest in 1823, his life was entirely directed towards the deliverance of liturgical music from what he saw as the debased theatrical style of contemporary composers and the neglect and incompetence of singers and organists in regard to Gregorian chant and Renaissance music. He contributed most importantly to this goal through his editions, particularly the *Raccolta di musica sacra* (Rome, 1841–6), the seven volumes of which provided the first large modern collection of Palestrina's music. Palestrina was Alfieri's ideal for new church music, which, according to his *Ristabilimento*, should be grave, succinct and suited in expression to the words, which were to be presented clearly and with few repetitions. His own compositions, many of them published at Rome, exemplified these principles.

Alfieri was also a pioneer in Italy in the historical study of Gregorian chant, which he sought to restore to its original purity, although along lines that now appear somewhat arbitrary and subjective. His early *Saggio* and *Accompagnamento* are practical manuals, designed to improve performance of the chant. In the 1850s he completed an edition of the Roman Gradual, Antiphonal and Hymnal, setting out his methods in the *Précis historique*. He was, however, unable to get his version accepted by the Church or even published. According to his friend Fabi Montani, Alfieri's outspoken devotion to his mission was the reason for his failure to receive an important church music post in Rome. He taught Gregorian chant in the Collegio Inglese there and was a member of scholarly societies in Rome, Florence and Naples.

DENNIS LIBBY/EMANUELE SENICI

Alfiero [Alfieri], **Giuseppe** (*b* Naples, 1630; *d* Naples, 21 Jan 1665). Italian composer. He studied at the Conservatorio dei Poveri di Gesù Cristo from 1642 to 1649 and about 1658 was named *maestro di cappella* of the city of Naples. In 1655 he composed for the Teatro S Bartolomeo *La fedeltà trionfante* (G.C. Sorrentino), one of the first operas originally written for Naples. Prota-Giurleo (*DBI*) ascribed to him two other dramatic works: *Le magie amorose* (1653, Naples) and *Il trionfo della pace* (G. Gastaldo; 1658, Naples). The libretto of *Le magie* is a revision of Marco Faustini's *Rosinda*; if Alfiero was involved, he may simply have revised Cavalli's music. Bianconi proposes O. Gaudioso and A. De Santis as the composers of *Il trionfo*. Alfiero's only surviving work is a hymn (*I-Nf*).

THOMAS WALKER/JENNIFER WILLIAMS BROWN

Al fine (It.: 'to the end'). An indication to return to the start of a piece (especially a da capo aria), but to proceed with the repetition only to the point marked (or intended) as the end.

See also FINE.

Alfonso V ['El Magnánimo'], King of Aragon (*b* ?Medina del Campo, 1394; ruled 1416–58; *d* Naples, 27 June 1458). Spanish monarch and patron. He was the son of Fernando I of Antequera and Leonor of Albuquerque. His activity as patron is usually divided into two periods, before and after he had settled in Naples (1433). He was an outstanding patron of minstrels, among them the shawm player Jehan Boisard and the lutenist Rodrigo de la Guitarra. The choir of his royal chapel was, according to his contemporaries, one of the finest of its day. In the two earliest records of its members, dating from 1413 and 1417, there are 13 singers, among them Gacian Reyneau and Leonart Tallender, and two organists. His singers were recruited from Spain, France and Germany: in October 1419 he sent one of them, Huguet lo Franch, to his native land in search of singers, providing him with a letter offering all kinds of privileges. In February 1420 he informed the King of Castile that he had sent to France and Germany for tenors, and five months later he sent Pere Sabater to the papal court in Rome in search of more singers. Because of the king's interest in providing his chapel with good voices, the new musical styles of northern Europe gradually infiltrated the kingdom of Aragon, a process that was interrupted when the king finally left the Iberian peninsula.

Information about Alfonso's royal chapel in Naples is reduced to little more than three lists of its members: in 1444 it had 14, and in 1451 and 1455 21 or 22 as well as one or two organists. Outstanding among them was the composer Pere Oriola, one of several Spaniards whose presence in the royal chapel in Naples seems to have given it a distinctive Spanish character; from April 1453, or perhaps earlier, Johannes Cornago was a member of it.

The organ had an important role in Alfonso's chapel, being used at Vespers and at Mass on important feast days. Jaume Gil and Pere Granyena were the principal builders entrusted with the construction of two instruments for the use of the royal chapel, one in Naples and the other in Barcelona.

MARICARMEN GÓMEZ

Alfonso el Sabio [Alfonso X] (*b* Toledo, 23 Nov 1221; *d* Seville, 4 April 1284). Spanish monarch, patron, poet and composer. The son of Ferdinand the Saint, he became King of Castile and León in 1252. 'El Sabio' may be taken as both 'the Wise' and 'the Learned', for Alfonso's works show his conviction that learning begets wisdom. He was a remarkable patron of the arts, sciences and culture; he recognized the importance of Spain's Islamic as well as its Roman and Visigothic heritage, and his court became celebrated as a meeting-place for Christian, Islamic and Jewish scholars and artists. He has long stood accused of sacrificing his family relations and political stability to impractical schemes for liberal reform but, though out of favour with those close to him in his latter years, he fostered notable social, educational and judiciary reforms, encouraged the use of the vernacular in learning and art, and made Spain respected in Europe. In 1254 he founded a chair of music at the University of Salamanca, stipulating 'that there should be a teacher of composition [*órgano*]'. The songs in his *Cantigas de Santa María* probably occupied more of his time than any other of his cultural projects (which include books on history, law, astronomy and games, and poetry); they amply vindicate his statement in the first cantiga that 'composition entails understanding'. A selection of his works appeared in 1922, edited by A. García Solalinde, who, with others, issued a further edition (Madrid, 1930–94).

JACK SAGE

Alford, Kenneth J. [Ricketts, Frederic Joseph] (*b* London, 21 Feb 1881; *d* Reigate, 15 May 1945). English composer and bandmaster. As a cornet-player with the Royal Irish Regiment, he served in India. Subsequently he studied at Kneller Hall (1904–8), qualifying as a bandmaster, and in 1908 was appointed to the 2nd Argyll and Sutherland Highlanders. In 1912, under the pseudonym Alford (his mother's name), he published the marches *The Vedette* and *Holyrood*, the first of a long series of marches. Two of the most famous, written during World War I, illustrate differing approaches to march-style. *Colonel Bogey* (1913) is in simple time; the golfing allusion of the title reflects the work's origin on the green, where Alford's partner would whistle the notes *C* and *A* instead of shouting 'fore'. *On the Quarter Deck* (1917) is in the compound time made popular by the American John Philip Sousa. Alford is unlikely to have missed Sousa's concert on 20 February 1911 in Aberdeen, and the influence of Sousa pervades his later marches.

In 1927 Alford became director of music to the Royal Marines, and shortly after wrote the marches *Dunedin* (1928) and *Old Panama* (1929) for a visit to the South Seas Exhibition in New Zealand. He was recalled from retirement during World War II and wrote more marches, including *Army of the Nile* (1941) and *Eagle Squadron* (1942). He also wrote a number of novelties for one and two xylophones with accompaniment, and the valse *Thoughts* (1917).

His work is characterized by an abundance of sturdy tunes which are often decorated with inventive counterpoints, especially strong in the inner parts, while his melodic ideas often derive from arpeggio figures with occasional chromatic inflections.

WORKS
(selective list)

Marches: Holyrood (1912); The Vedette (1912); Colonel Bogey (1913); The Great Little Army (1916); The Middy (1917); The Voice of the Guns (1917); On the Quarter Deck (1917); The Vanished Army (poetic march) (1919); The Mad Major (1921); Cavalry of the Clouds (1923); The Thin Red Line (1925); Dunedin (1928); Old Panama (1929); H.M. Jollies (1929); The Standard of St George (1930); By Land and Sea (1941); Army of the Nile (1941); Eagle Squadron (1942)

Other: Valse Riviera (1910); Thoughts (1917); Sparks, xyl, acc. (1923); The Two Imps, 2 xyl, cornet, acc. (1923); Mac and Mac, 1/2 xyl, acc. (1928); The Two Dons, 2 xyl, acc. (1933); The Smithy (pastoral fantasia) (1933); The Hunt (descriptive ov.) (1940)

Arrs.: Humoresque: A Musical Switch (1921); Fantasia: The Lightning Switch (1924); March Fantasia: Colonel Bogey on Parade (1939); Lilliburlero (1942); A Life on the Ocean Wave (1944)

GEOFFREY SELF

Alfvén, Hugo (Emil) (*b* Stockholm, 1 May 1872; *d* Falun, 8 May 1960). Swedish composer, conductor and violinist. He attended the Stockholm Conservatory (1887–91) and then took private lessons with Lindegren (composition) and Zetterquist (violin); from 1887 he also studied painting. A violinist in the Hovkapellet (the opera orchestra, 1890–92), he decided in 1892 to make his career in music. From 1904 to 1957 he conducted the Siljan Choir – a group of five church choirs and regional choirs in Dalarna – and he was the director of other choruses, including the Orphei Drängar (1910–47), with whom he made 22 tours throughout most of Europe. In addition he was Director Musices of Uppsala University (1910–39). A Hugo Alfvén Foundation has been established in Stockholm.

Alfvén's music is distinguished by orchestral subtlety and by a painterly exploitation of harmony and timbre. His output was almost entirely of programme music, often suggested by the Swedish archipelago; he commented that 'my best ideas have come during my sea-voyages at night, and, in particular, the wild autumns have been my most wonderful times for composition'. A few pieces, often performed, have maintained his reputation: *Midsommarvaka* ('Midsummer Vigil'), a picture of the Swedish summer in highly-coloured orchestral splendour, based on Swedish folk music and inspired by a rude peasant wedding; *Festspel*, composed for the inauguration of the Stockholm New Dramatic Theatre in 1908; the 'Elegi' from the suite *Gustav II Adolf*, frequently used as funeral music; 'Vallflickans dans' ('Shepherd-Girl's Dance') from the ballet-pantomime *Bergakungen*; *Sveriges flagga*, which has become almost a second Swedish national anthem; and *Roslagsvår* ('Spring in Roslag'), which, like *Midsummer Vigil*, soon became generally known in Sweden as a light piece. The choral folksong arrangements also achieved wide popularity.

Alfvén considered his most important works to be the first four symphonies and the oratorio *Herrans bön* ('The Lord's Prayer'), the last combining high Romantic harmony with full contrapuntal artistry, notably in the quadruple fugue of the finale. In the last movement of the Second Symphony the chorale *Jag går mot döden var jag går* comes at the end of a powerful fugue, and the same melody is transformed into a dance of death in the scherzo of the Fifth Symphony. The heliocentric Third Symphony is a work of the south, written in Italy; the Fourth, composed over a period of 20 years, tells a love story against a symbolic sea- and rockscape background, using a large orchestra, supplemented by two wordless voices, with virtuoso effectiveness. According to Alfvén, *En skärgårdssägen* ('A tale from the archipelago') was a preliminary study for the Fourth Symphony. The first movement of the Symphony no.5, often played separately, is built on a theme which was also used in *Bergakungen* and was, in Alfvén's opinion, 'the least bad thing I have written'.

WORKS

ORCHESTRAL

Sym. no.1, f, op.7, 1897; Sym. no.2, D, op.11, 1897–8; Midsommarvaka [Midsummer Vigil] (Svensk rapsodi no.1), op.19, 1903; En skärgårdssägen [A Tale from the Archipelago], tone poem, op.20, 1904; Sym. no.3, E, op.23, 1905; Uppsala-rapsodi (Akademisk fest-ouverture, Svensk rapsodi no.2), op.24, 1907; Festspel, op.25, 1907; Drapa [in memoriam King Oscar II], op.27, 1908; Bröllopsmarsch [Wedding March], 1909; Fest-ouverture, op.26, large military band, 1909; Elégie: Vid Emil Sjögrens bår [At Emil Sjögren's funeral], tone poem, op.38, 1918; Sym. no.4 'Från havsbandet' [From the Outskirts of the Archipelago], c, op.39, 1918–19; Bergakungen, ballet-pantomime, 3, op.37, 1916–23, orch suite and Vallflickans dans [Shepherd-Girl's Dance], last arr. vn, pf

Hjalmar Brantings sorgmarsch [Hjalmar Branting's Funeral March], op.42, wind, 1924; Svensk rapsodi no.3 (Dalarapsodien), op.47, 1931; Gustav II Adolf, op.49 (incid music, L. Nordström: *Vi*), 1932: orch suite; Sarabanda, str orch; Bourrée, 3 bn; Menuett,

orch; Elegi, small orch; Synnöve Solbakken, suite [from film music], op.50, pf/orch, 1934; Festmarsch till Stockholmsutställningens öppnande op.41, 1930, reorchd 1936; Fest-ouverture, op.52, 1944; Mans kvinna, film score, 1944; En bygdesaga [A Distinct Fairy Tale], suite, op .53, 1944; Singoalla, film score, 1949; Sym. no.5, a, op.54, 1942–53; Den förlorade sonen [The Prodigal Son], ballet, 5 scenes, 1957; orch suite; Several folksong arrs.

CHORAL

Vid sekelskiftet [At the Turn of the Century] (E. Karlfeldt), op.12, S, chorus, orch, 1899; Frihetssång [Freedom] (Bishop Thomas), male vv/mixed vv/(unison vv/1v, pf), 1900; Lugn i tron [Rest in Truth] (E.J. Stagnelius), male vv, ?1900; Herrans bön [The Lord's Prayer] (Stagnelius, after Martyrerna), op.15, S, A, Bar, chorus, orch, 1899–1901; Här är landet [Here is the Country] (W. Nordin), male/mixed vv, ?1901; Harrgårstösa i äppelapla [Country-House Girl in an Apple Tree] (G. Fröding), male vv, ?1904; Fosterlandspsalm [National hymn] (J. Runeberg), (1v/chorus, pf)/(unison vv, orch)/orch/military band, 1906; Afton [Evening] (D. Fallström), Bar, male vv, ?1907

Vårens vandring [The Wandering Spring] (Fallström), male vv, 1908; Marsch (E.G. Geijer), male vv, 1908; Gustaf Frödings jordafärd [Gustaf Fröding's Funeral] (V. von Heidenstam), op.29, male vv/pf, 1911; Kvinnornas lösen (K.G. Ossiannilsson), unison vv, pf, 1911; Unge Herr Sten Sture (H. Tigerschiöld), op.30, Bar, male vv, orch, 1912; Spåmannen [The Fortune Teller] (incid music, Heidenstam), chorus, small orch, 1912; Uppenbarelsekantat [Revelation Cantata] (Bible), op.31, Bar, B, 2 choruses, org, hmn, hp, cel, str, 1913; Kantat vid Baltiska utställningens i Malmö öppnande (N. Flensburg), op.33, Bar, chorus, orch, 1914; Motett, op.34/52 (J.O. Wallin), chorus, org ad lib, 1914; Kantat vid Uppsala läns Kungliga Hushållningssä skaps 100-årsjubileum 1915 (K. Hamilton), op.35, chorus, orch, 1915; Sveriges flagga (Ossiannilsson), male vv/1v, pf/mixed vv/small orch, 1916

En visa om troheten [A Song of Loyalty] (E. Brogren), male vv, ?1917; Kantat vid Reformationsfesten i Uppsala 1917 (1695 hymnbook, Karlfeldt), op.36, Bar, chorus, orch, 1917; Lindagull (B. Gripenberg), (T, male vv)/(T, 2 hn, cel, hp, str)/(lv, pf), 1919; Minnessång över Gustav Vasa (C. Larsson i By), op.40, T, Bar, chorus, org/orch, 1920; En visa om Barnens ö på Barnens dag [A Song of Children's Island on Children's Day] (C. Granér), children's vv, male vv, 1923; Kantat vid Världspostunionens halvsekelsjubileum 1924 (A. Albert-Henning), op.41, Bar, chorus, orch, 1924; För Sverige! (I. Lindberg), male vv/(unison vv, military band)/(1v, pf), 1925; 5 sånger (G. Salwén, Geijer, trad., A. Fryxell), op.42, male vv, 1923–6; Kantat vid Uppsala universitets 450-årsjubileum (G. M. Silfverstolpe), op.45, A, Bar, chorus, orch, 1927

Manhem (Geijer), op.47, T, male vv, orch, 1928; Kantat vid Svenska Röda korsets högtidssammankomst 2 maj 1930 (Albert-Henning), op.46, A, chorus, orch, 1930; Natt [Night] (G. Alexanderson), Bar, male vv, 1930; Barnens bön för fäderneslandet [Children's Prayer for the Native Land] (Z. Topelius), children's 4vv, 1930; Gryning vid havet [Dawn over the ocean] (S. Selander), male vv, 1933; Min kära [My Beloved] (Selander), male vv, 1933; Vaggvisa [Lullaby] (E. Blomberg), male vv/mixed vv/1v, pf/cl, gong, str, 1933; Julsång [Christmas Song] (Nyblom), 1934; Synnöve Solbakken (film score, Björnson), S, chorus, orch, 1934; Eldsång [Fire Song] (F. Nycander), op.51, male vv/mixed vv/ mixed vv, pf, 1935

Hymn till Sverige (Tigerschiöld), male vv, 1935; Kantat vid Sveriges Riksdags 500-års minnesfest 1935 (Selander), Bar, chorus, orch, 1935; Psalm (P. Jönsson Rösiö), 1935; Papillon (Fjärilen) (Alexanderson), male/mixed vv, 1936; Sång till Stockholm (G. Fant), 1v/unison male vv, pf/mixed vv, male vv, 1936; Midsommarlåt i Leksand (S. Gabrielsson), 1936–7; Kosack-vaggvisa [Cossack Lullaby] (M. Lermontov, trans. J. Brenning), male vv/mixed vv/str orch/pf trio, 1938; Stemning (Stimmung, Stämning) (Jacobsen), mixed vv/male vv/str orch, mixed vv ad lib, 1938, 2 versions; Tattare-Emma [Gipsy Emma] (Jeremias i Tröstlösa [L. Rickson]), male vv, 1939; Endräkt – en sång i orostiden 1940 [Concord – a Song in the Time of Solicitude 1940] (A. Grape), (1v/unison vv, pf)/male vv, 1940

Berceuse (E. Kléen), (T, male vv)/(1v, 2 hn, str)/(1v, pf, 1940; Vårsång, Maj [Spring Song, May] (K. Hed), male/mixed vv, 1941; I vapen [In Arms] (I. Edwall), unison male vv, pf, 1941; Taltrasten [The Song-Thrush] (Hed), (male/mixed vv)/(1v, pf/fl, eng hn, str), 1941; Aftonen [Evenings] (H. Sötherberg), (mixed/male vv)/(1v, pf/2 cl, 2 hn, harp/pf, str), 1942; Mitt i en blomstermånad [In the Midst of a Month of Flowers] (H. Gullberg). male vv, 1943; Nordens lånder (H. Dhejne), male/mixed vv, 1943; Till SHT (G. Kallstenius), male vv, 1944; Champagnevinet (F.M. Franzén), male vv, 1949; Roslagsvår [Spring in Roslag] (A. Henrikson), mixed/male vv/pf, 1954; Festsång till Arla Coldinu-orden (O. Wahlström), male vv, 1955; 16 arrs. of works by other composers; numerous folksong arrs. for male/mixed vv

CHAMBER AND INSTRUMENTAL

Early pf pieces, 1884–5, no.8 inc.; Romance, fl, pf, 1885; Barcarol, vn, pf, 1888; Souvenir de Säter, vn, pf, 1888; Souvenir de Visby, fl, pf, 1890; 4 Mazurkas, pf, 1890s; 5 Mazurkas, pf, 1890s; Festmarsch, pf, 1890s; Triumfmarsch, op.10, pf, 1893; Minne från Åsen, Dalarne, pf, 1893; Romans, op.3, vn, pf, 1895; Sonata, op.1, vn, pf, ?1896; Elegi, op.5, hn/vc, org, 1897; Drömmeri (Rêverie), pf, ?1898; Menuett, op.2, pf, ?1901; Sorg (Air mélancolique), op.14, pf, ?1901; Serenad, vn, pf, ?1902; Serenade på mammas födelsedag [Serenade on Mother's Birthday], fl, cl, vn, pf, 1902; Skårgårdsbilder (Archipelago Pictures], op.17, pf, 1901–2; Nocturne, pf, 1911; Mostellaria (incid music, Plautus), fl, 1912; Andante religioso [from Uppenbarelsekantat, 80], cel, hp, str qt, 1913; Margita dansar, waltz, pf, ?1919; ?Marsch, ?2 vn, c1950; Potpourri över svenska folkvisor och låtar, 3 insts, 1950; Roslagspolketta, vn, pf, 1956; Several folksong arrs.

VOCAL

Barnatro [Childlike faith] (Topelius), 1v, pf, 1884; Visa med piano accompagnement (W. Vennberg), ?1887; Romans, 1v, ?vn, pf, 1891; Fugue Exercise, S, T, Bar, 1890s; Fuga di tono (H. Spegel), S, A, 1890s; Vaggvisa [Lullaby] (Runeberg), 1v, pf, ?1896, 10 sånger, op.4 (J. Alströmer jr, E. Ekgren, Fallström, T. Hedberg, A. Fet trans. H. Wigert-Lundström, T. von Wehl, C.D. af Wirsén, Fjalar [C.L. Östergren], trad.), 1v, pf, 1898, nos.3, 8, 10 [2 versions] orchd, no.8 arr. vc, orch; O stode du i kylig blåst [O wert thou in the cauld blast] (R. Burns), op.6, 1v, pf, ?1899; 2 lyriska stämningar (E. Lundberg), op.8, 1v, pf, 1899, no.2 orchd; Ur Lyckans visor [From Songs of Happiness] (K.-E. Forsslund), op.9, 1v, pf, 1899

Klockorna [The Bells] (F. Holmgren), op 13, Bar, orch, 1900; Trubadurens ande (The Minstrel's Spirit] (A. Butenschön), op.18, 1v, pf, 1901; Marias sånger (E. Aarestrup), op.21, 1v, pf, 1903–4; Bön [Prayer] (A. Österling), op.?16, 1v, pf, 1905; Pioner [Peonies] (Österling), op.22, 1v, pf/orch, 1905; Minnesskrift [In Memoriam] (Österling), 1v, pf, 1905; Hos drottning Margareta (Junker Nils sjunger till lutan) (Faflström), op.18, 1v, pf/orch, ?1907; 7 dikter (E. Thiel), op.28, 1v, pf, 1908, nos.4–7 orchd, no.4 arr. vn/vc, pf, no.6 arr. vc, orch; Julsång [Carol] (E. Evers), 1v, pf/chorus, ?1908; Ställ flaggan så jag ser den [Place the flag so that I can see it] (Fallström), op.29, 1v, pf, 1910; Stockholms nations sång (O. Thunman), 1v, pf, ?1911; Geflüster im Gange (O.J. Bierbaum), 1v/(S, T), pf, 1911; Hälsningskväde till damerna vid SHT-festen 1911 (Grape), Bar. pf, 1911; Julsång [Carol] (O. Levertin), 1v, pf, 1912

Kring ditt rika och vågiga hår och andra dikter [About Your Abundant and Wavy Hair and Other Poems] (Thiel), op.32, 1v, pf, 1913; Vandrarens julsång (Wanderer's Carol] (B. Mörner, Arafi), 1v, pf, ?1917; I bruset [In the Rush] (Mörner), 1v. pf, 1920; En båt med blommor [A Boat with Flowers] (Levertin), op.44, Bar, orch, 1925; Mikaelidagen (trad.), 1v, pf, 1936–7; Det unga hemmet (The Young Home] (Alexanderson), 1v, pf, 1937; Vaggsång [Lullaby] (Thunman), 1v, pf/(hp/pf, str), 1939; I stilla timmar [In Quiet Hours] (J. Hemmer), 1v, pf/orch, 1940; Saa tag mit hjerte (So Take My Heart] (T. Ditlevsen), 1v, pf/orch, 1946; Sängen till Folkare (C.A. Norrgren), Bar, pf/male chorus, pf/male chorus, 1951; several folksong arrs. for 1v, pf/orch

ROLF HAGLUND

Algaita [àlgáità]. The Hausa term, commonly used, for a type of oboe of the savanna zone of West Africa, particularly southern Mali and Niger, northern Nigeria, southern Chad and the adjoining areas of Cameroon. The FulBe (Fulani) instrument is called *algaitaru*, while in parts of north-eastern Nigeria (e.g. Bauchi and among the Bolewa or Bole and Kilba or Huba peoples) it is called *aligata*; the Kanuri use the name *alita* and the Tiv people of east-central Nigeria *agida*. The *agida* is the principal instrument of a lively popular dance-style known as *swange*, and a statue of a performer has been erected at a central place in Makurdi, the Tiv capital of the state of Benue in Nigeria. The instrument is an importation from the Maghrib and has carried with it not only the name *gaita* (*ghayṭa*; *see* GAITA (i)) but, in most cases, the article 'al'.

The *algaita* consists of a leather-covered pipe (with conical bore) about 30 cm long, and a bell end about 10 cm long, and is made from a single piece of wood. This is connected by a narrow pipe to a transverse circular disc, both usually made of brass, and to the double reed, which is made from stalks of wild grass. The Nigerian instrument usually has four finger-holes, though the *ghaita* of the Kanembu people of south-western Chad has five. The player presses his lips against the disc, blowing both round and through the reed and using his cheeks as an air reservoir so that the instrument can be blown continuously (see illustration).

The *algaita* is associated with the authority of traditional rulers and forms part of an ensemble that includes long metal trumpets (*see* KAKAKI) and double-headed cylindrical drums (*see* GANGA). This group performs praise-epithets at the courts of rulers. The *algaita* may also be played solo, as in Kano, Nigeria, where the emir's *algaita* player both sings and plays the praise-words associated with his patron. Outside traditionally stratified societies such as the Hausa, it has been adopted to local usage, for example, among the Bura and Tera (Cara) peoples of north-eastern Nigeria, where it is frequently played in instrumental dance ensembles or with xylophone and drums.

ANTHONY KING/K.A. GOURLAY/ROGER BLENCH

Algarotti, Francesco (*b* Venice, 11 Dec 1712; *d* Pisa, 3 May 1764). Italian writer on opera, poet and savant. He was well educated at Rome and Bologna, whence he was welcomed into the learned circles of London and Paris, where he shared accommodation with Voltaire. In 1740 Frederick the Great took him into his personal service and gave him the title of count. From 1742 to 1747 he was also adviser to Augustus III, Elector of Saxony and King of Poland. At both Berlin and Dresden he was actively engaged in operatic productions, arranging and versifying Italian librettos to the taste of his patrons. He returned to Italy in 1753 because of ill-health. His *Saggio sopra l'opera in musica* was written the following year and first published in 1755. It attacks the unruliness prevalent in Italian public theatres, which compared unfavourably with the well-regulated and varied spectacles beginning to emerge at the court theatres of northern Europe. Other contemporary essayists such as Blainville, John Brown, Calzabigi, Krause, Ortes and Durazzo said much the same thing in condemning the dominance of the singers over every other aspect of serious opera in Italy.

The *Saggio* was the best-grounded and most wide-ranging of these critiques, and the one that received the widest diffusion through reprinting and translation. It proposed that all aspects of music, including singing, be subordinated to a unifying poetic idea, preferably a remote or exotic tale because the fabulous lent itself most readily to the extreme stylization endemic to the operatic genre. Graun's *Montezuma* for Berlin was held up as a model. Metastasio's librettos were dismissed with faint praise; only two of them, *Didone abbandonata* and *Achille in Sciro*, were mentioned as providing sufficient opportunity for spectacle. An ideal collaboration between poet and musician was achieved by Quinault and Lully. Algarotti concluded the *Saggio* with two examples of the path to be followed: a sketch for an *Enea in Troia*, after Virgil, and a fully-fledged French libretto for an *Iphigénie en Aulide*, after Euripides and Racine. The latter represented a bold departure from the Metastasian canon in the direction of a Grecian severity and simplicity. It lacked amorous intrigue and confidantes; choruses, ballets and spectacle were integrated into its action. Two years later Diderot proclaimed the same subject to be the salvation of serious opera, but without mention of Algarotti. A spate of operas more or less indebted to Algarotti's *Iphigénie* followed in the last third of the century, the best-known being Gluck's for Paris, which Algarotti did not live to see. He did witness and to a small extent supervise the reform operas of Traetta and Frugoni for Parma, beginning in 1759, an attempt to wed Rameau's style of *tragédie lyrique* and *opera seria* that preceded the more thorough-going integration achieved by Gluck in Vienna and Paris. The revolution in taste during the 1750s that saw the Rococo style dethroned found an eloquent voice in the *Saggio*, described by Voltaire as 'the foundation for the reform of the castrato's realm'. The ensuing wave of archaeological neo-classicism is already apparent in Algarotti's work, particularly in his call for large, sparely adorned opera houses, with semicircular halls modelled after ancient arenas. Practical man of the theatre that he was, Algarotti tempered this antique-inspired vision of the future with advice about the materials and dimensions likely to produce the best acoustic, and about the compromises necessary between proscenium stage and arena for maximum sight lines.

Algarotti, Giovanni Francesco. *See* ALCAROTTO, GIOVANNI FRANCESCO.

Algeria, People's Democratic Republic of (Arab. Jumhuriya al-Jazairiya ad-Dimuqratiya ash-Shabiya). Country in North Africa. Algeria is the second-largest country in the African continent, with an area of 2,381,741 km² and a population of 31·6 million (2000). Its wide musical diversity reflects its geographic proximity to Libya, Mali, Mauritania, Morocco, Niger, Tunisia and Western Sahara, as well as its physical and historical links with Europe. Sunni Islam is the state religion, and a regional form of Arabic is used, although French and Berber are also widely spoken. Most of the country's inhabitants live in the large cities of the *Tell*, the country's coastal plain, although significant populations occupy inland mountainous and desert regions. The country consists mainly of semi-arid plateaux and the Sahara, where isolated towns and oases serve the needs of transhumant tribes and the petrochemical industry. The 20th century's increased migration to northern cities, combined with recent technological developments, led to a closer overlapping, and in some circumstances mixing, of diverse musical and cultural practices.

Algeria's position on the southern shore of the Mediterranean has meant that the original Berber societies have long been affected by external cultures, each contributing to the country's musical traditions. Urban art music derives from both eastern and western Arab traditions (although these often developed into distinctive styles); lengthy periods of Ottoman domination and French colonization have also shaped the cultural environment in which music is produced and used.

The urban and rural communities of the *Tell* have been the most affected by waves of external influences, from the Romans and Vandals to the present, while the musical traditions maintained by the isolated populations of mountainous regions and the south can be very distinctive, often reflecting long associations with the Sahel and sub-Saharan Africa.

1. URBAN MUSICS. Despite the increasing proximity of musical styles brought about by internal migration and technology, there exist musics that are emblematic of urban civilization, and these can be subdivided into art and popular traditions. The quintessential Algerian art music traditions are known collectively as *andalouse*, while *ḥawzī* and *sha'abī* can be considered vernacular hybrids of *andalouse* with rural roots.

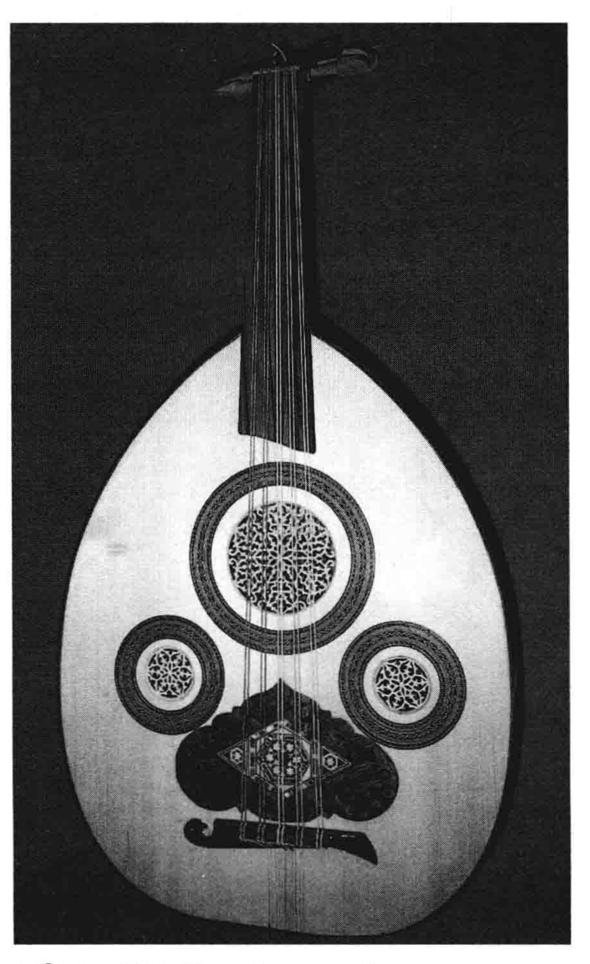
(i) Andalouse. The gradual fall of Islamic Spain to the Christian *Reconquista* in the 15th century led to waves of refugees from the courts of Al-andalus to North Africa. The Muslim nobility and their Jewish retinue settled along the coast from Morocco to Libya, bringing with them the court musics of the city states of Córdoba, Granada, Valencia and Seville. These repertories were probably quite distinct by this date, although they are often all mythically ascribed to a single composer, Ziryāb, a 9th-century exile from Baghdad.

There were, in theory, originally 24 *nūbāt* suites (sing. *nūba*) comprising instrumental and sung pieces – each in a separate *tab'* mode corresponding to a particular hour of the day – and humour. However, there is no evidence

that the complete body of work ever existed. The verse structures of *andalouse* songs are based mostly on the *zajal* and *mūwashshaḥ* forms of court poetry, which became popular throughout the Arab world in the 11th and 12th centuries, suggesting that composition of the repertory was more or less continuous until the fall of Andalucia. Only 12 of the original 24 *nūbāt kāmila* (also known as the *grand nūbāt*) have survived intact in Algeria, while another four, the *nūbāt nāqiṣa*, exist in fragmentary form. A third part of the repertory, the *inqilibāt*, is of more recent provenance, using vernacular poetry but composed in a traditional style. These pieces in particular reflect regional preferences and influences. A single *nūba* contains five sections of introductory pieces, overtures, song series, solos and finales, arranged in a traditional sequence of rhythmic patterns.

(a) Schools. As Spain was progressively conquered, émigrés from each city in turn moved en masse to particular towns in the Maghrib, which is the main reason suggested for the contemporary existence of three different schools of *andalouse* in Algeria. Each share common texts, *tubū'* (modes), structure and instrumentation, but in performance style and repertory they are fairly distinct.

Ma'lūf. Ma'lūf or 'traditional' is the name given to the *andalouse* music from the eastern Algerian school, centred on Constantine and Annaba. This tradition spans the border into Tunisia, where it is regarded as a music of national importance (see Davis, 1993). Ma'lūf is also performed in Libya with a style and repertory heavily influenced by Bedouin and Egyptian musics.



Ṣan'a. The geographically central tradition of *andalouse*, based in the Algiers region, is the youngest school of the three, since the city was not of major importance until the Ottoman period. The tradition was founded by aristocratic families from the city of Tlemcen, in western Algeria, but it has since been greatly influenced by both *ma'lūf* and Turkish art musics and by popular urban genres. Its name, meaning 'embellished', refers to the genre's musical sophistication.

Ṭarab al-gharnāṭī. This westernmost tradition is named after the city of Granada; it is based in Tlemcen but also played in other cities in the region. This style is the closest to the medieval original and boasts an unbroken oral tradition in the city since its introduction. In the 20th century, *sheikhs* (*gharnāṭī* master musicians) founded conservatories in Morocco, most notably in Oujda, on the Algerian border, and also in Rabat, where the tradition exists as distinct from *al'ala*, the best-known Moroccan form of *andalouse*.

(b) General features. Andalouse repertories were originally transmitted orally from *sheikhs*, whose orchestras and conservatories vied with one another for prestige and the best performers. Many of the most renowned *sheikhs* belonged to the minority Jewish population until independence from France in 1962, after which time the music was adopted as part of a national cultural heritage and academies were sponsored by the state. During the colonial period, *ma'lūf* in particular was associated with hashish smoking and other immoral activities that took place in *fanādiq*, hotels where profane musics were played. The young nationalist movement in the 1950s founded a system of associations that created a better moral climate in which the traditions could be learnt. Today, participation in and patronage of *andalouse* musics tends to come from the better-educated social classes in urban centres. Although *andalouse* does not enjoy the same wide popularity as other local or even international genres, it has had considerable influence on other forms of Algerian music, which are considered less élitist.

The size and instrumentation of the *andalouse* ensemble has varied considerably over time and between traditions. Currently, groups of up to 30 musicians are common, sometimes more for broadcast performances on radio or television. In the past, ensembles have been much smaller than this, and on more intimate occasions they frequently are. The *'ūd sharqī* (lute; fig.1) and *rebab* (two-string fiddle) are the most esteemed instruments in the ensemble, although the low, gruff sound of the latter is often replaced with the cello. Other string instruments include the *kamanja* (violin) and viola (both played vertically on the knee), *mandūl* (a large, fretted mandolin used originally for teaching purposes only), the Spanish guitar, *qitra* (another form of lute), now only used in Tlemcen, and occasionally the piano and banjo. The *nay* (transverse flute) is often used in performance, and rhythmical accompaniment is provided by *darbukka* (goblet drum) and *ṭār* (tambourine) in all traditions, and sometimes with *duff* (small frame drum) and *naqarāt* (small kettledrums) in *ma'lūf*.

(ii) Ḥawzī. Algerian *ḥawzī* ('outside the walls', not to be confused with Moroccan '*hausī*', a popular music derived

1. 'Ūd sharqī (lute) of the andalouse ensemble

from tribal traditions) is a development from the Tlemcen *gharnāṭī* tradition. This genre combines musical features from *andalouse* with poetry written in colloquial Arabic. Folksongs, rhythms and melodies from the region have also been incorporated into the genre. *Ḥawzī* songs, often lighter in mood than those of the *gharnāṭī* repertory, exist as individual songs and tunes, rather than as parts of sophisticated suites. As *ḥawzī* music has existed for several centuries, it is usually considered to be an art genre, but it is played by specialized *ḥawzī* ensembles and *andalouse* orchestras. The most renowned contemporary exponent of Algerian *ḥawzī* is Nuri Koufi.

(iii) Sha'bī. Like *ḥawzī*, *sha'bī* music ('people's music') also bears some structural similarities to *andalouse*, but shows more influence of Berber and Ottoman styles. Pieces consist of lengthy narrative songs sung by a single performer interspersed with vociferous choral sections involving the ensemble. As the music most associated with the working classes of the city of Algiers, *sha'bī* was promoted by the first, socialist, post-colonial regimes, despite (or even because of) the social criticism contained in its lyrics.

The instruments in the *sha'bī* ensemble vary but always include the *mandūl*, *darbukka*, violins, and often the banjo. As both *mandūl* (fig.2) and banjo are fretted instruments, quarter-tones are not employed in this genre, distinguishing it from more élite musics. Modern groups use the Spanish guitar, bass guitar and synthesizer in addition to this arrangement.

2. Mandūl, main instrument of the sha'bī ensemble

Important features of Algerian *sha'bī* (not to be confused with Egyptian and Moroccan musics with the same name) are its relaxed performance style and use of colloquial language. A major star of the 1960s, the legendary Muḥammad Al Anka, sang in the Kabyle Berber language as well as a local form of Arabic, acknowledging not only his own origins, but also the origins of a significant proportion of immigrants to Algiers. Kamel Messaoudi is perhaps the best known among contemporary musicians who have combined traditional and international musical features into *sha'bī*.

(iv) Sharqī. The terms *sharqī* (eastern) and *orientale* refer to a wide range of musics produced in Algeria that were directly influenced by recent Levantine Arab traditions. The battle for independence from France in the late 1950s coincided with hugely popular radio broadcasts of Egyptian and Lebanese stars such as Farid al-Aṭrash and Umm Kulthūm, encouraging a pan-Arab political and cultural movement that affected local music greatly. Egyptian film and television music has also had more recent impact on Algerian music. In the western city of Oran in the 1950s, singer-composers Ahmed Wahby and Houari el Bilaoui combined rich Egyptian arrangements with local rhythms and languages to create a genre that in some ways encapsulated nationalist aspirations during and after the war of independence. The female singer Anissa Toraia performed in a similar style in Algiers. Later performers, such as Ahmed Saber, also drew on eastern musical sources, in a somewhat less patriotic vein.

Larger cities in the north of Algeria often have *orientale* orchestras that perform and compose music in the manner of Egyptian or Algerian stars, and the style remains one of the most popular in the country. *Sharqī* popular music, very much in the fashion of Egyptian film songs, is produced in Algiers, and the female singer Warda has become an international success in this genre.

(v) Raï. This popular genre of music is also associated with the western city of Oran (Waharan) but is now widely heard throughout Algeria and beyond. *Raï*, which translates as 'my opinion', was the name given to the traditional wedding and festival music that in the 1930s was played in the urban bars and brothels of Oran. Songs were most usually sung by female *medahattes* (wedding entertainers), such as the infamous Cheikha Rimitti, to the accompaniment of *gaspah* (end-blown flute) and *guellal* (long goblet drums). Texts were often of a sexually suggestive nature, which kept *raï* out of view of the wider public until the 1970s.

The adoption of electronic instrumentation and the arrival of cassette-recording technology brought the new pop-*raï* to the attention not only of Oran and Algeria but also, via émigré *maghribī* communities, to that of the world music industry. Messaoud Bellemou was the first to combine local traditional musics with the instrumentation of Western popular music, and this approach was taken further by the record producers Rachid and Fethi Ahmed Baba, who built the country's first 24-track recording studio in Tlemcen. In the 1980s several star singers who adopted the prefix 'Cheb' (male) or 'Cheba' (female), meaning 'kid' or 'young', became international celebrities in both Arabic-speaking and Western cultures. Among these, Cheba Zahouania, Cheba Fadela, Cheb Mami and Cheb Khaled became the best known.

Given its 'low-life' origins, *raï* has always been something of a controversial genre in Algeria, made all the more so when serious political turmoil erupted at the end of the 1980s between the secularist single-party state and its Islamic critics. The government saw in *raï* a potential liberal ally and allowed its broadcast, though in a much sanitized form. Many major stars of the genre were either pressured to leave the country through intimidation or enticed by better prospects in Europe. Those *raï* musicians who remained in Algeria continued to balance local with global musical elements, although some, notably singer Cheb Hasni and producer Rachid Baba, were killed by terrorists for doing so. Throughout its many changes, Algerian *raï* has expressed a close relationship with Oran itself, frequently making reference to the city and employing the local dialect and slang.

2. RURAL MUSICS. Although waves of migration from the colonial period to the present have brought rural styles into the shanty-towns, markets and residential quarters of northern cities, Algerians still differentiate musics of rural origins from established urban traditions. This is partially due to the fact that émigré communities use the music to mark their ethnic or regional identity, but also due to the kinds of social practices associated with these genres. As Al Faruqi (1985) illustrates, some orthodox interpretations of Islam are critical of music; its use is most acceptable when employed in quasi-religious or community events such as weddings, circumcisions and festivals. Some rural musics, played in honour of local marabout saints and their shrines, are used to induce a *ḥaḍra* (a trance state) among listeners, during which dance, convulsion and fainting rid them of *djinn* (evil spirits). Yet other forms of music are used by Sufi brotherhoods in *dhikr* ceremonies that lead participants to a state of spiritual union with Allah. Interestingly, these same states of consciousness are brought about in various religious cults by quite dissimilar musics. Although none of these practices is sanctioned by orthodox Islam, they are nevertheless common in both rural communities and urban émigré communities.

(i) Berber. There are at least nine distinct, though related, Berber languages spoken in Algeria, and several tribes of Arabic-speaking Bedouin also exist; the variety of musical traditions that can be found in the country is great. Transhumant desert communities and economic migrants have also long overlapped national frontiers, thus sharing cultural features and populations with neighbouring countries. Despite this diversity, the further south one travels, the more the music resembles Sahelian rather than Arab traditions. The Tuareg Berbers in the far south of the country are distinguished by the prominence of female musicians in their society who use the *imzad*, a one-string round fiddle, and percussion instruments to accompany improvised sung poetry. Further north, the region from Tindouf to Béchar is known for a relaxed style of *'ūd* playing more reminiscent of the music of Mali than of the Arab world. The virtuoso lutist Alla is the best-known musician in this *tindī* style, and the most renowned singer is Mohammed Cherrif.

The Berbers of the Aurès and Ksour mountains and of the Mzab towns of the high plateaux are a minority religious group in Algeria well known for their rich musical traditions, but the Berbers of the coastal Kabyle (Kabylie) region have had the greatest impact on national culture. The Kabyle ranges have been an important site of Berber culture and identity despite hundreds of years of colonization and Arabization. Unlike other isolated Berber communities, that of the Kabyle was close enough to the major cities of Algiers, Constantine and Bejaïa to influence musical and cultural traditions significantly in these centres. Contemporary Kabyle singers such as Ait Menguellet and Adjroud Ahcene and the group Djurdjura promote awareness of the Amazight language and provide commentary on homogeneous conceptions of national identity (see Langlois, 1996). Some, such as the singer Lounès Matoub (1956–98), have been killed for supporting the Berber cause. Berber song and dance is most closely associated with weddings, circumcisions and religious festivals. Although Kabyle musicians have incorporated many modern instruments into their practices, the fretted *mandūl* is most associated with regional genres. The equal-tempered fretting of the *mandūl*, however, makes it incapable of playing the quarter-tones demanded by Middle Eastern Arab traditions.

(ii) Non-Berber. The music, dances and sung poetry that were brought to the Maghrib byBedouin tribes in the 11th century are an important feature of Algerian music, although many have hybridized with Berber traditions. In particular, *Al'awi* male dancing troupes are located throughout the country's north-west. These dances are accompanied by *bendīr* (frame drums), *ghraita* (oboe), *gaspa* (flute) or *mizwid* (bagpipe), shouted instructions and occasional rifle-shots. The steps of the dance mimic the footfalls of horses, an evocation of the traditional culture of these tribally organized pastoral societies which today mark their independent rural identities.

Populations of black *Sahouari* (Saharans) and *G'naoui* (Guineans, mostly descendants of sub-Sahelian slaves) inhabit towns between the Hoggar mountains to the far south of Algeria and the Niger and Malian borders. Their music, consisting largely of chants and polyrhythmic drumming, features *bandīr*s and various-sized goblet

3. Algerian musicians playing ṭabl (cylindrical drums) and shkāshik (metal castanets)

drums. Also commonly found are large double-headed *tbel* or *ṭabl* (drums), oboes and *kakarbāt* or *shkāshik* (metal castanets; fig.3). Song structures, modes and harmonies clearly owe a great deal to sub-Saharan traditions, although texts are mostly concerned with local saints and other religious themes. Through emigration, significant populations of *Sahouari* live in northern cities where this music is in great demand for marabout practices and wedding music. So popular is this *kakabou* music that it is now performed by many non-*Sahouari* musicians, and it has had noticeable influence on popular music.

TONY LANGLOIS

Alghisi [Algisi], **Paris Francesco** (*b* Brescia, 19 June 1666; *d* Brescia, 29 or 30 March 1733). Italian composer and organist. He began musical studies at an early age with Orazio Polaroli (organist of Brescia Cathedral) and spent a short time (*c*1681–3) serving at the court of the Polish king when Polaroli was its *maestro di cappella*. After his return to Brescia, Alghisi entered the order of S Filippo Neri without, however, ceasing to compose secular music. From at least 1690 he was *maestro di cappella* of S Maria della Pace, their church, and in that year he applied, without success, for the position of organist of Brescia Cathedral. A libretto of 1692 refers to him as *maestro di cappella* of the Brescian Collegio dei Nobili and the title-page to his *Sonate da camera* describes him as a member of the Accademia Filarmonica of Bologna. In the libretto for his oratorio *Il serafino* performed in S Domenico, Brescia, 1703, Alghisi is for the first time cited as the organist of Brescia Cathedral. He was elected organist on 10 February 1701 and served until his death. His series of annual oratorios for S Domenico ceased in 1705. Although very little of his music is known – no copy of his cantata collection, dedicated to Ferdinando III, Grand Prince of Tuscany, and published in Bologna (no later than 1694) is known to modern scholars – Tagliavini reported that a large part of his music was given to the Benedictine abbey of Disentis in Graubünden, Switzerland, and the remainder, including his harpsichord, to the S Filippo Neri congregation in Brescia. A collection of his letters belonged to the 18th-century Brescian scholar Orazio Chiaramonti, who published one of them in his *Idea dell'orazione* (Brescia, 1782). A theoretical work (cited by Eitner) is lost.

His operatic output is restricted to two three-act works to librettos by G.C. Corradi, written for the Teatro SS Giovanni e Paolo, Venice, in 1690; *L'amor di Curzio per la patria* was for carnival and *Il trionfo della continenza* for the autumn season. There is no evidence that either was re-staged. Although neither survives in full score, the existing arias, mainly in da capo form, reveal him as a fluent writer of vocal melodies; their declamatory style is reflected also in the supporting continuo parts. The

preface to F.G. de Castro's *Trattenimenti armonici* (Bologna, 1695) praises Alghisi as teacher and composer. Towards the end of his life, moreover, he acquired the reputation of a saintly ascetic (Fétis). The claim that another Brescian composer named P.F. Alghisi lived from 1733 to 1767 (*Storia di Brescia*, iii, 268) is false; some of Alghisi's sacred music continued to be performed in Brescia after his death.

Aliyev, Khabil' (Mustafa oglu) (*b* Agdash, 28 May 1927). Azerbaijani *kamanca* player. He began his education at a music school in Agdash in 1934. He studied at a college of music in the same town from 1941 to 1945, working as a *kamanca* player at a local theatre at the same time. In 1952 he moved to Baku, and in spring 1953 he began to work at the State Philharmonic organization of Azerbaijan, where he became well known as a soloist and an accompanist. From 1958 he toured as a soloist in the Middle East, Africa, Europe, and South and Inner Asia.

Aliyev's career marks a new stage in the history of *kamanca* playing in Azerbaijan; he is a master of timbre and has created a distinctive sound on the instrument. His original playing style has had a great impact on younger generations of *kamanca* players. He has also composed many lyrical songs which have gained widespread popularity. An account of his career is given in I. Rakhimli: *Khabil' Keman* (Baku, 1987).

FAIK CHELEBI

Alimatov, Turgun (*b* Keles, Uzbekistan, 1922). Uzbek musician. He was a musical autodidact from an early age, teaching himself to play the *dutār*, the *ṭanbūr* and, later, the *sato*, or bowed *ṭanbūr*, and the violin. In 1942, after being wounded in World War II, he joined the music ensemble of the Muqimi Theatre of Musical Drama in Tashkent. In 1948 he moved to the Uzbek radio station, where he worked until 1952, when all the traditional music ensembles at the radio were disbanded and replaced by note-reading orchestras. From 1952 to 1957 Alimatov worked as a freelance musician, performing mostly at weddings. In 1957 he became a founding member of the Makom Ensemble of Uzbekistan Radio under the direction of Yunus Rajabi, and performed in this ensemble until 1982. In addition to his work in the Makom Ensemble, Alimatov made his own recordings of traditional and classical music. However, because his performances did not conform to official stylistic canons, his recordings were banned from the radio from 1960 to 1975. In the late 1970s, after a change of leadership at the radio station, the Soviet Melodiya company released two volumes of his solo recordings. In 1995 he made his European début in a solo concert at the Théâtre de la Ville in Paris. In the same year, Ocora/Radio France released his first solo CD recording. Alimatov is known as a musical innovator who creates elegantly austere versions of traditional melodies in a style that has been termed neo-classical. While his innovations once earned scepticism from older musicians, his performance versions have become classics in themselves for an entire generation of younger performers.

THEODORE LEVIN

Aliotti [Aleotti, Aliotta, Aliocti, Alioti], **Bonaventura** [Padre Palermino] (*b* Palermo, ?1640; *d* Palermo, after 1687). Italian composer. A Minorite friar, in the 1660s he was a pupil of G.B. Fasolo in Palermo. From March 1671 to November 1674 Aliotti was in Padua, as principal organist of the Basilica di S Antonio. He was organist of the Accademia della Morte, Ferrara, between 1676 and 1677, and during this period one of his oratorios, *Il trionfo della morte*, was performed there. Between 1677 and 1678 he was organist of Spoleto Duomo. From 1679 to 1687 he was once again in Palermo, where he was a member of

the *Unione dei musici* and *maestro di cappella* of the Gesù. He was also *maestro del Senato* in the city (1680–82, 1685, 1687) and *maestro di cappella* of the cathedral (1681–2); during this time two of his oratorios were performed by the Congregazione dell'Oratorio dei Filippini. A report of 1687 mentions him as the composer of a 'marvellous concert' in honour of the patron saint of Palermo; the work in question was his masterpiece, the oratorio *Santa Rosalia*, repeated the following year in Modena.

In his four surviving oratorios, on Biblical stories or the lives of saints, Aliotti displays a sophisticated technique, as well as ingenuity and imagination. There is great variety in the succession of recitatives (often closing with a few arioso bars), arias, ensembles and instrumental passages. There are highly effective progressions, melodic and harmonic dissonances, chromatic inflections and lively ostinatos. *Santa Rosalia* contains some exquisite duets and trios, while in *Il trionfo della morte*, the melodic line of Eve's aria 'Discioglietevi, dileguatevi' (in C minor with four violas), embellished with a flattened supertonic, makes it one of the most attractive single pieces in the 17th-century oratorio repertory.

WORKS

ORATORIOS

La morte di S Antonio da Padova (G. Desideri), Padua or ?Ferrara, before 1677, *I-Nf*
Il trionfo della morte per il peccato d'Adamo, Ferrara, 1677, *Moe*, *Nf*

PAOLO EMILIO CARAPEZZA, GIUSEPPE COLLISANI

Alió y Brea, Francisco (*b* Barcelona, 27 March 1862; *d* Barcelona, 31 March 1908). Spanish composer, folklorist and music critic. He studied composition with Antonio Nicolau and Anselmo Barba and piano with C.G. Vidiella in Barcelona and was music critic for various journals there, including *La renaixensa*, *L'avenç* and, from 1905 to 1908, *El poble català*. He published his *Collecció de 6 melodies per a cant i piano* and five *Cansons per cant i piano* (both Barcelona, 1887), which are settings of poems by Angel Guimerá, Francisco Matheu y Fornells, Apeles Mestres and Jacinto Verdaguer. He illustrated the latter volume himself, and some of his work was displayed at an exhibition of the Sociedad de Acuarelistas in Barcelona. A distinguished folklorist as well as a sensitive composer and skilful melodist, he collected Catalan folksongs and published arrangements of 23 of these in *Cansons populars catalanas* (Barcelona, 1891). He used native rhythms and melodies in his songs and piano pieces (among them *Ballet*, *Marxa fantástica*, *Nota de color* and several barcarolles) and was one of the great initiators of the Catalan music revival while Luis Millet and Amadeo Vives were founding the Orfeó Català (1891).

JOCELYNE AUBÉ

Aliprandi, Bernardo (*b* ?Milan, *c*1710; *d* Frankfurt, *c*1792). Italian cellist and composer. Although early sources (Eitner, Rudhart) claimed a Milanese origin for Aliprandi, the family has not been definitely traced. One of the numerous Italians who found careers north of the Alps, Aliprandi first appears in the records of the Bavarian court at Munich on 1 October 1731 as a chamber and court musician, with a yearly stipend of 1000 florins. On 22 August 1737 he succeeded G.B. Ferrandini as composer of chamber music; on 11 March 1744 he was promoted to Konzertmeister, with his salary increased to 1200 florins. By 1777 this amount had been reduced to 1105 florins, and in 1778 he retired with a pension of 500 florins. In 1791 he was living in Frankfurt; a petition by his son Bernardo Maria dated May 1793 indicates that he had died by then.

Aliprandi's works for the Bavarian court opera include *Mitridate* (B. Pasqualigo, 1738) and *Semiramide riconosciuta* (Metastasio, 1740); he also wrote a *festa teatrale* for Nymphenburg, *Apollo trà le muse in Parnasso* (Perozzo do Perozzi, 1737) and two works for performance at the Munich College of Jesuits, *Vocatio tertia ad nuptias filii regis* (G. Arnold, 1737) and *De via a caelo* (Neumayr, 1738). The *Iphigenia in Aulide* (Munich, 1739) sometimes attributed to Aliprandi was probably by Giovanni Porta. A piano score of *Mitridate* and a *Stabat mater* of 1749, for soprano, alto and chamber orchestra, survive (*D-Dl*). 18 sinfonias are listed in the 1753 catalogue of the Munich Hofkapelle. In Münster's judgment Aliprandi's style was conservative, isolated from the newer Italian operatic developments, although the writing in the *Stabat mater* has emotional power.

JAMES L. JACKMAN

Aliprandi, Bernardo [Bernhard] **Maria** (*b* Munich, 5 Feb 1747; *d* Munich, 19 Feb 1801). Italian cellist and

composer, son of BERNARDO ALIPRANDI. The young Bernardo probably studied with his father and, like many cellists of the era, would have been familiar with the viol. He began playing the cello for the Munich court between 1762 and 1765, acting as the unpaid assistant director of the court orchestra from 1768. When the Munich and Mannheim Kapellen were consolidated in 1778, he succeeded his father as court virtuoso; by 1799 he received 400 florins yearly. Lipowsky considered him to be a good cellist. According to Gerber, he published pieces for the viol in 1782, while Fétis maintained that he wrote only for the cello; no works appear to have survived.

For bibliography *see* ALIPRANDI, BERNARDO.

JAMES L. JACKMAN/VALERIE WALDEN

Aliquot. A mathematical term meaning 'contained in another a certain number of times without leaving any remainder' (*OED*); for example, 2 is an aliquot part of 6. The wavelengths of the harmonic partials of a tone are thus aliquot parts of the fundamental wavelength. Aliquot strings are SYMPATHETIC STRINGS that vibrate in resonance with those that are struck or bowed. An aliquot piano has additional strings in the upper register that vibrate in sympathy with those struck by the hammers; the BLÜTHNER firm in particular employs 'aliquot scaling' (also occasionally referred to as 'duplex scaling'). *Aliquotstimme* is the German term for a MUTATION STOP, i.e. an organ stop which sounds at an odd harmonic of the basic or foundation stop.

HOWARD MAYER BROWN/CLIVE GREATED

Alís (Flores), Román (*b* Palma de Mallorca, 24 Aug 1931). Spanish composer. He began his musical studies at the Barcelona Conservatory with Gabriel Gálvez, Luis Millet, Juan Pich Santasusana, Joan Gibert Camins, Joaquín Zamocois and Eduardo Toldrá, and later removed to Geneva to broaden his training. His tireless professional work has extended beyond composition to directing various musical and ballet groups, orchestration, performing as a pianist, music criticism on radio and television, and teaching. He taught composition and fugue at the Seville Conservatory until 1971, then composition at the Madrid Conservatory until his retirement in 1997.

Alís's works number about 200 and comprise a wide variety of genres. Many of them were commissioned by various official organizations. Among them are the orchestral *Sinfonietta*, *Música para un festival en Sevilla*, *Homenatge a Antoni Gaudí*, *Seis remembranzas a Eduardo Toldrá* and *Rêverie*, all of which bear witness to his mastery of orchestration, tone-colour and intensity. Equally well known are his pieces for piano, his choral pieces and his string quartets. In addition to his serious music, he has composed, orchestrated and conducted commercial and incidental music for publishing houses, CDs, theatre, radio, television and the cinema. A member of various juries of international competitions, he was made Commander of the Imperial Hispanic Order of Carlos V and received numerous honours and prizes.

At first Alís composed in a 12-note serial technique, but this gradually changed into a more flexible style enriched by a more purely personal, expressive approach.

MARTA CURESES

Aliseda, Jerónimo [Sánchez] **de** (*b c*1548; *d* Granada, 28 June 1591). Spanish composer, son of SANTOS DE ALISEDA. From about 1557 to September 1577 when he was ordained, he was a member of the choir of Granada Cathedral. On 8 June, 1580 the chapter accepted him as successor to his father without the customary public competition. As *maestro de capilla* he was required to give board and instruction to the choirboys, to provide daily lessons in polyphony and to compose *chanzonetas* and *extremeses* for important feasts. In 1589 he was relieved of these obligations because of ill-health. He died in poverty, like his father. None of Aliseda's secular music survives. His solemnly expressive motets owe much to those of Morales in structure and style, particularly to the latter's *Emendemus in melius*.

ROBERT STEVENSON

Aliseda, Santos de (*d* Granada, 4 July 1580). Spanish composer. He was appointed *maestro de capilla* of Granada Cathedral on 19 November 1557 despite the opposition of his predecessor, Luis de Cózar, who intended his own nephew to succeed him. After an unsuccessful appeal to the archbishop, Cózar was forced to hand over the charge of the choirboys to Aliseda in May 1558. Aliseda had already begun to search for better singers, but was hindered by the poor salaries which the Granada Cathedral chapter offered.

Throughout his 23 years as *maestro de capilla* Aliseda won praise from the chapter for his diligent teaching, his punctuality and particularly for his care of the choirboys. In 1579, in appreciation of his merits, the chapter recommended him to Philip II for a prebend, and on 14 May 1580 voted him a gift of 12 ducats to aid him in his illness.

Aliseda's six-part motet *Similabo eum* shows him to have been a composer of great contrapuntal skill and sophistication. 11 of the motets in the Toledo Cathedral archive have resisted transcription owing to severe deterioration of the manuscript.

WORKS

Missa 'Ecce vir prudens', 4–6vv, *E-GRcr*; ed. in López-Calo

6 motets and 1 lamentation in *GRc*: Filiae Jerusalem, 5vv; Haec est virgo sapiens, 4vv; Misericordiae Domine, 4vv (Lamentation); O doctor optime, 5vv; Pulchra facie, 4vv; Similabo eum, 6vv; Verba mea auribus percipe, 4vv: ed. in López-Calo

15 motets, all in *Tc*: Dixit Dominus paralytico, 5vv; Estote fortes in bello, 5vv; Iste est qui ante Deum, 4vv; Hodie in monte, 6vv; Heu mihi, 6vv; Homo natus de muliere, 6vv; In illo tempore dixit ... audistis, 6vv; Ne projicias me in tempore senectutis, 5vv; O bone Jesu illumina oculos meos, 5vv; Obsecro Domine mitte quem misurus es, 5vv; Puer qui natus est, 5vv; Sub tuum preasidium, 6vv; Super flumina Babylonis, 5vv; Surrexit Pastor bonus, 4vv; Transeunte Domino clamabat caecus, 6vv

Alison, Richard. *See* ALLISON, RICHARD.

Alix, May. *See* HUNTER, ALBERTA.

Ali-Zadeh, Franghiz (Ali Aga Kïzï) (*b* Baku, 28 May 1947). Azerbaijani composer and pianist. She studied at the Music School attached to the Azerbaijan State Conservatory (1954–65) and then at the conservatory itself (composition with Kara Karayev and the piano with Khalilov), graduating in 1970 as a pianist and 1972 as a composer. She then attended a postgraduate course under Karayev (1974–6) and at the same time served as his assistant (1970–76) before being appointed assistant professor (1976–89) and then professor (1996 onwards). During the 1960s and 70s she encouraged the dissemination of new music by giving the first performances in Azerbaijan of works by Berg, Cage, Crumb, Messiaen and Schoenberg as well as playing works by Soviet composers such as Denisov, Gubaydulina and Schnittke. She also frequently took part in festivals around the former Soviet Union, while in 1988 she was elected to join the Friends of the Arnold Schoenberg Institute of Los Angeles and in 1989 she gained her DMus. Since the mid-1980s her works have been heard in the USA and Europe on a regular basis. She has lived in Turkey since 1992. Her compositional style is informed by Azerbaijani traditions including *mugam*, and also by Western modernism; she was initially attracted to techniques variously employed by Boulez, Ligeti, Lutosławski and Stockhausen. Problems concerning time and space, stasis and dynamism are central to her thinking; *Gabil-Sajahy* (1979) for cello and piano is characteristic of her output and also formed the basis of her international reputation.

MARINA LOBANOVA

Alizadeh, Hossein (*b* Tehran, 1951). Iranian *tār* and *setār* player, teacher and composer. He studied at the National Music Conservatory in Tehran from the age of 13 and then at the University of Tehran from 1970 to 1974; his teachers included Habibollah Salehi, Ali Akbar Shahnazi, Nur Ali Borumand, Abdollah Davami, Mahmud Karimi, Yusef Forutan, Said Hormozi, Dariush Safvate and Hooshang Zarif. From 1971 Alizadeh studied and taught at the influential Centre for the Preservation and Propagation of Iranian Music in Tehran; he later taught music theory and *tār* at the University of Tehran. In 1976 he began his association with Iranian National Radio and Television, working as a soloist, a composer and a

conductor. He co-founded the Chavosh Cultural Artistic Centre in 1977 and the Aref Ensemble in 1983; he also worked with the Sheyda Ensemble. In the early 1980s he studied musicology and composition at the University of Berlin. In 1997 he served one year as head of the National Music Conservatory in Tehran.

Thoroughly trained as a classical musician, Alizadeh has worked towards finding a contemporary voice for traditional Iranian music. In particular, he has contributed to the development of a more prominent role for instrumental music in the traditionally voice-based classical music; most of his compositions are for instrumental ensembles, some incorporating western instruments. His work with children at the Institute for the Intellectual Development of Children and Young Adults in Tehran helped him to develop new ideas concerning music education. At the beginning of the 21st century he remains active as a soloist, a composer and a teacher, regularly performing and recording in Iran and abroad in Europe, the USA and Asia.

LAUDAN NOOSHIN

Alkaios. *See* ALCAEUS.

Alkan [Morhange], **(Charles-)Valentin** (*b* Paris, 30 Nov 1813; *d* Paris, 29 March 1888). French pianist and composer. His real name was Morhange. He was one of the leading piano virtuosos of the 19th century and one of its most unusual composers, remarkable in both technique and imagination, yet largely ignored by his own and succeeding generations.

1. Life. 2. Alkan as pianist. 3. Works and style.

1. LIFE. Of Jewish parentage, Alkan was the eldest of five brothers, all of whom, with an elder sister as well, became musicians under the assumed name Alkan; Napoléon Alkan, the third brother (1826–1910), taught solfège at the Paris Conservatoire for over 50 years. Valentin Alkan's career at the Conservatoire started brilliantly with a *premier prix* for solfège at the age of seven. When Alkan was nine Cherubini observed that he was 'astonishing for his age' and described his ability on the piano as 'extraordinary'. He won a *premier prix* for piano in 1824, for harmony in 1827 and for organ in 1834. His op.1 was published in 1828, when he was 14. As a child prodigy he enjoyed great success, especially in the salon of the Princesse de la Moskova, although he later admitted feeling eclipsed by the yet greater success of the young Liszt. His teachers were Dourlen for harmony and P.-J. Zimmermann for the piano. Still on the crest of his youthful success he visited London in 1833, according to Fétis, and was 'cheerful, outgoing and confident' (Marmontel).

Alkan soon came under the spell of Chopin, whose close friendship he enjoyed and whose music he much admired. He was friendly too with George Sand and others of their circle. Yet there soon appeared the strain of shyness and misanthropy that was later to become Alkan's dominant characteristic. His life is undocumented for long periods when he withdrew from the concert platform; his publications appeared only at intervals; and he seems more and more to have avoided company. He held no official appointments. From 1829 until 1836 he was a part-time teacher of solfège at the Conservatoire, but he was never a full member of its staff. In 1848, on the death of Zimmermann, there was public controversy as to whether Alkan or Marmontel should succeed to the teaching post at the Conservatoire. The two men fell out when Marmontel was appointed and Alkan remained without public office or honour.

Alkan's concert appearances were rare, and he played more music by other composers than his own works. After 1838 he disappeared from view until 1844 when he gave two concerts for *La France musicale*, followed by two in 1845 in the Salle Erard. By this time he had attracted the attention of leading critics, including Liszt, Schumann and d'Ortigue, and he was definitely regarded as among the principal virtuosos of the day. Yet he again withdrew until 1853, when he gave two concerts of 'classical and retrospective music'; this was followed by a further gap of 20 years until 1873, when he began the series of 'Petits concerts', giving up to six concerts a year until 1880 in both the Salle Erard and the Salle Pleyel. He continued to play at Erard's twice a week until his death, giving afternoon classes. His most eminent pupil was Elie-Miriam Delaborde (*b* Paris, 8 Feb 1839; *d* Paris, 9 Dec 1913), generally thought to be Alkan's illegitimate son. Like his father, Delaborde favoured the pedal piano and was a composer. But in contrast, his character was extroverted and urbane; he toured widely as a virtuoso, painted a little and knew both Bizet and Manet well.

Alkan's publications were nearly as intermittent as his concerts; there is an uncharted gap in the 1860s, a period of his life of which virtually nothing is known. His works were known, if at all, from publication rather than performance, which perhaps accounts for the obscurity in which they have lain both during and since his lifetime. It is fortunate that so many works, many of them of considerable dimensions, should have been published at all.

Alkan's enigmatic character, reflected in his music, has been well described by Marmontel and de Bertha. He dressed in a severe, old-fashioned, somewhat clerical manner, discouraged visitors and went out rarely. He felt he had lived beyond his time. Niecks described how Alkan became warm-hearted and almost convivial once the outer reserve had been penetrated. He had few friends, though he particularly enjoyed the patronage of Russian aristocratic ladies, 'des dames très parfumées et froufroutantes', as Isidore Philipp described them. He was nervous in public and pathologically worried about his health, even though it was good. He remained a strict member of

Valentin Alkan: portrait by Edouard Dubufe, pastel (private collection)

the Jewish faith in which he had been brought up, and was widely read in classical and biblical lore. This may account for the story, which seems to have no basis of truth, that he died under a collapsed bookcase; de Bertha's account of his death mentions no such incident.

2. ALKAN AS PIANIST. Accounts of Alkan's playing are in accord on its virtuosity, although he only rarely played his most difficult pieces. He performed the Symphonie from op.39, for example, only once, and never played the complete Concerto (from the same set) or the *Grande sonate* op.33. D'Ortigue in 1844 called his playing 'firm, powerful, brilliant and severe', while the 'Rover of Concerts' (*Revue et gazette musicale*, xii, 1845, 139) said: 'his playing is clear, pure, brilliant, perfectly controlled; but it lacks breadth, passion, poetry or individuality, despite his claim to display these qualities in his music'. He was proud of the strictness and precision of his playing, and was a rigorous user of the metronome. His variations *Le festin d'Esope* are headed 'senza licenza quantunque', and he insisted that Chopin, whom he greatly admired, should be interpreted in a classical manner.

Alkan was particularly noted for his attachment to a wide repertory of historical music and for his promulgation of music, such as the late Beethoven sonatas and Schubert's piano music, not fashionable at the time. He published transcriptions of Bach, Handel, Marcello, Grétry and others, and composed in the 'style ancien' from time to time. He was an ardent champion of the *pédalier* (the pedal piano), for which he wrote some impressive works, especially near the end of his life.

3. WORKS AND STYLE. Most of Alkan's works are for the piano. Of the two early chamber concertos, the second was later arranged by Alkan for solo piano. The orchestral symphony in B minor, described by Léon Kreutzer in 1846, is lost. There are three substantial chamber works and some miscellaneous vocal pieces of no special interest, save the comical march on the death of a parrot for choir and woodwind. His earliest piano compositions are variations and rondos wholly in the fashion of the day, many based on popular operatic melodies, but without true marks of individuality. The characteristic brilliance for which he was soon to be noted appears plainly in the various sets of studies published in 1837 and 1838. In 1844 followed a group of works that display his taste for unusual titles and subject matter, *Le chemin de fer* for example, and the style is noticeably bolder and more original. In the next group the scale is enormously enlarged with the *25 préludes* op.31 in all the major and minor keys (C major appears twice) in 1847 and the *Grande sonate: Les quatre âges* op.33 and the *12 études* in all the major keys op.35 in 1848. The full conception was realized in 1857 with the appearance of his most ambitious work, the *12 études* in all the minor keys, op.39; these comprise a four-movement symphony, a three-movement concerto, a set of variations, an overture and three miscellaneous pieces, some of the movements being of enormous length. Other collections show his fondness for assembling many pieces into one folder, for example the five *Recueils de chants* published between 1857 and about 1873, modelled in part on Mendelssohn's *Lieder ohne Worte*, and the *48 motifs* or *esquisses* published in four books in 1861.

Alkan's originality is evident in nearly all his music, but he was in debt to both old and new music for elements of his style. His admiration for 18th-century Classics has already been mentioned, and the more formal mannerisms of Bach and Handel are plentiful. He was close in spirit, at least in his early music, to Zimmermann, Henri Bertini, Kalkbrenner and the Parisian virtuoso school of the 1820s. Above all he felt the influence of Chopin, whose ornamental phraseology he adopted, combining it with a different melodic and harmonic style. The extra-musical element and his recurrent boldness have invited comparison with Berlioz (who appears to have shown no interest in Alkan). Schumann made the comparison in 1839, and so did Sorabji, in 1932, when he said that Alkan's *Sonatine* op.61 sounded like Berlioz attempting to compose a Beethoven sonata. But Alkan was altogether more puzzling and impenetrable. His titles are obscure and elliptical, often with a satanic or mocking tone. He revelled in Faustian ideas yet at other times assumed a childish, domestic simplicity. Military motifs and quasi-religious tones, biblical or Hebraic, are also common. Superscriptions and instructions abound.

A surprising aspect of Alkan's style is its technical rigour, for he wrote not as a pianist with a keyboard before him but with the cerebral exactness of someone for whom the notation is more important than the sound. He refused to spell enharmonically and facilitate reading, with the result that at least twice he was compelled to use a notation for a triple sharp; he was scrupulous in his part-writing. The same obstinacy is to be seen in his harmonic writing in which, for example, he used pedal points or ostinatos against theoretically incompatible counterpoints; *Fa* op.38 no.8 makes a special feature of this. His clashing harmony is nearly always the result of one part's refusing to move into line with another and the effect can be very harsh. His playing without rubato was a kindred characteristic; indeed one of the *48 motifs* (no.28) is entitled *Inflexibilité*.

At a period when the piano was undergoing universal exploitation for new and more dazzling sonorities, Alkan made a positive contribution to virtuoso technique. His music can be exacting beyond the capacity of any but the most powerful players in technique, dynamic demands and stamina. It can also be disarmingly simple. He exploited the extreme ends of the keyboard, often in deliberate contrast with the middle range. *Salut cendre du pauvre* op.45 has fine side-drum effects, also found in the powerful Mahlerian *Le tambour bat aux champs* op.50*bis*. *Le grillon* op.60*bis* imitates the chirping of the cricket; *Le chemin de fer*, obviously, imitates a train. Other instruments are imitated, for example the cello in *La voix de l'instrument* op.70 no.4, and a string quartet is evoked with remarkable precision in *Début du quatuor*, no.31 of the *48 motifs*. No.15 of the same set is a *Tutti de concerto dans le genre ancien* in a heavy orchestral manner with a clearly differentiated entry for the 'soloist'. The Concerto in op.39 takes this idea to extreme lengths with the orchestral and solo elements in balance throughout. The fine opening of the Symphonie in the same work has a real orchestral surge.

Alkan's melodic gift was variable, rarely comparable to that of Chopin or Berlioz, and sometimes critically weak. But he was master of a naive style as, for example, in the *maggiore* section of the slow movement of the Symphonie or in *Promenade sur l'eau*, no.6 of *Les mois* op.74. A piece such as the powerful *Morituri te salutant*, no.21 of the *48 motifs*, achieves its effect entirely without recourse to melody in the normal sense. His interest in unusual metres and rhythmic combinations was keen as can clearly be seen in the second book of impromptus op.32: of the four pieces three are in quintuple time and one is in septuple.

Alkan had unconventional ideas about tonal structure and was not bound by unity of key in his larger forms. As early as 1832, in the first chamber concerto, the first movement begins in A minor and concludes in E major and the last movement ends in C♯ major. The four movements of the *Grande sonate* op.33 not only get progressively slower to illustrate increasing age (the first movement is a scherzo), but are all in different keys. Both the Symphonie and the Concerto in op.39, being parts of a scheme of 12 studies in all the minor keys, have all their movements in different keys. In the second chamber concerto the three movements are continuous, with the third returning to the material of the first. Alkan's structures sometimes run to epic length; the largest is the first movement of the Concerto, which lasts nearly 30 minutes. But many of his pieces are no more than a dozen bars long. One of his favourite devices was the stark juxtaposition of quite different elements, the best example of which is *Héraclite et Démocrite* op.63 no.39.

Alkan's music has been seriously neglected. Pianists have been slow to explore the great range and variety of his music, not all of which is extravagantly difficult to play. But he was greatly valued by Liszt, Busoni and many others, and should eventually take his due place among the most important figures of his time.

for piano unless otherwise stated

1	Variations on a theme from Steibelt: Orage (1828)
2	Les omnibus, variations (1829)
3	Il était un p'tit homme, rondoletto (1830)
4	Rondo brillant, str qt ad lib (*c*1833)
5	Rondo, on Rossini: Largo al factotum from Il barbiere di Siviglia (*c*1833)
12	Rondeau chromatique (1833)
16/4	Variations on Donizetti: Ah segnata é la mia morte from Anna Bolena (1834)
16/5	Variations on Bellini: La tremenda ultrice spada from I Capuleti e Montecchi (1834)
16/6	Variations quasi fantaisie sur une barcarolle napolitaine (1834)
12	Trois improvisations dans le style brillant (1837)
13	Trois andantes romantiques (1837)
15	Trois morceaux dans le genre pathétique (1837): 1 Aime-moi, 2 Le vent, 3 Morte
16	Tre scherzi (1837)
16	Six morceaux caractéristiques (1838), also as op.8; repubd as nos.1, 4, 5, 7, 8, 12 of Les mois, op.74
17	Finale, pf 4 hands (1838–40)
76	Trois grandes études (*c*1838): 1 Fantaisie, left hand, 2 Introduction, variations and finale, right hand, 3 Etude à mouvement semblable et perpetuel
—	Jean qui pleure et Jean qui rit [2 fughe da camera] (*c*1840)
—	Variations à la vielle, on a theme from Donizetti: L'elisir d'amore (*c*1840)
—	Variations on a theme from Donizetti: Ugo conte di Parigi (1842)
22	Nocturne (1844)
23	Saltarelle (1844)
24	Gigue et air de ballet dans le style ancien (1844)
25	Alleluia (1844)
17	Le preux, étude de concert (1844)
26	Variations-fantaisie on themes from Mozart: Don Giovanni, pf 4 hands (1844)
27	Le chemin de fer, étude (1844)
—	Désir (1844)
—	L'amitié, étude (1845), repubd as op.32(1)/2
—	Impromptu, F♯ (*c*1845)
29	Bourrée d'Auvergne (1846)
26	Marche funèbre (1846)
27	Marche triomphale [originally Marche héroïque] (1846)
26c	Vaghezza, impromptu (1847), repubd as op.32(1)/1
26b	Fantasietta alla moresca (1847), repubd as op.32(1)/3
31	Vingt-cinq préludes, in all major and minor keys, pf/org (1847)
33	Grande sonate: Les quatre âges (1848)
34	Scherzo focoso (1848)
35	Douze études, in all major keys (1848)
32(1)	Quatre impromptus (1848): 1 Vaghezza, 2 L'amitié, 3 Fantasietta alla moresca, 4 La foi [nos.1, 2, 3 also pubd separately]
32(2)	Deuxième recueil d'impromptus, 3 airs à 5 temps et 1 à 7 temps (1849)

—	Pro organo, org, 1850, unpubd
—	Fantasticheria (*c*1850)
45	Salut, cendre du pauvre!, paraphrase (1856)
37	Trois marches, quasi da cavalleria (1857)
38	Premier recueil de chants (1857)
38	Deuxième recueil de chants (1857)
39	Douze études, in all minor keys (1857): 1 Comme le vent, 2 En rythme molossique, 3 Scherzo diabolico, 4–7 Symphonie, 8–10 Concerto, 11 Ouverture, 12 Le festin d'Esope, variations
40	Trois marches, pf 4 hands (1857)
41	Trois petites fantaisies (1857)
42	Réconciliation, petit caprice (1857)
46	Minuetto alla tedesca (1857)
50	Capriccio alla soldatesca (1859)
51	Trois menuets (1859)
52	Super flumina Babylonis, paraphrase (1859)
53	Quasi-caccia, caprice (1859)
54	Benedictus, pedal pf/pf 3 hands (1859)
55	Une fusée, introduction et impromptu (1859)
—	Petit conte (1859)
—	Petits préludes sur les 8 gammes du plain-chant, org (1859)
57	Nocturnes nos.2, 3 (1859)
60	Deux petites pièces (1859): 1 Ma chère liberté, 2 Ma chère servitude
50bis	Le tambour bat aux champs, esquisse (1859)
60bis	Nocturne no.4, Le grillon (1859)
61	Sonatine (1861)
63	Quarante-huit motifs (esquisses) (1861)
64	Treize prières, org/pedal pf/pf 3 hands (*c*1870)
65	Troisième recueil de chants (*c*1870)
66	Onze grands préludes and transcr. of Handel: Messiah, pedal pf/pf 3 hands (*c*1870)
69	Impromptu sur le choral de Luther, org/pedal pf (*c*1871)
—	Douze études, pedals only (org/pedal pf) (*c*1871)
—	Chapeau bas, 2me fantasticheria (*c*1872)
—	Bombardo-carillon, pedal-board 4 feet/pf 4 hands (*c*1872)
72	Onze pièces dans le style religieux and transcr. of Handel: Messiah, org/harmonium/pf (*c*1872)
74	Les mois, 12 morceaux caractéristiques (*c*1872) [incl. op.16]
75	Toccatina (*c*1872)
67	Quatrième recueil de chants (*c*1873)
70	Cinquième recueil de chants (*c*1873)
—	Douze fugues, pedal pf/org (n.d.)
—	Zorcico, danse ibérienne, ed. G. Beck (1969)

Transcrs. of works by Bach, Beethoven, Gluck, Grétry, Handel, Haydn, Marcello, Meyerbeer, Mozart, Weber etc.

HUGH MACDONALD

Alla breve (It.). In the system of PROPORTIONAL NOTATION of the late Middle Ages and Renaissance, another name for *proportio dupla* (time signature 2/1 or more commonly ₵), where note shapes diminish in relative value in the ratio 2:1. The *tactus* thus shifts from its normal place on the semibreve (*alla semibreve*) to the breve. *Alla breve* still retains its connotation of a smaller relative value per note shape in modern practice, and is commonly used for music in a relatively quick tempo, where ₵ indicates two beats to a bar of four crotchets while C indicates four beats.

PETER WRIGHT

Alla cappella (It.). A CAPPELLA.

Allacci [Allacius, Allatius], **Leone** [Lione] (*b* Chios, 1588; *d* Rome, 19 Jan 1669). Italian theologian and scholar of Greek origin. He went to Italy as a child and studied philosophy, theology and classics in Rome at the Greek Catholic Collegio di S Atanasio from 1599 to 1610. After a period in Chios he studied medicine in Rome until 1616. Thereafter he was employed in the Vatican Library and was responsible for moving the Biblioteca Palatina from Heidelberg to Rome in 1622–3. In 1661 he succeeded Luca Holstenio as chief curator of the Vatican Library. He wrote extensively on a wide range of subjects including theology, Byzantine studies, classical antiquity and Italian letters. He was a member of the Accademia degli Incogniti, which played an important role in early Venetian opera. He is significant for the history of music by virtue of his *Drammaturgia . . . divisa in sette indici* (Rome, 1666), a compendious and surprisingly accurate list of dramatic works of all kinds, including opera librettos, published in Italy; it also lists many unpublished works. A second, vastly enlarged and updated edition by Giovanni Cendoni, Apostolo Zeno, Giovanni degli Apostoli and others unnamed (Venice, 1755) adds the names of composers to *drammi per musica* and remains a major work of reference for Italian drama studies, although it must be used with caution. Many of Allacci's manuscripts and his large collection of printed dramas are now in the Vatican

Library. A treatise, *De melodiis Graecorum*, searched for in vain by Gerbert, appears not to have existed.

Allaire. *See* ALAIRE.

Alla longa (It.). In the system of PROPORTIONAL NOTATION of the late Middle Ages and Renaissance, another name for *proportio quadrupla* (time signature 4/1), where note shapes diminish in relative value in the ratio 4:1. The *tactus* thus shifts from its normal place on the semibreve (*alla semibreve*) to the long.

Alla minima (It.). In the system of PROPORTIONAL NOTATION of the late Middle Ages and Renaissance, another name for *proportio subdupla* (time signature 1/2), where note shapes are augmented in relative value in the ratio 1:2. The *tactus* thus shifts from its normal place on the semibreve (*alla semibreve*) to the minim.

Allan, Richard van. *See* VAN ALLAN, RICHARD.

Allard. *See* HALLART, MICHEL.

Allard, Maurice (*b* Sin-le-Noble, Nord, 25 May 1923). French bassoonist and teacher. A precocious talent, he won a *premier prix* at the Paris Conservatoire at the age of 17. He won a first prize at the Geneva International Competition in 1949 and was appointed to the Paris Opéra the same year. In 1957 he succeeded his teacher Dhérin as professor of bassoon at the Paris Conservatoire. Among the many composers who wrote concertos for him were Marcel Bitsch, Pierre Max Dubois, Jolivet, Rivier, Tisné, Tomasi and Marc Vaubourgoin. The outstanding French bassoonist of his time, he was an energetic champion of the French, as opposed to the German, instrument; in 1975 he founded Les Amis du Basson Français, an organization which existed to defend its interests. Allard edited much music for the bassoon and wrote a number of works for his instrument.

WILLIAM WATERHOUSE/R

Allardo. *See* DU GAUCKIER, ALARD.

Allargando (It.: 'broadening', 'spreading'; gerund of *allargare*, 'to spread'). An instruction to slow down the tempo and often to develop a fuller and more majestic performing style. But this is not always intended. Verdi, for example, almost invariably accompanied *allargando* with a decrease in texture or volume; thus the very end of the prelude to *La traviata* has the successive markings *allargando*, *diminuendo* and *morendo*. The forms *slargando* and *slargandosi* also appear, with the same meaning.

See also TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Alla semibreve (It.). A term used to describe the normal tempo of late medieval and Renaissance music where the *tactus* falls on the semibreve, as opposed to the breve (*alla breve*) or other note shape. *See* PROPORTIONAL NOTATION.

Allatius, Leone [Lione]. *See* ALLACCI, LEONE.

Alla turca. *See* TURCA, ALLA.

Alla zingarese. *See* ZINGARESE, ALLA.

Allde [Alday], **Edward** (*d* 1634). English music printer. He printed a few musical works between 1610 and 1615, only his initials 'E.A.' appearing on certain imprints. He printed Thomas Ravenscroft's *A Briefe Discourse* (1614) and John Amner's *Sacred Hymnes of 3, 4, 5 and 6 parts for Voyces and Vyols* (1615). His address was 'neere Christ-Church' in London. His name appears among a list of printers granted printing monopolies by James I and his successors as 'Edw. Alday, to print sett songs et al', but he apparently made little use of any such privilege.

MIRIAM MILLER

Allegra, Salvatore (*b* Palermo, 17 July 1898; *d* Florence, 9 Dec 1993). Italian composer. He studied at the Palermo Conservatory with Cilea and Antonio Favara, graduating in 1917. He held office as president of the Cassa Nazionale Assistenza Musicisti and as honorary president of the Italian Musicians' Union. He is known mainly as a composer of operettas and operas in which he followed a conservative, late *verismo* style. His operettas, of which *Mademoiselle Ultra* (1926) and *Mitizi* (1928) are representative, exploit the vein of *petit bourgeois* sentimentality which guaranteed their success between 1910 and 1930. In the 1930s, when operetta progressively lost its appeal with Italian audiences, Allegra turned to opera, producing rather conventional work lacking in invention, such as *Ave Maria* (1934) and *Romulus* (1946). His orchestral and chamber output reveals nothing more original. Examples include the facile lyricism of his ballet *L'isola degli incanti* (1952) and *Il pastore errante* for cello and piano (1951). He also wrote religious works and film music.

WORKS

Operettas: La maschera nuda (3, F. Paolieri and L. Bonelli), Naples, Politeama Giacosa, 26 June 1925 [based on sketches by Leoncavallo]; Mademoiselle Ultra (3, Paolieri and Bonelli), Turin, Balbo, 1926; Mitizi (3, N. Vitali), Brindisi, 1928; La fiera dell'Impruneta (3, G. Bucciolini), Genoa, 1929; Il gatto in cantina (Vitali), Florence, 1930; Maremma (Yambo [G.E. Novelli]), Florence, 1931; Cappuccetto rosso (3, Yambo), Florence, 1932; Le avventure di Pippo Fallatutti (4 scenes, Bucciolini), Florence, 1934
Ops: Ave Maria (A. Donini, after G. Zorzi), Perugia, Morlacchi, 1934; Il medico suo malgrado (Donini, after Molière), Kassel, 1938; Romulus (3, E. Mucci), Naples, Floridiana, 1946; Il ritratto (after R. Nathan), Cluj, 1958
Other stage: I viandanti (poema lirico-sinfonico, 1, after V. Andreaus), Kassel, 1938, as Rast vor dem Jenseits; L'isola degli incanti (azione coreografica), 1952

RAFFAELE POZZI

Allegranti, Maddalena (*b* Venice, 1754; *d* Ireland, after 1801). Italian soprano. She made her début in 1770 in Venice and in 1771 went from Florence to Mannheim, possibly on a recommendation by Casanova to the Mannheim court poet, Mattia Verazi. Holzbauer gave her singing lessons and employed her as second soubrette in the court opera (1771–5). She made her Mannheim début in 1771 in Piccinni's *Gli stravaganti* (Nerina) and appeared the following year at the palace theatre in Schwetzingen in Gassmann's *L'amore artigiano* (Angiolina) and Sacchini's *La contadina in corte* (Tancia); Burney gave a glowing report of her. After 1778 she sang in Venice and Florence, in 1781 in London, making her début there in Anfossi's *I viaggiatori felici*. On 20 July 1783 she was engaged by Bertholdi at a salary of 1000 ducats as *prima donna buffa* at the Dresden court opera, where Mozart heard her and placed her above Ferrarese (letter of 16 April 1789). She returned by way of Venice (1798) to London where she sang in Cimarosa's *Il matrimonio segreto* (1799) and taught singing for a few years from 1801. She is said to have retired with her husband, a guards' officer called Harrison, to his home in Ireland. Horace Walpole ranked her success in London in 1781 above that of the dancer Gaetano Vestris, but Parke was critical of her 20 years later. Her portrait was engraved by F. Bartolozzi after Cosway.

ROLAND WÜRTZ (with PAUL CORNEILSON)

Allegretto (It., diminutive of *allegro*). A tempo (and mood) designation, normally indicating something a little less fast, and perhaps a little more lighthearted, than ALLEGRO. But there is some evidence that in Paris around 1800 it was understood to be faster than *allegro*, most specifically in J.B. Cartier's *L'art du violon* (Paris, 1798) and in Renaudin's *Plexichronomètre* readings (see B. Brook *La symphonie française*, Paris, 1962, i, 318). It is found occasionally in Vivaldi and Domenico Scarlatti, but hardly at all in their precursors, even though Brossard mentioned the word in his *Dictionaire* of 1703. During the second half of the 18th century it came into special popularity, for the idea of a fastish tempo that should on no account show any sign of hurry was peculiarly appropriate to the *galant* style. Leopold Mozart (1756) said it should be performed 'prettily, frivolously and jokily' ('artig, tändelend und scherzhaft'). When included in graduated lists of tempo marks it was normally placed between *allegro* and *andantino*. Unlike *allegro*, it is current only in musical contexts.

The slow movement of Beethoven's Seventh Symphony is perhaps the most famous example of *allegretto*, and a glimpse of the word's precise nature may result from the attempt to consider how that movement would have been affected if Beethoven had chosen instead to mark it *andantino*. He marked the second movement of his Quartet op.59 no.1 *allegretto vivace e sempre scherzando*, presumably in an attempt to suggest a fast tempo with the minimum of metrical accentuation and a maximum of fluidity.

DAVID FALLOWS

Allegri, Domenico (*b* Rome, *c*1585; *d* Rome, 5 Sept 1629). Italian composer. He was brought up in Rome. He was a private pupil of G.B. Nanino from April 1594 and a choirboy at S Luigi dei Francesi from October 1595; by February 1596 he was learning to compose. He left S Luigi in January 1602, after his voice had broken, but returned as an alto in December and remained until May 1603. He is next heard of at the collegiate church of S Maria Maggiore at Spello, where he was *maestro di cappella* from at least June 1608 (possibly from 1606) to January 1609. He then moved back to Rome and was *maestro di cappella* of S Maria in Trastevere from September 1609 to March 1610 and of S Maria Maggiore from then to his death. He married in 1616 and had five children. Allegri was one of the first to write independent instrumental accompaniments in vocal chamber music: his *Modi quos expositis in choris* (Rome, 1617) includes solos and duets with accompaniments for two violins (sometimes muted). A motet by him (in RISM 1634[1]) is an attractive example of the Roman style. A volume of motets for two to five voices (Rome, 1638) appears to be lost. According to Münster a *Magnificat* by Allegri is included in Fabio Costantini's op.11 (Venice, 1630). Two works attributed to Allegri by Fétis – *Euge serve bone* and *Beatus ille servus* – are by Abbatini, and a 16-part mass mentioned in the same source may be too.

COLIN TIMMS

Allegri, Gregorio (*b* Rome, 1582; *d* Rome, 7 Feb 1652). Italian composer and singer, brother of Domenico Allegri. From 1591 to 1596 he was a boy chorister and from 1601 to 1604 a tenor at S Luigi dei Francesi, Rome, where the *maestro di cappella* was G.B. Nanino. According to Allegri's obituary he studied with G.M. Nanino (see Lionnet). He was active as a singer and composer at the cathedrals of Fermo (1607–21) and Tivoli, and by August 1628 he was *maestro di cappella* of Santo Spirito in Sassia, Rome. He joined the papal choir as an alto on 6 December 1629, under Urban VIII, and was elected its *maestro di cappella* for the jubilee year of 1650. In 1640 his fellow singers elected him to revise Palestrina's hymns (necessitated by Urban VIII's revision of the texts), which were published in Antwerp in 1644. His contemporaries clearly saw him as a worthy successor to Palestrina and a guardian of the *stile antico*.

Allegri's fame stems largely from his *Miserere*, a setting of Psalm l, which, up until 1870, was traditionally sung by the papal choir during the Tenebrae Offices of Holy Week. Ironically, the setting's renown has little to do with Allegri since, in its basic form, it is a simple nine-part *falsobordone* chant for two choirs (SATTB/SSABar); the choirs alternate with each other and with plainchant (sung

on a monotone), joining together only for the final half-verse. It was customary for improvised embellishments to be added to such *falsobordoni*, and during the 18th century both the five-and four-part verses of Allegri's setting were made increasingly elaborate. In 1713 Bai wrote a complementary setting which was often substituted for Allegri's. Both these ornamented versions were performed at a very high pitch and were much admired by, among others, Emperor Leopold I, G.B. Martini, Burney and Mozart. The embellishments were at first a closely guarded secret but they were written down in the 1820s. Goethe and Mendelssohn were among the Romantics who enthused over Allegri's setting at a time when Roman polyphony was becoming the subject of attention for the earliest musicologists. The *Miserere* was first published by Burney in 1771, but in a version not found in any Vatican source. The version that is now commonly performed was assembled by Sir Ivor Atkins in the 1950s, from Burney's version and one made in the 1930s by Robert Haas (see Keyte); it bears little or no resemblance either to Allegri's original or to the piece as it as performed before 1870.

Allegri's best music is in the *a cappella* style, much of it for two choirs: it was copied and recopied into Cappella Sistina manuscripts for at least a century. A fine example is the six-part *Missa 'Vidi turbam magnam'*; based on his own motet it shows that the *stile antico*, far from being insipid, could be the vehicle for superbly controlled sonority and counterpoint, using syncopation to lead to a climax and with a bass line entirely harmonic in function.

Along with other Roman composers, Allegri responded to the new vogue for small-scale concertato church music and his published pieces are mostly in a more modern idiom. Clearly these were not written for the papal choir but for smaller musical establishments in Rome such as Spirito in Sassia, or for a provincial centre such as Fermo, where Allegri was living when they were published. The first book of *Concertini* has not survived, but the second (dedicated to Duke Giovanni Antonio Altaemps) is written in an unambitious post-Viadana idiom, neither melodious in the manner of the best north Italians nor ornamented. Some pieces include dance-like triple-time sections, but contrapuntal considerations still predominate. The five-part *Dilectus meus* is very like a late 16th-century madrigal in style, with delicate textural and rhythmic contrasts.

JEROME ROCHE/NOEL O'REGAN

Allegri, Lorenzo (*b* Florence, 16 Nov 1567; *d* Florence, 15 July 1648). Italian composer and lutenist. Cesare Tinghi, the Medici court diarist, called him (in Solerti) 'Lorenzo [or Lorenzino] todesco del liuto', which has encouraged the notion that he may have been German, but his baptismal record confirms that he was from Florence. He entered the ranks of salaried musicians at the Medici court on 15 April 1604 as a lutenist; during the period 1636–7 he was referred to as *maestro di liuto*. In January 1622 he was appointed *guardaroba della musica*, and in due course he was also placed in charge of the pages who played, sang and danced in court entertainments. He continued to serve the court until his death. He seems chiefly to have written instrumental music. Only two vocal pieces by him are known: *Tu piangi*, a madrigal for solo voice and continuo published in Antonio Brunelli's *Scherzi, arie, canzonette, e madrigali* (Venice, 1614[14]), and a short stage work for one to six voices to a text by Ferdinando Saracinelli beginning 'Spirto del ciel, scendi volando a noi'. The latter was published in his only collection of music, *Primo libro delle musiche* (Venice, 1618). This volume, which is printed in score, otherwise consists of a sinfonia and eight suites of dances for five or six unspecified instruments and continuo (extracts in *Lorenzo Allegri: Ballet Suites for String Orchestra and Basso Continuo*, ed. H. Beck, London, 1967, and in Mw, xxvi, 1964, Eng. trans., 1966).

All of the dances can be identified as belonging to entertainments produced at the Medici court between 1608 and 1615, including *La notte d'Amore* (1608), *La serena* (1611, reworked as *Le ninfe di Senna*, 1613), *Alta Maria* (1614), *I Campi Elisi* (1614) and *L'Iride* (1615); each suite consists of dances from a single work. The sinfonia, which opens the book, is divided into a slow first section in duple metre and with dotted rhythms and a faster, mildly imitative, second section in triple metre, a scheme that adumbrates the French overture. The suites contain three to seven dances. Each begins with a ballo in duple metre and moderate tempo and continues with such dances as the galliard, corrente, canario, branle and gavotte. Various combinations of them, sometimes interspersed with ritornellos, produce alternations of moderate and fast tempos, balance pairs of moderate duple-metre dances with fast triple-metre pairs or, following Brunelli's principle, provide increasing movement through the course of a suite. The last suite, with its seven movements (five dances and two ritornellos), symmetrical balancing of metres, and acceleration of tempo in successive movements, marks the artistic peak of the book and of the small body of Allegri's surviving works. His influence was far reaching and he had some responsibility for the transmission of the new Italian style into France, by way of Lully, who was in Florence as a young man, and Germany, by way of his student Johann Nauwach. Nauwach's publications of 1623 and 1627 contain the

earliest published Italian monodies by a non-Italian, as well as the earliest monodies to German texts.

EDMOND STRAINCHAMPS

Allegrissimo. Superlative of ALLEGRO.

Allegro (It.: 'merry', 'cheerful', 'lively'). The most common tempo designation in Western music. It was often abbreviated, particularly in the 18th century, to *all°*. Practically all the lists of tempo marks in musical dictionaries and handbooks give *allegro* as the standard moderately fast tempo, though its very ubiquity has led to its use with a variety of different shades of meaning: as early as 1703 Brossard (*Dictionaire*) needed to say that it sometimes meant 'quick' and sometimes meant 'moderately fast'. It was used particularly often by those composers who were economical in their use of tempo marks, such as Corelli or Mozart; and the more flamboyant composers have tended to use it for the base of some of their more whimsical designations: *allegro cristiano*, Rossini; *allegro felice*, Walford Davies; *allegro orgoglioso*, Nielsen; *allegro irato, allegro allegro molto più che si può*, Vivaldi (the superlative form *allegro allegro* used here is mentioned by Brossard).

Its earlier musical uses were purely adjectival with absolutely no implication of tempo. Ganassi (*Fontegara*, 1535) used it to characterize a certain trill. Zarlino (1558) noted that singers should follow the sense of the words: 'quando le parole contengono materie allegre, debbono cantare allegramente & con gagliardi movimenti' ('when the words contain cheerful matter, they should sing cheerfully and with vigorous movement'). The same was the case in the early 17th century: Bernardino Bottazzi (1614) gave 'Rules how to make melancholy canti fermi *allegri*'; and in 1650 Giovanni Scipione was still talking about *tempo allegro*. This adjectival use also appears in musical scores, beginning with Andrea Gabrieli's *Fantasia allegra* (1596), continuing through Maurizio Cazzati's tempo designation *allegro e presto* (op.8, 1648) in which *allegro* seems to define the mood and *presto* the tempo, and still common in Handel and Domenico Scarlatti, both of whom used the designation *andante allegro* (but *see* ANDANTE). In 1690 W.C. Printz still translated *allegro* literally into Latin: 'hilaris'.

As a tempo designation in its own right *allegro* was already used by Banchieri in 'La battaglia' (*L'organo suonarino*, 1611) and was shortly afterwards to be used by Jelich, Frescobaldi and Monteverdi. By 1683 *allegro* was common enough for Purcell to use it in his *Sonnata's of III Parts* and to translate it and *vivace* in the preface to that volume as 'a very brisk or fast movement'. Although the direction *allegro ma non presto* was relatively common, there is nothing to suggest that 17th-century composers had any general conception of a difference between *allegro* and *presto*: some used one to the exclusion of the other, and others used both interchangeably or even simultaneously (e.g. Marini, op.22, 1655). Curiously enough J.F.B.C. Majer's *Museum musicum* (Schwäbisch Hall, 1732) has no entry for *allegro* but lists *alegramente* and *alaigrement*.

The superlative *allegrissimo* was used as the faster tempo by Jelich (1622) and by both Alessandro and Domenico Scarlatti; although this is not included in the music dictionaries of Brossard (1703) and Rousseau (1768), it appears as late as that of Koch (1802).

There is some evidence of a change in the meaning of *allegro* at the end of the 18th century with the increasing use of a large variety of tempo marks. Quantz (*Versuch*, 1752) had warned that 'Whatever speed an Allegro demands it ought never to depart from a controlled and reasonable movement'. And a similarly moderate tempo was also implied in Koch's *Musikalisches Lexikon* (1802):

> The performance of *allegro* requires a masculine tone and a rounded, clear articulation of the notes, which in this movement should only be slurred together either when this is explicitly marked or when a prominent cantabile section makes it necessary.

But in the 1802 edition of his *Clavierschule*, D.G. Türk wrote that 'A far more moderate tempo is taken for granted for an Allegro composed 50 years or more ago than that employed for a more recent composition with the same superscription'. And it seems that the idea of an *allegro ma non troppo* was unknown to the early 18th century although it was a particular favourite in the early 19th century.

Yet such considerations can be advanced only tentatively because there were also regional preferences. C.P.E. Bach observed (*Versuch*, i, 1753) that in Berlin *adagio* was 'far slower and *allegro* far faster than elsewhere' (on which see N. Zaslaw, 'Mozart's Tempo Conventions', *IMSCR XI: Copenhagen 1972*, 720–33, esp. 729); later Spohr noted in his autobiography that in 1820 he had found Parisian allegros 'unreasonably quick'.

As a noun, Allegro can be used to mean any fast movement: Quantz (1752) included a chapter 'Von der Art das Allegro zu spielen'. The term 'sonata-allegro' is used more specifically for the extended and carefully worked-out form characteristic of the first movements of symphonies and sonatas: it was in this sense that Shostakovich declared his difficulty in writing allegros and Schering wrote his article 'Zur Entwicklungsgeschichte des Orchesterallegros' (*Festschrift für Guido Adler*, 1930).

DAVID FALLOWS

Allēlouïarion. In the Byzantine Divine Liturgy, the equivalent of the alleluia verse of the Roman Mass. According to medieval descriptions of the Byzantine rite, the *allēlouïa* was preceded by the chanted announcement of the *psaltēs*: 'Allēlouïa, a psalm of David'. The *psaltēs* then sang 'allēlouïa' to one of six non-melismatic melodies, followed by the *allēlouïarion*, which consisted of two or three psalm verses set to a moderately elaborate melody. The chant concluded with a choral repetition of the *allēlouïa*.

Thodberg has argued persuasively (*Der byzantinische Alleluiarionzyklus*, MMB, *Subsidia*, viii, 1966) that the Byzantine *allēlouïa-allēlouïarion* had a crucial influence on the origins of the Roman alleluia of the Mass. *See* ALLELUIA, §II.

Alleluia (Latinized form of Heb. *halleluyah*: 'praise God'; Gk. *allēlouïa*). Chant of the Mass in the Western Church and of the Divine Liturgy in the Eastern Church.

I. Latin rite. II. Byzantine rite.

I. Latin rite

1. Definition. 2. Origins and early history. 3. 8th-century Roman repertory. 4. Roman Easter Week Vespers. 5. 8th- and 9th-century Frankish repertory. 6. Later history. 7. Other Latin liturgies.

1. DEFINITION. The alleluia of the Mass is a Proper chant sung during the Fore-Mass after the gradual (*see* GRADUAL (i)) on liturgical occasions associated with penitence and fasting (most notably during Lent), and on ones associated with sorrow (such as the Requiem Mass), when it may be replaced by the TRACT. During Paschal Time, beginning with Low Sunday, the gradual is omitted and two alleluias are sung.

The alleluia is performed in a responsorial manner: first the word 'alleluia' is sung, concluding with an extended melismatic flourish – the JUBILUS; then a verse (rarely, two or three verses) is chanted in a moderately elaborate setting; and finally the alleluia is repeated. Throughout much of the Middle Ages a cantor intoned the alleluia without its jubilus and the chorus answered with the entire alleluia; one or two cantors sang the verse and the chorus entered for the final word or two (usually concluding with a melisma echoing that of the jubilus); the chorus, finally, repeated the alleluia. Early sources fail to indicate such involvement by the chorus, but it might well be that the chorus performed at least the final repetition of the alleluia.

2. ORIGINS AND EARLY HISTORY. The word 'alleluia' is superscribed over 20 psalms of the Hebrew Bible (Psalms cv–cvii, cxi–cxix, cxxxv–cxxxvi and cxlv–cl), and it was probably sung as a response to these psalms in the Temple at Jerusalem. It was much employed by early Christians also, who chanted it both as a response to the psalms and as an independent acclamation. As the Office developed in the second half of the 4th century, it became customary to sing 'alleluia' in a response to psalms other than those to which it was superscribed in the Bible (in the Latin and Greek numbering, Psalms civ–cvi, cx–cxviii, cxxxiv–cxxxv and cxlv–cl). The Rule of St Benedict (*c*530) gives precise instructions for this custom (chap.15), and the contemporary author of the pseudo-correspondence of Pope Damasus and St Jerome called for a similar practice in the Roman Office. The usage of the early Western Mass, however, appears to have been considerably more restrictive: 'alleluia' was sung as a response only to the alleluia psalms and was confined to Paschal Time.

Much early Western evidence for the psalmody of the Fore-Mass comes from the 700 or more extant sermons of AUGUSTINE OF HIPPO (*d* 430), in which the psalm that had been sung previously in the service is frequently mentioned. Augustine speaks of but a single psalm in the Fore-Mass, typically declaimed by a lector and responded to by the congregation with a selected verse of the psalm. If the psalm was one of those with 'alleluia' superscribed, then 'alleluia' was the response (Psalm cxvii, an alleluia psalm sometimes sung with its verse 24, 'Haec dies', as response, is an apparent exception). The totality of evidence suggests that this single psalm of the 4th-century Fore-Mass, whatever its response, is the direct ancestor of the 'responsum' of *Ordo romanus I*, that is, the early medieval gradual (McKinnon, 1996). A formal link with the alleluia of the Mass would require the regular singing of two psalms in the ancient Fore-Mass, the second of which would use an 'alleluia' response. Such a configuration first appeared in the early 5th-century liturgy of Jerusalem, as made known through the celebrated Armenian Lectionary (see Renoux). The Jerusalem format was observed at several other Eastern ecclesiastical centres, including Byzantium, in the succeeding centuries (see Martimort). At a relatively early date the Byzantine alleluia took on the familiar form of alleluia, verse (usually two), alleluia (see Thodberg).

There is no compelling evidence that the Eastern practice reached the Latin Churches in the centuries immediately following Augustine. Two items of literary evidence, however, are frequently cited in support of the early existence of the Western, and more particularly the Roman, alleluia: the wordless jubilus, described by several Church Fathers; and the letter of Pope Gregory I to Bishop John of Syracuse in 598, which speaks of singing 'alleluia' at Mass outside Paschal Time. The jubilus was a sort of wordless chant employed by farm workers as an aid to their labours. Patristic authors such as Augustine invoked it in their allegorical exposition of biblical words such as 'jubilate' and 'jubilatio', but they never spoke of it in connection with the singing of 'alleluia'; the first author to do so was the 9th-century Amalarius of Metz, who applied the term 'jubilus' to various melismatic passages in the chant, including that of the alleluia (McKinnon, 1993 and 1996). Gregory's letter speaks only of singing 'alleluia' at Mass, not necessarily the alleluia chant of the Mass, that is, the medieval genre consisting of alleluia, verse, alleluia. The liturgical circumstances of the time suggest that he was probably referring simply to a fuller employment at Mass of the affixing of 'alleluia' to certain psalms, a custom that pervaded the contemporary Office (see Martimort; Hiley; and McKinnon, 1996).

Once these two purported indications for the early existence of the Roman alleluia are set aside, a much noted paradox in its history is resolved. Scholars have long been puzzled by the contradiction between the seemingly ancient establishment of the alleluia and traits of the medieval chant that point to its late development, most notably, its pronounced instability of liturgical assignment. This contradiction has been rationalized by the hypothesis that the alleluia was originally sung in the Fore-Mass as a melismatic chant (the jubilus) unrelated to a psalm or psalm verse, to which verses were added many centuries later (see Apel). However, all indications now point to a late date for the establishment of the genre: in addition to the alleluia's instability of assignment, the limited number of Roman alleluia melodies and the exploitation of melody types in an apparent effort to render the repertory adequate for liturgical needs (see below) must be taken into account.

There is, moreover, a plausible explanation for the late appearance of the alleluia: unlike other genres of the Roman Mass Proper, it did not originate as a complete

psalm but was adopted from the Byzantine liturgy as a mature chant, that is, one having the form of alleluia, verse (or verses), alleluia. The central argument for this view is Thodberg's demonstration that the three Roman alleluias with Greek texts (*Epi si kyrie*, *O kyrioc* and *Oti theos*) are derived from Byzantine alleluias, both with respect to text and melody. The degree of concordance between Roman and Byzantine verse texts far exceeds that of any other item of the Mass Proper; nearly half of the early Roman repertory is involved, a figure that could hardly be accounted for by coincidence. And then there is the shared preference of the Byzantine and Roman alleluia for G mode and the avoidance of F. As for the date of adoption, some time during the period of the Greek-speaking popes (685–752) seems likely (i.e. later than Thodberg proposed), perhaps not too distant from the time when the four principal Marian feasts were adopted under Pope Sergius I (687–701).

3. 8TH-CENTURY ROMAN REPERTORY. An inventory of the 8th-century Roman repertory is shown in Table 1, the result of comparing the Roman graduals with their 9th-century Frankish counterparts (i.e. the unnotated graduals edited in Hesbert's *Antiphonale missarum sextuplex* [*AMS*], 1935/*R*) and their early notated Gregorian counterparts; this is a method that works with near precision for other items of the Mass Proper, but retains a number of uncertainties in the case of the alleluia because the instability of liturgical assignment is matched by a comparable melodic instability. (The appearance of a Roman verse text in the *AMS* graduals is no guarantee that the verse was sung to a melody transmitted from Rome.)

Among the more striking features of the Roman repertory is the small number of melodies used. Of the Latin 'alleluias with unique melodies' listed in Table 1, *Beatus vir* and *Haec dies* have the same melody, while *Te decet hymnus* and *Venite exsultemus* are the same for the alleluia and first half of the verse; two different melodies exist for *Confitemini quoniam*, one used for the day of the Greater Litany and the other for the vigils of Easter and Pentecost. There are, then, 14 different melodies in this Latin group; these together with the three melody types, *Ostende*, *Dies sanctificatus* and *Excita*, constitute a total of just 17. Of the three Byzantine-derived chants with Greek texts, *Epi si kyrie*, *O kyrioc* and *Oti theos*, each one is melodically related to a Latin textual cognate. *O kyrioc*, the least problematic, is related to the Roman *Dominus regnavit decorem*. The other two, however, illustrate the complexities of the early alleluia's history: *Oti theos* is not melodically related to its Roman textual cognate *Quoniam Deus*, which is set to the *Dies sanctificatus* melody type, but to the Gregorian *Quoniam Deus*; *Epi si kyrie* is truly enigmatic in that it has no Roman Latin counterpart, textual or musical, but is melodically related to the Gregorian *In te speravi*.

A further complexity results from the considerable number of Roman alleluias that fail to appear in Gregorian sources. These chants can be divided into two overlapping categories: in the first (indicated in Table 1 by a single asterisk), the chants have textual concordances in the *AMS* graduals but different melodies in the early Gregorian sources (these Roman and Gregorian alleluias should probably be looked upon as essentially different chants that happen to use the same text); in the second (indicated by a double asterisk), even textual concordances in the *AMS* manuscripts are lacking. The first group, whose chants seem to indicate that the Franks substituted new melodies for the Roman originals, suggests a degree of difficulty in the transmission of the Roman alleluia

TABLE 1: Early Roman Mass Alleluia Repertory

repertory well beyond that encountered in other items of the Mass Proper (see below).

The second group, that is, those chants entirely absent from Frankish sources, points to an interesting peculiarity of the Roman alleluia. All these chants, with the exception of *Magnus sanctus Paulus*, appear in the Roman post-Pentecostal cycle. In view of the Frankish practice of simply providing a list of alleluias for the season, it is surprising that there was a Roman post-Pentecostal cycle with fixed assignments. It is even more surprising that eight chants of the cycle were uniquely assigned – an apparent extravagance for a season in which one would expect most chants to be borrowed from other portions of the liturgical year. These uniquely assigned chants are *Cantate Domino . . . cantate*, *Cantate Domino . . . quia*, *Laudate Dominum omnes*, *Laudate Dominum quoniam*, *Laetatus sum*, *Qui posuit fines*, *Qui sanat contritos* and *Quoniam Deus magnus*, of which all except *Qui posuit* fall into either of the two categories in question, that is, they fail to appear in any Gregorian source with melodies related to those of the respective Roman chants, and *Qui posuit* itself appears only rarely. No fewer than six of the eight, moreover, are set to the *Excita* melody type. These two facts alone are sufficient to suggest that the Roman post-Pentecostal cycle was established after the mid-8th-century transmission of the Roman chant to the north, and that the cycle was hastily provided with chants, using especially the *Excita* melody type, and with texts of a similar nature, such as *Cantate Domino* and *Laudate Dominum*.

The instability of liturgical assignment of Gregorian alleluias has been much discussed, particularly the post-Pentecostal cycle, but also the Paschal Time alleluias, which, because of their supposed antiquity, might be expected to show some stability. The alleluias of the Advent-Christmas season, on the other hand, manifest a degree of stability roughly comparable to that of other items of the Mass Proper.

But these observations, though valuable, are inadequate because they fail to take into account the relationship with the Roman assignments. When Roman and Frankish assignments are compared, the overall degree of instability is even greater than previously suspected. Table 2 provides all alleluias for which there is both continuity of assignment between the Roman and Frankish manuscripts and stability of assignment within the Frankish books themselves. There are only 15 liturgical occasions involved, but these manifest a distinct pattern, or, more precisely, two distinct patterns, one each for the Christmas and Easter seasons. Every alleluia from Christmas Day to Epiphany without exception has the same Roman and Frankish assignment, while all the other alleluias of the Advent-Christmas season, that is, the Sundays of Advent and those after Epiphany, do not. For Paschal Time only eight dates manifest continuity between Rome and Francia, but these are the eight principal festivals of the season: the Easter Vigil, Easter Sunday, Easter Monday, Easter Saturday (the ancient *clausum Paschae*), the Greater Litany, Ascension, the Vigil of Pentecost and Pentecost Sunday. The remaining dates, like those of the Advent-Christmas season, are either ferias or numbered Sundays. It would appear, then, that only these 15 dates of the Roman *Temporale* had permanently assigned alleluias at the time of the mid-8th-century transmission to the north; the remainder of the repertory (i.e. the

	Ascendit Deus	
Vigil of Pentecost	*Confitemini quoniam*	
Pentecost Sunday	*Emitte Spiritum*	*Excita*
	Spiritus Domini	

alleluias for all the Sundays and ferias, not just the post-Pentecostal Sundays) must have been conveyed in a list of some sort. Taking into account that this list of texts was probably transmitted without musical notation, it becomes clear why the Franks experienced difficulty in maintaining melodic continuity with the Roman alleluia. The alleluias of the 15 stable dates, on the other hand, display nearly total melodic continuity between the Roman and Gregorian books; the only exception is *Laudate pueri*, where the Gregorian chant retains the verse melody of the *Excita* type but substitutes a new alleluia melody.

A large proportion of the stable alleluias employ the three melody types. This provides at least a starting point for considering the difficult question of chronology within the Roman repertory (a subject that exceeds the scope of the present article). If some of the melody type alleluias, like the post-Pentecostal *Excita* chants, appear to be late additions to the repertory, then at least certain of their number, in view of their assignment to principal festivals, must have existed at a relatively early date.

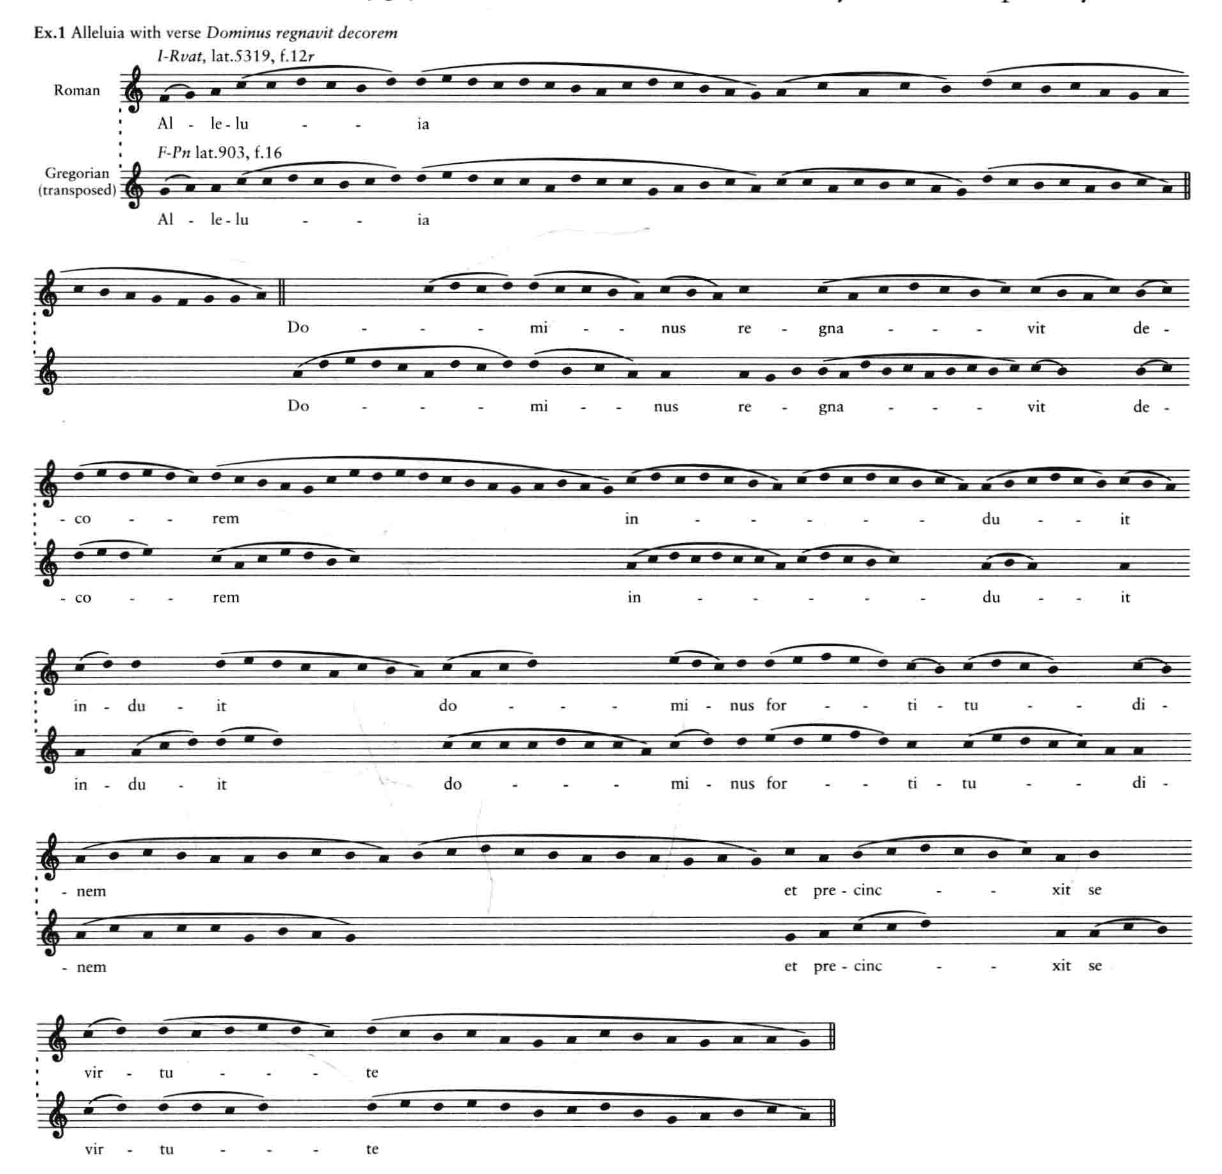
4. Roman Easter Week Vespers. During Easter Week at Rome the principal clergy of the city gathered at the Lateran for a vesper service of particular splendour. On each day, between two and four alleluias with multiple verses were sung; some were borrowed from the Mass repertory, while others were unique to the vesper service and made use of a relatively simple common 'vesper tone'. Table 3 gives the alleluias as they were distributed over the Week according to *Ordo romanus XXVII*. When the first verse is a Mass verse, as, for example, *Pascha nostrum*, the Proper Mass alleluia of that verse is sung; when the first verse is one of those set to the vesper tone, the melody of the Mass alleluia *Dominus regnavit decorum* is used. The vesper tone itself, according to Thodberg, is derived from the verse melody of *Dominus regnavit decorem*.

TABLE 3: Alleluia Verses at Easter Week Vespers

M – a verse sung to the same melody as at Mass
v – a verse sung to the vesper tone

Easter Day	*Dominus regnavit decorem*	M	v	v
	Pascha nostrum	M	M	
	O kyrios	M	M	
	Venite exsultemus	M	M	
Monday	*Domine refugium*	v	v	
	O pimenon	v	v	v
	In exitu Israel	v	v	v
Tuesday	*Paratum cor*	v	v	v
	Prosechete laos	v	v	
	Confitebor	M	M	v
Wednesday	*Te decet hymnus*	M	v	v
	Confitemini ... et invocate	v	v	
Thursday	*Laetatus sum*	v	v	v
	Qui confidunt	M	v	v
Friday	*Cantate ... quia*	v	v	
	Y urani	v	v	v
Saturday	*Deute galliasometha*	v	v	
	Omnes gentes	v	v	v

There is much else to recommend the special status of *Dominus regnavit decorem*: it precedes *Pascha nostrum* at Easter Sunday Vespers; it is one of the three Roman alleluias derived from a Byzantine model; and it appears no less than five times in the Roman *Temporale*, including Christmas Day itself and (in its Greek form) Easter Monday. It was, in fact, possibly the first Roman alleluia, originally assigned to Easter Sunday and later replaced by *Pascha nostrum* (see Bernard).



5. 8TH- AND 9TH-CENTURY FRANKISH REPERTORY. The list of 8th- and 9th-century Frankish additions to the Roman repertory shown in Table 4 gives all those verse texts appearing in the *AMS* manuscripts that are absent from the Roman graduals, a total of some 50. They are divided into melodic categories on the basis that each text has been traced through a representative selection of earlier Gregorian sources and the results checked against the compilations of Schlager (1965, 1968 and 1987). Additionally, a comparison of the Roman melodies with the Gregorian provides a group of chants (marked in Table 4 with an asterisk) for which a text that had also been used at Rome is set to a different Gregorian melody. (Because of the scale of the task, the results given here

Ex.1 Alleluia with verse *Dominus regnavit decorem*

must be considered as approximate and provisional. There are, moreover, complexities that are difficult to reconcile with the format of this table: *In te Domine*, for example, which is given in brackets, has a Roman melodic counterpart in the Greek *Epi si kyrie*; and *Laudate pueri*, which is omitted, has a new Gregorian alleluia while retaining the *Excita* melody type for its verse.)

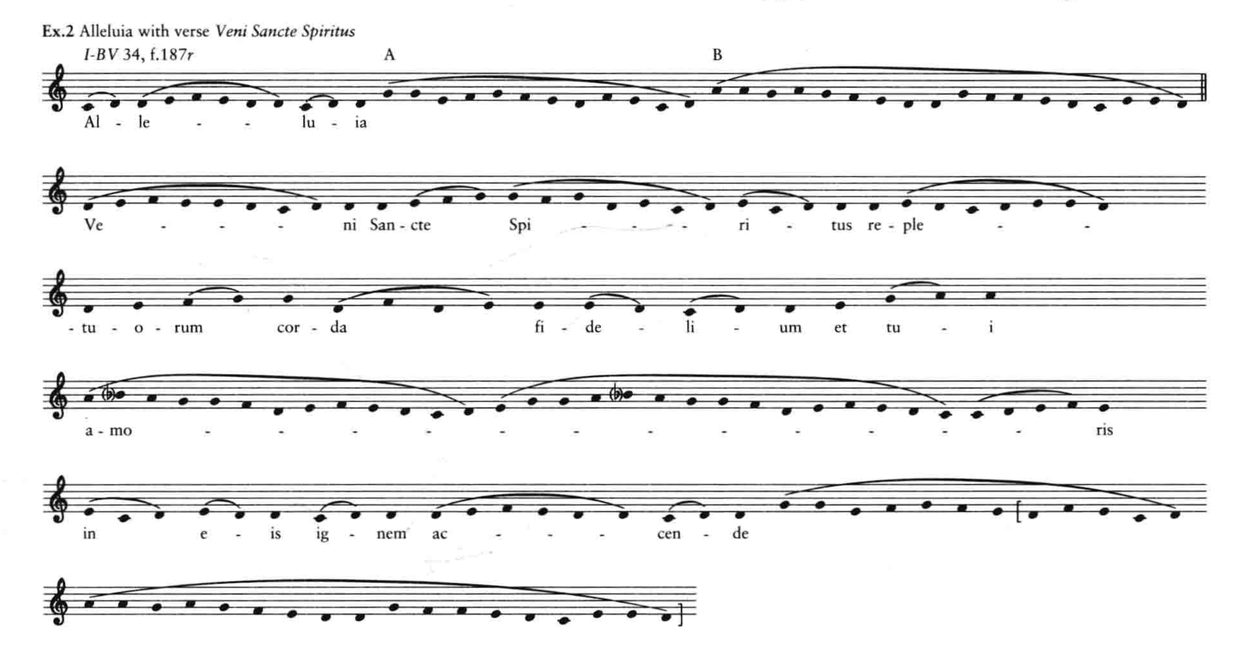
Perhaps the most striking feature of the Frankish repertory is the large number of new melodies. No fewer than 30 are indicated in the two right-hand columns of Table 4, while the alleluias 'with multiple melodies' must account for several additional new examples, even if the verses involved are sometimes set both to melodies represented by chants in the right-hand columns and to the three melody types. Finally, to the alleluias indicated in the *AMS* manuscripts should be added several that appear in the earliest notated sources. It would seem fair to estimate that the 8th- and 9th-century Franks at least trebled the number of melodies transmitted to them in the original Roman fund. A notable trait of the Frankish contribution is the preference for D mode in contrast to the Roman preference for G mode. The difference is nicely exemplified by *Dominus regnavit decorem* (ex.1). The Roman chant is in G and the Frankish one in D, even though the two are apparently related: they have the same overall melodic contour, their syllabic and melismatic passages are similarly apportioned, and they share numerous pitches at key points in both alleluia and verse.

Another striking feature of the Frankish alleluia repertory is the considerable degree of melodic instability, which far exceeds that of any other item of the Mass Proper. The alleluias in Table 4 labelled 'with new melodies (unstable)' manifest melodic variants from manuscript to manuscript that go well beyond those defined by Hughes (*JAMS*, 1987), and the alleluias 'with multiple melodies' can be said to display a still more radical degree of melodic instability. Finally, the verses 'not found in medieval notated sources' are those that appear in the unnotated *AMS* manuscripts but not in

notated Gregorian sources; seemingly representative of alleluias that were sung at one Carolingian centre or another but failed to make their way into the Gregorian repertory, they thus exemplify a further kind of instability.

The musical characteristic of the alleluia that is of greatest interest is the tendency of the genre to display certain types of melodic repetition, most notably the re-use of the jubilus at the end of the verse, the imitation of the opening melodic gesture of the alleluia at the beginning of the verse, and the repetition of a melodic figure within a melismatic passage, whether in the jubilus or the verse. Peter Wagner (*Einführung*, iii, 1921) noticed this trait and appreciated its value in determining the relative age of alleluias – the later the chant the more likely it is to display such melodic patterning. This broadly valid proposition is useful in determining chronological layers in later alleluias, but a fundamental methodological difficulty arises when it is applied to determine the most ancient examples of the genre; this is generally attempted by matching the melodic traits of an alleluia with its liturgical assignment, on the assumed basis that important festivals such as Christmas and Easter will have older chants. Thus in the alleluias sung on such occasions, little evidence of melodic repetition might be expected.

There is a problem, however, in trying (as scholars have done) to match Gregorian melodies with events in Roman liturgical history. But even if Roman melodies were involved in the analysis, the results would still remain inconclusive. Comparing the jubilus of a Roman alleluia to the end of its verse has little point, because the verses (at least as they appear in the so-called Old Roman graduals) do not have extended melismas but only cadential figures of lesser length that nearly always duplicate the cadential figure at the end of the jubilus. As regards the internal repetition of melodic figures, only *Pascha nostrum* and *Adorabo* display this trait within their verses, obviously an insufficient finding for the construction of a meaningful chronology; and no Roman alleluia displays internal repetition in the jubilus of its opening alleluia, even if several do so in a second, greatly extended alleluia appearing after the verse in the Old Roman manuscripts.



If Gregorian melodic characteristics were to be applied to the history of the Roman alleluia, the results would still disappoint: for although seven of the alleluia melodies transmitted from Rome (*Adorabo*, *Beatus vir*, *Dominus regnavit*, *Qui sanat*, *Venite exsultemus*, and the *Dies* and *Ostende* melody types) fail, in their Gregorian versions, to display a melodic correspondence between the jubilus of the alleluia and the end of the verse, an almost equal number (six: *Gaudete justi*, *Jubilate Deo*, *Pascha nostrum*, *Spiritus Domini*, *Te decet hymnus* and the *Excita* melody type) do display such a correspondence. There is little to differentiate the two groups liturgically: if, for example, a chant such as *Dies sanctificatus*, with the supposedly ancient trait of a jubilus that fails to correspond with the end of its verse, appears on a venerable festival like Christmas, then *Spiritus Domini*, with the supposedly late trait of such correspondence, appears on the even more venerable festival of Pentecost. A final factor rendering such comparisons dubious is the real possibility that in a final revision of the Roman alleluia repertory liturgical assignments were reordered.

Similar difficulties are involved in any attempt to determine chronology by applying Wagner's approach to the 8th- and 9th-century Frankish repertory itself. The trait of melodic correspondence between jubilus and verse ending is virtually universal among the Frankish additions to the Roman repertory; the number of exceptions is too slight to form a basis for determining chronological layers. Similarly, the traits of repeating melodic figures within melismas and especially the imitation of the beginning of the alleluia at the beginning of the verse are distinctly minority occurrences. The striking melodic repetitions of a Frankish chant such as *Alleluia, Justus ut palma* are by no means typical. What can be said of such characteristics in the context of the 8th- and 9th-century Frankish alleluia is that they are encountered frequently enough, especially the customary repetition of the jubilus at the end of the verse, to differentiate the alleluia melodically from other genres of the Mass Proper. They are significant, too, as harbingers of a dramatically increased usage of melodic repetition in the alleluia after the 9th century.

6. LATER HISTORY. The expansion in the 8th- and 9th-century Frankish alleluia repertory continued throughout the 10th and 11th centuries, confined primarily, however, to southern France (especially Aquitania) and central and southern Italy (especially Benevento); northern Italy, northern France, England and German-speaking regions retained the Frankish repertory with comparatively modest additions. The 410 pre-1100 alleluia melodies and about 600 verse texts listed by Schlager (1968) represent a complex mixture, with many texts being set to different melodies and a considerable number of melodies (beyond the original melody types) being used for several texts.

As for the melodic traits of the new alleluias, the correspondence of jubilus and verse ending is virtually universal, while the other forms of repetition are distinctly more common than before. About a third of the new chants imitate the beginning of the alleluia at the start of the verse, and a comparable number have some sort of melodic repetition within the verse; as many as half display melodic repetition within the jubilus, frequently creating an *AAB* pattern. Beneventan alleluias (the majority of the 10th- and 11th-century chants are unique to their own region) manifest these traits slightly more often than Aquitanian alleluias, while the latter display to a far greater degree than the Beneventan chants another progressive characteristic, namely, a generous range – at least an octave with the occasional filling in by upward and downward scalic and sequential passages.

The alleluias of the period, however, can by no means be described as extravagant or manneristic. They manage for the most part to integrate the new traits into a style of classic restraint; the very beautiful chant *Veni Sancte Spiritus* (ex.2) is not uncharacteristic. Here, the expected correspondence of jubilus (the entire alleluia in fact) and verse ending are present, and the opening of the verse imitates the beginning of the alleluia; a descending melismatic figure over the word 'amoris', spanning a 7th and echoing the jubilus of the alleluia, is repeated. There is no melodic repetition within the jubilus as it appears

Ex.2 Alleluia with verse *Veni Sancte Spiritus*

in most manuscripts, but some sources, including *F-CHRm* 520, create the common *AAB* pattern by duplicating a portion of the jubilus (that labelled 'A' in ex.2).

After 1100 the alleluia repertory continued to expand; before the end of the medieval period the number of melodies had more than doubled and there was a comparable increase in texts. As before, many melodies were used with more than one text and many texts with more than one melody, making the overall number of alleluias in the repertory difficult to calculate. Moreover, stylistic characteristics that might be considered extravagant in comparison to the pre-1100 chants made their appearance. This was particularly true in southern Germany between the 14th and 16th centuries and also in Bohemia, areas that had previously contented themselves with what was essentially a 9th-century Frankish repertory (see Schlager, 1987). Musically these new alleluias (for examples, see Hiley) are characterized by a greatly expanded range, frequent leaps of as much as an octave, extended melismas with scalic and sequential passages, and sometimes an abrupt juxtaposition of syllabic and melismatic phrases. The texts, most of which are non-biblical, are frequently rhymed and often interspersed with tropes.

Many of the new alleluias were composed to accommodate the later medieval intensification of devotion to the Virgin Mary, and an even greater number celebrated local saints. As a result much of the new repertory was regionally confined. But at the same time the core repertory remained intact and provided the chants for much of the universally observed liturgical festivals; many of the new melodies were even composed in classical Gregorian style, while new texts continued to be set to favourite traditional melodies such as those of *Dies sanctificatus*, *Justus ut palma* and *Veni Sancte Spiritus*.

7. Other Latin liturgies. There is no evidence that an alleluia was sung in the Fore-Mass of Gallican liturgical centres before the mid-8th-century transmission of the Roman chant to the Carolingian realm. The single existing description of a particular Fore-Mass from the period – that of Caesarius of Arles (*d* 542) for Pentecost Sunday – cites the responsorial singing of Psalm l but does not mention an alleluia. And similarly the 7th-century *Expositio antiquae gallicanae liturgiae* of Pseudo-Germanus states that 'only the response' is sung between the *Benedicite* and the Gospel.

In the Mozarabic rite an alleluia, called the *laudes*, was sung after the Gospel as early as the 7th century (*see* Mozarabic chant, §4(viii)); the acts of the Fourth Council of Toledo (633) state: 'For the laudes follow the gospel because of the glory of Christ, which is proclaimed through that very gospel'. It is not certain, however, how much of the repertory of some 100 *laudes* appearing in the 11th-century chant manuscripts can be dated to the earlier period. The Mozarabic *laudes* have the same responsorial format observed in the Mass alleluias of most Western and Eastern rites, that is, melismatic alleluia, neumatic verse and melismatic alleluia.

Similarly, the alleluia of the Ambrosian rite is available only in sources dating from the 12th and 13th centuries (see Bailey; *see also* Ambrosian chant, §7(i)). In the limited extent of its repertory it bears a certain resemblance to its Roman counterpart. The manuscripts give just ten alleluia melodies (some of which are related to each other) and only 52 verses, which are themselves set to ten melody types matching the ten alleluia melodies. The alleluia melodies are notable for the complex development of their jubili: in addition to the original form of the melody there is an extended one called 'prima melodia' and a still more extended one called 'secunda melodia'. This allowed the chant to be sung in a number of variations upon the basic responsorial format, employing different groups of singers. There are elements here that recall the less elaborate scheme given in the Old Roman graduals, that is, alleluia, verse, and an extended form of the alleluia.

While the alleluia of the Beneventan rite is known only from 11th- and 12th-century manuscripts, liturgical

evidence suggests that the Beneventan repertory flourished in the 8th century (see Kelly; *see also* BENEVENTAN CHANT, §3). It is probable that the entire body of this chant has not been preserved, but what remnants there are nevertheless create the impression that the 8th-century Beneventan alleluia repertory was particularly limited. Some 15 texts are set to the same alleluia and verse melody, while two others, *Posuisti* and *Resurrexit tamquam dormiens*, have unique melodies. The common format of melismatic alleluia followed by neumatic verse is employed, and although the repeat of the alleluia is not indicated in the sources, it was probably observed in practice. About a quarter of the Beneventan verse texts appear additionally at Rome (*Pascha nostrum*, *Specie tua*, *Spiritus Domini* and *Tu es Petrus*), and more than half in the Frankish sources, numbers not easily explained by coincidence. A comparative study of Latin alleluia verse texts might well shed light on the relationships among the various Western chant dialects.

II. Byzantine rite

1. The Byzantine *allēlouïarion*. 2. The Byzantine *allēlouïa* and Roman alleluia.

1. THE BYZANTINE 'ALLĒLOUÏARION'. The *allēlouïa* takes its place in the Divine Liturgy, the Mass of the Orthodox Church, just before the recitation of the Gospel and immediately after the reading from the *apostolos* (the Epistle). The *allēlouïa* in fact consists of the singing of the word 'allēlouïa' followed by two or three psalm verses (*stichoi*), the latter known collectively as the *allēlouïarion*. The following instructions taken from the 12th–13th-century euchologion *ET-MSsc* 1020 illustrate this:

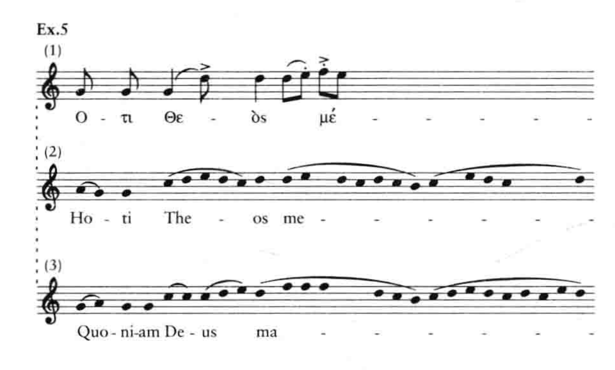
> PSALTĒS: Allēlouïa, a Psalm of David.
> DEACON: Attention
> And the allēlouïa is sung.
> Psaltēs [sings] the allēlouïarion.
> People [sing] the allēlouïa.

The first *allēlouïa* is presumably sung by the *psaltēs* (the soloist peculiar to the Byzantine liturgy), and is then repeated by the people.

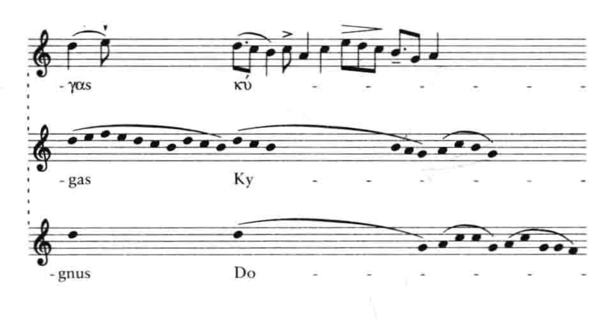
In present-day practice only the word 'Allēlouïa' is sung, but the liturgical books still contain the psalm verses belonging to the classical period. Of great musicological interest, however, is the medieval form reflected in the euchologion quoted above. A cycle of 59 *allēlouïaria* covering the Church year is found in medieval manuscripts. They are divided into six *ēchoi* (modes; since the *tritos*, or F modes, do not occur, only six of the ordinary eight *ēchoi* are represented). Unlike the Roman tradition there are only six melodies in the Byzantine rite associated with the word 'allēlouïa', one for each *ēchos*. Thus, for example, all *allēlouïaria* of the *ēchos prōtos* (first authentic mode) have one common *allēlouïa* melody.

By way of illustration, the *allēlouïa* of the *ēchos plagios prōtos* is given in ex.3 as it appears in the early psaltikon

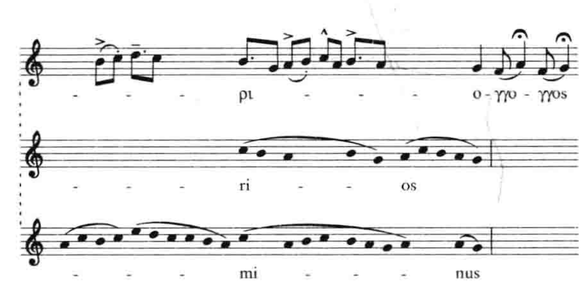
Ex.3



GR-P 221 (dating from 1177), together with the related melody of *Alleluia, Dominus regnavit* from the Roman Gradual. The similarity between the two examples to some extent springs from a direct relationship between the two melodies, and also from the common character of the mode. (See below for the relationship between Byzantine and Roman chant.) Whereas the Roman alleluia continues with the celebrated jubilus ending, the latter is not found in the Byzantine form.



The existence of no more than six short melodies in association with the word 'allēlouïa' throws the main interest on to the melodies of the *allēlouïarion* – the verses, from the Psalter, of the biblical canticles that follow. For medieval Byzantine music these are to be found in the psaltikon, the book belonging to the office of the *psaltēs* and presenting a special genre, perhaps the oldest one, of the psaltikon style (*see* KONTAKION). These verses consist of between two and ten lines. The structure of the line is so stable that the verse (*stichos*) is without question the Byzantine form most strongly influenced by CENTONIZATION (as defined by Ferretti). The structure is determined by constantly recurring motifs, formulae and cadences.



As an example of a *stichos*, the first line of the *allēlouïarion* for Christmas Day (Psalm xix, 'The heavens declare the glory of God') is given in ex.4 in two versions: the two main traditions, the so-called 'short' and 'long' psaltikon traditions represented respectively by *I-Rvat* gr.345 and Ashb. 64. The modal characteristics stand out clearly. In theory the melodies belong to the *ēchos prōtos*. In practice the 'short' form may better be described as an *ēchos plagios prōtos* melody with a fixed B♭, whereas the 'long' form after its first few notes turns out to be a transposition one degree of the scale higher as compared with its counterpart. The F♯ is particularly remarkable. Consequently the occurrence of the *ēchos plagios prōtos* in the *allēlouïarion* cycle seems to be a fiction. An analysis reveals only three or four modal groups, a fact that partly explains the weak position of the *oktōēchos* system. (For the modal system of the psaltikon *see* KONTAKION.)

Ex.5

2. The Byzantine 'allēlouïa' and Roman alleluia. From both the musicological and liturgical points of view, the Byzantine *allēlouïarion* cycle attracts attention because its relatively late musical evidence may prove that some of the alleluias of the Roman Mass were based on Byzantine models, with the so-called Old Roman tradition as an intermediate stage. The cases in point are the alleluias *Dominus regnavit* (ex.3 above), *In te Domine* and *Quoniam Deus magnus*. Ex.5 demonstrates the three stages of development for the *Alleluia, Quoniam Deus magnus*: (1) the *allēlouïarion* (*ēchos tetartos*); (2) the Old Roman version (from *I-Rvat* lat.5319), in which the original Greek text is transliterated into Latin letters; (3) the equivalent from the ordinary Roman Gradual.

This example shows that since the transition from the Byzantine to the Old Roman form and the Gregorian transformation of the Old Roman melody between the 6th and 8th centuries, the melodies have developed according to their own stylistic rules until their codification in 13th- and 14th-century manuscripts. Nevertheless, in general the similarities remain.

JAMES W. McKINNON (I), CHRISTIAN THODBERG(II)

Alleluiatici. Alleluiatic antiphons sung at Matins and Vespers in the Mozarabic rite. *See* MOZARABIC CHANT, §3(ii).

Alleluiaticum (Lat.). A term denoting Psalms cxlviii–cl when sung in the liturgy in the Gallican rite. *See* ANTIPHON, §1, and GALLICAN CHANT, §§8 and 10.

Allemande [allemand, almain, alman, almond] (Fr.: 'German [dance]'; It. *alemana, allemanda*). One of the most popular of Baroque instrumental dances and a standard movement, along with the courante, sarabande and gigue, of the suite. It originated some time in the early or mid-16th century, appearing under such titles as 'Teutschertanz' or 'Dantz' in Germany and 'bal todescho', 'bal francese' and 'tedesco' in Italy. Originally a moderate duple-metre dance in two or three strains, the allemande came to be one of the most highly stylized of all Baroque dances and by 1732 was likened to a rhetorical 'Proposition, woraus die übrigen Suiten, als die Courante, Sarabande, und Gigue, als Partes fliessen' (*WaltherML*). 30 years later Marpurg (*Clavierstücke*, 1762, ii, 21) referred to the allemande as similar to the prelude, in that it was said to be based on a succession of changing harmonies in an improvisatory style, although he noted that in the allemande dissonances were to be more carefully prepared and resolved.

1. 16th-century allemandes. 2. Solo allemandes for keyboard and lute. 3. Ensemble allemandes. 4. Late 18th-century allemandes.

1. 16TH-CENTURY ALLEMANDES. The origins of the allemande are obscure. Possibly the dance began as a German variant of the basse danse or HOFTANZ, for the earliest known use of the title 'allemande' occurs in a short dancing manual devoted to the basse danse published in London in 1521 (*Here Followeth the Manner of Dancing Bace Dances after the Use of France and Other Places translated out of French in English by Robert Coplande*, an appendix to Alexander Barclay's *The Introductory to Write and to Pronounce French*, London, 1521, repr. 1937). One of the seven choreographies included by Coplande, without its accompanying music, is entitled *La allemande*. It is a short basse danse, filling only 20 longs instead of the usual 32. This may not be the first appearance of the dance, however. As early as the 1480s two Italian dancing treatises, Guglielmo Ebreo's *De praticha seu arte tripudii* (ed. F. Zambrini in *Scelta di curiosità letterarie*, cxxxi, 1873) and Giovanni Ambrosio's *De pratica seu arte tripudii* (*F-Pn* it.476) referred to one of the four varieties of bassadanza to be derived by imposing proportions on a single tenor, the quadernaria, as 'saltarello tedesco'. (The series is bassadanza, quadernaria, saltarello, piva, with the mensural proportions O:C:3:2.) It is worth noting that the proportion bassadanza to quadernaria or 'saltarello tedesco', 6:4, is very nearly that of the normal basse danse in Coplande's treatise to the dance he called 'La allemande'.

In the middle of the 16th century, allemandes for lute, guitar, cittern, keyboard, or instrumental ensemble began to appear both in prints and manuscripts across Europe. French and Netherlandish printers seem to have been responsible for the application of the term 'allemande', or 'alemande', to the new dance, for Phalèse (*Carminum testudine liber III*, 1546), Morlaye (*Tabulature de guiterne où sont chansons, gaillardes, pavanes, bransles, allemandes*, 1550), Adrian Le Roy (*Premier livre de tabulature de luth*, 1551), Gervaise (*Troisième livre de danceries*, 1556) and Susato (*Het derck musyck boexken ... bassedansen, ronden, allemaingien, pavanen*, 1551) used that title for pieces called simply 'Tantz' or 'ballo todescho' in contemporary German and Italian sources. Susato's inclusion of both basse danses and allemandes in the title cited above suggests that if the allemande had begun as a kind of bassadanza, by 1551 it was a distinct genre. Most of these early allemandes were grouped together at the end of dance music collections, after the basse danses, pavanes and galliardes, and many were followed by afterdances (with such titles as 'Nachtanz', 'saltarello', 'reprise', 'recoupe') using the same harmonic and melodic material for a faster triple-metre dance.

Only one French choreography with music for the allemande is extant from this period, that given by Arbeau in *Orchésographie* (1588). It is a couple dance, with the man and woman side by side; the dancers proceed in a line of couples from one end of a hall to the other, each turning his partner around in such a way as to reverse the line and go back to the original place. Arbeau called it 'a plain dance of a certain gravity', and claimed that it must be among 'our most ancient dances, for we are descended from the Germans'. The steps are shown in ex.1 with the opening strain of an allemande for lute printed by Le Roy in 1551: step 1 represents the basic unit, repeated over four minims, consisting of three walking steps followed by a *grève*, or raising of the free foot in the air. Occasionally the four minims might be taken up by a step–*grève*–step–*grève* pattern, shown here as step 2. Arbeau mentioned a third 'part' to the allemande, to be danced 'with greater lightness and animation', with little

Ex.1 Adrian Le Roy: Almande from *Premier livre de tabulature de luth* (Paris, 1551)

Ex.2 *Allemana d'Amor*, *GB-Lbl* Roy.App.75, f.44r. The manuscript has key signatures of one flat in the Altus and Tenor parts.

jumps inserted between each step 'as in the courante'; apparently he referred to the third section of the dance itself rather than to a separate afterdance. Afterdances were nearly always in triple metre, and he specified that one is to continue in duple in this third section. Further, contemporary literary references to the allemande consistently mention 'almayne leaps' (as in Ben Jonson's *The Devil is an Ass* Act 1 scene i: 'And take his almain-leap into a custard'). The music he provided for this third livelier section of the allemande is similar melodically and identical harmonically with that provided for the first strain of the allemande.

A typical 16th-century allemande (ex.2), one of the earliest surviving (*GB-Lbl* Roy.App.75, *c*1548), shows some of the traits that may have encouraged the extensive stylization of the form for solo instruments in the 17th and 18th centuries. The dance is written in ¢ with no syncopation, consists of three repeated strains, each of which is in turn made of repeated motifs, and has a homophonic texture. As in many 16th- and early 17th-century allemandes, the tonality of the second strain of the dance contrasts with that of the first and third strains, and this contrast is often emphasized by the use of shorter phrases. In ex.2, as in the 'air de allemande' printed with Arbeau's description of the dance, the third strain returns to the original 'key' with a variant of the opening motifs, creating a rounded (*ABA*[1]) form. Often the middle section of an allemande stresses the area of a half-cadence (i.e. the modern dominant), although stress on the subdominant and minor supertonic, as well as on the relative major, are equally common. Such a formal scheme, shared by many of the dances called 'Teutschertanz' and 'bal todescho', seems to be one of the chief characteristics of the allemande, for it occurs even in dances of only two strains (the first phrase of the second strain would either hover around a cadence formula in the contrasting 'key' or begin with a cadence in that 'key' and move by sequence back to the original tonal area). This rather early tendency to explore contrasting tonal areas, coupled with the apparently flexible tempo limits and neutral duple metre of the 16th-century allemande, may have predisposed this form, of all the dances emerging from the late Renaissance, to develop into the prelude-like succession of harmonies described by Marpurg.

2. Solo allemandes for keyboard and lute. The English school of virginalists in the early 17th century seem to have been almost as fond of the allemande as of the pavan–galliard, and Mohr has credited them with a significant contribution to the development of the allemande as a form independent of actual dancing. About two dozen 'almans' appear in the Fitzwilliam Virginal Book, rather fewer in other sources like *Parthenia* and the Dublin Virginal Manuscript (*c*1583), as well as in manuscript sources of works by such composers as Byrd and Orlando Gibbons. Roughly half show a rounded tonal and motivic plan like that of ex.2, described above, while half consist of successive unrelated strains, each built in two-bar units and each followed by a 'reprise' or variation displaying some aspect of keyboard virtuosity. In both kinds of allemande, harmonic movement seems to be the main organizing factor, for melodic phrases are often irregular, blurred by the free-voice arpeggiation so characteristic of both lute and harpsichord styles.

Contemporary French composers for both lute and keyboard combined this idiomatic arpeggiation (*style brisé*) shared by both instruments with a growing awareness of the contrapuntal possibilities of the newly intricate texture. Ex.3, the beginning of an allemande for

Ex.3 François de Chancy: *Allemande pour luth* from Mersenne: *Harmonie universelle*, ii (1637), 88

lute by François de Chancy (printed by Mersenne in *Harmonie universelle*, ii, 1637), shows an early application of *style brisé* to the French allemande, written in free-voice texture enlivened by motivic play among the parts. The tendency of the allemande to be a vehicle for motivic and harmonic exploration within a binary or rounded binary form continued through the works of Denis Gaultier, Pinel, Nicolas Vallet, Joseph de La Barre, N.-A. Lebègue, J.-H. d'Anglebert, Chambonnières, and Louis and François Couperin (see HAM, nos.216 and 250).

Ex.4 Chambonnières: Allemande from *Pièces de clavessin*, ii (1670)

Ex.5

(a) Froberger: Allemande (*c*1681)

(b) J. S. Bach: Allemande from French Suite in B minor (*c*1722)

Ex.4, from Chambonnières' second set of *Pièces de clavessin* (1670), shows a typical French stylization of the allemande, including a somewhat veiled use of points of imitation at the opening (see brackets in ex.4), the use of motivic inversion in bars 6 and 7, and the strong thrust of the initial upbeat.

The 37 titled allemandes of J.S. Bach form an artistic high point of the genre. All are pieces for a soloist, and are found in his keyboard suites, two of the solo violin partitas, and all six of the cello suites. Bach incorporated a wide variety of styles, including the French overture style (BWV827 and 830), ornamental aria (BWV828 and 829), two-voice counterpoint using triplets (BWV829), as well as established idiomatic techniques such as motivic play and a pseudo-polyphonic texture. Ex.5 shows the openings of allemandes by J.S. Bach (*c*1722) and his

18th-century 'allemande': 'The Dress Ball', engraving by Antoine-Jean Duclos after Augustin de Saint-Aubin, 1774

earlier contemporary Froberger (*c*1681). Ex.6 illustrates differences in texture exploited by German composers such as Pachelbel; other examples may be found in suites by F.T. Richter, J.C.F. Fischer, Gottlieb Muffat and J.P. Krieger, and in the deliberately archaic allemande movement of Mozart's suite for piano K399/385i (1782).

3. Ensemble allemandes. Allemandes for ensemble performance or dance accompaniment were slower to relinquish the relatively simple texture and clear phrase structure of the Renaissance form. Early 17th-century composers such as H.L. Hassler, Melchior Franck and Scheidt used the allemande to open a set of dances, while Schein continued the older practice of ending groups of dances with an allemande and its *Nachtanz* in the suites of his *Banchetto musicale* (1617). Schein's allemandes, typical of most written by his generation, were nearly all homophonic, written in two or three strains with occasional motivic and tonal links between the first and last sections. The use of imitation in ensemble allemandes was not unknown in 17th-century Germany, for a five-voice allemande by William Brade appeared in Hamburg in 1609 (*Neue auserlesene Paduanen, Galliarden*, printed in GMB, no.156), written as a strict four-voice canon over a drone. Nonetheless, German allemandes for ensemble by composers such as Rosenmüller, J.C. Pezel, R.I. Mayr, Hieronymus Gradenthaler, Esias Reusner and Pachelbel (see examples printed in Mohr) were unaffected by the concern for textual and motivic interest that marked keyboard versions of the dance. Ex.6 shows the beginnings of two allemandes by Pachelbel, one from a keyboard suite and one from a trio sonata, illustrating how differently the texture of the allemande might be treated by a single composer.

English and Italian composers of ensemble music treated the allemande with more contrapuntal imagination than their German contemporaries. Most of the 'alman' movements in the fantasia-suites of William Lawes, John Jenkins and Coprario feature imitative openings in the two main sections, and several have rather long sections in which the two upper parts play in canon (see MB ix, xxi and xxvi). Corelli's use of the allemande in his trio sonatas and some of his concertos is more varied; some are as homophonic and direct as contemporary German examples, while others use the exchange of motifs among parts to suggest imitation. Genuine imitation like that of the English composers remained rare. Corelli's tempo markings for the allemande are among the most diverse encountered, ranging from *largo* and *adagio* to *allegro* and even *presto*. Neither Corelli nor such prominent Italians as Bononcini and Vivaldi, however, were much concerned with introducing the motivic imitation of keyboard allemandes into their ensemble settings.

4. Late 18th-century allemandes. The allemande continued to be performed as a dance throughout the 18th century. Louis Pécour's *L'allemande*, a social dance in duple metre for a gentleman and a lady, was first published in 1702 but also appears in various other manuscript and printed sources (Little and Marsh, 1992, no.1200). By the later 18th century the title 'allemande' referred to a new dance in 6/8 metre. Guillaume (1786) pictured it as a sentimental and tender dance in which the partners joined hands throughout while turning around each other in various ways (see reproduction in Horst,

Pre-Classic Dance Forms, New York, 1937/*R*). Clément's *Allemande à la Dauphine*, published in about 1771, is a choreography for two gentlement and two ladies intended for social dancing (Little and Marsh, 1992, no.1220). In 1793 Mozart's German Dances K571, for piano, appeared in Paris under the title 'Allemandes'. A character in Sheridan's *The Rivals* linked the allemande with the cotillon (Act 3 scene v, ll.43–5, Acres: 'these outlandish heathen Allemandes and Cotillons are quite beyond me'). Pieces called allemande by the turn of the 19th century, such as Weber's *Douze allemandes* op.4 (1801), are actually examples of the newly popular German dance, a waltz-like form known as early as the 1730s.

MEREDITH ELLIS LITTLE, SUZANNE G. CUSICK

Allen, Henry (James) 'Red' (*b* New Orleans, 7 Jan 1908; *d* New York, 17 April 1967). American jazz trumpeter. He learnt the trumpet in New Orleans in the brass band of his father, Henry Allen sr. After playing in various New Orleans groups, including that of George Lewis, he went to St Louis in 1927 to join King Oliver, then in 1928–9 played in Fate Marable's Mississippi riverboat bands. The Victor company, who were searching for a jazz trumpeter to offset the tremendous success of Louis Armstrong on the Okeh label, took him to New York, where he recorded four sides in July 1929 with members of Luis Russell's band. These performances were sensationally received among jazz musicians, and Allen immediately began a long engagement in Russell's band (1929–32), followed by similar terms with Fletcher Henderson (1932, 1933–4) and the Mills Blue Rhythm Band (1934–7), with whom he recorded *Red, Red, Ride* (1935, Col.). Here, and in many small-group studio recordings under his own leadership, Allen established himself as a leading soloist of the early swing period.

In 1937 Allen returned to Russell's band, which was then being used to accompany Louis Armstrong. Removed from his role as a soloist, and perhaps troubled by the new swing style of Roy Eldridge and others, he lost some of his power and direction. After leaving Armstrong in 1940, he took part in the burgeoning traditional-jazz movement, recording in New Orleans formats with Jelly Roll Morton, Sidney Bechet and his own sextets. In the late 1940s and 1950s he regained his momentum and became a dominant figure in the mainstream jazz movement, leading his own groups and recording prolifically with musicians such as Coleman Hawkins, Buster Bailey, Kid Ory, Pee Wee Russell and J.C. Higginbotham. He held a long residency at the Metropole, New York, from 1954 to 1965, and undertook several tours of Europe in the 1960s.

Henry 'Red' Allen

Like that of many swing trumpeters, Allen's early style was very similar to Louis Armstrong's (the two musicians are indistinguishable in their joint solo on *I ain't got nobody*, 1929, OK). Later, with Russell's band and especially with Henderson, Allen developed a personal manner characterized by a fluid, legato articulation, a remarkably free concept of rhythm in which he seemed to ignore the fixed pulse, a wide dynamic range, and above all a large arsenal of timbral effects (lip trills, smears, rips, glissandos, spattered notes and growls). In later years he further explored these effects to such an extent that, in the 1960s, he drew the attention of free-jazz players looking for alternatives to the uniform sonority of bop trumpet playing. Although famous in the 1930s for his flamboyant middle- and high-register solos, in the 1950s he cultivated an expressive, quasi-vocal manner in the low register as a complement to his jazz singing. Gradually he came to reject his swing legacy and concentrate on the New Orleans ensemble format and repertory, particularly the blues, of which he was an outstanding interpreter.

J. BRADFORD ROBINSON

Allen, Henry Robinson (*b* Cork, 1809; *d* London, 27 Nov 1876). Irish tenor and composer. He was educated at the RAM in London and first attracted public attention by his performance, on 5 February 1842, as Damon in the stage production of Handel's *Acis and Galatea* under Macready at Drury Lane. On 3 February 1846 he created the role of Basilius in Macfarren's *Don Quixote* at Drury Lane. Chorley considered him 'as a singer and actor ... altogether the most complete artist on our operatic stage'. But his small voice was better suited to the Princess's Theatre, where he sang from 1843 to 1850. In general he was overshadowed by William Harrison and Sims Reeves, both of whom specialized in singing ballads.

Allen retired as a performer about 1856 and turned to teaching and the composition of ballads, of which *The Maid of Athens* and *When we two parted* achieved some popularity.

ALEXIS CHITTY/GEORGE BIDDLECOMBE

Allen, Sir Hugh (Percy) (*b* Reading, 23 Dec 1869; *d* Oxford, 20 Feb 1946). English organist, conductor and musical administrator. As a student at Cambridge he laid the foundation of his reputation as a conductor of Bach by his performances of the cantatas in his college chapel. Subsequently he held appointments as organist of St Asaph's Cathedral (1897) and Ely Cathedral (1898), while his appointment in 1901 as organist of New College, Oxford, heralded 17 year's untiring effort for the development of music in the university. He maintained the chapel choir at a high level, organized an amateur orchestra and conducted both the town and university choral societies. In 1908 he was made a Fellow of New College, a post carrying an implied commitment to musical research; but this was not to his liking, and he soon resigned the fellowship. The position of choragus to the university, however, to which he was appointed in 1909, enabled him to revolutionize the Oxford music examinations and to produce a far-reaching scheme for the practical training of the university's music students.

Meanwhile, in 1907 Allen became conductor of the London Bach Choir, and in 1913 he was invited to conduct the B minor Mass and other works at the Leeds Festival. Finally, in 1918, he succeeded Sir Hubert Parry as director of the RCM and Sir Walter Parratt as professor of music at Oxford. He resigned practically all his other commitments, making only rare appearances as a professional conductor. In response to the demands of a postwar age, Allen succeeded during his tenure at the RCM in modernizing the training and in enlisting more staff to cope with the increasing numbers of students. At Oxford he converted the professorship into a practical directorship and was able to bring to fruition the reforms he had begun as choragus. He retired from the RCM in 1937 but retained the Oxford professorship until his death in 1946.

Allen owed his position less to his musical than to his organizing abilities, and to sheer energy and driving force. Nevertheless, the many honours which came to him in the inter-war years (he was knighted in 1920, created GCVO in 1935 and became Master of the Worshipful Company of Musicians in 1937) testify to his important place in the history of British music.

H.C. COLLES/MALCOLM TURNER/R

Allen, J(oseph) Lathrop (*b* Holland, MA, 24 Sept 1815; *d* c1905). American brass instrument maker. About 1850 he designed a very efficient rotary valve, featuring flattened windways, string linkage and enclosed stops. This valve was very successful in the USA during the second half of the 19th century. Other makers who adopted the Allen valve included B.F. Richardson, D.C. Hall and B.F. Quinby, all of whom had at one time worked with Allen.

Allen began making brass instruments about 1838 in Sturbridge, Massachusetts, a short distance from his birthplace. He moved to Boston in 1842, and is known to have worked in Norwich, Connecticut, from 1846 to 1849; in 1852 he returned to Boston. He is known to have made at least one keyed bugle early in his career, and a number of instruments with double-piston Vienna valves. During the 1850s in Boston his flat-windway valve won respect among leading musicians and his instruments received favourable comment at mechanics exhibitions. From 1862 until at least 1897 Allen worked in New York City, where he continued to make some musical instruments but was also engaged in other types of manufacture.

There are many instruments with Allen valves in American collections of 19th-century brass instruments. Several instruments signed by Allen are found in the John H. Elrod Memorial Collection, Germantown, Maryland and the Henry Ford Museum, Dearborn, Michigan.

Allen, Paul Hastings (*b* Hyde Park, MA, 28 Nov 1883; *d* Boston, 28 Sept 1952). American composer. After graduating from Harvard University (BA 1903), he moved to Florence, serving in the US diplomatic service in Italy during World War I. He returned to the USA in 1920 and settled in Boston. He was a prolific composer, particularly of operas and chamber music. His instrumental works combine careful construction and Romantic gestures, while the operas reflect 19th-century Italian techniques. His *Pilgrim Symphony* (1910) won the Paderewski Prize.

H. WILEY HITCHCOCK/MICHAEL MECKNA

Allen, Richard (*b* Philadelphia, PA, 14 Feb 1760; *d* Philadelphia, 26 March 1831). American tunebook compiler. A former slave, he founded the African Methodist Episcopal Church in Philadelphia in 1794 and was elected its first bishop on the incorporation of the church in 1816. He compiled a hymnbook of 54 hymns, *A Collection of Spiritual Songs and Hymns*, for use by his congregation, the Bethel AME Church, in 1801. Later that year an enlarged version was published as *A Collection of Hymns and Spiritual Songs*. It was the first hymnbook published by an African American for use by

African Americans, and many of the hymns later became sources for black spirituals. With Daniel Coker and James Champion, Allen also compiled the first official hymnbook of the AME Church in 1818.

□

Allen, Samuel (*b* Cornwall, 1848; *d* *c*1905). English bowmaker. He worked for W.E. Hill & Sons from about 1880 until 1891. During this time he made many bows marked with the brand of his employers, some of them with exquisitely decorative mountings. He also repaired and modernized old sticks. On leaving Hill he continued to make bows, branding them 'S. Allen'; he made at least one double bass as well. Some players complain that his violin bows are too 'whippy', but strong sticks were apparently not highly regarded by players at that time. He earned his reputation mainly through his cello bows: patterned in most respects after Tourte, they are medium to heavy in weight, of the strongest Pernambuco wood, and in every way ideal for the modern cellist. His sticks are almost always octagonal. For further information see W.C. Retford: *Bows and Bow Makers* (London, 1964).

CHARLES BEARE

Allen, Sir Thomas (Boaz) (*b* Seaham Harbour, Co. Durham, 10 Sept 1944). English baritone. He studied at the RCM, 1964–8, with Hervey Alan (singing) and Harold Darke (organ). Early experience with the WNO (début as Marchese d'Obigny, *La traviata*, 1969) and in the Glyndebourne Festival Chorus led to important leading roles with WNO, among them Rossini's Figaro and Mozart's Count Almaviva, and thence to a Covent Garden début (Donald, *Billy Budd*, 1971). In this first phase of his career Allen undertook an unusual variety of musical styles, from Purcell, Rameau and Gluck to Tippett and Thea Musgrave (première of *The Voice of Ariadne*, Aldeburgh, 1974), while making a particular mark in the title role of *Billy Budd* and in Mozart works; but almost every appearance seemed to be stamped by his conjoining of striking appearance, magnetic command of the stage, and warm, naturally produced, vibrant lyric baritone of easy emission and wide range. At his peak Allen's Don Giovanni (which has been encountered in most of the world's leading theatres) was unrivalled for its compelling blend of comedy and menace, charm and cruelty, manly authority and sinuous elegance; many other successes – as Wolfram, Posa, Thomas's Hamlet, Marcello, Eisenstein, Busoni's Faust, and Ulysses in Henze's Monteverdi arrangement – have convincingly demonstrated his powers. In later years has come a move toward 'mature' roles (Don Alfonso, Giorgio Germont, Sharpless and Janáček's Forester among them), in which the deepening and refining of his art of characterization is everywhere in evidence.

In concert Allen's range has proved no less wide. A devoted but (measured by the highest standards) perhaps not exceptionally original exponent of lieder and *mélodies*, he has consistently championed the less familiar English composers of song (Butterworth, Warlock, Gurney, Finzi), colouring their words and phrases freshly and imaginatively, filling each note with a peculiar vigour of projection and intensity of communication. Allen's career is well documented on recordings: these include issues of Schubert, Schumann, Wolf and Mahler lieder, Brahms (lieder and *German Requiem*), the *War Requiem* (under Rattle), and songs from British and American musicals (with Valerie Masterson); and, of course, representation of many operatic roles, among them Rossini's Figaro, Donizetti's Malatesta, Britten's Balstrode, and two versions each of Gluck's Orestes (under Gardiner and Muti respectively) and Mozart's *Figaro* (the Count under Solti, the title role under Muti) and Don Giovanni (under Haitink and Marriner respectively). His Billy Budd is preserved in the video of the 1988 ENO production. He is the author of *Foreign Parts: a Singer's Journal* (London, 1993). He was made a CBE in 1989 and knighted in 1998.

MAX LOPPERT

Allen, William. English piano maker. He was co-inventor with James Thom of the COMPENSATION FRAME, patented in 1820. *See* PIANOFORTE, §I, 6.

Allende(-Sarón), Pedro Humberto (*b* Santiago, 29 June 1885; *d* Santiago, 17 Aug 1959). Chilean composer and ethnomusicologist. He studied the violin, music theory and composition at the Santiago Conservatorio National de Música (1899–1908). The Chilean government then sent him to France and Spain for further study (1910–

11). On returning to Chile he was elected to the Folklore Society and worked for the Ministry of Education in improving the teaching of music in the state schools (1924–8). He travelled again to Europe in 1922 and was one of the founders of the International Academy of Fine Arts in Paris (1923). In 1928 he was appointed professor of composition at the Conservatorio National, which had recently become part of the arts faculty of the University of Chile. There, until his retirement in 1946, he taught many Chilean composers who later came to international prominence. On another visit to Europe, also in 1928, he served as vice-president of the music section at the First International Congress of the Popular Arts in Prague. During this trip he attended performances of a number of his works at the Ibero-American Festival in Barcelona (1929). He was a member of the Kharkov Folklore Society, the Costa Rican Academy of Fine Arts and the Chilean Associación Nacional Compositores, and he was the first Chilean composer to receive his country's National Arts Prize (1945).

Allende's work as a composer was complemented by extensive research into the indigenous and popular musics of Chile; he was responsible for issuing, on the RCA Victor label, the first field recordings of Araucanian Indian music. Since his death he has earned a reputation as the initiator of modernism in Chile, mainly on the strength of his progressive harmonic idiom and orchestration. At the same time, his use of themes and rhythms based on Chilean peasant songs and dances aligns him with other nationalist composers in Latin America. An example of the blending of these two elements can be seen in the *12 tonadas* (1918–22), a set of character pieces for piano.

JUAN A. ORREGO-SALAS

Allende-Blin, Juan (*b* Santiago, 24 Feb 1928). Chilean composer. His mother, Rebeca Blin, was a teacher at the Conservatory of the State University in Santiago, and his father, Adolfo Allende-Saron, was a composer, choirmaster and critic. He studied with his uncle Pedro Humberto Allende and (1950–51) with Fré Focke, a pupil of Webern.

During World War II the home of Allende-Blin's parents was a meeting place for emigrés from Europe; their visitors included such musicians as Erich Kleiber, Fritz Busch, Rudolf Kolisch, Artur Rubinstein and Ricardo Viñes as well as painters and writers. As a child, Allende-Blin thus had the opportunity of becoming familiar with art that was banned in Germany at the time, and the experience influenced him profoundly. In 1951, at the suggestion of Hermann Scherchen, he moved to West Germany, where he studied piano with Theodor Kaufmann in Hamburg (1953–4) and attended lectures given by Messiaen at the Darmstadt Ferienkurse. He returned to Santiago (1954–7) to teach music analysis at the Conservatory, and then settled permanently in Germany, where he worked for North German Radio in Hamburg (1962–70). Since 1971 he has lived and worked as a freelance composer in Essen, where in 1989 he organized a symposium with four concerts entitled 'Besuch aus dem Exil' which for the first time united a number of musicians and choreographers who had been living in exile since they were forced to leave Germany. He published the accounts of their lives in *Musiktradition in Exil* (Cologne, 1993).

As a student Allende-Blin was introduced by Pedro Humberto Allende to the music of Franck, from which he developed his technique of using intervallic cells and cyclic form. The process of transition to Schoenberg's 12-note technique can be seen in the Piano Sonatine (1949–50) and the *Drei Rilke-Lieder* (1951). In his *Transformations I* of the same year he uses the serial organization of cells to subject contrapuntal, harmonic and melodic formations as well as tone colour to constant change. He went on to develop structures governed by proportions which govern both the largest formal divisions and the smallest, including single notes and rests. Examples are *Zeitspanne* (1971–4), *Fragment* (1984) and *Coral de Caracola* (1985), works which formed the basis of the dramatically concentrated forms of his operas and cantatas, for example *Des Landes verwiesen* (1978) and *Walter Mehring* (1995), both commissioned for the Berlin Festival. Both works explore the disintegration of the German cultural tradition which he had learnt from the emigrés he had met in Santiago as a child.

In 1972 Allende-Blin collaborated with the stage designer and painter Herman Markard on an open-air instrument called the 'Orgelinsel', a combination of acrylic cylinders and organ pipes operated by the natural forces of air and water, for which he wrote his *Open Air and Water Music*. In 1977 he assembled and orchestrated the sketches for Debussy's unfinished opera *La chute de la maison Usher*.

KLAUS LINDER

Allen organ. An ELECTRONIC ORGAN designed by Jerome Markowitz (1917–91) between 1937 and 1939, and manufactured from 1939 in Allentown, Pennsylvania, and from 1953 in nearby Macungie. The Allen Organ Co. was founded in 1945; besides many models of the organ, it has manufactured two electronic harpsichords (introduced in 1961 and 1982) and an electronic piano (from 1965). After Markowitz's death his son Steve Markowitz succeeded him as president.

The Allen organ was the first fully-electronic organ to become commercially available. A three-manual instrument was produced in 1946, and a four-manual one in 1954. In 1949 a two-speed rotating loudspeaker unit, the Gyrophonic Projector, was introduced. The company was one of the first to develop a fully transistorized organ (1959), and in the digital Computer Organ (1971) it pioneered the replacement of oscillators by a computer that generates sounds by means of digital waveform synthesis (based on recordings of pipe organ spectra). The original organ was designed for use in churches, but later models included concert and home organs. The concert models have frequently taken solo and obbligato roles in orchestras, under conductors such as Barenboim, Bernstein, Dorati, Karajan, Mehta, Ormandy and Stokowski. Four-manual touring organs were commissioned in the mid-1970s by Carlo Curley (380 loudspeakers) and Virgil Fox (over 500 loudspeakers).

From the mid-1960s to the early 80s Allen's RMI division (Rocky Mount Instruments) manufactured portable electronic pianos and keyboards, including the Electra-Piano (1967), Rock-Si-Chord (1967) and RMI Keyboard Computer KC-I (1974) and KC-II (1977), two of the first polyphonic synthesizers.

HUGH DAVIES

Allentando (It.: 'relaxing', 'slackening'). *See* RALLENTANDO. *See also* TEMPO AND EXPRESSION MARKS.

Aller, Eleanor (*b* New York, 20 May 1917; *d* Los Angeles, 12 Oct 1995). American cellist of Russian parentage. She studied with her father, and at the age of 12 appeared at Carnegie Hall. She subsequently studied with Felix Salmond at the Juilliard School of Music, and toured as a soloist. In 1936 she became principal cellist of the Warner Brothers Studio Orchestra, the first woman to hold such an appointment; she held this position until 1972. In 1946 Korngold wrote his Cello Concerto for Aller to play in the film *Deception*, and she also gave the work's first concert performance with the Los Angeles PO. In 1947 Aller and her husband, the violinist Felix Slatkin, founded the HOLLYWOOD STRING QUARTET with other principal players from Hollywood studio orchestras. The quartet, which disbanded in 1961, achieved distinction through its many recordings. From 1972 to 1985 Aller was principal cellist for 20th Century Fox. Her playing was accurate and stylish, and she was uncompromising in her musical beliefs.

MARGARET CAMPBELL

Allevi [Allevi Piacenza, Alevi, Allievi, Allevo, Levi, Leva], **Giuseppe** [Gioseppe, Gioseffo, Josefo, Joseffo, Iseppe] (*b* Piacenza or Cremona, 1603/4; *d* Piacenza, 18 July 1670). Italian composer. The date of his death is usually incorrectly given as 1668. Although little is known of his life, it is certain that the invariable addition to his name of the word 'Piacenza' indicates his complete identification with the city where he worked and probably was born (though his inclusion in Giuseppe Bresciani's *La virtù*

ravivata de cremonesi insigni, MS, 1665, see Pontiroli, suggests that he may have been born at Cremona). The first evidence of his reputation in musical circles at Piacenza dates from Carnival 1644, when his ballet *Le ninfe del Po*, to a text by Bernardo Morando, was performed in the public square of the Cittadella, which was transformed into a theatre on the occasion of the festivities marking the arrival in Piacenza of Francesco I d'Este, Duke of Modena, and his wife. On the basis of the dates and information derived from Allevi's three collections of sacred music, all previous dictionaries have stated that he was *maestro di cappella* of Piacenza Cathedral from 1654 to 1668. It is clear, however, from the records of the Congregazione del Sacro Cordone at S Francesco, Piacenza, for which he also worked, that he must have taken up this position by 21 May 1652; he remained in it until his death. At his death he also held a prebend at the cathedral. His successor at the Congregazione del Sacro Cordone was appointed in 1670, but the next recorded *maestro* of the cathedral is F.M. Bazzani, who was appointed in 1679. A good deal of the printed music in the archives of Piacenza Cathedral bears Allevi's signature and must therefore have belonged to him. His reputation as a musician, especially as a skilled contrapuntist, is attested to by Bresciani. He was a reasonably up-to-date composer, largely of small-scale concertato motets, which are technically assured and display occasional flashes of lively invention, while a certain variety is evident in the dialogue-like writing for the obbligato instruments.

FRANCESCO BUSSI

Allgemeiner Deutscher Musikverein. German musical organization. Established in 1861 in Weimar and dedicated to the promotion of new music (primarily through performance), the Allgemeiner Deutscher Musikverein (ADMV) was the first national music society in Germany. Focal points of its activity were the annual festivals that took place in alternating German and German-speaking cities and initially featured the music of Liszt and his colleagues in the 'New German' movement. During its first decade the ADMV gave premières of music by such composers as Wagner, Liszt, Cornelius and Felix Draeseke. Liszt provided the society with artistic leadership but, as president, Franz Brendel was the chief guiding spirit during its early years. Upon Brendel's death in 1868 the noted Leipzig choral conductor Carl Riedel took over the presidency. During Riedel's leadership the society entered into a period of identity crisis that was exacerbated by the deaths of Wagner and Liszt: it gradually broadened its mandate to encompass the promotion of music by non-Germans (Saint-Säens, Dvořák, Tchaikovsky) and by the former conservative opposition (Brahms). These developments intensified under the leadership of Riedel's successors, Hans von Bronsart von Schellendorf (1888–98) and Fritz Steinbach (1898–1901). The 1890s nevertheless brought premières or important first performances of such works as Strauss's *Tod und Verklärung* (1890) and Mahler's Symphony no.1 (Weimar, 1894), yet the growing conservatism of the society, above all under Steinbach, led to the so-called 'Heidelberg Revolution' of 1901, at which festival Richard Strauss was elected president. Albeit brief, the Strauss presidency (1901–9) represented a second heyday for the ADMV, manifesting a renewed commitment to the principles of Liszt and founders and a return to the promotion of contemporary German music. Against the opposition of board members, Strauss primarily championed Mahler (and was responsible for premières of the complete Symphony no.3 in 1902 and of Symphony no.6 in 1906), although his presidency also saw world or German premières of works by such composers as Reger, Delius, Pfitzner, Loeffler and Strauss himself. During this period the ADMV had a membership list that included such composers as Schoenberg, Berg, Zemlinsky and Bartók. Strauss was succeeded by Max von Schillings (1909–20), and then by Friedrich Rösch (1920–26), whose presidency was marked by some attempts to programme avant-garde works (by Hindemith and Křenek, among others). The last presidents, Siegmund von Hausegger (1926–35) and Peter Raabe (1935–7), brought the ADMV in line with evolving Nazi ideology, and the society was dissolved in 1937, in keeping with the consolidation of the organizations of German musical life.

During the course of its existence, the society gave birth to several chapters ('Zweigvereine'), most notably in Leipzig and Munich. The activities of the ADMV extended beyond the performance of new music at the festivals: it instituted a library of published books and music; published a yearbook (*Almanach*), which appeared three times (1868, 1869, 1871); established and administered several charitable foundations (for example, Reger and Schoenberg received scholarships respectively from the Beethoven-Stiftung and the Liszt-Stiftung); and generally served as an advocate for the interests of musicians, promoting and supporting such causes as copyright protection and pensions. At the festivals themselves the organizers initially offered a mixture of performances and lectures about current issues in music, and in later years mounted composition competitions. Throughout the society's existence, the annually appointed programme committees exerted considerable influence over the contents of the festivals, and thus over the artistic direction of the ADMV in general: they usually consisted of leading composers of the day, including Liszt, Strauss, Berg and Hindemith. The extensive archive of the ADMV, housed in the Goethe- und Schiller-Archiv of the Stiftung Weimarer Klassik in Weimar, encompasses over 350 archival units.

JAMES DEAVILLE

Allgemeiner Richard-Wagner-Verband. *See* WAGNER SOCIETIES.

Allgén, Claude (Johannes Maria) Loyola [Klas-Thure] (*b* Calcutta, 16 April 1920; *d* Täby, 18 Sept 1990). Swedish composer. He left grammar school before completing his studies and studied the viola and counterpoint at the Swedish Royal Academy of Music in Stockholm. A self-taught composer, in the 1940s he was a member of the Monday Group, which included Bäck, Lidholm and Blomdahl. Following his conversion to Catholicism in 1950 he read theology in the 1950s in Austria and the Netherlands but was not ordained to the priesthood. His last years were spent in poverty and he died after fire broke out in his house.

More than 150 of his works are preserved; most have a duration of more than one hour, one string trio lasting longer than two hours. An unfinished violin concerto comprises 18 movements, each based on one of Paganini's 24 violin caprices. His use of superimposed voices, styles and time sequences (which he called 'metre fission') anticipates both Nancarrow and B.A. Zimmermann. His music's ecstatic pathos resembles that of Ruedgaard or Skryabin, while his leaps between consonance and dissonance herald the work of Christian Wolff, all composers who were unknown to him. Allgén advocated an absolute music free from human feelings and emotions. His extremely polyphonic music was regarded as unplayable, but a new generation of musicians has found it not only playable but also gripping and often sublime; most effective are the works which, through the use of canon technique, seem airy and transparent.

ROLF HAGLUND

Alliance of Composer Organisations. A British society founded in 1993 by the COMPOSERS' GUILD OF GREAT BRITAIN, the Association of Professional Composers and the British Academy of Songwriters, Composers and Authors.

Allik, Kristi (Anne) (*b* Toronto, 6 Feb 1952). Canadian composer. She earned the BMus (1975) from the University of Toronto, the MFA (1977) from Princeton University and the DMA (1982) from the University of Southern California. Her teachers included John Weinzweig, Gustav Ciamaga, Nadia Boulanger and Oscar Peterson at the University of Tornto and Milton Babbitt and Claudio Spies at Princeton. After teaching at the Royal Conservatory and the University of Western Ontario, she began teaching at Queen's University (Kingston) in 1988, where she became the director of the Electroacoustic Music Studios and the Computer Laboratory for Application in Music in 1996.

Serialism, minimalism, jazz and Estonian folksong have all influenced Allik's compositional style. Her epic opera *Loom Sword River* (1982) uses layered vocal ostinati, as well as exploring the possibilities of the voice as a percussion instrument. In the early 1980s she became interested in tape and computer music. Since that time she has produced many electro-acoustic works, multime-

dia performances and interactive installations. *Skyharp* (1992) collects audio-visual information from the natural environment, using the dynamics of ecological forces to generate electro-acoustic soundscape compositions. Her works have won awards from Bourges (*Skyharp*, 1994) and Ars Electronica (*Alaubic Rhythms*, 1990; *Electronic Purgatory*, 1991; *Rhapsody* and *Skyharp*, 1992). She has received additional recognition from the Canada Council, the Canadian Music Centre and the Ontario Arts Council.

ANDRA McCARTNEY

Allin, Norman (*b* Ashton-under-Lyne, 19 Nov 1884; *d* Hereford, 27 Oct 1973). English bass. He studied at the RMCM (1906–10), intending to become a teacher, but after marrying the mezzo-soprano Edith Clegg took up performing. He made his concert début in Manchester and his stage début in 1916 with the Beecham Opera Company at the Aldwych Theatre, London, as the Old Hebrew in *Samson et Dalila*; he later sang Dosifey when *Khovanshchina* was first given in English at Drury Lane. At Covent Garden in 1919 he appeared as Khan Konchak and Boris, and as Gurnemanz won particular praise for the beauty of his singing and the dignity of his acting. In 1922 he became a director and principal bass of the newly formed British National Opera Company, and added Méphistophélès, King Mark, Osmin and Sarastro to his notable roles. He took part in the international seasons from 1926 to 1933, sang Mozart's Bartolo at the first Glyndebourne season in 1934 and then appeared with the Carl Rosa Company from 1942 to 1949. His extensive concert repertory ranged from Purcell to Musorgsky. A leading British bass of his day, he had a voice of comparative rarity, a true, voluminous bass capable of considerable agility and vitality. His singing, most notably of Handel and Wagner, is preserved on a number of discs.

ALAN BLYTH

Allinson, Thomas (bap. Durham, 16 Jan 1670; bur. Lincoln, 11 Feb 1705). English composer and cathedral musician. Allinson was first a chorister (*c*1682–6) and then a lay-clerk (1689–93) at Durham Cathedral, where his musical ability was nurtured by William Greggs. He was admitted as organist of Lincoln Cathedral on 5 May 1693 and held that position until his death. Parts of five anthems survive, four being represented at both Durham (where one had been transcribed by 1693 and all four by 1699) and Lincoln. Only his full anthem *O give thanks unto the Lord* is complete. In his verse anthems, two of which lack only their treble part, he displays ability whether writing a declamatory solo or for small groups of voices.

BRIAN CROSBY

Alliot-Lugaz, Colette (*b* Notre-Dame-de-Bellecombe, 20 July 1947). French soprano. She studied in Bonneville, and then Geneva where she graduated from the Centre Lyrique. She made her début at the Opéra-Studio in Paris as Pamina in 1976, and then joined the Lyons Opéra, where she remained a member of the company until 1983. Her roles there included Jonathas in Charpentier's *David et Jonathas* and Mélisande. She made her first appearance at Glyndebourne in 1981 as Cherubino, returning for Ninetta in *The Love for Three Oranges* in 1982. In 1983 Alliot-Lugaz created the role of the Page in Boesmans's *La passion de Gilles* at La Monnaie in Brussels. Her repertory also includes Messager's Véronique, Gluck's Alcestis, Ascanius in *Les Troyens* (which she sang at the opening of the Opéra Bastille, Paris, in 1990) and Eurydice in Berio's *Opera*, while her many recordings include Monteverdi's *Orfeo*, Lully's *Alceste*, Campra's *Tancrède*, Offenbach's *Les brigands*, Messager's *Fortunio* and Ravel's *L'enfant et les sortilèges*. She also has a notable career as a concert singer, and has recorded such works as Berlioz's *Nuits d'été* and Chausson's *Poème de l'amour et de la mer*.

PATRICK O'CONNOR

Allison [Alison, Allysonn, Aloyson], **Richard** (*b* ?1560–70; *d* ?before 1610). English composer. He referred in the dedication of his *Psalmes* to the late Ambrose Dudley, Earl of Warwick (died 1589/90) as 'my good Lord and Master'. Allison is represented by 13 compositions in a set of consort books (dated 1588), from the household of Sir Francis Walsingham. Ten four-part settings by him appeared in Thomas East's *Whole Booke of Psalms* (RISM 1592[7]), and he contributed a dedicatory poem to Giles Farnaby's *Canzonets to Fowre Voyces* (1598). In 1599 he published his own *Psalmes of David in Meter*, giving his London address as Dukes Place, near Aldgate, and describing himself as a 'gentleman' and a 'practitioner' of music. This print also includes his coat of arms, providing much information about his family. In the same year seven of his instrumental works appeared without attribution in Morley's *First Booke of Consort Lessons* (claims that Allison may have been the 'gentleman' who financed the publication remain unsubstantiated and seem improbable). In 1606 he published *An Howres Recreation in Musicke*, acknowledging Sir John Scudamore (of Holme Lacy, near Hereford) as his patron. He is not heard of

again, and may well have been dead by the time of Rosseter's *Lessens for Consort* (1609) which includes four of his compositions, together with the information that most of the contents are by composers 'whose memorie only remaines'.

Allison's most distinctive works are among those for mixed consort of treble viol (or violin), flute, lute, cittern, bandora and bass viol. At least six of these – the Lady Frances Sidney pieces, *Allison's knell*, *The Batchelors delight* and *Goe from my window* – feature antiphonal groupings, often with written out violin and flute divisions to complement those of the lute. These delightful compositions appear to have been conceived for this specific instrumentation, something that can be said otherwise only of works by Allison's younger imitators Bacheler and Reade. The bright major chords of his well-circulated 'Sharp' pavan contrast pointedly with the more lugubrious harmonies of Johnson's popular 'Flat' pavan which presumably inspired it. Allison's 'Dolorosa' pavan belongs to the same world of Elizabethan melancholy as Dowland's *Lachrimae* with which it shares melodic features.

Allison's interest in plucked strings in consort is manifest also in the 69 psalm settings he published in 1599 in which four rather austere vocal parts are enlivened by tablature accompaniments for lute or orpharion, and for cittern. No such specifically instrumental parts adorn the sombre four- and five-voice compositions of his 1606 print whose consequent subdued tone leaves an impression of a creative mind torn between exuberance and sobriety in a manner typical of his time.

WORKS

Editions: *The First Book of Consort Lessons collected by Thomas Morley*, ed. S. Beck (New York, 1959) [B]
Music for Mixed Consort, ed. W. Edwards, MB, xl (1977) [E]
English Duets for Two Renaissance Lutes, ed. S. Lundgren (Munich, 1982–6) [D]
Richard Allison: The Solo Lute Music, ed. J. Robinson and S. McCoy (Oldham, 1995) [tablature; incl. inventory of Allison's works and their sources] [L]

MIXED CONSORT

for lute, treble viol (or violin), flute (or recorder), lute cittern, bandora and bass viol unless otherwise stated

Allison's allmayne, E; Allison's knell, B; Galliard to the knell, inc.; Allison's paven, inc.; The Bachelers delight, B; Dolorosa paven, E; Goe from my window, B; The Lady Frances Sidneys almayne, E; The Lady Frances Sidneys goodmorowe (De la tromba pavin), B; Galliard to De la tromba, inc.; The Lady Frances Sidneys goodnight (Responce pavin), B, E (also attrib. Bacheler); Mrs Millicents paven, inc.; Millicent galliard, inc.; Quadro pavin, B; Galliard to the Quadro pavin, B; Sharp pavan, E; Spanish measure, inc.; The voyce (The sprite's tune), E
1 In nomine a 5, ed. in MB, xlv (1988)

LUTE

Solos: Dolorosa pavan, L; Galliarda Glaziers, L (attrib. Cutting in *GB-Cu*); Go from my window, L; Passymeasures pavan and galliard, L; Primero, L; Quadro pavan, L; Sharp pavan, L; 3 pavans, L; 2 galliards, L; 1 almain, L; Fantasia, lute/bandora solo, attrib. Allison in *GB-Cu* Dd.2.11, attrib. Alfonso Ferrabosco in *GB-Lbl* Add.31392, L, also ed. in CMM, xcvi/9 (1988); 2 passamezzos, lute solo, attrib. 'Richardi Anglus' in *PL-Kj* Berlin Mus.ms.40143, L; Galliard, lute solo, attrib. Allison in London, RAM, 'Board MS', attrib. Robert Johnson in *GB-Cu* Dd.9.33, L
Duets: De la trumba; Sharp pavin, D; Spanish measures, D

VOCAL

The Psalms of David in Meter (London, 1599/*R*); ed. in Anderson
An Howres Recreation in Musicke (London, 1606); ed. in EM, xxxiii (1924, rev. 2/1961)
10 psalm harmonizations in 1592[7]

DIANA POULTON/WARWICK EDWARDS

Allitsen [Bumpus], **(Mary) Frances** (*b* London, 30 Dec 1848; *d* London, 30 Sept 1912). English composer. She came from a family of well-known booksellers who disapproved of her taking up music as a career. In her thirties, with the support of Thomas Weist-Hill, she eventually studied composition with Henry Gadsby at the Guildhall School of Music, where she was a Corporation Exhibitioner. She composed several instrumental and orchestral works as a student and from 1880 occasionally appeared as a singer, but she was best known as a songwriter. She used the pseudonym Frances Allitsen. Her record of financial transactions (*GB-Lbl*), kept between 1885 and 1896, shows the increasing profitability of her work. This notebook also includes a brief diary from 1911.

Allitsen's songs range from immensely popular patriotic and religious songs, such as *There's a Land* (1896), widely sung by Clara Butt during the Boer War, and *The Lord is my Light* (1897), recorded by John McCormack in 1917, to ardent, harmonically rich love songs, such as her *Six Songs* (1889) or *King and Slave* (1892). Several songs are rather more subtle and complex, including her eight Heine settings (published by Robert Cocks in 'Series of Artistic Songs', 1892), the cycle *Four Songs from 'A Lute of Jade'* (1910) and *Unto Thy Heart* (1888), in which the voice is characteristically accompanied by an additional instrument as well as the piano. Towards the end of her life Allitsen turned to dramatic music, producing the scena *Cleopatra* (1904), written for Butt, and *For the Queen* (1911), a large-scale work exploring many of the same concerns as her romantic opera *Bindra the Minstrel* (1912), which, despite negotiations with German opera houses, remained unperformed at Allitsen's death.

WORKS

(selective list)

Stage: For the Queen ('cantata', F. Hyde), Bar, Mez, B, SATB, orch (vs, 1911); Bindra the Minstrel (op, 2, F. Allitsen, from *Songs from the Book of Jaffir*) (vs, 1912)
Orch: Slavonic Ov., 1884; Undine, 1884; Funeral March; Tarantella
Vocal: Break, Diviner Light! (A. Tennyson), C, Bar (1899); Cleopatra (scena, W. Shakespeare and T.S. Collier), C, orch (1904); Magnificat (A Hymn of the Woodlands) (A.L. Salmon), C/Bar, SATB (1909)

*c*140 pubd songs with pf acc., incl. My Lady Sleeps (H.W. Longfellow) (1885); Unto thy Heart (V. Hugo), with vn obbl (1888); 6 Songs (J. Hay, Tennyson, W.H. Mallock, F. Kemble, M. Corelli) (1889); King and Slave (A. Procter) (1892); Album of 8 Songs (H. Heine) (1892); There's a Land (C. Mackay) (1896); The Lord is my Light (Ps xxvii) (1897); Like as the Hart Desireth (Ps xliii), with vc obbl (1898); Moods and Tenses (Phases in a Love Drama), song cycle (1905); 4 Songs from A Lute of Jade (trans. L. Cranmer-Byng) (1910)
Also works for pf and vn

SOPHIE FULLER

Allman Brothers Band, the. American rock group. Its original members were (Howard) Duane Allman (*b* Nashville, TN, 20 Nov 1946; *d* Macon, GA, 29 Oct 1971; guitar), Gregg (Gregory Lenoir) Allman (*b* Nashville, TN, 8 Dec 1947; guitar, keyboard and vocals), Dickey (Richard) Betts (*b* West Palm Beach, FL, 12 Dec 1943; guitar and vocals), Jai Johanny (Jaimoe) Johanson (John Lee Johnson; *b* Ocean Springs, MS, 8 July 1944; drums and percussion), Berry Oakley (*b* Chicago, 4 April 1948; *d* Macon, GA, 11 Nov 1972; bass guitar) and Butch (Claude Hudson) Trucks (*b* Jacksonville, FL; drums). The two Allman brothers grew up in Florida and worked in several short-lived groups during the 1960s, including the Hourglass with whom they recorded two albums for Liberty Records in Los Angeles. In 1968 they moved to Fame Studios in Muscle Shoals, Alabama, where Duane Allman was engaged as a studio guitarist; he participated in sessions with Wilson Pickett, King Curtis and Aretha Franklin among others. Having signed a recording contract with Atlantic Records, Duane Allman with his brother Gregg formed the Allman Brothers Band, though even after the release of its first album and during its early tours he continued his session work, most significantly with Eric Clapton on Derek and the Dominos' single, *Layla* (1971). The group's second album, *Idlewild South* (1970), and constant touring strengthened its reputation in the USA.

By 1971 the Allman Brothers Band had developed a consistent sound that amalgamated various southern musical styles: Muscle Shoals soul, blues and country music, and improvisatory hard rock. They kept their rhythms and song structures tight and Gregg Allman used a gruff tenor voice effectively, while Betts and Duane Allman often executed harmonized guitar runs on memorable melodic lines, as in Betts's song *In Memory of Elizabeth Reed* (1970). Capable of fiercely eloquent solos, Duane Allman was also an articulate slide guitarist. The band's style can be heard to advantage on the live album *At Fillmore East* (1971) which placed the group in the commercial and artistic forefront of American rock. After Duane Allman's death the group did not replace him, but its album *Eat a Peach* (1972), which included studio and concert material recorded before his death, reached the US top ten. In 1973 Oakley also died and was replaced by Lamar Williams. The group split up in 1976 after recording two more albums, but reunited without Williams, to make *Enlightened Rogues* (1979), which marked a partial return to form. More recordings and tours followed in the early 1980s, but by then the southern rock movement that the Allman Brothers Band had inspired a decade earlier had all but played itself out. In 1989 Gregg Allman and Betts reformed the group to make *Seven Turns* (1990) and three further albums in the early 1990s.

CHRIS WALTERS/R

Allorto, Riccardo (*b* Mosso Santa Maria, nr Biella, 31 Jan 1921). Italian musicologist. He took diplomas in piano at the Parma Conservatory (1942) and in choral music at the Turin Conservatory (1948), and studied music history with Della Corte at Turin University, where he took an arts degree (1946). He subsequently taught music history in the conservatories of Bolzano (1950–51), Parma (1951–5) and Milan (1954–88); he has edited the journals *Almanacco musicale italiano* (1954–5), *Ricordiana* (1955–7) and *Musica d'oggi* (1958–63) and has been vice-director of *Enciclopedia della musica Ricordi* (1960–64). He has been a consulting editor for Ricordi since 1964. Music education is one of his major interests: he became director of the series Manuali di Didattica Musicale and Canti nel Mondo (Ricordi) in 1965, and editor of *Educazione musicale* in 1964, and taught music education at the Milan Conservatory (from 1967). He has also been artistic director of Angelicum records (1958–67), of the Teatro Angelicum, Milan (1959–67; 1977–88), and of the Teatro Donizetti in Bergamo (from 1978), where he founded the Festival 'Donizetti e il suo tempo'. He has also collaborated on projects with La Scala. Allorto's *Storia della musica* (1955, 12/1995) is one of the histories most frequently used in Italian conservatories; he followed it with other surveys, such as *Antologia di storia della musica* (1959), responding to a great need in Italian musical education. He has edited vocal and instrumental works by Banchieri, Boccherini (including his *Stabat mater*, Milan, 1976), Carissimi, Logroscino, Clementi, Tosti (*Romanze per canto e pianoforte*, Milan, 1991–5) and Donizetti (*Nuits d'été à Pausilippe*, Milan, 1987).

CAROLYN GIANTURCO, TERESA M. GIALDRONI

All'ottava [all'8va] (It.: 'at the octave'). An instruction to play an octave above the written pitch if the sign is placed above the notes (sometimes specified as *ottava alta*, or *sopra*); if an octave lower is intended, this is indicated by placing the sign below the notes or by specifying with *ottava bassa* or *sotta*. The duration of the transposition is sometimes shown by a dotted line; and when the notes are again to be played as written, the word 'loco' (Lat.: 'in its place') is sometimes inserted. In orchestral scores, especially manuscripts, *all'8va* is sometimes used as a shorthand signifying that one instrument plays in octaves with another, either above or below. In figured bass, *all'ottava*, like ALL'UNISONO, instructs that no harmony is to be used, but merely a duplication of the bass line at the octave.

See also TASTO SOLO.

EBENEZER PROUT/DAVID FALLOWS

All'unisono (It.: 'at the unison'). An instruction that any parts thus shown are to be taken as one part, either at the same pitch or (where the range of the voice or instrument implies it) at the octave (or double octave) above or below. It is frequently abbreviated to 'unis.'. In orchestral scores the term is used to show that two or more instruments whose parts are written on the same staff are to play in unison; in the later 19th century the words *a due*, *a tre*, etc., are more often used. In figured bass, *all'unisono* instructs that no harmony is to be used, but merely a duplication of the bass line in as many octaves as desired, whereas TASTO SOLO instructs that the bass line is to be played only at the pitch notated; but this distinction is not always strictly observed.

EBENEZER PROUT/ROBERT DONINGTON

Allusion. A reference in a musical work to another work or to a style or convention, in a manner akin to an allusion in speech or literature, or the act of making such a reference. Allusion to a particular work is generally distinguished from QUOTATION in that material is not quoted directly, but a reference is made through some other similarity between the two works, such as gesture, melodic or rhythmic contour, timbre, texture or form; some writers consider quotation a type of allusion. Generally an allusion is made in order to evoke associations with the work, style or convention alluded to and thus to convey meaning; to invoke a work or style as a model for the new work (*see* MODELLING) or in homage to another composer; or in some other way to suggest a link with the music alluded to that calls for interpretation. This purpose sets allusion apart from other forms of BORROWING, such as PARAPHRASE, VARIATIONS or CANTUS FIRMUS, which elaborate borrowed musical material without necessarily demanding interpretation or conveying meaning.

Allusions to texted music may serve to remind the listener of the original words. In vocal music, this may provide commentary on the words being sung, a practice that apparently extends back to at least the 15th century. In instrumental music, it may suggest programmatic interpretations, as in symphonies by Bruckner, Brahms and Mahler. Allusions to instrumental works can evoke the associations they carry, as in Frank Zappa's frequent references to the theme of the television show *The Twilight Zone*. Allusions to styles or conventions are much more common. Not all changes of style are allusive; the alternation between toccata-like and fugal sections in a Buxtehude organ prelude is an expected feature of the form and therefore unremarkable. When a piece in one genre or tradition evokes a style that normally would not occur in that genre or tradition and sets it off from its surroundings, that may be termed an allusion. This would include, for example, Mozart's evocation of concerto cadenza style in the finales of some of his piano sonatas (K311/284*c*, K333/315*c*, K533) and Beethoven's references to chorale style in the third movement and recitative style in the fourth movement of his String Quartet in A minor op.132. Stylistic allusions are often used in operas and programme music to invoke a type of music and the people or activities associated with it; examples include the evocations of shepherds' dances and hunting-calls in Vivaldi's 'Four Seasons' and the march, lullaby and tavern piano in Berg's *Wozzeck*. Allusion can also suggest a place or time through musical style, as in the Spanish rhythms and melodic turns in Bizet's *Carmen* or the Mozartian music of John Corigliano's opera *The Ghosts of Versailles*. Allusion is not always melodic or rhythmic; the timbre of the english horn playing unaccompanied in Berlioz's *Symphonie fantastique* and Wagner's *Tristan und Isolde* Act 3 is sufficient to suggest a shepherd's pipe, allowing both composers to write very un-folklike melodies, and Stravinsky's allusions to sonata form and symphonic conventions in his Piano Sonata and Symphony in C create the tension between present and past that is fundamental to the meaning of these works.

J. PETER BURKHOLDER

Allwood, Richard. *See* ALWOOD, RICHARD.

Allyson, June [Geisman, Ella] (*b* Bronx, NY, 7 Oct 1917). American singer and actress. Trained as a dancer and with a career which began on Broadway, she became known as the perennial 'girl next door' in MGM motion pictures. Her early career in film was as a dancer in shorts such as *Dime a Dance* (1937), but she gained attention with her first major Broadway role in *Best Foot Forward* (1941) and reprised her role in the 1943 film version. Other musical films in which she appeared include *Thousands Cheer* (1943), *Girl Crazy* (1943), *Two Girls and a Sailor* (1944), *Music for Millions* (1944), *Two Sisters from Boston* (1946) and *Good News* (1947). In 1948, she began to appear in non-musical films, including dramas and comedies. She received a Golden Globe Award in 1952 for *Too Young to Kiss*. She was married to fellow singing actor Dick Powell from 1945 until his death in 1963.

The distinctive quality of her singing voice was that it closely resembled her speaking voice. Both rested in a relatively low register and exhibited an attractive aspirant quality. Possessing a legitimate stage voice, Allyson was able to be heard easily in theatres without either belting or using electronic enhancement.

WILLIAM A. EVERETT, LEE SNOOK

Almain [Alman]. *See* ALLEMANDE.

Almandoz, Norberto (*b* Astigarraga, Guipúzcoa, 1893; *d* Seville, 7 Dec 1970). Spanish composer and organist. He studied with Donostia and others in San Sebastián, with Otaño at the Comillas Seminary, and in Paris with Eugène Cools. In 1919 he was appointed *maestro de capilla* at Orense Cathedral and then organist at Seville Cathedral, where he became *maestro de capilla* in 1939 and where he was also priest and canon. He taught counterpoint and fugue at the Seville Conservatory until 1934, and was made director of that institution in 1936. A remarkable performer and a brilliant improviser, he composed prolifically in a style sometimes tinged by Impressionism and sometimes drawing on Basque folk music. (G. Bourligueux: Obituary, *L'orgue*, no.140 (1971), 201–2)

GUY BOURLIGUEUX

Alma Redemptoris mater (Lat.: 'Life-giving mother of the Redeemer'). One of the four Marian antiphons retained at the Council of Trent and ordered to be sung at the end of Compline from the first Sunday of Advent to the Purification (2 February). It is now sung as a self-contained item, but originally it preceded and followed the chanting of a psalm or canticle. In the light of recent scholarship, the traditional ascription of the words and music to HERMANNUS CONTRACTUS no longer appears tenable. Of the two melodies in the *Liber usualis*, only the more elaborate (p.273) appears in medieval chantbooks. This melody, of uncommon beauty and originality, served as the basis for numerous polyphonic compositions during the medieval and Renaissance periods. It appears as the tenor of a number of polytextual motets in the 13th-century Montpellier, Bamberg and Las Huelgas manuscripts. Leonel Power's Mass *Alma Redemptoris mater* uses the first half of the melody in each of the movements of the mass as a unifying cantus firmus. In one of Du Fay's three-voice settings the melody is embellished in the superius; it is assigned to the alto and bass respectively in settings by Ockeghem and Obrecht. Josquin's two settings show typical contrapuntal ingenuity: in one version the melody is treated in canon between alto and tenor; in the other it is combined in double counterpoint with the *Ave regina* melody. There are also settings by Gombert, Mouton, Palestrina, Victoria, Philips, Aichinger and others.

Almási, István (*b* Cluj [now Cluj-Napoca], 8 Dec 1934). Romanian-Hungarian ethnomusicologist. He studied music education and choir direction under János Jagamas, Ferenc Major and István Nagy at the Cluj Academy of Music (1951–6). He joined the Folklore Archives of the Romanian Academy of Sciences (1957), initially as an assistant researcher, becoming researcher (1960) and senior researcher (1970). He took the doctorate in 1989 at the Academy of Music under Romeo Ghircoiaşiu, with a dissertation on the early stages of Hungarian folk music research in Transylvania. Almási has collected more than 6000 folksongs and instrumental melodies from 130 Transylvanian villages. He is chiefly interested in the classification and systematization of folk melodies, the methodology of field investigation, inter-ethnic musical relations, and the history of folklore research. He has compiled folk music programmes for Radio Cluj and Radio Budapest. He is a member of the editorial board of the journals *Anuarul Arhivei de folclor* and *Magyar egyházzene*, and has translated numerous articles and textbooks into Hungarian, Romanian or German.

FERENC LÁSZLÓ

Almayne. *See* ALLEMANDE.

Almeida, Antonio (Jacques) de (*b* Neuilly-sur-Seine, 20 Jan 1928; *d* Pittsburgh, 18 Feb 1997). French conductor. He studied with Ginastera in Argentina and with Hindemith, Koussevitzky and Szell in the USA, joining the opera department at the University of Southern California and setting up and directing the opera school of Occidental College, Los Angeles. He subsequently held conducting posts with the Portuguese RSO in Lisbon (1957–60), the Stuttgart PO (1962–4), the Paris Opéra (1965–7) and the Houston SO (1969–71). After serving as music director for the Friends of French Opera, New York, in 1976 he was appointed music director of the Nice PO, a post he held until 1980. In 1992 he became music director of the Moscow SO. Almeida's many recordings include Haydn's *L'infedeltà delusa* (in collaboration with H.C. Robbins Landon, 1969), the first recording of Bizet's *Le Docteur Miracle* (1974), Halévy's *La Juive* (1989) and Boieldieu's *Le calife de Bagdad* (1994), as well as symphonies by Haydn, Malipiero and Tournemire and the complete ballet music of Verdi. A conductor of elegance and fastidious detail, his work as an editor included the complete symphonies of Boccherini and a thematic catalogue of Offenbach's works. He received the French Ordre des Arts et des Lettres and the Légion d'Honneur.

NOËL GOODWIN

Almeida (Goulartt de Medeiros), António Victorino d' (*b* Lisbon, 21 May 1940). Portuguese composer and conductor. He began his music studies with Marina Dwander, Artur Santos and Joly Braga Santos. In 1959 he completed his higher degree in piano studies with Campos Coelho at the National Conservatory, Lisbon. In 1960 he was awarded a grant from the Instituto de Alta Cultura to study piano with Schiske at the Vienna Hochschule für Musik. While there he also studied with Wladyslaw Kedra and Dieter Weber. He also studied composition with Cerha on a grant from the Calouste Gulbenkian Foundation. He was the cultural attaché in Vienna (1974–81) and founded the Almeida-Pluhar-Marinoff Trio in 1983. He lectured both at the University of Oporto and at the House Museum of A'lvaro de Campos.

Almeida is a versatile artist whose activities range from improvisation to television scores, film-making, fiction and essay-writing. He has a wide public following within Portugal and distances himself from the institutional circles of Portuguese composition. His extensive output is somewhat uneven. Although the dominant idiom in his compositions is a wide tonality, with visible influence from Stravinsky, Hindemith, Eisler and Prokofiev, he often uses more modern means such as electro-acoustics.

WORKS
(*selective list*)

Stage: O chacareiro maníaco, ballet, op.28: Canto da ocidental praia (op, after L.V. de Camões), op.39
Orch: Pf Conc. no.1, op.20; Giestas, op.21; Variações e fuga, str, op.27; Epifania, op.42; Pornofonia, pf, orch, op.52; Fogo de artifício, op.65; Poema de maresia, op.82; Abertura clássica sobre um tema popular português, op.86; Memórias de amanhã, op.97; Fantasia concertante, gui, orch, op.104; Concertino for Orch, op.105; Divertimento, op.106

Principal publisher: Sassetti

SÉRGIO AZEVEDO

Almeida, Fernando de (*b* Lisbon, *c*1600; *d* Tomar, 21 March 1660). Portuguese composer. He studied with Duarte Lobo. In 1638 he professed as a friar in the military Order of Christ at the royal monastery at Tomar, where he was *mestre de capela*. He was elected visitor of his order in 1656. King João IV had his Holy Week music copied for performance in the royal chapel, and he also owned his 12-part *Missa tertii toni*. None of this music or indeed any other music by him – which included responsories and *Miserere* settings – now survives.

ROBERT STEVENSON

Almeida, Francisco António de (*fl* 1722–52). Portuguese composer and organist. Between 1722 (or earlier) and 1726 he was a royal scholar in Rome. On the second Sunday in Lent 1722 his oratorio *Il pentimento di Davidde* was performed in S Girolamo della Carità and on 9 July 1724 he attended the academy organized by Pier Leone Ghezzi, who drew his caricature (in *I-Rvat* Ottoboniano Latino 3115) with a caption describing him as a young but excellent composer of concertos and church music who sang with extreme taste. Before returning to Portugal in 1726, where he apparently became organist of the Royal and Patriarchal Chapel, his oratorio *La Giuditta* was sung at the Oratorio dei Filippini at the Chiesa Nuova in Rome. Its first modern performances, in France and Lisbon in 1990, revealed *La Giuditta* as a masterpiece which stands comparison with the best Italian oratorios of the same period.

On 22 April 1728 the first of Almeida's serenatas, *Il trionfo della virtù*, was performed in Lisbon at the palace of Cardinal da Mota to celebrate the latter's elevation to the purple. Almeida's comic opera *La pazienza di Socrate*, based on a libretto by Nicolò Minato revised by João V's secretary Alexandre de Gusmão, was performed at the royal palace in Carnival 1733; it was the first opera in Italian to be sung in Portugal. Almeida also composed another two of the six Italian operas sung at the royal palace during the first half of the 18th century, *La finta pazza* and *La Spinalba*. *La Spinalba* is the only one to survive complete; it is written in the elegant and expressive style of Pergolesi's generation. According to a contemporary diarist, Almeida also composed music for the popular performances of *presépios*, or Nativity scenes, in the Lisbon quarter of Mouraria. His sacred music is similar in quality to his secular and theatrical music, and with Carlos Seixas and António Teixeira he is undoubtedly one of the most important Portuguese composers of the first half of the 18th century. His last dated work, the serenata *L'Ippolito*, was written in 1752. Almeida was probably one of the victims of the Lisbon earthquake in 1755.

WORKS

music lost unless otherwise stated

SACRED VOCAL

Il pentimento di Davidde (componimento sacro, A. Trabucco), Rome, S Girolamo della Carità, 1 March 1722

MANUEL CARLOS DE BRITO

Almeida, Inácio António de (*b* Guimarães, 18 Feb 1760; *d* Braga, 25 Oct 1825). Portuguese composer. In 1790 he became acting (and on 19 August 1793 titular) *mestre de capela* at Nossa Senhora da Oliveira, Guimarães, the collegiate church in which he was baptized. Vasconcellos's claim that he long served at Braga Cathedral as *mestre de capela* cannot be substantiated from any existing records at the cathedral, which instead give an uninterrupted succession of four others from 1752 to 1831. The sole work credited to him in the cathedral's 1895 music inventory is an orchestrally accompanied *Oficio de difuntos*, now lost. The decline of standards in church music during the early 19th century is illustrated by a trivial set of Christmas Matins for two sopranos, bass and piano (in *P-Ln*), signed by the 'abbade de Penedono', Almeida's ecclesiastical title. Much of his music for Holy Week (including 15 solo Lamentations and two *Miserere* settings) as well as 16 string quartets opp.5–7 survives (*E-Mp*), providing these works have been correctly attributed by their first cataloguer, who in fact gave the composer's first name as 'Juan'. Peris Lacasa has now credited these Madrid works to another Almeida.

ROBERT STEVENSON

Almeida (Nobrega Neto), Laurindo (José) (de Araujo) (*b* Santos, 2 Sept 1917; *d* Sherman Oaks, CA, 26 July 1995). Brazilian guitarist, composer and arranger. He was taught

the piano by his mother but secretly taught himself the guitar (borrowing his sister's instrument) from the age of nine. He first worked for radio stations in São Paulo and Rio de Janeiro, and in 1936 made a tour of Europe. For the 1940 Carnival he and Ubirajara Nesdan wrote *Aldeia da roupa branca* (later called *Johnny Peddlar*), which became internationally popular. From 1936 to 1947 Almeida worked with Brazilian artists such as Garoto, Villa-Lobos, Radames Gnatalli, Carmen Miranda and her sister Aurora, and Pixinguinha. After emigrating to the USA in 1947, he appeared in a Danny Kaye film, *A Song is Born*. Soon afterwards he joined Stan Kenton's orchestra, staying with him as a soloist, arranger and composer until 1952. While with Kenton he introduced the classical guitar tradition to jazz, and his recordings from this time set the standard for jazz guitarists. In the early 1950s he cultivated 'samba jazz', a combination of cool jazz with samba elements. He also toured throughout the world and recorded with the Modern Jazz Quartet and his own group, the LA 4.

Almeida's guitar works, which include a concerto (1979), were influenced by his classical background, Afro-Brazilian rhythms, traditional Brazilian music and American jazz. He contributed to a large number of films, composing the complete scores to some, including *Old Man and the Sea* and *Goodbye, my Lady*, and contributing to others. In 1961 his *Discantus* for three guitars tied with Stravinsky's *Moments* for piano and orchestra in a major composition prize. He also wrote a guitar tutor (1950) and ten Studies for guitar (1988). He made numerous recordings, some featuring his own works, and was created a Comendador da Ordem do Rio Branco by the Brazilian government.

RONALD C. PURCELL

Almeida, Renato (*b* S Antônio de Jesus, Bahia, 6 Dec 1895; *d* Rio de Janeiro, 25 Jan 1981). Brazilian musicologist and folklorist. After graduating from law school in Rio de Janeiro, he set out to be an author, journalist and critic. His first writings dealt with criticism and philosophy, but he also wrote important works on music, including the well-known *História da música brasileira* (Rio de Janeiro, 1926). The second edition (1942) contains over 150 musical examples and gives a chronological treatment to the art-music tradition as well as a detailed account of Brazilian folk and popular music. This was the standard Brazilian reference book for many years.

From 1947 Almeida turned his attention to folk music and folklore studies. For many years he was a member of the executive board of the International Folk Music Council. He was a founder-member of the Brazilian Academy of Music and chief of the information service of the Brazilian Ministry of Foreign Relations. He was also the first chairman of the Comissão Nacional de Folclore, which was created in 1947. His chief contribution to the field of folklore and folk music was the theoretical book *A inteligência do folclore* (Rio de Janeiro, 1957). His achievements as the executive director of the Campanha de Defesa do Folclore Brasileiro in the 1960s and as director of the *Revista brasileira de folclore* were outstanding.

NORMAN FRASER/GERARD BÉHAGUE

Almeida Prado, José de. *See* PRADO, JOSÉ DE ALMEIDA.

Almenraeder, Carl (*b* Ronsdorf [now Wuppertal], 3 Oct 1786; *d* Biebrich, 14 Sept 1843). German bassoonist, inventor and composer. Largely self-taught, he was a professional bassoonist in Cologne from 1808. After a period with the Frankfurt Nationaltheater (1812–14) he returned to Cologne as bandmaster of the 3rd Prussian Militia, accepting a similar position in Mainz (1816), where he met the learned acoustician and theorist Gottfried Weber. His association with Weber was of the greatest importance to his subsequent career and led him to make fundamental improvements to the bassoon. In 1817 he was able to experiment in the instrument factory of B. Schotts Söhne and first published his findings in a *Traité sur le perfectionnement du basson avec deux tableaux* (Mainz, *c*1819–20), with French and German text, describing his improved 15-key bassoon. In 1820, after Weber's departure from Mainz, Almenraeder returned to Cologne where he taught and performed, and also made flutes and clarinets in his own workshop. He gave this up in 1822 to take up a position as first bassoon in the Duke of Nassau's court orchestra at Biebrich and Wiesbaden. This enabled him to continue his research in Schott's factory and to superintend the making of bassoons according to his design and Weber's principles. His successive improvements were fully described by Weber in Caecilia [Mainz], ii (1825), 123–40, and ix (1828), 128–30.

Almenraeder remained at Biebrich for the rest of his life, apart from several concert tours, particularly in Holland. In 1829 he published in Caecilia an article on the maintenance of bassoon reeds. In the same year J.A. Heckel, who was 17, entered Schott's factory; Almenraeder, took him into partnership in 1831. Thus the business of Heckel, still the chief German manufacturer of bassoons, was founded in Biebrich. In Mainz in 1843 Almenraeder published his *Fagottschule* in German and French for his 17-key bassoon; this tutor, which includes reed-making instructions, has gone through many editions. His published compositions include a bassoon concerto and some chamber music with bassoon; he also left many unpublished works in manuscript. For a more detailed discussion of his improvements to the bassoon *see* BASSOON, §4.

LYNDESAY G. LANGWILL/R

Almeri, Giovanni Paolo (*b* Senigallia, 17 Aug 1629; *d* after 1689). Italian composer. In 1654 he was *maestro di camera* to the papal nuncio to Venice, in 1689 canon and *maestro di cappella* of Senigallia Cathedral. He published two volumes of motets for small groups. The first (Venice, 1654) consists of 17 pieces for solo voice and continuo distinguished by expansive melodies. The second, *Motetti sagri* op.2 (Bologna, 1689), consists of pieces for two and three voices and continuo.

NIGEL FORTUNE

Almérie. A kind of lute, perhaps one activated by a wheel, invented by the French polymath JEAN LE MAIRE (*c*1581–*c*1650). The word 'almérie' is an anagram of the inventor's name.

Almglocken (Ger.). *See* COWBELLS.

Almila, Atso (*b* Helsinki, 13 June 1953). Finnish conductor and composer. He studied conducting at the Sibelius Academy in Helsinki with Jorma Panula (diploma 1979) and shared first prize in the Nordic Conductors' Competition at Norrköping. He was conductor of the Polytechnic Orchestra (1975–9), the Cantemus chamber choir (1977–82), the Tampere PO (1987–9), the Akateeminen Laulu choir (from 1989), the Joensuu City Orchestra (from 1993) and the Finnish National Theatre (1982–7 and from 1989). In 1993 he became artistic director of the Jyväskylä Arts Festival. His principal works include concertos for double bass and flute (1978 and 1985) and two operas, *Thirty Pieces of Silver* (1987, Heikki Ylikangas) on a Revivalist theme, and, on the subject of emigration, *America* (1991, Antti Tuuri), which was first performed at the Ilmajoki Festival.

MIKKO HEINIÖ

Almond. *See* ALLEMANDE.

Almorox [Almoroix], **Juan Alvárez de** (*fl* 1482). Iberian composer. He was a singer in the Aragonese royal chapel of Ferdinand V over a period of almost 30 years, from 1482 until 1510. He was presented to various ecclesiastical benefices under royal patronage and held, presumably by proxy, the position of head chaplain of the Dominican monastery in Madrid until 1505.

He was also closely associated with Segovia Cathedral for the best part of his life, being appointed chapel master there from 1 October 1504. For some years he held both positions, but this must have proved incompatible for in the autumn of 1507 he was suspended from his post as chapel master for an unspecified breach of the rules and replaced by Francisco de San Juan. He remained a member of the chapter, however, and was much involved in cathedral business during long periods of absence from the royal chapel during the period 1507–10. After this date, his name disappears from the registers of the royal household, and he dedicated himself to his cathedral work, as a tenor in the choir, but also, as the years went by, as a statesman who was called upon to oversee the musical reforms of 1539, and to adjudicate on the appointment of the chapel master in 1541. The chapter acts for 25 June 1550 (by which time he was living at home, unable to fulfil his duties) state that he had served the cathedral for over seventy years (which would imply that he may have begun his training there as a choir boy and that he was probably born around 1470), and that he had been responsible for the copying of music for the cathedral. The chapter determined to reward his long service with a pension, and, as his health deteriorated, ensured that he was well cared for: by 21 November 1551 it was making arrangements for his funeral.

Relatively few works by Almorox survive, but he was clearly a technically able composer who wrote in the musical idiom characteristic of the generation of Francisco de Peñalosa. The Cancionero Musical de Palacio contains three pieces by him: *Gaeta nos es subjeta*, *O dichoso i desdichsdo* and *Porque os vi* (ed. H. Anglès, *La música en la corte de los reyes católicos: Cancionero musical de palacio*, MME, v, x (1947–51), nos.423, 200, 211) and there is a three-voice Mass in *E-TZ* 3. The Mass does not appear to be based on a cantus firmus. It exploits contrasts of texture and scoring as structural signposts; declamatory homophonic passages are used to highlight key words in the text. The three surviving villancicos, all for four voices, are notable for their use of triple time in the refrain. Two of these songs take themes of courtly love, while the third *Gaeta nos es subjeta* celebrates the taking of Gaeta in 1504.

ISABEL POPE/TESS KNIGHTON

Almqvist, Carl Jonas Love (*b* Stockholm, 28 Nov 1793; *d* Bremen, 26 Sept 1866). Swedish author, journalist and composer. After his mother's early death he was educated mainly by his grandfather, the prominent magazine publisher C.C. Gjörwell. In 1815 he graduated from the University of Uppsala and subsequently became a government official and fellow-clerk of the neo-Romantic poet E.J. Stagnelius. At this time Almqvist was greatly influenced by the German poets (Goethe, Tieck, Hoffmann and Schlegel), by Swedenborg and by the Gothic movement: his enthusiasm for old Nordic culture – the so-called 'Alliance of Mannheim' included Almqvist as a member in 1816 – was exceptional for the period. But eventually he abandoned neo-Romanticism, which he found too allegorical, and worked towards a poetry of reality in a wider sense. In 1823–6 he attempted to put Rousseau's philosophy into practice as a subsistence farmer, but he returned to Stockholm and became headmaster of the Nya Elementar-skolan in 1829.

While still a student, Almqvist wrote poetry and philosophy. In 1822 he was forced to destroy the whole

edition of *Amorina*, a 'poetical fugue' (a compound of lyrics and drama), because it attacked the doctrine of free will. As a teacher Almqvist wrote books on educational subjects but also novels in *Törnrosens Bok* ('The Book of the Thorn-rose'), which was published in a duodecimo edition (1832–42) and an imperial edition (1839–49). Gradually his publications became more radical; he pleaded for universal suffrage, humane prison discipline, the emancipation of women and finally, in the short story *Det går an* (1840, Eng. trans. as *Sara Videbeck and the Chapel*, New York, 1919), he recommended free union based on love, without marriage.

Almqvist had taken holy orders in 1837 and was warned by the Chapter for moral crime and finally forced to resign his orders in 1841; he then supported himself as a journalist on the liberal newspaper *Aftonbladet*. In 1851 he was accused of murder by poison and was forced to flee the country. After living in the USA under pseudonyms, including 'Gustavi', he moved to Bremen in 1865, where he died while working on an ambitious study of Swedish metrics.

Almqvist was a master of various literary styles and was well versed in a wide variety of subjects, including music. In his *Monografi* (1844–5), principally a reply in the moral controversy, he developed his view on musical matters (*Om poesi i sak till åtskillnad ifrån poesi i ord*), describing how the beauty of 'Melody' had to give way to the counterpoint of Bach and was defeated by 'Harmony'. As a composer he was self-taught; he struggled against the enthusiasm for virtuosos and 'the empire of instrumental music' and upheld the right of genius to shape its own rules. The collection of 26 piano pieces, *Fria Fantasier* ('Free fantasies', 1847–9), was criticized, perhaps justly, for being too plain. Some of these pieces, however, are unique for their period, being naive in a folklike manner, as are his masterpieces, the unaccompanied songs to his own texts, *Songes* ('Dreams'), which were composed *c*1830 and intended to be used in *tableaux vivants*. They bear witness to his profoundly original musical gifts.

CARL-GUNNAR ÅHLÉN

Alnaes, Eyvind (*b* Fredrikstad, 29 April 1872; *d* Oslo, 24 Dec 1932). Norwegian composer, conductor and organist. He studied with Peter Lindeman (organ) and Iver Holter (harmony, counterpoint and composition) at the Christiania Music and Organ School (1888–92), and was then a pupil of Reinecke (composition) and Ruthard (piano) at the Leipzig Conservatory (1892–4). Appointments as organist followed in Drammen (1895–1907) and Oslo (1907–32), where he served at the cathedral from 1916; his First Symphony was completed during a course of study in Berlin in 1897. He was one of those responsible for the foundation of the Norsk Komponistforening, of which he was president from 1921 to 1923. As a member of the Koralbokkomiteen (1922–6) he harmonized most of the melodies in the chorale book of the Norwegian Church, and he edited preludes to all of the chorales. He was active as a choir-conductor, leading the Håndverksangforening (1905–31) and Holter's Choral Society (1920–31). He was also president of TONO, the International Music Bureau of the Norwegian Composers' Union (1931), and active as a teacher. Among the awards he received were the King's Gold Medal and the Order of St Olav (1932). Particularly outstanding as a composer of solo and choral songs, the successor of Grieg and Kjerulf, he began composing in a distinctly late-Romantic style with complex harmonic ornamentation; some of the later works, however, show a tendency towards an Impressionist handling of chords and freer experimentation with dissonance. Though Norwegian folk music is rarely a direct influence, its presence informs his melodic lines in his more ballad-like settings, which are almost always of Scandinavian poets. His orchestral music is bolder, the later music in particular: the Second Symphony still has audible roots in Norwegian Romanticism, but it is invigorated with a rhythmic vitality and sense of orchestral colour reminiscent of Janáček.

PETER ANDREAS KJELDSBERG/MARTIN ANDERSON

Alnar, Hasan Ferit (*b* Istanbul, 11 March 1906; *d* Ankara, 27 July 1978). Turkish composer and conductor. He had his first music lessons from his mother. He showed a precocious talent for playing the *qānūn* and at 16 he composed a musical play in traditional Turkish monophonic style. In 1927 he went to Vienna and studied composition with Joseph Marx at the Academy of Music and conducting with Oswald Kabasta. He returned to Turkey in 1932, was appointed conductor to the Istanbul City Theatre Orchestra and taught history of music at the Istanbul Conservatory. In 1936 he became assistant conductor of the Ankara Presidential SO, taught piano at the State Conservatory and was an assistant to Carl Abert at the Ankara State Opera. In 1946 he was appointed conductor of the Presidential PO and held the post until 1952, when he left because of a nervous breakdown, though he continued to teach at the conservatory and to appear as guest conductor in Ankara and with the Vienna SO and the Stuttgart RSO. One of the Turkish Five, Alnar showed strong attraction in his works to the rhythmic and melodic patterns of Turkish monophonic music. (*KdG*, M. Greve)

FARUK YENER

Aloisi, Giovanni Battista (*b* Bologna; *fl* 1628–44). Italian composer. He became a Franciscan friar and a doctor of theology; he was also *maestro di cappella* of the Cathedral of Sacile, near Udine, and later, in 1628, at the Franciscan friary in Bologna. With several other Italian musicians, he was active in the establishment of Cardinal Franz von Dietrichstein, Prince-Bishop of Olomouc, from 1631 until the cardinal's death in 1636, and in 1637 he wrote the dedication of his *Contextus musicarum* in Vienna. His output, entirely of church music, is mostly up to date in style and competently written. The masses of 1628 do, however, contain works in the *stile antico* as well, mellifluous and harmonically unadventurous compared to the music in the then modern manner, which is based more on contrasts. The *Coelestis Parnassus*, published in the same year, includes two motets with violins, which are used in delicate interplay with tenor voices. Aloisi's expressive technique includes chromaticism, used with telling effect in the third setting of *Alma Redemptoris mater* in the *Corona stellarum* and in the motet *Quid mihi est in caelo* from the *Contextus musicarum*. The six-part pieces of the latter collection recall a grander style, using imitative building up of the texture, dramatic pauses and daring counterpoints.

JEROME ROCHE

Alomía Robles, Daniel (*b* Huánuco, 3 Jan 1871; *d* Lima, 17 July 1942). Peruvian ethnomusicologist and composer. At the age of 13 he was sent by his mother to live with her brother at Lima, and there in 1887 he began studies of solfège with Manuel de la Cruz Panizo and the piano with Claudio Rebagliatti. He studied medicine at the Lima Facultad de S Fernando (1892–4), but in 1896, while on a lengthy visit to the hinterland Campas tribe, he was stimulated by a Franciscan to devote himself to the study of indigenous music. The Cuban pianist Sebastiana Godoy, whom he married in 1897, helped him to harmonize and arrange the Andean tribal music collected during the numerous journeys throughout Ecuador, Peru and Bolivia that occupied him intermittently until 1917. A lecture-demonstration at S Marcos University, Lima (1910) brought his Inca researches to national notice; after the issue by Victor and Brunswick of 13 discs of his orchestrally accompanied arrangements, he became the best-known Peruvian musician of his time. He spent periods in Havana (1917–22) and the USA (1922–33), and from 1939 to 1941 he directed the fine arts section of the Peruvian Ministry of Education. His output falls into three categories: 696 notated Andean melodies, 319 harmonizations and 238 original compositions. The last, often of a regional character, include piano pieces, works for vocal and instrumental combinations, three zarzuelas, a four-act opera, *Ille Cori*, and his best known stage work, *El cóndor pasa*, a one-act sketch in two scenes, which was first performed in 1913 at the Teatro Mazzi in Lima. Alomía Robles's compositions, folk music collections and arrangements have been preserved and can be found in the three-volume publication compiled and edited by his son, *Himno al sol* (1990), a collection that notably contains a number of materials previously unknown.

ROBERT STEVENSON

Alonso (*fl* 1500). Spanish composer. He may be identifiable with ALONSO DE PLAJA.

Alonso (Gómez), Miguel (*b* Villarín de Campos, Zamora, 25 Aug 1925). Spanish composer. He studied initially at the Ciudad Rodrigo Seminary with Cándido Ledesma (1936), becoming a priest in 1948, and then studied in Salamanca with Hilario Goyenechea, and (1948–54) in Madrid with Conrado del Campo, Julio Gómez and others. In 1953 he won the Carmen del Río scholarship

of the Real Academia de S Fernando, and in 1955 the Prix de Rome.

He qualified in the field of Gregorian chant at the Pontificio Instituto di Musica Sacra in Rome (1958), having been a pupil of Higini Anglès and Eugène Cardine. He attended Petrassi's classes at the Accademia di S Cecilia and Franco Evangelisti's courses in electronic music. While in Rome he was music director of S Maria di Monserrato, professor at S Salvatore in Lauro, contributor to *Psalterium* (whose editor he later became), consultant to the Commission on Sacred Music of the diocese of Rome, representative of the National Secretariat on Liturgy and consultant to the Vatican's Sacred Congregation of Rites for the Sacred Liturgy.

Alonso returned to Spain in 1971 and in the same year was appointed a corresponding member of the Real Academia de S Fernando. He continued working on musical and liturgical matters within the Spanish Church. Since 1972 he has worked with Spanish Radio, the Spanish Radio and Television SO (1986–9) and the music publisher RTVE-Música (1990–95).

Alonso began composing in 1952. At the centre of his works are an Expressionist inclination and a critical awareness of the innovations introduced during the post-serial decades, including musique concrète, electro-acoustic music, flexibility in notation and the delegation of responsibility to the performers themselves. There is also a sacred pulse that beats in all his works, attributable both to his priestly training and practice and to his preoccupation with the future of the human race.

ANGEL MEDINA

Alonso Bernaola, Carmelo (*b* Ochandiano, Vizcaya, 16 July 1929). Spanish composer. After early musical training in Medina de Pomar and Burgos, he began his career as a professional clarinettist. He studied composition with Enrique Massó, Francisco Calés Otero and Julio Gómez at the Real Conservatorio, Madrid; in Italy (as the winner of the Spanish Rome Prize, 1959) with Petrassi and Celibidache; and in Darmstadt with Maderna (1962). He also attended summer courses given by Jolivet and Tansman in Santiago de Compostela. Active as a film music composer from 1964, he lectured on film music at Valladolid University and on composition at several Spanish summer courses during the 1970s. From 1981 until 1994 he directed the Escuela de Música Jesús Guridi that he had founded in Vitoria, and taught composition. He was appointed to the Real Academia de Bellas Artes de San Fernando in 1990, and in 1993 he was awarded a Medal of Merit from the Madrid city council in recognition of his artistic achievements. Other awards include the National Prize for Music (1962, 1992), the Goya Prize for film music (1989) and an honorary doctorate from the University of Madrid (1998).

Bernaola is regarded as one of the leading Spanish composers of the 'Generación del 51'. His compositional style, which at first reflected the characteristics of extended tonality and late neo-classicism, changed radically under the influence of the European avant garde with which he came into contact in the early 1960s. After exploring atonality (*Piccolo concerto*, 1959–60) and serial music (*Constantes*, 1960), he adopted a style marked by aleatory techniques (*Superficie I*, 1961). In the works that followed he aimed to communicate a 'spatial sense of music' through the use of combinatorial procedures (*Espacios variados*, 1962), structural mixtures of sound (*Heterofonías*, 1965, rev. 1967) and visual images (*Músicas de cámara*, 1967). This progressive separation of musical parameters from their traditional functions concluded with *Impulsos* (1968–72). In the 1970s Bernaola consolidated his compositional language (Symphony in C, 1974) and relaxed his use of aleatory techniques, abandoning them entirely in some works (*Las siete últimas palabras de Jesús en la cruz*, 1984). In 1990 he returned to a style in which a 'greater vertical dependence of the parts on each other' could be achieved.

CHRISTIANE HEINE

Alotin, Yardena (*b* Tel-Aviv, 19 Oct 1930; *d* New York, 4 Oct 1994). Israeli composer. She studied at the Tel-Aviv Music Teachers' College (1948–50) and at the Israel Academy of Music (1950–52), where her principal teachers were Oedoen Partos (composition) and Ilona Vincze-Kraus (piano). Later, she was composer-in-residence at the Bar-Ilan University (1975–6).

Alotin shared her teachers' ideal of combining Western, Eastern and Jewish music traditions with contemporary ideas. In general, her works are based on Baroque and Classical forms, but in conjunction with an individual language of fluidly changing metre and rhythm, already evident in *Yefeh nof* ('Beautiful Landscape', 1952). The theme of the Passacaglia (1954) for piano is a Bukharian song, elaborated through extended tonality, while the influence of biblical cantillation is felt in the Cantata (1956) and in the vital and spontaneous Sonata for violin and piano (1960). A sense of optimism, together with a natural lyricism and flair for drama, is present in most of her work; even *Al golah d'vuyah* ('A Suffering Diaspora'), inspired by the suffering and longing of the diaspora Jews, has its optimistic close. As well as a frequent use of polyphonic textures, as in the *Kina fuga* (Lament Fugue, 1960) and *Trio* (1979), Alotin also employed heterophony in her mixed vocal and instrumental works, for example in *Shir chag* ('Holiday Song', 1984), which was commissioned by the Tel-Aviv Foundation for Literature and Art to mark the 75th anniversary of the city. A pianist and piano teacher, she also wrote youth and educational music. Her flute piece *Yefeh nof* (1978), composed for James Galway and performed by him many times, has become established in the international flute repertory.

WORKS
(*selective list*)

Orch: Al golah d'vuyah [A Suffering Diaspora] (Alotin), 1v, orch, 1958; Divertimento, chbr orch, 1992

Aloyson, Richard. *See* ALLISON, RICHARD.

Alpaerts, Flor (*b* Antwerp, 12 Sept 1876; *d* Antwerp, 5 Oct 1954). Belgian composer and conductor. He studied in Antwerp at the Flemish Music School (later called the Royal Flemish Conservatory) under Peter Benoit and Jan Blockx, and conducting under Eduard Keurvels. In 1903 he became professor at the Conservatory, and was director of that institution from 1934 to 1941, when he retired. He was also active as an orchestral and operatic conductor, and was a member of the Académie Royale de Belgique.

Alpaerts was one of the outstanding personalities in Flemish musical life, both as conductor and composer; he was also a great teacher and an admirable organizer. As a composer he was, like Paul Gilson and August de Boeck, a typical Flemish representative of the Impressionist school. However, his Impressionism came closer to Richard Strauss and Respighi than to Debussy. An example of this tendency is the symphonic poem *Pallieter*, while with his *James Ensor Suite* he was inspired by four works of the Ostend painter to create an Expressionist score. In his later works he turned gradually to neo-classicism. As a conductor he was recognized abroad as well as in Antwerp.

WORKS
(*selective list*)

AUGUST CORBET/CORNEEL MERTENS/ DIANA VON VOLBORTH-DANYS

Alpert, Herb (*b* Los Angeles, 31 March 1935). American trumpeter, bandleader, composer and record company executive. He studied jazz and the classical trumpet as a child, then spent two years in the army as a trumpeter and bugler. He set himself up as an independent record

producer, having his first success in 1959. In 1962, in association with Jerry Moss, he launched the company A&M Records with his own first recording as a trumpeter and bandleader, *The Lonely Bull*; because band sounds and crowd noise from the bullring at Tijuana, Mexico, were dubbed on to the record, Alpert's band became known as the Tijuana Brass. This piece, a *mariachi*-style trumpet duet over guitar and drum accompaniment, set the pattern for a number of hits, including *Mexican Shuffle* and *A Taste of Honey*, that exploited a distinctive combination of Mexican brass sound and jazz rhythms. In 1968 the band's recording of *This guy's in love with you* (by Bacharach and David), on which Alpert appeared as both the vocalist and trumpeter, reached no.1 on the chart. Alpert's style influenced the instrumental accompaniments of a number of other groups, such as Diana Ross and the Supremes and the Beatles. A&M Records became a highly successful company, prompting performers such as Joe Cocker, Carole King and the Flying Burrito Brothers in the 1960s, and the Carpenters and Supertramp in the 70s; Alpert devoted much of his time to his business activities. He disbanded his group in 1970, but by 1974 he had begun to perform again. His subsequent albums showed an eclectic style, drawing on influences from Africa for *Herb Alpert and Hugh Masekela* (1978), funk and disco for the hugely successful *Rise* (1979), big band sounds for *My Abstract Heart* (1989) and hip-hop for *North on South Street* (1991). The jazz album *Midnight Sun* (1992) was his last for A&M Records, which he and Moss had sold in 1990. In 1994 they started a new record label, Almo, with which Alpert recorded *Second Wind* (1996) in conjunction with a world tour, and the salsa-inspired *Passion Dance* (1997).

TERENCE J. O'GRADY/R

Alphorn [Alpenhorn] (Ger.; Fr. *cor des alpes*). Wooden trumpet of pastoral communities in the Alps. The name is also conveniently used to cover similar instruments of Scandinavia, Russia, the western Slav countries, Hungary, Romania and, up to the 19th century, some of the highlands of Germany. Szadrowsky's vague reports of alphorns in the Pyrenees and the Scottish highlands are unconfirmed. An alphorn is made of a young fir, lime, poplar etc.; a mountainside tree curving upwards from the roots is often chosen, giving an upturned bell. The wood is longitudinally halved by axe or saw and each half is hollowed. The two pieces are reunited under strips of bark or binding of roots or gut. The mouthpiece may be either cut in the wood or made separately. In several areas the folded shape of a trumpet is sometimes imitated. The commonest length of the alphorn is about 185 cm, in which case its range extends to the 5th or 6th harmonic (as quoted by Beethoven at the end of the Pastoral Symphony). Many alphorns are 120 cm in length or less; however, instruments 335 cm long have been known in Switzerland since the 16th century, and specimens up to 520 cm occur in Slovakia. Today the standard length ranges from 340 cm to 360 cm for alphorns tuned in F or G. Tunes may then ascend to the 12th harmonic or even higher.

Alphorns were known best as herdsmen's calling instruments, serving also in some areas to summon to church and formerly to war. They may also be numinous: among the Mari of Russia the long wooden trumpet is made for the spring festival and afterwards sacrificially burnt or hidden in a sacred place. Overall likeness in making and using alphorns, and their distribution, suggest that they possibly may have originated among post-Celtic peoples of the Migration Era. There is no firm evidence of prior existence; 'cornu alpinus' in Tacitus is less than proof of a wooden trumpet, of which the earliest specimen, from the 9th-century Oseberg ship (Oslo, Vikingskiphuset), supports iconographic suggestions that wooden trumpets of moderate size were used as summoning and military instruments in early medieval northern Europe in addition to their pastoral functions.

Alphorns are currently constructed in a technically more refined manner, and in Switzerland alone around 20 makers export their instruments worldwide. Those manufactured industrially are often built in three parts, with a shallow-cup mouthpiece made of beechwood or plastic; they are electronically tuned, and produce ten to fifteen natural tones (of which the particularly characteristic 11th partial is called the 'Alphorn-fa'). Jean Daetwyler (1907–94) and Ferenc Farkas (*b* 1905) both wrote alphorn concertos; other works include Xaver Schnyder von Wartensee's *Alpenlied auf Rigi Scheideck* (1835) for male voices and alphorn, and *Recitatif et prière pour cor des alpes et orgue* (1972) by Etienne Isoz (1905–87).

al-Rajab, al-Ḥājj Hāshim (*b* al-A'zamiyya, June 1921). Iraqi ethnomusicologist and *santūr* player. The focus of his studies has been on the *maqām*. He became interested in this in the 1930s after hearing the singing of the masters Muḥammad al-Qundarjī (*d* 1945) and 'Abbās al-Shaykhalī (1881–1967) and in 1937 began learning the *maqām* himself. In about 1949 he started lessons on the *santūr* with Sha'ūbī Ibrāhīm Khalīl (*b* 1925) and founded a chamber ensemble, *al-tchalghīal-baghdādī*, in 1950. He has widely researched the *maqām*, making it publicly known with his writings and by touring widely with his chamber ensemble. He is also an expert on manuscripts and has published annotations of treatises by classical authors.

CHRISTIAN POCHÉ

Al rovescio (It.: 'upside down', 'back to front'). A term that can refer either to INVERSION or to RETROGRADE motion. Haydn called the minuet of the Piano Sonata in A H XVI:26 *Minuetto al rovescio*: after the trio the minuet is directed to be played backwards (retrograde motion). In the Serenade for Wind in C minor K388/384*a*, Mozart called the trio of the minuet *Trio in canone al rovescio*, referring to the fact that the two oboes and the two bassoons are in canon by inversion.

□

Alsager, Thomas Massa (*b* Alsager, Cheshire, 27 Sept 1779; *d* London, 15 Nov 1846). English music critic and patron. He was proprietor of and writer for *The Times*, an association formed in 1817 through his friendship with Thomas Barnes. Alsager reported on financial matters and foreign news, but evidence reveals that both he and Barnes wrote most of the articles on theatre and music in *The Times* before the appointment in 1846, at Alsager's recommendation, of J.W. Davison as the first full-time music critic on a daily newspaper. Alsager was intimate with Charles Lamb, Coleridge, Wordsworth, Leigh Hunt and Keats, while his passion for music led to friendships with many important figures in London musical life, including Mendelssohn, Spohr, Smart, Moscheles and Ayrton (whose son married Alsager's daughter). Several English premières took place at Alsager's residence, most notably that of Beethoven's *Missa solemnis* on 24 December 1832. Alsager's desire to proselytize for Beethoven's piano sonatas and quartets, especially the late works, led to the establishment of the Queen Square Select Society (1842) and the Beethoven Quartet Society (1845), enterprises supported by Mendelssohn, Moscheles, Joachim, Vieuxtemps and Scipion Rousselot, who published his own edition of the Beethoven quartets (dedicated to Alsager) in 1846. Allegations of impropriety at *The Times* led to Alsager's suicide, but his important contributions to London's musical life survived him.

DAVID B. LEVY

Alsbach. Dutch firm of music publishers. Carl Georg Alsbach (*b* Koblenz, 20 Jan 1830; *d* Rotterdam, 3 Jan 1906) founded the firm in Rotterdam on 15 March 1866 and it became one of the most important music publishing

firms in the Netherlands in the first half of the 20th century. In 1898 the business moved to Amsterdam where the founder's son Johann Adam Alsbach (*b* Rotterdam, 12 April 1873; *d* Amsterdam, 20 May 1961) directed it from 1903 until his death, when the firm was taken over by Editions Basart. By purchasing the stock of several publishing houses, including Brix von Wahlberg (1898), Stumpf & Koning (1898), J.W.L. Seyffardt and A.A. Noske, Alsbach became the publishers for the majority of Dutch composers (e.g. Julius Röntgen, Diepenbrock, Sigtenhorst Meyer and Badings). From 1910 to 1960 the firm produced the publications of the Vereniging voor Nederlandse Muziekgeschiedenis. It also issued a large number of works concerned with music teaching and practical music-making, both vocal and instrumental. Until 1939 Alsbach formed an important collection of music by Dutch composers printed since the start of the 19th century; it is now in the Gemeentemuseum in The Hague.

Al segno (It.: 'to the sign'). An instruction to proceed, on repetition, only to the point at which a sign is placed. It is also used to indicate the duration of some other instruction, for example *sul tasto al segno* (Stravinsky, *Dumbarton Oaks* concerto, second movement).

See also DAL SEGNO.

Al-Shawān, 'Azīz (*b* Cairo, 6 May 1916; *d* Cairo, 14 May 1993). Egyptian composer. He was educated at a French school in Cairo, the Collège des Frères, obtaining a diploma in commercial studies. There he played clarinet and horn in the school band, and sang in the choir. He also received private violin lessons from the German Joseph Aubervon, but after nine years an accident obliged him to give up the instrument, and he turned to composition. He took lessons in theory and composition with Aubervon, Minato and other European teachers resident in Cairo, and with the Russian Orlovitsky. After leaving school he worked for the Philips recording company. This period (the late 1940s and early 1950s) saw him composing patriotic and love songs for famous singers such as Shādia and Ragā' 'Abdū. In 1952 he became director of the newly founded Soviet cultural centre in Cairo. In the late 1950s he made his first trip to the USSR, where he studied with Khachaturian at the Moscow Conservatory. During that trip he acquainted himself with the music of Soviet composers from the eastern republics and their solutions of the problems of creating their national musical styles. There the Melodiya recording company recorded some of his early works, including the symphonic poem based on the popular song *'Aṭshān yā Sabāyā*. After returning to Egypt, he received a grant from the Ministry of Culture, enabling him to compose his second opera *Anās El-Wugūd* (1960–65). In 1967 he went again to the USSR and studied composition for a year and a half with Khachaturian. On his return he taught composition at the Institute of Arab Music and the Academy of Arts (1970), and was appointed musical adviser to the Cairo SO (1973).

Al-Shawān's style is characterized by broad, melismatic melodies with frequent touches of the higaz genre, using the augmented 2nd. Part of the appeal of his melodies derives from the quasi-improvisatory character of his cadences, reminiscent of the free *mawwāl* singing. His harmonic language is richly chromatic, showing the influence of Rachmaninoff or Khachaturian. He regarded Western music (in his own words) 'not as an alien element, but rather as an international musical language'. Folk themes do not occupy a prominent place in his style but, when used, they are woven into a Western Romantic syntax. Al-Shawān's output falls into three periods. In the first (*c*1945–55) he composed mainly chamber music and orchestral works, notably *Abu Simbel*, written for the transportation of a temple. The second period (1955–65) saw him writing larger works: the Piano Concerto (notable for its first-movement cadenza, imitating the zither-like qānūn), four cantatas on patriotic subjects, and symphonic works. In the third period (from 1966) he wrote his opera *Anās El-Wugūd* and the Oman Symphony. *Anās El-Wugūd* is perhaps his most important work, the first Egyptian opera with Arabic language and content to reach the stage. It was first heard in a concert version in 1994 and staged at the Cairo Opera House in 1996 and 1997. El-Shawān's writings on music are gathered in *Mawsū'a mūjaza li'l mūsīqā* [A small encyclopedia of music] (Cairo,1992).

Al'shvang, Arnol'd Aleksandrovich (*b* Kiev, 19 Sept/1 Oct 1898; *d* Moscow, 28 July 1960). Ukrainian musicologist and composer. He entered the Kiev Academy of the Russian Musical Society in 1911, but in 1914 he was exiled to the northern Olonets government by tsarist authorities. Returning eventually to Kiev he continued his musical education and worked illegally in courses for workers. At the Kiev Conservatory (reorganized by Glier on the basis of the old academy) he studied composition

with Glier and Boleslav Yavorsky, and graduated in 1920 from the piano class, where he had studied with Khodorovsky and Heinnich Neuhaus. In the same year he graduated from the Institute of National Economy.

Al'shvang began teaching in public classes on music history in 1919, and in the same year he was appointed head of the Soviet Military Music School in Kiev. From 1923 he taught at the Kiev Conservatory and at the Valery Bryusov Institute of Literature and Fine Arts in Moscow. From 1923 to 1931 he also appeared as a pianist in many towns in the USSR. In 1930 he began to give a course in music history at the Moscow Conservatory, but a serious illness interrupted his teaching work in 1934. However, he continued to publish books and a large number of articles, and until the last days of his life he maintained a wide range of interests, including the music of Debussy and Ravel, the philosophical problems of Skryabin's music and the music of Russian and contemporary Soviet composers. In 1944 he was awarded the degree of Doctor of Arts in recognition of his services to Soviet musicology. As a composer Al'shvang was known for his symphony (1922), his symphonic poem on Ukrainian folk themes (1927), songs, choral works and piano pieces; all his works remained in manuscript.

IGOR BELZA

Alsina, Carlos Roqué (*b* Buenos Aires, 19 Feb 1941). Argentine pianist and composer. He worked with Berio and Maderna in 1965; after two years at SUNY, Buffalo (1966–8) he moved to Berlin, then to Paris in 1973. In 1969, with the collaboration of Vinko Globokar and Michel Portal, he founded New Phonic Art, an ensemble dedicated to new forms of improvisation. He was awarded the Guggenheim Prize in New York in 1971 for his *Überwindung* for four soloists and orchestra (1970) and *Schichten* for chamber orchestra (1971). His work often involves elements of music theatre (*La muraille*, on a text by Michel Rafaelli and Taankred Dorst, 1981; *Del tango*, 1982) and forms of spectacle that include dance (*Fusion*, 1974, for two pianos and two percussionists with additional instruments played by the dancers). Alsina is fond of transforming or reinterpreting existing forms in his works; for example, the second part of his First Symphony attempts to recreate the emotional and musical world of the tango.

JEAN-YVES BOSSEUR

Alsted, Birgitte (*b* Odense, 15 June 1942). Danish composer. Educated at the Kongelige Danske Musikkonservatorium in Copenhagen as a violinist, she became a member of the conservatory's Study Circle of contemporary music, which encouraged her development as a composer. Since producing her first work in 1971 she has devoted herself to composing, but at the same time she derives inspiration from working as a freelance violinist and teacher, where her main concern is encouraging creativity in children. All her activities, not least her theatrical projects, reveal an experimental approach. She has co-operated successfully with the actor and director Brigitte Kolerus to create fascinating performance-pieces, usually with a feminist stance, such as *Frokost i det grønne* ('Lunch in the Open Air') and *Drømmespil* ('Dreamplay'). The photographer Helle Nørregaard has been another collaborator. Alsted's music has always been extremely expressive; when it is not dominated by pure timbres it moves freely, while not avoiding tonality.

In 1980 Alsted was one of the founders of Kvinder i Musik (Women in Music) and has worked to promote the performance of music by women.

INGE BRULAND

Alsted [Alstedt, Alstedius], **Johann Heinrich** (*b* Ballersbach, nr Herborn, March 1588; *d* Weissenburg [now Alba Julia, Romania], 9 Nov 1638). German theologian, encyclopedist and music theorist. From 1608 he taught at the Calvinist academy, Herborn, where J.A. Komenský was among his pupils. Following the disruptions of the Thirty Years War, he transferred to Weissenburg in Transylvania in 1629–30. His liberal strand of Calvinist thought is reflected in his theological understanding of music: he tolerated secular music (both polyphonic and instrumental) alongside strictly regulated church music as long as it was committed to the spiritual purpose of all music. Classifying music among the mathematical disciplines, he treated it briefly in a series of mathematical textbooks and most extensively in his masterwork, the largest, most comprehensive and systematic encyclopedia assembled to that time (1620). Like that of most of the 37 disciplines handled in the work, his treatment of music is derivative, and its chief importance lies in its comprehensiveness, systematic presentation, wide distribution and easy accessibility within the encyclopedia as a whole. Like Erycius Puteanus and David Mostart, he favoured seven-syllable solmization series (*ut-re-mi-fa-sol-la-bi* or *bo-ce-di-ga-lo-ma-ni*). His discussion of triads followed Zarlino and Johannes Lippius. From the former he took the mathematical derivation of the triad from the spacing of intervals; from the latter he took the principle that inversions of a chord should be regarded merely as different aspects of the same chord in root position.

INGO SCHULTZ/HOWARD HOTSON

Alt, in. *See* IN ALT. *See also* PITCH NOMENCLATURE.

Alta (i). 15th-century term for the group of two or three shawms and trumpet or sackbut that constituted one of the standard instrumental ensembles from the 14th century to the 16th. The word is evidently an abbreviation of *alta musique* (Fr.) or 'loud music' as opposed to *basse musique*, 'soft music'. The *haut* instruments included shawms, sackbuts, trumpets, drums, and so on, while the *bas* instruments were recorders, viols or fiddles, harps, psalteries, and so on.

In his incompletely surviving treatise, *De inventione et usu musicae* (*c*1485), Johannes Tinctoris described the alta as a standard combination, and explained that the treble and tenor shawms usually played the superius and tenor parts, and the sackbut (or slide trumpet) the contratenor. Many paintings, miniatures and other art works of the 15th and early 16th centuries show the typical alta; Besseler, for example, reproduced a representative selection of such pictures in his *Die Musik des Mittelalters und der Renaissance* (Potsdam, 1931–4). Many of these pictorial sources – for instance the well-known spalliera painting known as the *Adimari Wedding* (see illustration) – include four performers; three play while one evidently rests his embouchure.

Most towns and courts regularly employed a small band of loud minstrels on long-term patronage, and surviving contracts and guild regulations make clear that many independent musicians also formed their own freelance groups to secure whatever engagements they could (civic organizations and confraternities provided ample sources for such employment). The principal instruments were evidently shawms and sackbuts, although their training under an apprenticeship system leading to entry into the musicians' guild would also have taught players to double on various other instruments as well. Polk's *German Instrumental Music of the Late Middle Ages* provides a useful survey of the history of these wind bands in Germany; he also explained how these musicians learned to improvise independent parts over a given melody (his bibliography also provides a convenient guide to work by such scholars as Ross Duffin, Lewis Lockwood, Timothy McGee, William Prizer and Lorenz Welker).

The repertory of the 15th-century alta is not altogether clear; no source reveals precisely which music minstrels performed. In pictures they are almost always shown

Alta: detail from the 'Adimari Wedding' spalliera panel attributed to Scheggia, c1450s (Galleria dell'Accademia, Florence)

without music books, but nevertheless they probably did play composed music, motets and chansons and perhaps even mass sections, as well as improvising contrapuntal parts against homorhythmic melodies. At least in courtly milieux, they would most probably have improvised chiefly basses danses. The one composition actually called 'Alta' is a textless piece for three voices by F. de la Torre, in the MS Cancionero de Palacio (*E-Mp* 2–1–5; the piece is printed, among other places, in Barbieri: *Cancionero musical de los siglos XV y XVI*, and in HAM, i, no.102), and may be taken as a typical example of their improvisatory style. It is a polyphonic arrangement of the widely distributed basse danse tenor *La Spagna*, in which the *cantus prius factus* is set out in long notes with a contratenor that moves against it in more or less note-against-note motion, with a highly decorated fast-moving upper part. Since de la Torre's *Alta* probably reflects the standard improvisatory style of the late 15th century, we can use it as a model to imagine how the repertory of basses danses, surviving in a number of sources only as monophonic tenors, was realized in actual performance. Heartz, who made use of the extensive modern research into this monophonic repertory, connected the music with its choreography.

In the 16th century cantus firmus dances were replaced by other kinds, improvised or not; the wind bands grew in size to accommodate music in four parts, which by then had become a normal texture. As the century wore on minstrel bands came more and more to include string instruments. Thus the three-man *alta* gradually gave way to larger and more varied ensembles. The present-day Catalan *cobla*, a band that plays dances called 'sardanas', continues to some extent the 15th-century tradition; at least it features a modern version of the shawm, and the principal melody is traditionally played by the tenor member of the family.

Altena, Maarten (Van Regteren) (*b* Amsterdam, 22 Jan 1943). Dutch composer. After completing his study of the double bass at the Amsterdam Conservatory (1968), he chiefly pursued his activities outside the symphony orchestra. He has played in many Dutch and international ensembles and ad hoc formations with Breuker, Loevendie, Company, Vario, the Instant Composers Pool and the 'Orkest De Volharding'. Around 1975 he began to give solo concerts on the double bass, playing his own compositions, improvising and participating in a number of small-scale music-theatre productions. In 1978 he founded the Claxon Sound Festival with Waisvisz. He took private composition lessons with Robert Heppener (1980–84).

As an improviser and leader (from 1979) of his own ensembles, Altena has acquired an international reputation as a pioneer of music in which improvisations are structured by composed elements in an intricate and highly personal style. Since 1985 he has written for the Maarten Altena Ensemble (voice, violin, double bass, electric guitar, recorder, clarinet/bass clarinet/saxophone, trombone, piano and percussion), but also for wind ensemble, solo instruments, percussion, string quartet and orchestra. The female voice (which he uses mostly without text) plays an important role in his output. A remarkable vitality characterizes many of his pieces, while others possess a calm, mysterious atmosphere. Both extremes are represented in the music of two theatrical productions made in collaboration with the poet Remco Campert: *Open plekken* (1991) and *Mijlpaal er trilt iets* (1998).

TON BRAAS

Altenburg, Detlef (*b* Bad Hersfeld, 9 Jan 1947). German musicologist. He studied musicology at the universities of Marburg and Cologne with Hans Engel and Heinrich Hüschen while taking private lessons in piano, organ and Baroque trumpet (the last with Walter Holy). He obtained the doctorate at Cologne in 1973 with a dissertation on the history of the trumpet. In 1973 he became an assistant lecturer at Cologne University, completing the *Habilitation* in 1980 with a study on Liszt's aesthetics. After working as visiting professor at Göttingen University (1980–81) and lecturer at the Cologne Musikhochschule (1982–3), he was appointed professor at Paderborn University in 1983. He was appointed professor at Regensburg University in 1994. He became chief editor of the critical edition of Liszt's writings in 1985 and assistant editor of *Die Musikforschung*, 1986–9, associate editor of the *Journal of the American Liszt Society* from 1987, and editor of the series Musik und Musikanschauung im 19. Jahrhundert and Weimarer Liszt-Studien. He is also curator of the European Liszt Centre and was made president of the Franz-Liszt-Gesellschaft in 1990.

DIETRICH KAEMPER

Altenburg, Johann Ernst (*b* Weissenfels, 15 June 1734; *d* Bitterfeld, 14 May 1801). German trumpeter, organist and theorist. Son of Johann Caspar Altenburg, he was sworn into apprenticeship by his father at two years of age and was released from his articles as a trumpeter 16 years later. Because of the decline of Baroque social order, however, he was never able to find a position as a trumpeter. He became a secretary to a friend of his father's, a royal Polish stablemaster, then studied the organ and composition with Johann Theodor Römhild in Merseburg until 1757 and (briefly) with Bach's son-in-law, Johann Christoph Altnickol, in Naumburg. In 1757 he joined the French army as a field trumpeter and participated in the Seven Years War, then travelled to various German states, returning to Weissenfels in 1766. In 1767 he found a position as an organist in Landsberg, and in 1769 in the then small village of Bitterfeld. He auditioned unsuccessfully for better positions and died embittered and impoverished.

Altenburg is best known for his valuable treatise on the 'heroic and musical trumpeters' and kettledrummers' art', which, though finished in manuscript and offered on a subscription basis by J.A. Hiller as early as 1770, was not published until 1795. It contains important information on the declining position of court and field trumpeters, seen at first hand, and of their tightly knit organization ('Cameradschaft') founded on a privilege granted by the Holy Roman Emperors since 1623. His detailed description of the training of pupils shows him to have been a good teacher. His treatise is of lasting value because of its explanation of technical and stylistic matters pertaining to the natural trumpet. The 'secret' of Baroque trumpeters, so fascinating and elusive to modern writers, had little to do with their art of playing in the clarino register – which Altenburg treated in a rather matter-of-fact manner, for example mentioning only in passing the required 'lipping' of the out-of-tune 7th, 11th, 13th and 14th tones of the harmonic series (p.71) – but was rather associated with the repertory of the field trumpeters. Their five 'field pieces' or military signals were handed down by rote from teacher to pupil and were executed with special kinds of tonguing (and 'huffing'). For playing in the clarino register Altenburg exhorted imitation of the human voice and gave examples of unequal tonguing, practised throughout the Renaissance and Baroque periods on all wind instruments.

Altenburg is known to have composed six piano sonatas, published in manuscript by C.G. Thomas (1780) and by Breitkopf (1781). The works for two to seven trumpets included in his treatise are not necessarily of his

own authorship; indeed, the fugue in G minor (p.104) was published in H.I.F. Biber's *Sonatae tam aris* (1676).

Altenburg's father, Johann Caspar Altenburg (*b* Alach, nr Erfurt, 1689; *d* Weissenfels, 1761), presumably a descendant of the 17th-century church musician Michael Altenburg, served as court and chamber trumpeter for three successive dukes of Weissenfels (1711–46) and also performed in many other German courts (1731–3). According to his son's *Versuch*, which includes a full biography of him, he was especially praised for his playing in the high register.

EDWARD H. TARR

Altenburg, Michael (*b* Alach, nr Erfurt, 27 May 1584; *d* Erfurt, 12 Feb 1640). German composer. He was sent to school at Erfurt in 1590 and went on to study theology at the university there in 1598, gaining the bachelor's degree in 1599 and the master's degree in 1603. He taught at Erfurt from 1600, beginning at the Reglerschule; from 1601 he was Kantor at St Andreas and from 1607 was also rector of the school connected with it. He abandoned teaching in 1609 and became a pastor: he worked in the parishes of Ilversgehofen and Marbach, near Erfurt, until 1610 and then moved to Tröchtelborn, near Gotha, where he stayed until 1621 and was probably also Kantor. He published most of his music during these years. He was likened to Orlande de Lassus as an 'Orlandus Thuringiae' and he himself was conscious of living at a time of great musical activity: as he wrote in the preface to his *Intraden* (1620), 'soon there will not be a single village, especially in Thuringia, in which music, both vocal and instrumental, will not flourish in good order with splendour or refinement, according to the resources of the place'.

This happy and musically fertile period in Altenburg's life came to an end when he moved to the Bonifaciuskirche at Sömmerda. His contemporaries continued to 'praise him as a most devout, exemplary and inspired preacher, and his hymns ... are held in high esteem and are frequently sung in the churches of Gross-Sömmer and indeed throughout the whole locality'. The Thirty Years War, however, was bringing suffering to his homeland, and his creativity ceased. His congregation was decimated by plague in 1636; his wife died in 1637, and of their 13 children only three survived him. In 1637 the war drove him back to Erfurt, where he spent the rest of his life, first as deacon, then from 1638 as minister, of St Andreas.

Altenburg's church music was well known and greatly valued in his lifetime, and 17 of his melodies were used in congregational singing. His song *Verzage nicht, du Häuflein klein!*, to a text by Jacob Fabricius, became the marching song of King Gustavus Adolphus of Sweden. He composed vocal concertos for large forces, including trumpets and timpani, in up to 18 parts, but his motet-like pieces and simple but effective chorale-based intradas with their independent instrumental ensembles show that he was also a master of relaxed, madrigalian textures in polyphonic forms. A concern with deeper significance co-exists in his works with a tendency towards simplification of expression and technical requirements: as Blume said 'he can perhaps be called the first popularizer in the Protestant church music of his age'.

KARL-ERNST BERGUNDER

Alter, Martha (*b* New Bloomfield, PA, 8 Feb 1904; *d* Newport, PA, 3 June 1976). American composer, pianist and teacher. She studied at Vassar College (AB 1925), Columbia University (AM in musicology, 1931) and the Eastman School of Music (MM in composition, 1932). Her teachers included Ernest Hutcheson (piano, 1925–6), Rubin Goldmark (composition, 1926–7) and, at Eastman, Howard Hanson and Bernard Rogers. She taught at Vassar from 1929 to 1931 and between 1938 and 1942. In 1942 she joined the faculty of Connecticut College for Women, teaching composition, theory, history and the piano. She became a full professor in 1956 and department chair in 1963.

Alter began to compose while at college and continued until she retired from teaching in 1969. While at Eastman she composed large works with orchestra which Hanson conducted; these included a staged ballet *Anthony Comstock* at the Festival of American Music in 1934. At that time a reviewer called her 'a distinguished talent', one who wrote 'in a clear-cut manner, with force, sentiment, and humor'. Alter's later works were heard primarily in universities in the north-eastern USA and on radio. Her music is tonal with varying amounts of added dissonance. She used a lyrical and rhythmically energetic style and clear structures to create music of immediate communicative power. Some of the piano works and pieces on American themes incorporate irony, whimsy or wit.

WORKS
(*selective list*)

Stage: Groceries and Notions (operetta, 3, K.K. Doughtie), 1931 (1931); Anthony Comstock, or, A Puritan's Progress (ballet, Alter and G. McGarrahan), 1934; A Dimensional Fantasy (ballet, N. Noyes), 1946

Vocal: The Voice (R. Brooke), Bar, pf, 1927; 3 Epigrams (S. Crane), medium v, pf, 1931, arr. chbr orch by D. Diamond; Bill George: March and Song (M. Cowley), Bar, 21 insts, 1931, arr. Bar, orch, 1932 (1940); Factory Windows (V. Lindsay), Bar, pf, 1931; Simon Legree: a Negro Sermon (Lindsay), Bar, 2 pf, 1937; 2 Songs (no.2, Lindsay), medium v, pf, 1938; Blackout (E. Horn), dramatic chbr work, Bar, 2 tpt, jazz perc, pf, 1941; 2 Songs (Horn), Bar, pf, 1941; 6 Songs from Time and Eternity (E. Dickinson), S, pf, 1948; Prayers of Kierkegaard, 1v, pf, 1957; On the Other Side of the Moon (Alter), 1v, pf, 1959

Choral: Peace (Bacchylides), women's vv, pf, 1940; 2 Plato Settings, women's vv, fl, pf, 1942 (New York, 1943); Let God be Magnified (cant., Pss), women's vv, pf/org, 1947; Pennsylvania Dutch Songs (W.J. Meter), male vv, pf, 1953; A Prayer for my Daughter (W.B. Yeats), S, women's vv, pf, 1961; Ideas from Actuelles (A. Camus, trans. J. O'Brion), women's vv, org, 1964; God be Merciful (Ps lxvii), women's vv, kbd, 1965; Whispers of Heavenly Death (W. Whitman), women's vv, org, 1965

Orch and chbr: Pf Trio, 1925; Trio, cl, vc, pf, 1926; Suite of 3 Dances, vn, pf, jazz perc, 1928; Rhythmic Dance, orch, 1931; Sinfonietta (Ov.), 1932; Sextet for Wind Insts, 1933; Suite from Anthony Comstock, 1934; Wedding Music, ob, vc, pf, 1937; Pastorale, va, pf, 1943; The Trial of the Dog (Aristophanes, trans. G. Allen), S, Bar, B, spkr, pf, 1951; Sarabande, vn, pf

Kbd (pf unless otherwise stated): Sonata, 1927; Telegraph Poles, suite, 1929–32; Etudes, 1930–46; Bric-a-Brac Suite, pf/hpd, 1931; Jig, 1931 [from Anthony Comstock]; Nocturne, 1931; Suite of Songs and Dances, 2 pf, 1936; Sonata, hpd, 1941; Americana Pieces, hpd, 1941; Elegy and Alert, 1941–2; 4 Lyric Moods, 1945; 4 Pieces for Children, 1945; A Jig Sonatine, 1949; Biblical Sonata: the Story of Daniel, org, 1955; Festive March, org, 1962

KAREN AHLQUIST

Altered chord. In tonal harmony a chord one or more of whose notes is altered chromatically but whose function remains the same. Examples include the NEAPOLITAN SIXTH CHORD and any of the forms of the AUGMENTED SIXTH CHORD.

Alternatim (Lat.: 'alternately'). A term commonly used to describe the manner in which alternate sections of certain liturgical items were performed by distinct and normally dissimilar forces. The practice had its roots in the antiphonal psalmody of the early Western church. One of its first characteristic manifestations was in the performance of responsorial chants (e.g. gradual, alleluia) where the soloists (*cantores*) alternated with the choir (*schola*) (*see* PSALM, §II, and RESPONSORY, §4). In the organum settings of these texts in the Notre Dame repertory, the soloists sang polyphonically the sections normally reserved for the cantor, while the choir sang its sections in plainchant. Some Renaissance settings of responsorial texts show the same alternation of polyphony with plainchant (e.g. the settings of *Audivi vocem de caelo* by Taverner and Tallis).

The practice of *alternatim*, however, was not restricted to liturgical texts that were responsorial in character, nor to the opposition of plainchant to polyphony: psalms, canticles, hymns, sequences and the Ordinary of the Mass were also set in this fashion, one verse alternating with the next; and the alternation of organ with choir, or fauxbourdon with plainchant, rapidly gained currency during the 15th century. The introduction of the organ as a partner in *alternatim* practices (some time in the 14th century; *see* ORGAN MASS) led in particular to a fine body of liturgical organ music in Italy, Spain and France during the 16th and 17th centuries (*see* ORGAN HYMN). Settings in which polyphony alternated with plainchant became common during the Renaissance: a Kyrie and Gloria by Du Fay reveal the penetration of this manner of performance into the Mass Ordinary; but more numerous are the plainchant–polyphonic settings of the *Magnificat*, sequences and hymns. Victoria (1581) and Palestrina (1589) each published important collections of hymn versets in addition to numerous sets for the *Magnificat*; other notable composers of *alternatim Magnificat* settings include Du Fay, Fayrfax, Festa, Gombert, Morales and Taverner (*see also* MAGNIFICAT, §2).

In the modern performance of *alternatim* pieces a problem may arise where apparently insufficient versets are furnished by a composer. For instance, Du Fay often provided only a single polyphonically worked verset for a particular hymn; in such a case one would have been expected to repeat the same music for succeeding alternate versets. Similarly, in Attaingnant's publication *Magnificat sur les huit tons* (Paris, 1530), six of the eight sets of organ versets for the canticle contain only two versets (a minimum of six is required for the *Magnificat*); here the organist would have been expected to improvise the remainder. Modern performances need also to take into account the rules governing the modal or tonal relationships between choir and organ (Howell; Nelson).

Attention may also be drawn to *alternatim* patterns of greater complexity. The *Caeremoniale parisiense* (1662) describes the following manner of performing the invitatory at Matins (I = invitatory; i = section of invitatory; C = choir; cc = cantors; O = organ): I(cc); I(O); v.1(cc); I(C); v.2(cc); I(O); v.3(cc); I(C); v.4(cc); I(O); v.5(cc); I(C); *Gloria Patri* (cc); i(0); i(cc); i(C). Le Sieur de Moléon referred to another interesting *alternatim* scheme (*Voyages liturgiques*, Paris, 1718, p.132) used at the church of St Martin, Tours, on its patronal festival (12 May):

Le chantre de l'Eglise de S. Martin commence l'Introit, dont l'Orgue et la Musique chantent chacun la moitié. Le chantre des religieux chante le Verset et recommence l'Introit, que les Moines continuent; et le Chantre de l'Eglise le *Gloria Patri*, et reprend l'Introit pour la troisième fois, que la Musique poursuit; et ainsi du reste de la Messe qu'on chante à trois choeurs.

EDWARD HIGGINBOTTOM

Alternative music. Music that may be defined in opposition to other musics. This is an ambiguous concept that underwent a significant shift during the 1980s. Before then, alternative music meant music which, stylistically, was not pop, jazz or classical, but often drew on all three. In the USA the term was used to refer to music as diverse as that of Cage, Glass, Velvet Underground, the performance artists Laurie Anderson and Diamanda Galas, and even artists associated with the punk movement of the middle to late 1970s (the glam-drag band The New York Dolls, the poet-singer Patti Smith and the new-wave band Talking Heads). The only common factor was a basis in New York City and a desire to redefine the traditional boundaries between styles and genres, and even those of music itself. Possibly because of the popularity of many of these artists, particularly among students, 'alternative' became roughly synonymous with the music played by college radio stations during the 1980s: popular music which operated on the fringes of the mainstream, often incorporating avant-garde or non-Western sounds or concepts. Many of the most popular of these groups (the Police, U2 and REM among them) went on to massive mainstream success, and so ceased to be 'alternative' in the original sense.

During the early 1990s a musical style known as 'GRUNGE' emerged from Seattle in the recordings of such groups as Soundgarden, Nirvana, Alice in Chains and Pearl Jam. The lyrics of grunge overlay a confessional subjectivity with a nihilistic or apathetic outlook – hard drugs, particularly heroin, play a large part in its culture. Appearing at about the same time, in Olympia, Washington, the radical 'riot grrrl' movement (Bikini Kill, Hole) significantly overlapped with grunge in personnel and musical style, though with a stronger oppositional stance and punk-like disavowal of virtuosity. Though it quickly succumbed to media over-exposure, riot grrrl was the first major feminist rock movement. By 1993 the term 'alternative' paradoxically applied to a fairly coherent style that dominated the mainstream.

For bibliography *see* GRUNGE.

ROBYNN J. STILWELL

Alternativo (It.: 'alternately'; Fr. *alternativement*). A term used primarily in the 18th century to indicate that the first movement of a pair should be performed again after the second, resulting in *ABA* form. The word could be applied to either of the movements, which were usually binary dances such as minuets, or to the pair as a whole, with no difference in meaning. The second dance of a pair to be played *alternativo* was usually in the opposite mode or in a related key, but the element of contrast was also often provided by a reduced texture. Thus the second dance came to be labelled 'trio', contrasting with the 'quartet' texture of the first, whether or not it was literally in three parts. In modern performance, the internal repetitions of the first dance are often eliminated during the second playing, but there is scant evidence for this practice in the 18th century. In the 19th century, Schumann adopted *alternativo* as a designation for some contrasting middle sections (e.g. in his Intermezzos op.4).

BRUCE GUSTAFSON

Altflöte (Ger.). Alto flute. *See* FLUTE, §II, 3(iv).

Althof, Statius. *See* OLTHOF, STATIUS.

Althorn (Ger.). A brass instrument. Usually in E♭, a 5th below the cornet, with bugle-like bore, it is classified as a trumpet. It is used in brass bands in Germany, Switzerland and eastern Europe to fill the alto register and supply off-beats. It is made in various shapes: 'trumpet-form', with bell to the front; 'tuba-form', upright (see illustration overleaf); and 'oval-form', which is the upright oval shape first seen in instruments of the early 1850s by Červený and is today the favourite form. The circular 'Waldhorn-form' is rarer. The mouthpiece is a deep funnel, wider than that of an orchestral horn. Few details are known of the early althorn, which W.F. Wieprecht was testing in Berlin in 1837 as an alternative to an earlier 'Alt-Kornett'. An early upright example by Moritz, Berlin, is in the Städtisches Sammlung, Munich.

In Britain around 1845 the lists of Distin and other makers and importers give 'Alt Horn' as an instrument pitched a 4th lower in B♭, at first with the form of a CLAVICOR, then of a baritone saxhorn (*see* BARITONE (ii)). Mandel's *Treatise on the Instrumentation of Military Bands* (*c*1859) refers to the 'tenor horn or baryton (Alt horn in B♭)'. Contemporary military band journals allot it a solo part, which later in the century was renamed 'B♭ Baritone' and performed on that instrument.

In Germany the term 'althorn' refers to the TENOR HORN.

ANTHONY C. BAINES/TREVOR HERBERT

Altieri, Paolo (*b* Naples, 29 Jan 1745; *d* Noto, 17 Oct 1820). Italian composer and music teacher. He was educated in Naples, where he met two wealthy citizens

Althorn in C (high pitch) by John Köhler, London, c1840 (Spencer Collection, Brighton Museum and Art Gallery)

from Noto, a small city in south-eastern Sicily, who invited him to their city. Altieri arrived in 1766, became a music teacher, married and held the position of *maestro di cappella* for all the city's churches. He worked in Noto until his death.

A collection of Altieri's compositions was given to the Biblioteca Comunale of Noto by a local bishop who had acquired it from a relative of Altieri's: it comprises 449 works, mostly sacred vocal music, but also secular vocal music and instrumental works.

Altmann, Wilhelm (*b* Adelnau, Poznań, 4 April 1862; *d* Hildesheim, 25 March 1951). German musicologist. He received lessons in the violin and music theory from Otto Lüstner while at school in Breslau, and studied medieval history and classical philology at Marburg and Berlin (1882–5). After training as a librarian at the Royal University Library, Breslau (now Wrocław), he moved in 1889 to Greifswald University where in addition to his library duties he held the post of lecturer in medieval history and in librarianship from 1893. In 1900 he obtained a post at the Royal Library in Berlin, where he was instrumental in founding the Deutsche Musik Sammlung, and where he finally became director of the music section in 1915 in succession to Albert Kopfermann. He held this position until his retirement in 1927. The energetic cultivation of his dual interests, music and librarianship, both during his professional career and after his retirement to Hildesheim, resulted in the production of an invaluable series of catalogues of published works for various instruments or combinations of instruments.

ERIC BLOM/MALCOLM TURNER

Altnickol [Altnikol], **Johann Christoph** (*b* Berna bei Seidenberg, Oberlausitz, bap. 1 Jan 1720; *d* Naumburg, bur. 25 July 1759). German organist and composer. He attended the Lauban Lyceum in 1733, and was a singer and assistant organist at St Maria Magdalena, Breslau, from about 1740 until the beginning of 1744. He then wished to return to Germany and devote himself to 'higher studies' at Leipzig, and as his parents were poor, he asked for a viaticum. He was granted four thalers on 23 January 1744, and on 19 March he matriculated at Leipzig University as a theological student. He soon began to assist Bach, chiefly as a bass, and did so regularly from Michaelmas 1745. In taking on a university student Bach exceeded his authority, but he was always short of basses, for the boys of the Thomasschule often left before their voices had settled. On 16 April 1746 W.F. Bach recommended Altnickol as his successor at Dresden, saying that

he had studied the keyboard and composition with his father; but he was disregarded. On 26 April 1747 Altnickol applied to the Leipzig Council for a grant, saying that he had been singing bass for three years (i.e. from April 1744). Burgomaster Stieglitz seized the opportunity to say that the Kantor had no business to make such appointments; but the council agreed to pay 12 thalers (19 May), given proof that Altnickol had actually done the work. Bach certified on 25 May 1747 that Altnickol had worked continuously from Michaelmas 1745.

On 8 November 1747 a vacancy for an organist and schoolmaster arose at Niederwiesa (near Greiffenberg, Silesia); on 3 December the son of some local worthy drafted a letter inviting Altnickol to apply. The draft went to another local worthy for approval (no names are given) with a covering letter stating that the writer had known Altnickol at Lauban and Leipzig, and that he was a peaceable and upright man, no great theologian, but a good bass, violinist and organist, who understood composition and had endeared himself to Herr Bach. Subsequent events show that he had also endeared himself to Fräulein Bach. On 1 January 1748 Bach testified that Altnickol was a pupil of whom he need not be ashamed; on 18 January Altnickol was appointed, and he gave satisfaction. He is said to have been a fine organist.

A post at St Wenzel, Naumburg, fell vacant in the summer, and on 24 July 1748 Bach recommended Altnickol to the council, who unanimously appointed him on 30 July, before they had even received his formal application. There is a story that the council preferred Bach's candidate to Johann Friedrich Gräbner, who was being put forward by the all-powerful Count Brühl; by rushing the matter, they were able to say that the Count's recommendation came too late. Gräbner nevertheless became Altnickol's successor in 1759.

Altnickol moved in at mid-September, and married Bach's daughter Elisabeth Juliana Friderica on 20 January 1749. He invited the Naumburg Council to the wedding, thus securing a present of six thalers. A son, Johann Sebastian, was born on 4 October, but was buried on 21 October. On 24 November Altnickol's father died, and a few months later Bach fell seriously ill. According to Forkel, it was to Altnickol that Bach dictated his last chorale prelude (though the familiar manuscript fragment is not in Altnickol's hand). After Bach's death, Altnickol exercised the function of a trustee, with responsibility for distributing his estate. He took Bach's mentally handicapped son Gottfried Heinrich with him to Naumburg, where he also taught J.G. Müthel, Bach's pupil, until 1751. At the end of 1753 he, like W.F. Bach, competed unsuccessfully for an appointment at the Johanniskirche, Zittau; and in 1757 he taught the trumpeter J. Ernst Altenburg. In Naumburg Altnickol directed performances of a pasticcio Passion cantata with music by C.H. Graun, Bach and Telemann and of a presumably early version of Bach's *St Matthew Passion*.

Altnickol's widow must have stayed at Naumburg for a time, for her brother Gottfried died there in 1763. Later she moved to Leipzig, where both her daughters married, and she herself died on 24 August 1781; she had received an allowance from her half-brother Emanuel.

The Breitkopf catalogues of 1761 and 1764 list a *Magnificat* and two cantatas by Altnickol, but neither these nor most of his other works survive. Bach spoke well of them, perhaps for personal reasons; they have in fact attracted little attention. Altnickol is now remembered because he was Bach's son-in-law, and a trustworthy copyist.

WALTER EMERY/ANDREAS GLÖCKNER

Alto (i) (It., 'high'; Fr. *alto*; Ger. *Alt*). Term, derived from the Latin *altus* (the vocal part lying above the tenor), now applied to a singer whose voice lies in the region *f–d″*. It first became common in partbooks (especially of secular music) printed in the second half of the 16th century. In the 16th–18th centuries alto parts were sung by men (falsettists, castratos or high tenors) in sacred music; only in secular music were they sung by women. The terms 'alto' and 'contralto', often used interchangeably, derive from the same source, the late 15th-century CONTRATENOR ALTUS, or part above the tenor. In English usage a distinction is sometimes drawn between alto and contralto voices in solo singing, the former referring either to a boy or (more often) a falsettist, the latter to a female voice, although in practice this distinction is too often blurred to be useful. (*See* CONTRALTO and COUNTERTENOR.) The CASTRATO voice in this range was called '*contralto*'. The term alto continues to be applied to both the male and the female voice of this range in choral music.

OWEN JANDER/ELLEN T. HARRIS

Alto (ii). The French and Italian term for the VIOLA, a usage deriving from the instrument's range relative to other members of the violin family.

OWEN JANDER/ELLEN T. HARRIS

Alto (iii). A term applied as a qualifying adjective to instruments, especially wind (e.g. alto clarinet, alto flute), usually pitched a 4th or 5th below the standard members of their family. An exception is the alto recorder (in British usage, called the treble recorder) which is the representative instrument of its kind.

OWEN JANDER/ELLEN T. HARRIS

Altoboe (Ger., also *Althoboe*). A tenor oboe in F. It has an english horn body and a clarinet bell and was conceived by Wagner. *See* OBOE, §III, 4(v).

Alto clarinet. A member of the clarinet family (*see* Clarinet, §II, 1), normally pitched in E♭ (it is classified as an aerophone). It is used chiefly in military bands and wind bands, and is usually built with an upturned metal bell and a curved metal crook; the two-piece body carries a mechanism of similar design and layout to that of the soprano clarinet, with two common exceptions. First, because the tone-holes are a little large for convenient covering, the instrument is frequently made with tone-holes covered by plates instead of directly by the fingers; second, there are commonly two speaker keys, as on the bass clarinet.

The history of the alto clarinet as we now understand it may be said to begin in the early 19th century with the design of instruments of large bore, first in F and later in E♭ for military bands, both in France (those made by Cuvillier and Simiot, for example) and Germany (Grenser and Wiesner). In England, the alto clarinet in F seems to have survived as a non-military instrument of narrower bore, confusingly known as the tenor clarinet.

The alto clarinet has a good full tone, and blends well; unlike the basset-horn, it has no difficulty in balancing other modern instruments. It has been little used in the orchestra, however, and is no longer included in British Army bands, though it is a regular constituent of American concert bands and of clarinet choirs.

NICHOLAS SHACKLETON

Alto flute. A flute pitched in G, a 4th below the concert flute. *See* Flute, §II, 3(iv).

Alto horn. American term for a valved brass instrument pitched in E♭ below the cornet and employed in some wind bands; its form is upright, often with the bell turned forward. It is equivalent to the English Tenor horn.

Altrobrandino, Giuseppe Antonio Vincenzo. *See* Aldrovandini, Giuseppe Antonio Vincenzo.

Altus (Lat.: 'high'). A voice designation that originated in the mid-15th century as an abbreviation of Contratenor altus. In the early 16th century 'altus' and 'contratenor' were used interchangeably as designations for a voice lying below the superius (or cantus) and overlapping, more or less, with the tenor. As inner voices became more clearly stratified in range 'altus' (or 'alto') became the more common term, and during the second half of the 16th century 'contratenor' fell into disuse on the Continent. In England the terms 'contra' and 'countertenor' persisted well into the 17th century. Since World War II the term 'countertenor' has been revived in England to designate adult male voices in the alto range, but elsewhere the term 'altus' is often preferred.

See also Alto (i); Contralto; Haute-contre.

OWEN JANDER

Alva, Alonso de (*d* ?Seville, before 4 Sept 1504). Spanish *maestro de capilla*. He may be identifiable with Alonso de Alba.

Alva, Luigi [Alva Talledo, Luis Ernesto] (*b* Lima, 10 April 1927). Peruvian tenor. He studied in Lima with Rosa Morales and in Milan with Emilio Ghirardini and Ettore Campogalliani. He made his début in 1949 in *Luisa Fernanda* at Lima, where he sang Beppe (*Pagliacci*) the following year. His European début was at the Teatro Nuovo, Milan, in 1954 as Alfredo. He sang Paolino in *Il matrimonio segreto* to open the Piccola Scala in 1955, repeating the role in Edinburgh in 1957. At La Scala in 1956 he sang Almaviva, a role in which his highly developed sense of comedy and lack of exaggeration were to win him widespread admiration. He sang regularly in Milan (where he appeared in the premières of Luciano Chailly's *Una domanda di matrimonio* and Riccardo Malipiero's *La donna è mobile*), at Covent Garden (1960–77), at Chicago (1961–77) and at the Metropolitan (1964–76), where he made his début as Fenton and later sang Ernesto, Lindoro and Tamino. He appeared at the festivals of Aix-en-Provence and Salzburg and sang Nemorino at Glyndebourne in 1961. His elegant and refined style was specially suited to Mozart and Rossini, though he recorded Fenton as well as Ferrando and Almaviva. He taught in Lima from 1982 and retired as a singer in 1989.

HAROLD ROSENTHAL/R

Alvarado, Diego [Diogo] **de** (*b* c1570; *d* Lisbon, 12 Feb 1643). Basque organist and composer. He had already been in the service of the Spanish crown for some time when on 13 April 1602 he became organist of the royal chapel at Lisbon, with the modest annual salary of 30,000 reis and (from 13 June) three *moios* of wheat. According to his epitaph he was a keyboard player in the royal chapel for 43 years.

His only surviving works are two tientos (*P-La*, in a manuscript appendix to 38-XII-27) which show him to have been a highly skilled composer; the second is a superbly constructed monothematic ricercare and the first a much shorter but highly polished treatment of the Spanish *Pange lingua*, in which a counterpoint to the plainsong serves throughout as a unifying motif. Two motets were in the library of King João IV, *Ave virgo gloriosa* for five voices and *Versa est in luctum* for four voices.

ROBERT STEVENSON

Alvarenga, Oneyda (Paoliello de) (*b* Varginha, 6 Dec 1911; *d* São Paolo, 23 Feb 1984). Brazilian folklorist and musicologist. At the São Paulo Conservatory of Drama and Music, Mário de Andrade directed her towards the study of Brazilian folk and popular musical traditions; she also studied ethnography and folklore with Dina Lévi-Strauss (1937). Her main areas of activity were sound archive organization, ethnomusicology and folklore: she organized and directed the Discoteca Pública Municipal de São Paulo from its foundation in 1935 until her retirement in 1968. The collection of historical recordings, the Discoteca Oneyda Alvarenga of the Centro Cultural São Paulo, was named after her to honour her contribu-

tions to the field. She was a founder-member of the Brazilian Academy of Music, a member of the Conselho Nacional de Folclore of the Ministry of Education and of the executive committee of the International Association of Music Libraries, a corresponding member of the International Folk Music Council, and a member of the Conselho de Música Popular Brasileira, do Museu da Imagem e do Som established at Rio de Janeiro. Her publications include editions of the volumes on music in the complete works of Mário de Andrade.

GERARD BÉHAGUE

Álvares Frouvo, João. *See* FROUVO, JOÃO ÁLVARES.

Alvarez (Fernández), Cálixto (César) (*b* Santa Isabel de Las Lajas, Cuba, 15 March 1938). Cuban composer. He began studying music in Santa Clara and by 1955 had acquired a basic musical education there. In 1956 he moved to the USA, where he continued his studies at the Hartt School in Hartford, Connecticut, and (1963–4) at the Californian School of Music. From 1964 to 1966 he was enrolled at the Amadeo Roldán Conservatory in Havana, where he took composition classes with Brouwer. A scholarship enabled him to live in Warsaw (1966–71), where he took composition classes with Dobrowolski. In 1971 he returned to Havana and directed radio programmes for the classical music station CMBF. He has also worked as musical adviser and programme anotator for the Gran Teatro in Havana and with the National SO.

His music has explored a variety of contemporary techniques, especially, since the 1970s, minimalism and neo-Romanticism. He has written incidental music for a wide range of Cuban drama, and also for orchestras, choirs, piano, and for varied types of chamber groups and solo instruments.

OLAVO ALÉN RODRIGUEZ

Alvarez, Javier (*b* Mexico City, 8 May 1956). Mexican composer. He studied the clarinet and composition in Mexico City before attending the University of Wisconsin, Milwaukee (MM 1982); in 1981 he moved to London, where he studied at the RCM and at City University (PhD 1993). He was a founding member and chair of the Sonic Arts Network, and artistic director of the SPNM (1995–6). From 1993 to 1997 he was lecturer and then reader at the University of Hertfordshire, and in 1997 was appointed professor of composition at the Malmö Conservatory. He has won numerous prizes for both his electro-acoustic and instrumental works, including the Prix Euphonie d'Or at Bourges (1992). Leading ensembles such as the Mexico PO, L'Itinéraire (Paris), the Los Angeles Philharmonic New Music Group and Chicago Symphony New Music Ensemble have performed his works. His music combines the energy and rhythmic vitality of his Latin-American roots with elements of the European symphonic tradition. Characteristically, his harmonic language is consonant without being tonal. A large number of his works composed after 1982 (e.g. *Papalotl*, *Asi el acero* and *Mannam*) skilfully combine solo instruments with electro-acoustic sounds derived from the instrument's timbre.

STEPHEN MONTAGUE

Alvarez del Toro, Federico (*b* Tuxtla Gutiérrez, 16 Nov 1953). Mexican composer. He began his guitar studies in 1971 with Guillermo Flores and in 1977 had classes with Brouwer. He also took various composition courses at the National School of Music and the National Conservatory, where he studied with Eduardo Mata and Rodolfo Halffter.

In his compositions Alvarez del Toro aims to unite in a heterodox manner different musical materials and media – the cries of wild animals, instruments of stone (as in *Oratorio en la cueva de la marimba*, where the main instrument is a natural formation of stalactites), amplified voices (*Vilotl-mut*) – together with traditional symphonic and chamber ensembles. A constant feature of his work is the link between his musical discourse and nature, a concept which enables him to unite his ecological concern, nourished by the rich and exuberant landscape of the forest of his native region of Chiapas, with the evocation of the Maya and Lacandona cultures to be found in this area. Examples of his ecological concern can be found in *Ozomatli*, where the cries of a monkey are set against human voices and instruments, and in the symphony *El espíritu de la tierra*, which uses Lacandona melodies and the marimba (the traditional instrument of the south-east of Mexico and Guatemala) to evoke, in the composer's words, 'the generating principle of all the energies and the primordial rites of the elements'.

RICARDO MIRANDA-PÉREZ

Alvars, Elias Parish. *See* PARISH ALVARS, ELIAS.

Alvary [Achenbach], **Max(imilian)** (*b* Düsseldorf, 3 May 1856; *d* Grosstabarz, Thuringia, 7 Nov 1898). German tenor. He pursued his singing career over the initial objections of his father, the painter Andreas Achenbach, and studied in Frankfurt with Julius Stockhausen and in Milan with Francesco Lamperti. He made his début (1879) in Weimar, under the name of Max Anders, singing the title role of Flotow's *Alessandro Stradella*, and remained at the Weimar Opera until 1885 enjoying the favour of the grand duke. He had great success at the Metropolitan in New York, making his début there on 25 November 1885 singing Don José in German. He was the USA's first Siegfried (in *Siegfried*), his most celebrated role, in 1887; other important roles of his four years at the Metropolitan included Adolar in *Euryanthe* (1887), Alvar in Spontini's *Fernand Cortez* (1888) and Loge in *Das Rheingold* (1889). In 1890 he was engaged by the Munich Hofoper and in 1891 by the Hamburg Stadttheater. He sang Tristan and Tannhäuser at Bayreuth in 1891, and in the following year he made his London début singing Siegfried (in *Siegfried*) at Covent Garden with Mahler conducting. He returned to London in 1893 and 1894 and was heard as Max in *Der Freischütz*, Florestan, Tannhäuser, Lohengrin, Loge, Siegmund and Tristan. In October 1894 he was seriously injured in a fall while rehearsing *Siegfried* at Mannheim and never fully recovered; he retired from the stage in 1897. He was the outstanding Wagnerian tenor of his time for dramatic force and refined interpretation, and the first to break tradition by performing Tristan and the other heroic parts without a beard.

HAROLD ROSENTHAL

Alva Talledo, Luis Ernesto. *See* ALVA, LUIGI.

Alveri, Giovanni Battista (*b* Bologna, ?1660–70; *d* after 1719). Italian composer and instrumentalist. He was a pupil of G.P. Colonna and is described in his *Cantate a voce sola da camera* op.1 (Bologna, 1687; one ed. H. Riemann: *Ausgewählte Kammer-Kantaten*, Leipzig, [1911]) as a musician in the service of Marquis Guido Rangoni. Alveri also published *Arie italiane amorose e lamentabili* for solo voice and continuo (Antwerp, 1690), and two operas by him (*Il re pastore, overo il Basilio in Arcadia* and *L'Isione*) were performed at the court of Wolfenbüttel in 1691. The libretto of *Il re pastore* describes him as a 'virtuoso' of the duke there and as a member of the Accademia Filarmonica di Bologna. His name appears in a list of instrumentalists who were at Parma Cathedral on 10 August 1719. According to Schmitz, his cantatas are mostly fairly conservative in form although not without interesting features. Seven motets by him survive (*D-Bsb* Mus.ms. 30094); since his book of 1687 is his op.1, printed volumes of cantatas by him of 1671 and 1678, mentioned by Fétis, must be spurious.

Alwood [Alwoode, Allwood, Allwoode], **Richard** (*fl* 16th century). English composer. At the end of his six-voice Mass '*Praise him praiseworthy*' (ed. in EECM, i, 1963) in the Forrest-Heyther Partbooks (*GB-Ob* Mus. Sch.E.376–81), John Baldwin, who copied the last pages of 381, described him as 'Mr. Alwood, priest'. Alwood's In Nomine in the Mulliner Book (ed. in MB, i, 1951, rev. 2/1954) is based on the same five-note cantus firmus as the mass, and is related to the 'In nomine' of its Sanctus. The Mulliner Book contains four other keyboard pieces by Alwood: a voluntary, two settings of *Clara paschali gaudio* and an untitled piece; two more keyboard In Nomines are in manuscript (*Lbl* Add.30485). Four of these pieces are edited by M. Glyn, *Early English Organ Music* (London, 1939).

JOHN BERGSAGEL

Alwyn, William (*b* Northampton, 7 Nov 1905; *d* Southwold, 11 Sept 1985). English composer, flautist, painter and writer. He entered the RAM at the age of 15, studying the flute with Daniel Wood and composition with John McEwen, and receiving scholarships in both disciplines. He returned to the RAM as composition professor in 1926 and in the following year his growing reputation as a flautist earned him a position with the LSO; also in 1927, Sir Henry Wood conducted Alwyn's Five Preludes at a promenade concert. For the next decade Alwyn followed parallel careers as flautist and composer. In 1936 he embarked on a prolific series of film scores, first for documentaries and then for features (from 1941), notably in collaboration with Carol Reed; his work in this field was recognized in 1958 with his election to fellowship of the British Film Academy. In the 1940s and 50s he provided numerous incidental scores for BBC radio and television programmes. His experiences as a film composer quickly forced him to reassess what he termed a 'woeful inadequacy' of technique, and he felt compelled to disown all the music he had written before the Divertimento for flute (1940).

In 1948, under the patronage of Barbirolli, Alwyn began work on an ambitious cycle of four symphonies which was to occupy much of his creative energy until the late 1950s. His tireless work on behalf of young composers escalated after 1949 when he assumed the chair of the Composers' Guild of Great Britain (a role he resumed in 1950 and 1954), and went on to serve on the council of the PRS and as vice-president of the SPNM. Between 1958 and 1971 he was director of the Mechanical Copyright Protection Society.

In 1955 Alwyn left his post at the RAM, where his pupils had included Iain Hamilton and John Manduell, and continued to earn his living almost entirely from film work until the early 1960s. The years of his retirement in Suffolk were dominated by the composition of two operas (*Juan, or The Libertine* and *Miss Julie*), interspersed with concert works – many of which were introduced locally at the Aldeburgh and Norwich Festivals. He was made a CBE in 1978, by which time he was increasingly devoting himself to poetry and painting; his passion for art was reflected in his historic collection of pre-Raphaelite paintings, sold at Sotheby's in 1962. Alwyn's music has been promoted in an ambitious series of recordings for Chandos and, since 1995, by the activities of the William Alwyn Foundation and Alwyn Society.

Several of the major pre-war scores suppressed by Alwyn were revived and recorded after his death, and reveal him to have been an unduly harsh self-critic; the Piano Concerto no.1 (1930), for example, was highly adventurous for its time and achieved an effective balance between Romanticism and Modernism. His stylistic reassessment during World War II began with a neo-classical preoccupation with counterpoint, which Alwyn regarded as a foil to the 'ear-tickling harmony' of his earlier music. By the time he embarked on his symphonic cycle in the late 1940s, he had readmitted Romantic elements into solidly crafted structures unified by economic thematic transformation and revealing a refined sense of tonal contrast. The Second Symphony (1953) adopted an experimental form, subdividing into two decelerating halves, and combined monothematicism with more complex textures; the fiery Third (hailed by John Ireland as the finest British symphony since Elgar's Second) introduced a novel serial technique in which the 12 pitch classes were divided into two unequal tropes, a method further developed in the Fourth Symphony, the 12 Preludes for piano (1958) and the overture *Derby Day* (1960), which combined dodecaphonic and diatonic elements.

The consistent seriousness of purpose and technical strictness of Alwyn's symphonies offer a sharp contrast to the more relaxed idiom of his other works, in which the manifold influences on his style lie closer to the surface. Echoes of French Impressionism, the chromaticism of Delius and modality of the English pastoral school are prominent in pieces with descriptive titles, while a brittle jazziness in scherzo passages invites comparison with Walton and Arnold. Alwyn's most ambitious and eclectic score is the opera *Miss Julie* (broadcast by the BBC in 1977 and recorded in 1979, but not staged until the 1997 Norwich Festival), which is notable for standing entirely apart from the influential operatic developments of Britten and Tippett; its music is a heady blend of *verismo* and symbolism, fusing the lushness of Strauss and Ravel with the melodic directness of Puccini, the speech-rhythms of Janáček and the Expressionist atonality of Berg – a composer also celebrated in the intensely chromatic Sinfonietta for strings (1970), which quotes directly from *Lulu*.

In all his work, both musical and literary, Alwyn laid considerable emphasis on the aesthetics of beauty and positivity of expression, and distrusted any approach to composition and analysis not deeply rooted in the emotions.

MERVYN COOKE

Alyab′yev, Aleksandr Aleksandrovich (*b* Tobol′sk, W. Siberia, 4/15 Aug 1787; *d* Moscow, 22 Feb/6 March 1851). Russian composer. Alyab′yev's father, the governor of Tobol′sk, was a pioneer of local culture; his brother, Vasily, was a poet and playwright. At 14 Alyab′yev entered government service and in 1812 enlisted with the army; during the war he participated in the army's entry into Dresden and Paris. He was discharged from the service in 1823.

Alyab′yev displayed considerable musical talent at an early age. When he was 16 he studied with Heinrich Miller in St Petersburg; later he took piano lessons with John Field, to whom he dedicated his *Grande polonaise* (1811). His first large-scale composition was a string quartet in E flat major (1815), which shows a gift for instrumental part-writing and melody as well as an effective use of mild chromatic harmonies. It was the first of many chamber works which included two more string quartets, a trio in A minor for piano, violin and cello, a wind quintet in C minor, a violin sonata in E minor and several unfinished ensemble pieces. Early in the 1820s Alyab′yev started to compose for the stage. His earliest vaudeville, *Novaya shalost′, ili Teatral′noye srazheniye* ('A New Prank, or A Theatrical Battle'), composed in collaboration with A.N. Verstovsky and L. Maurer to a text by Nikolay Khmel′nitsky, was given in Moscow in 1822; its success led to the production of two new works in the following year, *Lunnaya noch′, ili Domovïye* ('The Moonlight Night, or The House Spirits'), Alyab′yev's first venture into comic opera (libretto by P.A. Mukhanov and P.N. Arapov), and his most popular vaudeville, *Derevenskiy filosof* ('The Village Philosopher'), to a text by M.N. Zagoskin. It was at the same time that he wrote his famous song *Solovey* ('The Nightingale') to words by Anton Delvig. Several prima donnas, including Pauline Viardot, Adelina Patti and Marcella Sembrich, incorporated this song into the singing-lesson scene in Act 2 of Rossini's *Il barbiere di Siviglia*; it was later also transcribed for piano by Liszt, and was used by Glinka as the theme for a set of piano variations. Alyab′yev composed about 170 songs to texts chosen widely from the literary and poetic works of his contemporaries, including Pushkin, Zhukovsky, Lermontov and Ogaryov.

In a card game on 12/24 February 1825, Alyab′yev allegedly struck one of his guests, who died some days later. Alyab′yev was imprisoned, and, after legal proceedings lasting nearly three years, was found guilty of murder and exiled to his native town in 1828. Although the evidence was inconclusive, the imperial authorities were clearly anxious for Alyab′yev to be away from the capital, most probably because of his connection with eminent figures in the Decembrist movement. Alyab′yev continued to compose vaudevilles in prison and during his Siberian exile contributed much to local musical life, conducting and organizing concerts. His compositions of this period include a symphony in E minor, inscribed 'Tobol′sk 1830; 30 October', of which only the first movement survives.

In 1831 he was allowed to travel from Tobol′sk to the Caucasus to cure an eye complaint. Here he met the Decembrist poet Aleksandr Bestuzhev-Marlinsky, author of the novella on which Alyab′yev's final opera *Ammalat-Bek* was based. While in the south Alyab′yev became interested in folk music and in 1834 published a collection devoted entirely to Ukrainian melodies. On medical advice he moved north to Orenburg and arrived in Moscow in 1836, remaining there, with only brief trips away, until his death.

The years in Moscow were successful both professionally and privately: he became established as a composer, particularly of stage music, and in 1840 married Yekaterina Aleksandrovna Ofrosimova (née Rimsky-Korsakov). Shortly after his arrival in Moscow he produced incidental music to three plays, his brother Vasily's *Otstupnik, ili Osada Korinfa* ('The Apostate, or The Siege of Corinth')

in 1837, Shakespeare's *The Merry Wives of Windsor* and Pushkin's *Rusalka* ('The Water-Nymph'), both in 1838. He also wrote two Shakespearean operas in the 1830s: *Burya* ('The Tempest'), and *Volshebnaya noch'* ('The Enchanted Night'), composed in 1838–9 and based on *A Midsummer Night's Dream*. Alyab'yev continued to compose in spite of ill-health, working on the opera *Rïbak i rusalka, ili Zloye zel'ye*('The Fisherman and the Water-Nymph, or The Evil Potion') between 1841 and 1843 and on his last opera, *Ammalat-Bek*, from 1842 to 1847; the latter was the inspiration behind an opera of the same name by Nikolay Afanas'yev, performed in 1870.

GEOFFREY NORRIS/NIGEL YANDELL

Alyff. *See* AYLIFF.

Alypius [Alupios] (*fl* 4th century CE). Greek writer on music. His *Introduction to Music* (*Eisagōgē mousikē*) contains the most complete tabulation of ancient Greek musical notation. He is mentioned by CASSIODORUS (*Institutiones*, ii.5) in the list of important Greek musical authors together with PTOLEMY and Euclid (i.e. CLEONIDES). Alypius's treatise may have been known to Boethius, who included notational symbols for the Lydian *tonos* in all three genera (*De institutione musica*, iv.3–4), but they are not attributed to him and could have been derived from other sources. Nothing is known of his life. The principal reasons for assigning such a late *floruit* have to do with the name (which is not otherwise attested before the 4th century), the content of the opening prose section (see below) and the general lack of interest in musical notation shown by writers securely dated before the 3rd century CE. Writers such as ARISTIDES QUINTILIANUS, GAUDENTIUS and BACCHIUS, who did include tables of notation within their treatises, can almost certainly be dated no earlier than the late 3rd century CE.

Alypius's treatise is preserved in 34 manuscripts, the earliest of which is *I-Vnm* gr.app.cl.VI/3 (RISM, B/XI, 270), dating from the 12th century. It begins with a short section in prose, the content of which reflects the later Aristoxenian tradition of Cleonides, Aristides Quintilianus and Gaudentius rather than the writings of Aristoxenus himself. According to this introductory section, music (*mousikē*) embraces the three disciplines of harmonics (*harmonikē*), rhythmics (*ruthmikē*) and metrics (*metrikē*). Harmonics, first in order and primary, is concerned with critically and perceptively determining musical notes and the differences among them (this definition recalls the opening sentence of Ptolemy's *Harmonics*). Adhering to tradition, Alypius lists the seven standard topics of harmonics: notes, intervals, scales, genera, *tonoi*, modulation and melic composition; he then states that he will proceed to represent the 15 *tropoi* and *tonoi*, beginning with the Lydian, in two sets of notational symbols (*sēmeia*), one for text (*lexis*) and one for instruments (*krousis*). These have come to be known in modern scholarship as the vocal and instrumental notations. Alypius concludes the prose section by naming the stationary and movable notes, together with incomplete observations about their positions within the *pyknon* (a group of three notes in the enharmonic and chromatic genera of the tetrachord; *see* GREECE, §I). All this would seem to be a very close (but imperfect) paraphrase of material appearing in the treatises of Cleonides and Aristides Quintilianus.

According to Cleonides (§12) and Aristides Quintilianus (i.10), Aristoxenus had identified 13 *tonoi*, but Aristides Quintilianus adds that the 'younger theorists' expanded the number to 15. In this formulation, each of the five traditional *tonoi* (Lydian, Aeolian, Phrygian, Iastian and Dorian) is joined by a low (hypo-) and high

(hyper-) form. Alypius follows this 'younger' tradition in his tabular representations of the *tonoi*: the table for each traditional *tonos* is immediately joined by tables for the low and high forms (e.g. Lydian, Hypolydian, Hyperlydian, Aeolian, Hypoaeolian, Hyperaeolian etc.). In each case, Alypius provides the name of the note (*proslambanomenos*, *hypatē hypatōn* etc.); a short description of the shapes of the two notational symbols (e.g. defective *zeta* and horizontal *tau*), vocal and instrumental; and the notational symbols themselves. The first 15 tables provide the notation for the *tonoi* in the diatonic genus; the cycle is then repeated for the chromatic genus. It was apparently intended that the cycle be repeated a third time for the enharmonic genus, but the tables are imperfect for the Aeolian *tonoi* and break off altogether in the middle of the Hyperphrygian *tonos*. Moreover, with the exception of the tables for the Lydian *tonos*, the symbols in the surviving tables for the enharmonic genus are identical to those in the corresponding tables for the chromatic genus. These general defects appear in the earliest surviving manuscript (see Mathiesen, 1988, p.712) and are substantially repeated in all other manuscripts and later editions of the treatise.

If a conventional pitch is applied to the notation, each of the *tonoi* following the lowest (Hypodorian) is one semitone higher overall, and the *proslambanomenoi* of the lowest and highest (Hyperlydian) *tonoi* span an octave and a tone. The overall span between the *proslambanomenos* of the lowest *tonos* and the *nētē hyperbolaiōn* of the highest is three octaves and a tone. This relationshhip among the *tonoi* is not shown in the layout of Alypius's tables, but it does appear in Aristides Quintilianus's diagram laid out 'akin to a wing' (see Mathiesen, 1983, p.91).

Although the tables of Alypius do not make it immediately apparent, the symbols for both sets of notation follow a triadic pattern in which the first symbol represents a certain pitch; the second, the pitch raised by a *diesis* (chromatic or enharmonic); and the third, the pitch raised by two *dieses* (the *dieses* might be as small as quarter-tones or as large as semitones). In the vocal notation the triads are formed of three-letter groups (e.g. *alpha-beta-gamma*, *delta-epsilon-zeta* etc.), while in the instrumental notation they are formed of a basic shape rotated 90° and 180° (or sometimes reflected) around a central axis. The basic set of symbols for the instrumental notation, which would seem to be the earlier, accounts for two octaves (*A–a′*; all the pitches in the following description and in the chart should be taken merely as conventional, not as indicative of any absolute pitch) of the span of three octaves and a tone; the upper five symbol-triads (together with *zeta*) are repetitions with the addition of an apostrophe to indicate the highest pitches (*b′–g″*); and two additional symbol triads are added at the bottom for the lowest pitches (*F* and *G*). The basic set of symbols for the vocal notation, on the other hand, makes use of the Ionic alphabet and thus must not be much older than the 5th century BCE. With only 24 characters, this set accounts for but a single octave (*f–f′*) in the centre of the overall span. In order to extend this pattern to match the two octaves of the instrumental notation, the two final triads *tau-upsilon-phi* and *chi-psi-omega* are inverted and added above the basic set (for *g′* and *a′*), while the symbols of the first five triads are inverted or otherwise made 'defective' and placed below the basic set (for *A–e*). Finally, just as in the instrumental notation, the upper five symbol-triads (together with the inverted *omega*) are repetitions with the addition of an apostrophe to indicate the highest pitches (*b′–g″*), and two additional symbol triads are added at the bottom for the lowest pitches (*F* and *G*).

It is not possible to represent on a modern staff the subtle gradations of pitch (and functions of pitch within a melodic complex), but a very rough idea of the pitch inflections indicated within each symbol-triad may be gathered from the display in ex.1 (see Henderson, 358; as

Ex.1

always the pitch is merely conventional). Pattern I represents the vocal notation; pattern II, the instrumental. In each case the symbols in row 1 represent the staff pitch; those of row 2, the pitch raised by an enharmonic or chromatic *diesis*; and those of row 3, the pitch raised by two enharmonic or chromatic *dieses*.

Descriptions of the notational symbols are late, but the symbols themselves appear in surviving pieces of ancient Greek music as early as the 3rd century BCE. A notational system of some sort was certainly in place even earlier. Aristoxenus referred to notation (*Harmonics*, ii.39–40), dismissing it as useless to scientific inquiry, and for the next several centuries theorists ignored it. Falling in the province of the practitioner rather than the theorist, musical notation must have been developed and passed on as a skill together with other details of instrumental technique and performing practice. Some pieces of ancient Greek music show a combination of vocal and instrumental notation, while others are predominantly in a single form. In some, notational symbols appear that are not represented in any of the theoretical treatments. Performers no doubt learnt how to interpret these special combinations as part of their training. As these traditional skills began to fade in late antiquity, a few writers undertook to codify the notational symbols. Alypius was the most systematic, and while his tables are incomplete and leave certain questions unanswered, their symbols do accord overall with the surviving notation, enabling it to be read for the most part in a sensible and musically coherent manner.

After Cassiodorus, Alypius's treatise, unlike many of the other ancient Greek treatises, seems to have been generally ignored by later writers until Girolamo Mei and Vincenzo Galilei. Shortly thereafter, in 1616, the treatise (as it appears in *NL-Lu* Scaligerianus gr.47: RISM, B/XI, 284) was first published in Greek without the notational symbols. With the publication of Meibom's improved edition of 1652, the treatise became widely known.

THOMAS J. MATHIESEN

Alzedo, José Bernardo. *See* ALCEDO, JOSÉ BERNARDO.

Åm, Magnar (*b* Trondheim, 9 April 1952). Norwegian composer. He made his début as an organist and as a composer won early fame with his work *Bøn* ('Prayer', 1972). At that time he was studying composition with Ketil Hvoslef at Bergen Conservatory of Music, but later he went to study with Lidholm at the Royal College of Music in Stockholm. His earliest acknowledged works use strict forms and tonality tinged with modal colourings; he has since developed his style more freely. A number of his works seem strikingly quiet and introverted.

Sometimes he has worked outside the traditional concert framework, an example of this being his *tone-bath* (1989), an experiment in creating a total musical environment (using texts by Liv Holtskog and visual objects by Astri Eidseth Rygh). In this and other works he seeks to transcend traditional musical practices in search of a new understanding of art and its perception. Several of his works can be understood in this light, including his 'pilgrim oratorio' composed for Nidaros Cathedral . . . *og livet* (' . . . and life').

WORKS

Dramatic: water music (ballet), tape, 1984; Open Question, 2 singing dancers, 2 gui, 1987; . . . og livet – eit oratorium [. . . and Life – an Oratorio] (C.F. Engelstad, Bible), chorus, insts, 1990; on a chair – visual consert (T. Lian), mime, tape, 4 musicians, audience, 1989; tone-bath, installation (text: L. Holtskog; visual objects: A.E. Rygh), 1989

Orch: Song, brass, perc, 1974; Study on a Norwegian Hymn, str, 1977; ajar, db, orch, 1981; my planet, my soul – a sym. (Åm), 1982; right through all this, 1985; March Nr.2001 B – The Oblique One, brass band/sym. band, 1985, rev. 1997; if we lift as one, 1988; mirror it, 1988; can tell you a mile off, concert piece/street march, sym. band, 1988; and let the boat slip quietly out, 1989; timeless energy, 1991; Naked Tones, sym. band, 1993; 'round 'n' around for the mulberry-bush, 2 sym. bands, 1994; gratia, hp, str, 1994; be quiet, my heart, 1995

Chbr: Sounds in Secret, 7 small poems, pf, 1970; Sonata, fl, gui, vc, 1976; Dance, hp, gui, hpd, 1977; Study on a Norwegian Hymn, org, 1977; sing, pain, va, 2 vc, perc, pf, 1979; farewell, borders, pf, 1980; omen (Holtskog), vn, hn, upright pf, opening recitation, 1983, rev. 1989; like a leaf on the river, gui, 1983; Konkylie (Chonch), vn, hn, pf, nar, 1984; pas de deux, vn, vc, 1984; still, pf/(fl, hp), 1985, rev. 1996; hovering depths, db, 1986; Freetonal Conversations – About Being Different: And Yet Born of the Same Unpalpable Matter – Love, vn, vc, pf, 1986; Air . . . of breath have you come, to breath shall you be, tape, db, 1987; lett leikande [Easy Playing] (vn, pf)/(Baroque vn, hammer pf), 1993; the light in your chest (fl, hn, vn, vc, pf)/freely composed amateur orch, 1994; glimpses of an embrace, tpt, hn, recitation, 11 echoes of Litledalen, Barstadvik, Ørsta, 1994; among mirrors, vn, vc, pf, 1995; on the banks of the eternal second, accdn, 1995; the silver thread, str qt, 1995; the wondering and the wonder – and the odd passing dolphin, orch, 1996, rev. 1997; love song over the meadow, hp, 1997; from splintered glass and shattered stone, re-tuned vn, vc, pf, 1997; but in the middle of the whirl, Hardanger fiddle, vc, pf, 1998; unio mystica, org [in memoriam Hildegard von Bingen], 1998

Vocal: Bøn [Prayer], chorus, S, str orch, 1972; point zero, choruses/congregation, orch/org, 1978, rev. 1983; A Cage-Bird's Dream (Music for Closed Eyes) (Åm), chorus, insts, slides, 1982; till we grow out of ourselves (Holtskog), chorus, nar, org, 1983; fritt fram [All Clear], S, fl, cl, vn, vc, perc, pf, 1987; a miracle and a tear (A. Eidslott), chorus, 1987; a new-born child (Holtskog), chorus, 1988; Is It Like This Among Humans Too?, chorus, insts, 1992; quiet ruby, chorus, folk singer, 1992; aeolian (chorus)/(chorus, insts), 1993; to unfold, S, pf, 1994; On the Wings of the Ka-Bird (Holtskog), 7 motets, 1996; you are loved, S, SSA, 2 hn, hp, 1997; wandering heaven (traditional from nowhere), A, 2 vn, 2 va, 2 vc, 1998

ARVID O. VOLLSNES

Amabile (It.: 'charming', 'gracious'). A performance direction found particularly in the later 18th century. It is mentioned, for instance, in Koch's *Musikalisches Lexikon* (1802). Beethoven used *con amabilità* ('with charm') as an expression mark at the opening of his op.110 Piano Sonata. Brahms used *Allegro amabile* in the Clarinet Sonata op.120 no.2, first movement.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Amabilità, con. *See* AMABILE.

Amacher, Maryanne (*b* Kates, PA, 25 Feb 1943). American composer, performer and multimedia artist. She studied composition with Rochberg at the University of Pennsylvania (BFA 1964) and with Stockhausen. A concern for physical space pervades her music, best exemplified by three ongoing multimedia installation projects. In *City*

Links #1-22 (1967–), she transmits sounds picked up by microphones placed throughout a city to mixing facilities at a central location. The resulting sound collages are broadcast at 'live' performances or over the radio. Locations for this project have included Boston, Chicago, New York and, in the Netherlands, Groningen. In *Music for Sound-Joined Rooms* (1980–), careful loudspeaker placement within a multi-room space creates 'structure-borne' sound that travels through walls and floors rather than through air. As the listener walks through a site, he or she experiences multiple sonic viewpoints arranged by Amacher to produce dramatic or narrative effects. The result is electronic music theatre designed according to the architectural features of a particular building. In *Mini-Sound Series* (1985–), Amacher presents a chronological as well as a spatial sound-narrative that evolves at a site over a period of several days or weeks. Such installations have been created in galleries and halls throughout Europe, the USA and Japan. She also collaborated with John Cage, providing sonic environments on electronic tape to accompany his readings (*Close-Up* for Cage's *Empty Words*, 1979). She has composed similar works for Merce Cunningham's dance ensemble.

WORKS

Multimedia installations (all works in progress): City-Links nos.1–22, 1967–; Music for Sound-Joined Rooms, 1980–; Mini-Sound Series, 1985–

Dance scores (all choreog. M. Cunningham): Everything in Air, tape, 1974; Events 100, 101, tape, 1975; Labyrinth Gives Way to Skin, tape, 1975; Remainder, tape, 1976

Other works (for tape, unless otherwise stated): Presence, 1975; Music for Sweet Bird of Youth, 1976; Lecture on the Weather, 1976 [collab. J. Cage]; Empty Words/Close Up, 1979 [collab. Cage]; Petra, 2 pf, 1991

GAVIN BORCHERT

Amadei, Filippo ['Pippo del Violoncello'] (*b* Rome, *c*1665; *d* London, *c*1725). Italian cellist and composer. He was mistakenly named 'Filippo Mattei' in Mattheson's *Critica musica* (January 1723). He played at Rome in concerts and religious functions sponsored by Cardinal Pamphili (1685–1708), the church of S Luigi dei Francesi (1686–1711), Cardinal Ottoboni (1690–99), the Accademia del Disegno di S Luca (1702–11), Prince Ruspoli (1708–11) and the church of S Giacomo degli Spagnoli (1707–13). He joined the musicians' Accademia di S Cecilia on 25 September 1690, was the organist at Santo Spirito in 1694 and a trombonist in the Concerto del Campidoglio beginning in 1702. He is called 'Roman' in the libretto for his oratorio *Aman delusus* (1699) and that of *La stella de' magi* (1702) identifies him as a 'virtuoso' of Cardinal Ottoboni. He served as *aiutante di camera* for the cardinal from April 1700 (i.e. immediately after the death of Lulier, his illustrious predecessor) to the end of March 1711. Near the end of his service for Ottoboni, his only complete opera, *Teodosio il giovane*, was splendidly produced with sets by Juvarra. Crescimbeni, in his *Comentarj intorno alla storia della volgar poesia* (Rome, 1702), terms Amadei a composer of cantatas who served Ottoboni, but his extant works include only one cantata and one cello sonata that were most likely written during his 40 years in Rome. A finely wrought two-part dialogue is employed throughout both the first movement of the sonata and the first aria of the cantata *Il pensiero* (La Via, 1983–4 and 1987). Ghezzi's fine drawing of Amadei 'with his charming dog Gignovetij, dwarfish and amusing [*nano e redicolo*]', was made at the resort of Filanciano on 2 June 1714 (reproduced in La Via, 1995, p.470).

On 28 January 1715 Amadei and two violinists, Pietro and Prospero Castrucci, left Rome for London in the retinue of the Earl of Burlington. His first advertised appearances in London were in 1718 at Lincoln's Inn Fields (20 May, 6 and 27 November). In 1719 he played with the newly arrived violinist Carbonelli on 13 February and 16 April; according to Rolli he was one of the five Italians who were to give two concerts a week for the Princess of Wales during the summer season; and he composed the 'entertainments' sung by Ann Turner Robinson at Drury Lane on 24 November. In 1720, when the Royal Academy of Music was founded, he was employed as its principal cellist. In 1721 the Academy commissioned him to arrange *Arsace* and to write Act 1 of *Muzio Scevola*. He played a concerto he had composed for the bass viol on 14 March 1722 at Drury Lane, where he also appeared as the concertino cellist in a Corelli concerto on 20 March 1723. In May 1724 the anonymous *Session of Musicians* advised him: 'keep to your playing, and leave off composing'. He seems to have heeded this advice throughout his career: as far as we know, he composed relatively few works. He may have died as early as 1725, at the age of about 60. Rolli subsequently wrote a mordant epigram, which begins: 'Qui sta Pippo un gran violoncellista: fate inchino, o Puttane, all fossa'. He may have been related to – and is sometimes confused with – Giovanni Amadei, a contrabassist who performed at Rome in 1715–59.

WORKS

lost unless otherwise stated

ORATORIOS, SACRED CANTATAS

performed in Rome unless otherwise stated

Aman delusus (orat, ? A. Spagna), Oratorio del SS Crocifisso, 10 April 1699

La pace per la nascita del Redentore (cant., F.M. de Conti), Palazzo Apostolico, 24 Dec 1701

La stella de' magi (cant., Campelli or ? P. Ottoboni), Palazzo Apostolico, 24 Dec 1702

Abelle (orat, ?Ottoboni), Palazzo della Cancelleria, ? 23 Jan 1708; Foligno, Compagnia della Madonna del Piano e di S Leonardo, 14 May 1713

Il trionfo di Tito per la distruzione di Gerusalemme, espresso nelle Lamentazioni del profeta Geremia (orat, A.D. Norcia), Palazzo della Cancelleria, Holy Week 1709

S Cassilda (melodramma), Chiesa Nuova, 1711

Il martirio de' SS fanciulli Giusto e Pastore (melodramma sacro, M. Strinati), Chiesa Nuova, Lent 1712

SECULAR VOCAL

Unidentified serenata for Queen Maria Casimira, Rome, Piazza alla Trinità dei Monti, 9 Aug 1703

Amor vince ogni core (serenata, C. Doni), Perugia, 7 Sept 1710

Teodosio il giovane (dramma, 3, Ottoboni), Rome, Palazzo della Cancelleria, 9 Jan 1711

Muzio Scevola [Act 1] (dramma, 3, P.A. Rolli), London, King's, 15 April 1721, *GB-Lbl* [Act 2 by G. Bononcini, Act 3 by G.F. Handel]

Addl music for Arsace by G.M. Orlandini (tragedia, 3, Rolli, after A. Salvi: *Amore e maestà*), London, King's, 1 Feb 1721, arias *Er*

Cants.: Il pensiero che rapido vola (A. Ottoboni), S, bc, before 1710, *Lbl*; Ove fuggi, ove vai, *Ob* (Tenbury); Pastorella sventurata, che mai vide più, S, bc, *Cfm*; Saprà quest'alma irata, S, vn, bc, *Er*; Soli voi m'innamorate, S, bc, *Er*

INSTRUMENTAL

Sonata, vc, bc, ?*c* 1700, *D-WD*; Concerto, b viol, perf. London, Drury Lane, 14 March 1722

LOWELL LINDGREN

Amadei, Michelangelo (*fl* 1614–15). Italian composer. The title-pages of his two collections of *Motecta* (Venice, 1614–15) do not indicate whether he held a post; their respective dedications to the Bishop of Cortone and a Neapolitan dignitary suggest that though publishing in Venice, he was not necessarily working in northern Italy. They contain motets for one to six voices with organ continuo; it can thus be seen that he adopted the up-to-date concertato style and was also interested in the modern art of the solo motet.

JEROME ROCHE/ELIZABETH ROCHE

Amadeus Quartet. British string quartet. It was founded in London in 1947 by Norbert Brainin (*b* Vienna, 12 March 1923), Siegmund Nissel (*b* Vienna, 3 Jan 1922), (Hans) Peter Schidlof (*b* Mödling, 9 July 1922; *d* Bassenthwaite, Cumbria, 15 Aug 1987) and Martin Lovett (*b* London, 3 March 1927). The violinists and viola player came to Britain from Austria just before the war and were pupils of Max Rostal. Lovett, who had studied with his father and at the RCM with Ivor James, was also of immigrant stock and was in Rostal's orbit as a member of his chamber orchestra. Brainin, who had previously studied with Riccardo Odnoposoff and Rosa Hochmann (and briefly with Carl Flesch), and Schidlof were both brilliant violinists; but the latter agreed to take the viola part and became a leading exponent of that instrument. As the Brainin Quartet, the four gave their first concert at the

Amadeus Quartet: (from left to right) Norbert Brainin, Siegmund Nissel, Peter Schidlof and Martin Lovett

Dartington Summer School on 13 July 1947. Their acclaimed début as the Amadeus Quartet was made on 10 January 1948 at the Wigmore Hall, London, a second recital at that venue following on 10 April. They were soon among Britain's busiest musicians, frequently broadcasting on the BBC Third Programme. By 1950 they were visiting Europe and tours of the USA, Canada, South America, Australasia and Japan followed. They became favourites in America and Germany, while at home they were central to musical life, giving regular recitals of the Viennese classics and appearing in quintets and sextets with the viola player Cecil Aronowitz and the cellist William Pleeth. In 1966–8 they were resident at the University of York; from 1978 they taught at the Cologne Hochschule and from 1986 at the RAM. Brainin and Schidlof sometimes appeared as soloists and made up a celebrated partnership in Mozart's Sinfonia concertante.

In essence, the Amadeus's style was Viennese, their homogeneity of tone and attitude underpinned by their similar training and backgrounds. Their warm, vibrant manner was especially well suited to Mozart, Schubert and Brahms; in earthier music by Haydn and Beethoven their approach was sometimes too comfortable, although Lovett's firm, tensile cello line often saved the overall effect from sounding sentimental. Livelier movements of Classical works were delivered with verve, geniality and wit. Although their choice of repertory was conservative, they performed music by Bartók, Tippett, Rainier and Fricker; and one of their warhorses was Britten's Second Quartet – in 1975 he wrote his Third Quartet for them. By then they were heavily dependent on the form of Norbert Brainin; when he was at his mercurial best, a performance of flair and imagination would ensue, whereas if he was in one of his wayward moods, intonation and ensemble would suffer. Their career was interrupted by Nissel's serious illnesses in 1960 and 1981 – on the second occasion, the others formed an Amadeus String Trio. Schidlof's sudden death brought the end after 40 years without a change of personnel, a record exceeded only by the Beethoven Quartet. The survivors continued to play in public for a time but in 1999 Lovett was the only one active as a player. Teaching has chiefly occupied them, especially at their Amadeus International Summer Course in London (an Amadeus Scholarship Fund helps some young groups to attend); and they are in demand for masterclasses and as competition adjudicators. They made myriad recordings, among which special mention must be made of Haydn's opp.54, 55 and 76, the Mozart and Schubert quartets and quintets, the Brahms quartets, quintets and sextets – as well as the G Minor Piano Quartet with Emil Gilels and a live recording of the Piano Quintet with Clifford Curzon – and the Britten quartets. Of their Beethoven performances, the best are those taped in the concert hall. In the quartet's later years four Stradivaris could be heard: the 'Chaconne' violin of 1725, the 'Payne' violin of 1731, the 'Macdonald' viola of 1701 and the 'Vaslin' or 'La belle blonde' cello of 1725, as well as Brainin's 'ex-Rode' Guarneri del Gesù of 1734.

TULLY POTTER

Amadino, Ricciardo (*fl* Venice, 1572–1621). Italian printer. In February 1572 he witnessed a codicil to the will of Girolamo Scotto, in which he is described as a printer, not a bookseller, suggesting that he may have worked in Scotto's shop in Venice at the time. After a brief attempt in printing music on his own in 1579, he resumed as a partner of GIACOMO VINCENTI, with whom he printed, between 1583 and 1586, about 80 books. A few were reprints of popular volumes by Arcadelt, Lassus, Marenzio, Palestrina, and Bernardino Lupacchino and Gioan Maria Tasso, but most were first editions of works by some 33 composers, of whom the best known are Asola, Bassano, Caimo, Gioseffo Guami, Marenzio, Stivori and Virchi, as well as anthologies. For their printer's mark Vincenti & Amadino used a woodcut of a pine-cone, with the motto 'Aeque bonum atque tutum'. When they began to print separately (from 1586) Vincenti kept the pine-cone symbol, while Amadino adopted a woodcut of an organ, with the motto 'Magis corde quam organo'. The dissolution of the partnership must have been amicable, for afterwards they seem to have shared type and ornamental pieces, and some of their editions have mistakes in common. Moreover, they printed together several theological and philosophical books between 1600 and 1609.

Working alone from 1586, Amadino printed vocal and instrumental music in such quantity as to assure him a position among Venice's four leading music printers. His preferred composers were Asola (59 editions, including those with Vincenti), Gastoldi (43), Banchieri, Monteverdi

Opening of Orpheus's 'Possente spirto' from Act 3 of Monteverdi's 'Orfeo' (Venice: Amadino, 1615)

and Agazzari. Asola, mentioned in one of the few dedications signed by Amadino, was probably a personal friend. Amadino also printed several theoretical volumes, including the first edition of Bottrigari's *Il desiderio* (1594). Non-musical publications by him are not numerous; among them are two tragedies, *Eutheria* (1588) and *Cratisiclea* (1591), both by Paolo Bozzi, whose *Canzonette* (1591) and two surviving madrigal books (1587 and 1599) were printed by Amadino.

Amadino printed several folio editions and a few octavos, but otherwise his whole musical production was in upright quarto format (apparently gathered in half-sheets). This reflected the current trend, and indeed his whole musical production mirrors the shifting musical tastes of the time; he printed canzonettas and works for *cori spezzati* as they grew in popularity, along with *falsobordoni*, accompanied solos and duets (including those by Gastoldi, d'India and Rubini), dramatic music (e.g. Monteverdi's *Orfeo* (see illustration) and Domenico Belli's *Orfeo dolente*) and all types of concertato music. Many of his publications were commissioned, either by the composers or by other printer-booksellers, such as Tozzi in Padua, Bozzola in Brescia or Pietro Tini in Milan. But Amadino's own preferences must account for his persistent loyalty to certain composers, such as Asola, Gastoldi, Banchieri and Monteverdi. Amadino deserves a place in the front rank of Italian music printers of his time for the sheer volume of his output and for his many first editions and reprints of leading composers' works.

THOMAS W. BRIDGES

Amadis, Pietro. *See* ZADORA, MICHAEL.

Amadori, Giuseppe (*b* *c*1670; *d* after 1730). Italian composer. He is not to be confused with Giovanni Tedeschi, 'detto Amadori' (*d* *c*1780). Giuseppe Amadori was active in Rome between 1690 and 1709. In 1690 he was in the service of Cardinal Pietro Ottoboni as organist and harpsichordist. His oratorio *Il martirio di S Adriano* was performed in the Chiesa Nuova in 1702, and in 1707 and 1709 he was active in the Accademia del Disegno. An autograph *Pange lingua* for soprano and continuo and an aria with instrumental accompaniment are in the St Sulpitiuskerk, Diest (according to Eitner); two manuscript arias for soprano and continuo are in the Schlosskirche at Sondershausen and the Giuseppe Verdi Conservatory, Milan, and a cantata and other church music are in the Santini Collection (*D-MÜp*). Instrumental movements by him are included in two anthologies published in London, *A Second Collection of Toccatas, Vollentarys and Fugues* (1719) and *The Lady's Entertainment* (1708). According to Arteaga, Amadori was highly regarded as a singing teacher; the possibility that Arteaga confused him with Giovanni Amadori cannot be excluded.

HANS JOACHIM MARX

Amalarius of Metz (*b* nr Metz, *c*775; *d* ?Metz, *c*850). Writer on liturgy and chant. He was probably educated under Alcuin at the monastery of St Martin in Tours, and served as archbishop of Trier from 809 and 814. In 813 he travelled to Constantinople at the behest of Charlemagne, returning the next year, apparently by way of Rome. He then began his literary activity, probably at Aachen. His longest and most significant work, the *Liber officialis*, first appeared in about 823, with a second edition in about 830. In 831 Amalarius visited Rome and requested a copy of the Roman antiphoner from Pope Gregory IV, only to be informed that Abbot Wala of Corbie had secured all available copies on his visit of 825 and had returned with them to Corbie. Amalarius himself made the journey to Corbie, there to compare the Roman antiphoners with their Frankish counterparts. Like HELISACHAR before him, he was distressed at the great differences between the various books and set about compiling his own antiphoner. He described the process in his *Prologus antiphonarii a se compositi*, mentioning that he had indicated Roman chants by an 'R' in the margin, Frankish ones by an 'M' (for Metz) and his own contributions by 'IC', seeking the 'indulgentia' and 'caritas' of possible critics.

Amalarius was appointed to replace AGOBARD OF LYONS as archbishop in 835 when the latter fell out of favour with Louis the Pious. Amalarius himself was deposed (and Agobard reinstated) when accused of heresy at the Council of Quierzy in 838. The central charges against Amalarius marshalled by Agobard and his deacon Florus, concerned the pervasive use of allegorical exposition in his liturgical works, a trait that exercised a great influence on much subsequent liturgical commentary. Amalarius appears to have spent the remaining years of his life at Metz, completing a commentary on the antiphoner (*Liber de ordine antiphonarii*), as well as one (now lost) on the gradual.

Embedded in the allegorical exposition of Amalarius's two major works, the *Liber officialis* and the *Liber de ordine antiphonarii*, is a rich fund of information about the liturgy and chant of his time, both Roman and Frankish. His own antiphoner is lost but has been reconstructed by Hanssens (iii, 110–224); curiously it appears to be closer to the usage of Lyons than that of Metz (see Hesbert).

JAMES W. McKINNON

Amalia Catharina, Countess of Erbach (*b* Arolsen, 8 Aug 1640; *d* Cuylenburg [now Culemborg], 4 Jan 1697). German poet and composer. She was the daughter of Count Philipp Theodor von Waldeck; her mother was born Countess of Nassau. She appears to have spent her youth at Arolsen, the seat of the Waldeck family. In 1664 she married Count Georg Ludwig von Erbach, and then settled at Michelstadt, near Erbach, Odenwald. She was typical of the numerous princesses of the years around 1700 who inclined to Pietism and gave expression to it in verse. She published *Andächtige Sing-Lust, das ist i. Morgen-, ii. Abend-, iii. Tage-, iv. Beth-, v. Buss-, vi. Klag- und Trost-, vii. Lob- und Dank-, viii. Lehrlieder* (Hildburghausen, 1692). The place of publication is explained by its being the residence of one of her sisters, who was the wife of the Duke Ernst of Saxe-Hildburghausen and to whom she dedicated her book. It is therefore possible that it was written under Middle German influence. Moreover, the Princesses of Reuss and Schwarzburg, who lived nearby, were ardent disciples of Pietism. Amalia Catharina's publication is a collection of songs for household devotion. It contains 67 poems, some of which are provided with melodies with figured bass. This music (which is not given by Zahn) is certainly by Amalia Catharina herself and is an important contribution to the development of the German sacred continuo song.

WALTER BLANKENBURG

Amalie, Princess of Saxony [Marie Auguste Friederike Amalie]. (*b* Dresden, 10 Aug 1794; *d* Dresden,18 Sept 1870). German writer and composer. The sister of King Johann of Saxony, she was taught the piano by Joseph Schuster, singing by Vincenzo Rastrelli and Johann Miksch, and music theory by F.A. Schubert and Weber. Weber found her 'highly talented'. She spent her whole life in Schloss Pillnitz, Dresden. Princess Amalie was stimulated by the cultivation of Italian opera in Dresden and composed a number of operas (under the name Amalie Serena), which were performed during family celebrations and within the court circle; some were performed in the Pillnitz theatre. Her operas are modelled on *opéra comique* and *opera buffa*. Her strength lies in her comic operas; she illustrates the characters with originality and humour. The instrumentation is simple, but the instrumental colouring is related to the characters and the various situations. After 1835 she stopped composing and wrote comedies, using the pseudonym Amalie Heiter.

WORKS

Amannsaxenim, Mälikäi (*b* Yarkand area, ?1533; *d* Yarkand, ?1567). Uighur musician. As much a mythical as a historical figure, she was the 17th and final musician discussed in the 1854 *Tävarixi musiqiyun* (Histories of musicians); the dozen pages devoted to her deserve summary here.

The sultan AbdurräÒid travelled to the desert anonymously accompanied by his escort to inspect his functionaries suspected of subversion. One day he lodged with a butcher in the Taklamakan desert, whose daughter, Mälikäi Amannsaxenim, then aged 13, transpired to be a fine musician, a singer, poet and composer with a perfect command of the drum. Charmed by the young musician, the sultan revealed his true identity, put on his royal turban, prepared ten sheep, as well as tea and silk, and accompanied by 40 of his functionaries returned to the house of the butcher formally to request the hand of his daughter.

After their wedding, Mälikäi wrote several books, one on poetry, one on music and finally one on calligraphy. She also composed a *muqam* which, for reasons of decorum, was signed by her husband the sultan. She died in bed at the age of 34, her distraught husband following soon after.

By 1988 her tomb at Yarkand was in poor condition, probably due to desecration in the Cultural Revolution.

SABINE TREBINJAC

Amat, Hamzah bin Awang (*b* Kelantan, Malaysia, 1940). Malaysian shadow puppeteer. From an early age he became interested in *wayang kulit Siam*, which is associated principally with the state of Kelantan and is the most important of Malaysia's four types of shadow play. He received his early training as a *dalang* (puppeteer) from his father and at the age of 11 created his own experimental *wayang kulit Siam* troupe with a few friends.

He later studied *wayang kulit Siam* with Pak Awang Lah, the most famous Kelantan *dalang*. After an initial lack of success, he managed to impress the international audience of scholars at the 1969 conference Traditional Drama and Music of Southeast Asia, held in Kuala Lumpur. This exposure enabled him to travel overseas. The Seri Setia Wayang Kulit troupe, with Amat as leader, visited ten European countries in 1971 under the sponsorship of UNESCO and the Malaysian Ministry of Culture, Arts and Tourism, giving performances in 31 cities. Aside from returning to Europe and performing in several Asian countries, Amat has also performed in Russia and Turkey (1973) and the USA (1974).

Both as performer and teacher, Hamzah has established an international reputation for authenticity of style and quality of performances. He is one of the very few surviving *dalang* in Malaysia who continue to perform *wayang kulit Siam* in the 'classical' manner, and he is the only performer who preserves the older musical repertory of this genre in his performances.

He has received several local awards for his performance of *wayang kulit Siam*, as well as the ASEAN Cultural Award. He is currently attached to the Akademi Seni Kebangsaan (National Academy of Arts) in Kuala Lumpur and has also recently established himself as a puppet maker, a craftsman of traditional musical instruments and a shaman, as well as a *ma'yong* (dance theatre) musician.

GHULAM-SARWAR YOUSOF

Amat, Joan Carles [Carles y Amat, Joan] (*b* Monistrol de Montserrat, *c*1572 or *c*1562; *d* Monistrol de Montserrat, 10 Feb 1642). Catalan theorist, guitarist and physician. Biographical information about Amat is drawn mainly from a letter written by Fray Leonardo de San Martín in Zaragoza which appeared for the first time in the 1639 edition of Amat's treatise *Guitarra española de cinco ordenes*. Leonardo praised Amat's musical abilities, stating that 'by the age of seven he already played the guitar and sang with grace'. It is from Leonardo's letter that the year of Amat's birth has been calculated. Writing in 1639, he stated that Amat was then 67, which suggests that he was born about 1572. But Leonardo also stated that Amat's treatise was published 'for the first time in the year 1586'. Pujol and Hall have argued that this date should read 1596, but, as a printed medical treatise by Amat bears the early date of 1588, it is also possible that Leonardo's statement of Amat's age involved a misprint of 'sesenta y siete' (67) for 'setenta y siete' (77).

Amat was a prolific writer and a knowledgeable physician. He received the doctorate in medicine at the University of Valencia, probably in 1595, and may have spent some time in Lérida. In 1600 he married Mónica Ubach Casanovas; they had no children. He was made municipal physician at Monistrol in 1618, performed a similar function at the nearby monastery of Montserrat, and occupied several other municipal offices. At the time of his death he had just started a period as mayor. Amat's published work includes several medical treatises as well as the *Guitarra española*, and he may have been the composer of an attractive *Entremés de la guitarra* in the Biblioteca Nacional, Madrid. A 12-voice mass and a villancico, *Sube el alma, sube*, both attributed to 'Joan Abat' in the Biblioteca Musical de la Diputació de Barcelona, may also be by Amat.

The earliest extant edition of *Guitarra española* was printed in Lérida in 1626. To the seven chapters of the original Barcelona edition – dealing with the stringing, fretting and tuning of the instrument; the fingering of 12 major and 12 minor chords, with diagram; some rules for harmonizing the notes in a scale; and 12 progressions each for *Las vacas* (harmonically identical to the romanesca) and the *paseo* (*passacalle*) – it added two further chapters, one containing a table and method for accompanying and the other dealing with the four-course guitar. Beginning some time between 1703 and 1713, the treatise was often issued with a supplementary *Tractat brev y explicació dels punts de la guitarra*, in Catalan or Valencian according to the place of publication; this also is possibly, but not certainly, by Amat. It contains a table depicting the chord shapes that Amat had described, but not illustrated, in the earlier sections; numerals are used to represent specific chord fingerings – a system sometimes referred to as Catalan notation. Two elegant woodcuts show how the 12 major and 12 minor triads correspond to Italian *alfabeto* chord shapes, and an appendix includes a brief description of the *vandola*.

Amat's *Guitarra española* was the longest lived and one of the most influential of all guitar treatises, being reprinted and plagiarized almost continuously for over two centuries. Facsimiles of an edition issued by Joseph Bró between 1761 and 1766 have been published (Barcelona, 1956; Monaco, 1980).

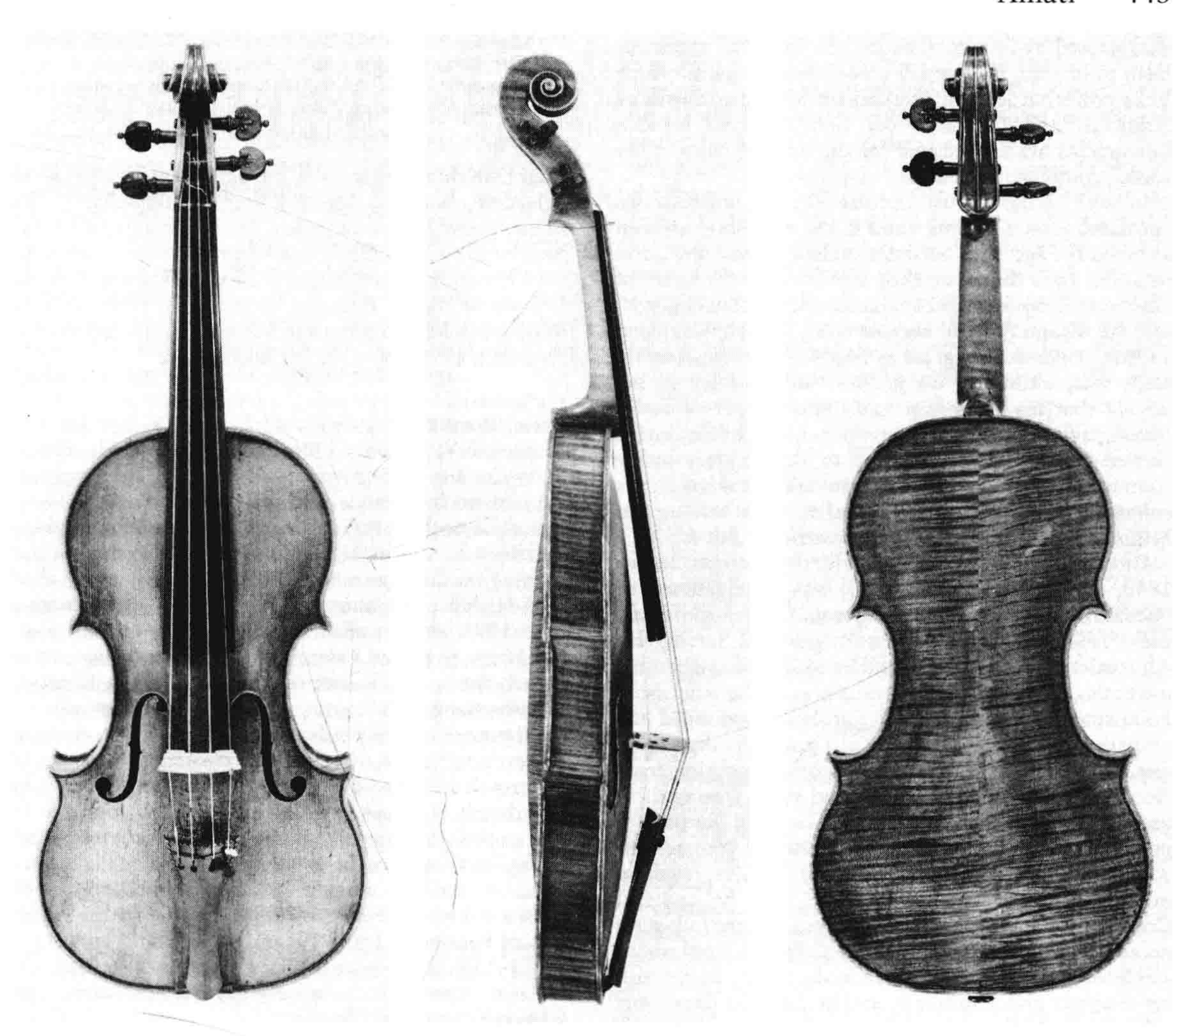
CRAIG H. RUSSELL

Amateur Concert. London concert organization active during the 1780s. *See* LONDON, §VI, 1.

Amati. Italian family of violin makers. The patriarch of the family, Andrea Amati (*b* before 1511; *d* Cremona, 24 Dec 1577), was possibly the founder of modern violin making; certainly he was the first violin maker to work in Cremona, the city whose name today is synonymous with the craft. Little is known of his life. His earliest documented instrument, a violin with three strings dated 1546, was still in existence in Milan at the beginning of the 19th century, according to a contemporary source. Of his surviving instruments – violins of two sizes, large violas (tenors) and large cellos – most have the coat-of-arms of Charles IX of France painted on the back and are dated between 1564 (fig.1) and 1574. The authenticity of these instruments has recently been challenged. If they are genuine then, Andrea must have been working well before that time for his fame to have reached the French court prior to the commissioning of these instruments (*see* VIOLIN, §I, 3(iii)(b)). In this period Gasparo da Salò, also sometimes considered the inventor of the violin, was just beginning his work in Brescia.

While there may have been violins before Andrea Amati (*see* VIOLIN, §I, 3(i)), he appears to have originated the form of violin, viola and cello as they are known today. His concept of design was carefully thought out in accordance with contemporary standards of measurement and proportion. These classical construction principles distinguish the instruments of the Cremonese school from those made almost anywhere else and give them much of their visual superiority. To those accustomed to later violins, it is difficult to appreciate the astonishing modernity and sophistication of Andrea's work. The shape and curvature of the bodies have become the standard look of a violin. The scrolls show immense originality and have virtually set the rules for scroll design



1. Front, side and back views of violin ('Charles IX') by Andrea Amati, Cremona, 1564 (Ashmolean Museum, Oxford)

for all time. Only in the fuller archings and the somewhat archaic soundholes do Andrea's instruments reveal the era of their creation. The work is delicate, the tone sweet, but they are less substantial and robust than those of the later generations. Andrea's golden or golden brown coloured varnish is very much the same as that which followed in his family.

Andrea Amati's two sons were Antonio Amati (*b* Cremona, *c*1540; *d* Cremona, 4 Feb 1607) and his half-brother Girolamo [Hieronymus] Amati (i) (*b* Cremona, *c*1561; *d* Cremona, 21 Oct 1630). They are commonly known as 'the brothers Amati'. Although heirs to their father's business, they apparently worked little together, and in 1588 the business was divided, with Girolamo retaining the family workshop and tools. Nevertheless, in all but a very few instances the productions of both the Amati workshop still carried the printed label of their partnership until 1630. They further developed the craft of violin making, improving the form of the soundhole and in subtle ways giving their instruments more strength. They experimented with different forms of outline and arching as well as with the visual aspect of the edge and purfling, but always retained that special quality of sound and an elegance that delights the eye. One innovation attributed to them, though this was possibly a Brescian creation and is also sometimes ascribed to Maggini, was the contralto viola, the size regarded as more or less ideal today. The much larger tenor viola was more common at the time, and the Amatis also made many of these. They also built large-size cellos; both these and the tenor violas have mostly been reduced for modern playing.

The instruments of the brothers Amati were spread throughout Italy and the Continent, and their influence upon other schools of violin making is incalculable. The superior appearance and construction of their instruments made them the model for all violin makers and thus Cremonese violins became the standard by which all are judged, even today. They were soon copied, even counterfeited, and long after the brothers' passing their designs inspired violin makers in Turin, Venice, Bologna, Milan, Florence, Padua, the Tyrol and the Netherlands. In England they were much in vogue at the end of the 18th century, the time of Forster and Banks. Since that time, however, the work of Nicolò, and especially his 'Grand Pattern', has generally been more appreciated by violin makers, and the brothers are sometimes underrated by comparison.

2. Front, side and back views of violin ('Alard') by Nicolò Amati, Cremona, 1649 (Ashmolean Museum, Oxford)

Nicolò Amati (*b* Cremona, 3 Dec 1596; *d* Cremona, 12 April 1684) was the son of Girolamo Amati (i). He was the most refined workman of the family, and today its most highly regarded member. His training would have commenced during the first decade of the 17th century, and by 1620 his had become an evident and even dominant hand in the instruments emanating from that workshop. The plague that killed his father in 1630 and much of his immediate family had been preceded by two years of famine, devastating the city of Cremona. The same plague killed Maggini, the Amatis' great rival, in 1632, and so, apart from a few provincial followers of the Brescian School, Nicolò Amati was suddenly the only violin maker of any consequence in Italy. Commissions for new instruments, needless to say, were likely few and far between during this decade, and violins from this period are exceedingly rare.

By 1640 the violin-making momentum had been regained, and Nicolò and his work entered a second phase. Once more, instruments poured forth in response to heavy demand, and the 1640 census returns show that Nicolò had assistance in his work from outside of his immediate family. Among the known violin makers who appeared in his household were Andrea Guarneri, G.B. Rogeri, Giacomo Gennaro, Bartolomeo Pasta and Bartolomeo Cristofori (probably the same Bartolomeo Cristofori who later invented the pianoforte), and there are several documented makers for whom there is no surviving independent work. Jacob Stainer may at some time have been Nicolò's pupil as well, and others with personal connections to Nicolò include Francesco Rugeri and Antonio Stradivari.

Most of Nicolò Amati's production seems to have consisted of violins, the proportion of violas and cellos being very small compared with that of his father and uncle. Although, as previously, the violins were of differing dimensions, from about 1628 he favoured a wider model than before, known in modern times as the 'Grand Pattern' (fig.2), and these violins are the most sought after. Well curved, long-cornered, and strongly and cleanly purfled, they perhaps represent the height of elegance in violin making. The soundholes too have a swing to their design, and the scrolls are in the best Amati tradition. The varnish leans away from brown and towards golden orange in colour: it must have been quite soft, as the top coat has now usually worn away. The arching shows a tendency towards what is known as 'scoop' near the edges. This degree of flatness, invariably

exaggerated by imitators, causes the flanks of an instrument to be thin, resulting in a sweetness of sound which lacks power, at least in comparison with instruments of Stradivari and Guarneri 'del Gesù'. Nicolò Amati's instruments are appreciated for the noble quality of the sound, combined with ease of response.

In 1645 Nicolò married Lucrezia Pagliari, and their son Girolamo took a leading hand in the workshop as soon as he was of age. This becomes evident in the 1660s, and by about 1670 the Amati shop was firmly in the hands of Girolamo. Once again the character of the violins changed, and the 'Grand Pattern' became rarer, though the golden varnish remained. As great as Nicolò's creative achievement was, ultimately his greatest influence lay in the impact that his workshop had upon the art of violin making as a whole. His numerous pupils and employees carried the concept of the shop to almost every major commercial centre in Italy and in some cases abroad, thus enhancing the overall quality of Italian violin making and helping to give it the cachet that it carries to this day.

Girolamo [Hieronymus] Amati (ii) (*b* Cremona, 26 Feb 1649; *d* Cremona, 21 Feb 1740) was the eldest son of Nicolò Amati. His early training would have begun in the early 1660s, at a time when Rogeri was serving his apprenticeship with Nicolò, and by 1666 his hand became increasingly evident in the production of the workshop. Following his father's death Girolamo continued the operation of the workshop, but at a gradually decreasing rate of output, indicative perhaps of competition from Antonio Stradivari and the Guarneri shop. During these years Girolamo and his brother, Giovanni Battista (a priest), entered into a series of financial transactions which gradually weakened the family finances, resulting in a lawsuit against Girolamo. By 1697 he had fled Cremona for Piacenza, where he stayed into the following decade. He remained away from Cremona until about 1715, when he returned to live in the family home with his daughter and son-in-law, and he died just days short of his 91st birthday.

Though he was a fine maker, 'Hieronymus II', when compared to his ancestors, suffered the same fate as other sons of great men. Most of the late instruments of Nicolò show his participation, and many appear to have been made by him unaided, and they are often less inspiring than the earlier ones, somehow lacking the grace and fluency that his father possessed. Tonally, they are often superior, for he eliminated any hint of scooped edges, and his arching is usually rather full in the upper and lower flanks. His soundholes, though nicely finished, lack the dynamic character of Nicolò's and the scrolls appear heavy with the fluting left rather flat in the manner of Rogeri. After Nicolò's death the varnish lost its golden brightness; while Girolamo (ii) still used a golden yellow, other instruments are varnished in a reddish brown which is perhaps a little less transparent. Only half a dozen instruments are known from after his departure from Cremona in 1697.

CHARLES BEARE/CARLO CHIESA, PHILIP J. KASS

Amati [Melchioni, Marchioni], Dom **Nicolò** (*b* Lizzano in Belvedere, Bologna, 1662; *d* Vergato, Bologna, 1752). Italian priest and violin maker. His real family name was Melchioni or Marchioni, and he had no connection with the Cremonese Amati family. For further information, see S. Pasqual and R. Regazzi: *Le radici del successo della liuteria a Bologna/Lutherie in Bologna: Roots and Success* (Bologna, 1998), pp.118, 177 and 200.

ROBERTO REGAZZI

Amato, Pasquale (*b* Naples, 21 March 1878; *d* Jackson Heights, NY, 12 Aug 1942). Italian baritone. He studied in Naples and made his début there in 1900 as Germont. Soon in much demand, he sang at Covent Garden (1904) and at La Scala with Toscanini (1907–8) before making his début at the Metropolitan Opera as Germont in *La traviata* on 20 November 1908. He quickly established himself there, and remained a member of the company until 1921, singing all the principal roles of the Italian repertory, as well as Valentin, Escamillo and many other French parts, and Kurwenal and Amfortas in German. He often sang with Caruso; they appeared together in the 1910 première of Puccini's *La fanciulla del West*, in which Amato sang Jack Rance . He also created the title role in Damrosch's *Cyrano de Bergerac* (1913) and Napoleon in Giordano's *Madame Sans-Gêne* (1915). His voice was of fine quality and extensive range, with brilliant resonance in the upper register; he made himself into a reliable and complete artist in every respect. His qualities are well shown in a long series of recordings, at first for the Italian firm of Fonotipia (1907–10) and subsequently for Victor (1911–15) and Homocord (1924); the Victor series, made in Amato's prime, includes some notable Verdi duets with Caruso, Gadski and Hempel.

DESMOND SHAWE-TAYLOR

Amato [D'Amato, De Amato, Di Amato], **(Epifanio) Vincenzo** (*b* Ciminna, nr Palermo, 5 Jan 1629; *d* Palermo, 29 July 1670). Italian composer. His family were connected with the princely houses of Ventimiglia and Gambacurta. His younger brother Paolo, author of *Teatro marmoreo della marina* (Palermo, 1682), was one of the greatest Italian architects. His sister or cousin Eleonora was the mother of Alessandro Scarlatti; deputizing for the parish priest of S Antonio Abate, Palermo, Amato personally baptized her daughters. He spent his life at Palermo. Entering the Seminario dei Chierici in adolescence, he obtained a degree in theology and took holy orders. From 1652 he directed music at the church of S Maria del Carmine and from 1665 until his death he was *maestro di cappella* at the cathedral. He was commissioned by S Maria del Carmine to compose two Passions (one according to St Matthew, the other according to St John). These are not oratorio Passions but liturgical works; recitatives and *falsobordone* choruses replace Gregorian chant in the readings of the Gospel. These Passions were sung by Sicilian chapels until the middle of

the 20th century. It is reported (Bertini) that there was also a performance at Mayenne, near Rennes in France, not long before the Revolution.

All Amato's surviving music (except for late arrangements of the *Passion*) is contained in four manuscripts and two printed collections of the 17th century discovered at Malta Cathedral, Mdina, in 1979. It seems that Amato's original music for the *St John Passion* was arranged during the 18th, 19th and 20th centuries not only for variants of the same, but also for setting the *St Matthew Passion* and the *St Mark Passion.* In these arrangements the tenor voice (Christ) is replaced by a bass voice and the four-part *falsobordone* choruses are substituted by the music of other composers.

Amato's recitative is even simpler than Carissimi's but no less concentrated and dramatic and with a few subtle inflections such as brief embellishments on emotive words, melodic and harmonic chromaticisms and expressive dominant 7ths. All of Christ's dignified and austere utterances start with a regular opening figure consisting of one or two rising trochees. The roots of Alessandro Scarlatti's recitative writing, as exemplified in his *St John Passion*, can probably be found in these works. In his polyphonic music, with its bold harmonies and modulations and vivid imagery, Amato shows himself to have been the worthy heir of Bonaventura Rubino, his predecessor as *maestro di cappella* of the cathedral and the greatest musical authority in Palermo during Amato's early years.

WORKS

MSS (except for late arrangements of the Passion) in Malta Cathedral, Mdina

Sacri concerti ... con una messa ... libro primo, 2–5vv, bc, op.1 (Palermo, 1652); ed. in D'Arpa

Messa e salmi di vespro e di compieta ... libro primo, 4–5vv, bc, op.2 (Palermo, 1656)

St John Passion, T, T, SATB, bc 18th-century arr., S, B, bc, *I-PLcom*; 1846 arr., T, B, bc, Monreale, Collegiata del Santissimo Crocifisso; 1889 arr., T, B, org, *PLpagano*

St Matthew Passion [arr. of St John Passion], T, B, bc, before 1870, Monreale, Collegiata del Santissimo Crocifisso; arr. 1889, T, B, org, *PLpagano*; 1904 arr., T only, Palermo, Cappella palatina

Lit, SSAB, bc

Magnificat, SSATB, bc

3 arie spirituali: Così vaga così pura, S, bc; Mondo infame, S, bc; Tue promesse son fallaci, S, bc

3 masses, lost: 2 for 5vv; 1 for 5vv 'con ripieni e violini'

Il martirio di S Caterina (componimento sacro, V. Giattini), lib (Palermo, 1669), music lost

PAOLO EMILIO CARAPEZZA, GIUSEPPE COLLISANI

Ambiela, Miguel de (*b* La Puebla de Albortón, Zaragoza, bap. 29 Sept 1666; *d* Toledo, 29 March 1733). Spanish composer. He began music studies at Daruca at the age of 15, where he was *maestro de capilla* of the collegiate church, 1685–6. He held the same post at Lérida (1686–90), Jaca (1698–1700), El Pilar in Zaragoza (1700–07), the Descalzas Reales convent at Madrid (1707–10), and from 22 March 1710 until his death at Toledo Cathedral. He was apparently the last Toledo *maestro de capilla* to leave to the cathedral a large and important choirbook repertory; it consists of eight four-voice masses parodied on his own motets, the eight motets themselves, and three hymns. He published there in 1717 a 20-folio *Disceptación música y discurso problemático* defending Francisco Valls's use of unprepared dissonance. Latin and vernacular works by him survive in several Spanish collections (*E-Bc, H, Mn, MO, Tc, Zac*). In his fast-modulating Assumption villancico *Suban las voces al cielo*, for six voices and continuo, dated 24 October 1689 (*Bc*; ed. in Calahorra), he demonstrates his mastery of word-painting. His Christmas villancicos for Toledo draw on French minuets as early as 1714 and jocular *negros* in 1727 and 1731. Several of his works were included in a collection copied in Tarragona by Crisóstomo Ripollés in 1704 (formerly Berlin, Staatsbibliothek Preussicher Kulturbesitz).

ROBERT STEVENSON

Ambient house. A form of 20th-century club dance music. It became popular in the 'chill out' rooms of clubs in London during the late 1980s as music to relax to, away from the more fevered, heavily rhythmic music favoured in the main rooms. Its DJs included Dr Alex Paterson of the Orb and the KLF, who played a mix of wildlife samples, sound effects, hypnotherapy tapes and Pink Floyd. The KLF's 1989 album, *Chill Out*, took up this thread and was perhaps the first ambient house record. A seemingly random collection of samples (from the likes of Fleetwood Mac to Acker Bilk), it is best described as a 1980s pop culture version of *musique concrète*. Like much club dance music, ambient house music is largely electronic, but differs from other styles in that much of it is not intended for dancing: many of its records are arhythmic, and those that feature a rhythm track do so sparingly. It also often lacks a diatonic centre and features perpetual atonality and prolonged washes of chords played on a synthesizer. Other features include samples of wildlife and birdsong. The term 'ambient' was eventually applied, unconvincingly, to many other forms of dance music, such as dub and drum 'n' bass. (For ambient music, *see* ENVIRONMENTAL MUSIC.)

WILL FULFORD-JONES

Ambient music. Term used by BRIAN ENO to describe his own type of ENVIRONMENTAL MUSIC.

Ambitus [cursus, processus, processo, medium, modulus] (Lat.: 'the going round'). Literally the 'course' of a melodic line, but in the Middle Ages and later usually the range of scale degrees attributed to a given MODE, particularly in Gregorian chant, or the range of a voice, instrument or piece.

Writers from Marchetto (*Lucidarium*, ed. and trans. J.W. Herlinger, Chicago, 1985, bk ii, chap.2) to Tinctoris (*Liber ... tonorum*, CSM, xi, chap.26) termed the modal ambitus perfect when it was a 9th or 10th, that is, the octave species plus one or two notes. From Gaffurius (*Practica musicae*, Milan, 1496/*R*, bk i, chap.8) onwards the perfect ambitus was usually equated to the octave species itself. The ambitus was called imperfect when it was less than the perfect ambitus, and pluperfect when it exceeded it. Tinctoris further refined this model to differentiate between the treatment of the upper and lower limit of the ambitus (*Liber ... tonorum*, chaps.27–42). If a melody used notes from both an authentic mode and its plagal, the resultant mode of that melody was termed 'mixtus'; if it used notes from the authentic or plagal versions of another mode, the mode was termed 'commixtus'.

Synonyms for 'ambitus' used by medieval authors include 'cursus' (Johannes Cotto: *De musica*, CSM, i, chap.12), 'processus' and 'medium' (Jacques de Liège: *Speculum musice*, CSM, iii/6, 244 and 246). These were used by later theorists with the same meaning, for example 'medium' by Tinctoris (*Liber ... tonorum*, chaps.1, 20) and 'processo' by Aaron (*Trattato ... di ... tuoni di canto figurato*, Venice, 1525/*R*, chaps.1, 4). The word 'modulus' is used for 'ambitus' in the *Quaestiones in musica* (ed. R. Steglich, Leipzig, 1911/*R*, p.45).

Ambitus is a significant aspect of musical style in Gregorian chant: in graduals and offertories, for example, the ambitus of the verse is usually higher than that of the respond. Stäblein ('Zum Verständnis des "klassischen" Tropus', *AcM*, xxxv, 1963, 84–95) noted that in troped introits the ambitus of the tropes differs from that of the introits.

HAROLD S. POWERS, RICHARD SHERR/FRANS WIERING

Ambleville, Charles d' (*b* Burgundy, late 16th century; *d* Rouen, 6 July 1637). French composer. All that is known of his life is that in 1626 he was *procureur* of the Compagnie de Jésus at Rouen. He left only musical works, from which we may infer that he was director of music of one of the colleges of his order. His *Octonarium sacrum* (1634) is a set of five-part verses for the *Magnificat*, using all eight tones; they are fugal and closely resemble similar pieces by Formé. Two years later he published his *Harmonia sacra* in two complementary volumes for four and six voices respectively. It includes works for double choir in a distinctly modern style originating in Italy that had already been adopted in France by several composers, Du Caurroy and Le Jeune notable among them; each volume also contains several masses and motets for a single choir. The double-choir works are for liturgical use and comprise psalms, motets and hymns. In his preface d'Ambleville states that they may be performed according to the forces available, for example by two groups – one of four soloists, the other a six-part chorus – by a soprano and bass duet from each choir or by a solo soprano, the missing voices being replaced by instruments or, failing them, by organ alone. He normally wrote either in fauxbourdon style (which he also called 'musica simplex') or contrapuntally, including fugal textures ('musica figurata'), which he handled skilfully. Apart from these Latin works he was also, according to Gastoué (p.264), the composer of the music published in 1623 for *Airs sur les hymnes sacrez, odes et noëls* to words by Michel Coyssard that had appeared in 1592; the music is old-fashioned for 1623.

WORKS

Airs sur les hymnes sacrez, odes et noëls, 4vv (Paris, 1623); attrib. in Gastoué

Octonarium sacrum, seu canticum BVM, 5vv (Paris, 1634)

Harmonia sacra, seu Vesperae ... una cum Missa ac litaniis BVM, 6vv (Paris, 1636)

Harmonia sacra, seu Vesperae, 4vv (Paris, 1636)

Amboss (Ger.). *See* ANVIL.

Ambrazas, Algirdas (Jonas) (*b* Kaunus, 11 Feb 1934). Lithuanian musicologist. He graduated from the Lithuanian State Conservatory (now the Lithuanian Academy of Music) in 1958 and later studied at the Leningrad Conservatory, gaining the MA (1969). He taught at the Vilnius Pedagogical Institute (1959–64) and then returned to the Conservatory to teach music theory and analysis. He became a professor in 1982 and *doctor habilis* in 1991 and he was head of the music theory department (1987–98). The main focus of his work has been Lithuanian contemporary music, particularly Gruodis, Juzeliūnas and Lithuanian symphonic music, and he has also studied the history of music theory. In 1979 he was awarded the Lithuanian State Prize as co-author and editor of *Muzikos kūrinių analizes pagrindai* ('The basics of music analysis', 1977) and in 1984 he gained the title of Honoured Art Worker.

Ambrogini Poliziano, Angelo. *See* POLIZIANO, ANGELO.

Ambros, August Wilhelm (*b* Mauth [now Vysoké Mýto], 17 Nov 1816; *d* Vienna, 28 June 1876). Austrian music historian and critic. His mother, sister of the musicologist Kiesewetter, fostered his love of music, painting and architecture; the performance of older music in the Kiesewetter home belonged to Ambros's strongest early impressions. He acquired a musical training, despite his father's objections, through a keen enthusiasm, an exceptional memory and an unbounded capacity for work. A humanistic Gymnasium education, a doctorate of law completed in 1839 at Prague University and vast reading, with a youthful predilection for Jean Paul, underlay his later scholarship and influenced his prolix style. Robert Schumann was his spiritual and journalistic model, and as 'Flamin' he associated with enthusiastic young followers, including Hanslick as 'Renatus', in a Bohemian branch of the 'Davidsbund' to fight musical conservatism in Prague. He was indebted more to the concepts and methods of art historians and historians of antiquity, of law and of literature, than to such musical colleagues as Kiesewetter or Fétis.

Ambros's historical perspective was strongly Hegelian, although tempered by an effort to understand historical particulars as discrete events, as well as a unified and progressive cultural vision in the manner of Burckhardt's *Civilization of the Renaissance in Italy*. A qualified respect for A.B. Marx's and K.F. Brendel's strictly Hegelian writings on music history and aesthetics, an open mind towards the friends and idols of his youth, Berlioz and Liszt, and a benevolent though apprehensive ambivalence towards Wagner and the *Gesamtkunstwerk* were the bases of his efforts to counterbalance Hanslick's controversial and conservative *Vom Musikalisch-Schönen* (1854) with his own first important publication *Die Grenzen der Musik und Poesie* (1856). The deaths of Mendelssohn and Schumann, disillusionment in the aftermath of the 1848 revolutions, and the growing politicization of European cultural life account for his persistent pessimism about the course of contemporary history.

For years Ambros laboured dutifully through the Austrian civil service, the legacy of his father's insistence on a respectable profession. At the age of 44, he received an unexpected commission from the Leipzig publisher F.E.C. Leuckart to realize his longstanding intention of writing a music history, based on original source studies and worthy of comparison with the far more advanced historiography of other disciplines. Accordingly he undertook extensive archival studies in Austria, south Germany and Italy between 1861 and 1869; he amassed materials and made transcriptions in Venice, Bologna, Florence, Modena, Rome and Naples. His travels in Italy were a turning-point in his life, and in 1861 he wrote to his wife from Venice: 'As I survey the fruits of my stay here I cannot help being very well satisfied. I have found what I sought – and more. The impressions which I take with me of Italy give me the intellectual and spiritual dimension I have lacked up to now'. As a devout Catholic and friend of the Abbé Liszt, he gained entrance to Roman society and the blessing of Pius IX, who gave him special privileges to study in the papal archives. The Austrian Royal Imperial Academy of Sciences assisted him financially in his researches.

In 1869 he attained his life's ambition by becoming professor of the history of music and professor of art in Prague, having previously lectured informally at the conservatory and at the art academy. In 1871 he was called to the attorney general's office in Vienna and in 1872 moved to the capital with his wife and seven children, gradually taking on so many activities and posts as to elicit an incredulous comment from Hanslick in his autobiography. He lectured at the Vienna Conservatory and, despite Hanslick's opposition, at the university; he was also the private tutor to the Archduke Rudolf in the history of the arts. He was associated with the Central Commission for the Study and Preservation of Artistic and Historical Monuments and with the Austrian Museum, was president of the St Cecilia Association, drafted a plan for the reorganization of music in Austria's churches and contributed to several foreign journals.

With his *Geschichte der Musik*, which began to appear in 1862, Ambros achieved a place of distinction in the writing of music history as cultural history. He prefaced the publication with provocative ambivalence:

> Let us leave open the question whether the development of music, as manifested with vital energy through almost three centuries, when great masters appeared not singly but at once in whole groups and one personality came hard upon the heels of the preceding, may not have come to an end for the time being. It is certain, however, that we are in a position to understand these epochs better and to honour them more justly than has ever been the case before – perhaps just because we ourselves have not been endowed to the same degree with the ability to create and invent significant works of art as were those epochs in which the masters of Italy and Germany gave the world no time to reflect on works of art, when yet more important works appeared and demanded attention even before their predecessors had been completely fathomed. For this reason it is above all the critical, art-philosophical, biographical, and historical orientation of our time which has achieved much that had not been achieved before ... The work of the aesthetician, of the historian of art, can always retain its rightful place vis à vis the work of art itself.

The first volume of the history treats of music in ancient civilizations, including the Chinese, Indian and Arabic, up to classical Greece and Rome. Volume ii spans the period in Western music from early Christianity to the evolution of Burgundian polyphony in the late Middle Ages. The third and most important volume explores Netherlandish and French music and music theory of the Renaissance, with separate chapters on Josquin and Ockeghem, as well as 15th-century German, English and Italian music. The posthumously issued fourth volume, edited by Nottebohm, embraces Italian subjects from Palestrina to Monteverdi and early opera, from the Counter-Reformation to organists, theorists and teachers of the 17th century. The fifth volume consists of 15th- and 16th-century music examples, published by Otto Kade in part from Ambros's transcriptions, 800 of which are held in the Österreichische Nationalbibliothek, Vienna.

Throughout his career Ambros also wrote, in a far-ranging and fanciful style, numerous essays on music, art, literature and contemporary events, which appeared in *Bohemia* (Prague), the *Wiener Allgemeine Musikzeitung*, the *Neue Zeitschrift für Musik*, *Anregungen für Kunst, Leben und Wissenschaft* (Leipzig), *Wiener Zeitung*, *Wiener Abendpost* and *Deutsche Rundschau* (Berlin), among other papers and journals, as well as in book form. They supplement his unfinished magnum opus and are also of considerable significance for 19th-century intellectual history.

Ambros's published compositions (24 opus numbers) were chiefly songs, piano sonatas and character-pieces for piano with titles reflecting his Schumannesque orientation, such as the *Landschaftsbilder* op.8 (1859), *Kindheitstage* op.9 (1860), *Phantasiestücke* op.14 (1862) and *Musikalische Reisebilder* op.24 (1876). More ambitious than these were his unpublished works, many of them lost, including a *Missa solemnis* (MS now in *A-Wn*) which was performed several times between 1857 and 1889, two symphonies, overtures to plays by Kleist, Calderón and Shakespeare, a Czech opera *Břetislav a Jitka* and a violin sonata first performed in 1865 by Camillo Sivori and Liszt.

PHILIPP NAEGELE

Ambrosch, Joseph Karl [Ambrož, Josef Karel] (*b* Krumau, Bohemia, [now Český Krumlov], 6 May 1759; *d* Berlin, 8 Sept 1833). Bohemian singer and composer. He studied in Prague with Johann Antonin Kozeluch, and sang in Bayreuth in 1784; he was perhaps also a member of a touring company. On 18 June 1787 Ambrosch made his début as Belmonte in Mozart's *Die Entführung aus dem Serail* in Hamburg, where he was active until 1790. For 20 years from 1791 he sang principally at the Königliche Theater in Berlin, again making his début as Belmonte. He was master of the entire range of abilities required of tenors at the period, and in 1803 changed from lyric to comic roles (see Ledebur, 9). Although he officially began receiving a pension in 1811, he appeared in Singspiele and concerts at least until 1818. From 1810 to 1817 he was a member of the Singakademie. Ambrosch was a freemason, and he both composed and edited masonic songs.

Ambrosch composed only vocal music. For his social and masonic songs (often for solo and chorus with piano, the number of singers being adjusted ad libitum in practice) he preferred a simple strophic form and a straightforward accompaniment. More rarely, he employed freer and more complex musical forms. Ambrosch's vocal variations for singing voice, on both popular Singspiel melodies of the day and melodies of his own composition, are characteristic of his creative work: they follow the 18th-century practice of instrumental ornamentation, giving the singer opportunities for virtuoso display. Ambrosch's daughter Wilhelmine (*b* Berlin, 1791, married name Becker from 1811 at the latest) was an opera singer at Breslau about 1809 and later became first soprano of the Hamburg Stadttheater.

WORKS

Masonic songs, incl.: 17 in Freymaurer-Lieder mit Melodien, ed. Ambrosch and J.M. Böheim (Berlin, 1793); 4 in Auswahl von Maurer Gesängen mit Melodien der vorzüglichsten Componisten, ii, ed. Böheim (Berlin, 1799)
Other songs, incl.: An die Hoffnung (Geyer), 1804, *D-Bsb*; partsongs
Song variations and arrs., incl.: 6 Lieder mit Veränderungen für die Singstimme (Zerbst, 1797); 6 Gesänge mit Begleitung, after 1802, *CZ-Pnm*; Deutsche und italienische Lieder mit Variationen (Berlin, *c*1815/16)

UNDINE WAGNER

Ambrose (*b* Trier, *c*340; *d* Milan, 397). Saint, bishop and Doctor of the Church. He was the son of the Roman prefect of Gaul, and embarked upon a successful political career, being named consular governor of Liguria and Aemilia in about 370. While yet unbaptized he was elected Bishop of Milan by popular acclaim on 7 December 374. Together with Augustine and Jerome he is acknowledged as one of the three great Latin Church Fathers of the 4th and 5th centuries. He was primarily a public figure, however, unlike Augustine, the philosopher, or Jerome, the scholar; he consolidated the position of the Church

against the powerful Arian heresy and the counter-attacks of paganism.

Tradition has assigned him a musical significance exceeding that of any other early Christian leader. This purported achievement can be summarized under four headings: (1) the co-authorship with AUGUSTINE OF HIPPO of the *Te Deum*; (2) an involvement in the composition and organization of the Milanese or Ambrosian chant comparable to that formerly attributed to GREGORY THE GREAT for the Gregorian chant; (3) the introduction of antiphonal psalmody into the Latin Church; and (4) the composition of a large repertory of liturgical hymns. By the late 19th century Dreves had already rejected the first two of these as largely the product of medieval legend; the two last have continued to find favour with many 20th-century historians but are nevertheless in need of substantial qualification.

Ambrose may well have been an innovator as regards the psalmodic practices of the Latin Church, but this did not, in the view of the present author, simply involve the introduction of antiphonal psalmody, or, as Leeb's countering position would have it, the introduction of responsorial psalmody. At issue is an incident in the year 386. The Milanese faithful were being held under guard in Ambrose's cathedral by troops loyal to the Arian empress Justina, and they spent the entire night in prayer and song. It is a phrase in Augustine's description of the event – 'at that time it was instituted that hymns and psalms (*hymni et psalmi*) be sung according to the custom of the Eastern church' – that has caused scholars to think of antiphonal psalmody; singing 'according to the custom of the Eastern church', presumably, could refer only to antiphonal psalmody. But a review of all the evidence, both the specific patristic passages referring to this incident (from Augustine, Paulinus and Ambrose himself) and the larger historical context, points to a more basic sort of innovation than a detail of musical performing practice. Ambrose's innovation was in all probability that of the psalmodic vigil itself, a quasi-liturgical event in which the congregation spent the night in prayer and psalmody; such vigils were received enthusiastically and became popular as they were taken up by different congregations in the latter decades of the 4th century in a broad trend moving from East to West.

That Ambrose was an innovator as regards the composition of sacred hymns is entirely true and a matter of considerable importance in the history of early Christian music. He was not the first ecclesiastical figure to create metrical Latin hymns, HILARY OF POITIERS had done so a few decades before, but there is no evidence that Hilary's excessively sophisticated poems were ever sung in the liturgy. The Ambrosian type of hymn, however, with its attractive language set in simple iambic tetrameters, became a regular part of the Western monastic Office in the 6th century and eventually the secular Office. BENEDICT OF NURSIA referred to these hymns in his *Regula* as 'ambrosiana'. The key question about Ambrosian hymns is how many of those attributed to Ambrose in medieval sources are authentic. Certainly the four cited by Augustine are – *Aeterne rerum conditor*, *Deus creator omnium*, *Iam surgit hora tertia* and *Intende qui regis Israel* – and perhaps some ten others as well. Dreves argued strongly that Ambrose was also responsible for the tunes to which his texts were set in medieval sources, but most scholars now consider this to be unlikely.

JAMES W. MCKINNON

Ambrose, Bert(ram) 'Ammy' (*b* London, 15 Sept 1896; *d* Leeds, 12 June 1971). English dance bandleader and violinist. His family emigrated when he was a youth to the USA, and he later worked in New York as the music director at the Club de Vingt (1917–20) and Clover Gardens (1922), in addition to making several recordings for Columbia (1923). However, from the 1920s he was active almost exclusively in London, where he was the music director at the Embassy Club (1920–26) and the Mayfair Hotel (1927–33). From 1927 his band regularly included American musicians, such as Sylvester Ahola, Danny Polo and the singer Sam Browne, and from the same year it performed regularly at the London Palladium and made several recordings. In 1928 the BBC began to broadcast a fortnightly programme from the Mayfair Hotel, and by autumn the following year Ambrose had become a national figure. In 1931, the year in which he made a successful recording of *Stardust*, his band became the first British orchestra to make a 30-minute broadcast in the USA. The following year he played and recorded in Monte Carlo, subsequently playing summer seasons at Biarritz and Cannes.

From 1933 to 1936 he was again at the Embassy Club, then moved back to the Mayfair before becoming manager and bandleader at Ciro's Club (1937). In 1938–9 he led an octet, while still occasionally working with full band. Ambrose re-formed his band at the Mayfair in December 1939, but his activities were curtailed the following year owing to ill-health. He resumed theatre tours with his octet in July 1941 and continued to lead bands until 1956, when he concentrated on management. His band displayed flair and discipline and employed a team of skilled arrangers which included Lew Stone and Sid Phillips; it was the most highly rated British ensemble of its period. Its successful amalgam of jazz and dance music is exemplified in a series of discs for Decca, including *Embassy Stomp* (1935), *B'wanga* (1935), *Copenhagen* (1935), *Champagne Cocktail* (1936) and *Cotton Pickers' Congregation* (1937).

DIGBY FAIRWEATHER/ALYN SHIPTON

Ambrose, John (*fl* *c*1520–45). English composer. A brief and undistinguished canon (two-in-one) attributed to him is in *GB-Lbl* Roy.App.58. *Och* 1034A contains a longer and more accomplished keyboard work, remarkable for its period in observing a free-composed fantasia form (ed. in MB, lxvi, 1995). The composer may be identifiable with the John Ambrose who became a clerk of the choir

of the collegiate church of St Anthony, London (St Anthony's Hospital), in 1522. (J. Caldwell: *English Keyboard Music before the Nineteenth Century* (Oxford, 1973), 45–6)

ROGER BOWERS

Ambrosian chant [Milanese chant]. A chant repertory associated with Milan and one of only two musical repertories of the Latin Church to have been transmitted integrally in pitch-accurate notation. All the others were supplanted by 'Gregorian' chant before being adequately recorded. The survival of the Ambrosian music is due to the enduring importance of Milan, which the Byzantine historian Procopius described as 'the first city in the West, after Rome'.

1. Distribution, origins and development. 2. Written tradition. 3. Character of the chants. 4. Modal classification and tonal structure of the melodies. 5. Chant forms. 6. Office chants: (i) Antiphons connected with psalmody (ii) Other antiphons (iii) Simple psalm tones (iv) Responsories (v) Other items. 7. Mass chants: (i) Proper chants (ii) Ordinary chants.

1. Distribution, origins and development. For some centuries Ambrosian chant has been confined to Milan, its suburbs, and to certain dependent parishes mainly between the city and Lakes Como and Maggiore to the north. The rite attributed to St Ambrose was centred on Milan, but it was formerly very widely disseminated: according to an Irish monk writing in France in 767, its domain was 'Italia', a region that in Ambrose's day included all 17 Roman provinces of the northern Italian peninsula. There is evidence that the chant was even sung in southern Italy, in regions conquered in the 6th century by the Ostragoths and the Lombards (whose heartland was northern Italy, in Ambrosian territory). Because of the wide distribution of the rite and its associated chant, the term 'Ambrosian' is perhaps preferable to 'Milanese', even though the role of St Ambrose in the formation of the liturgy bearing his name is no better documented than the part played by St Gregory in 'Gregorian' chant.

Milan had a bishop, and therefore liturgical independence, as early as the 2nd century; thus it can hardly be doubted that 'Milanese' chant was to some extent indigenous. But outside influences must have been important, not least the influence of Rome, 'whose form and fashion', declared St Ambrose, 'we follow in all things'. It has been suggested that the Ambrosian liturgy was strongly influenced by the East. Borrowings from the Greek Church have been identified, but it is not clear whether these date from the formative period of Ambrosian chant, or whether they are more significant than similar influences identified in other Latin rites. Connections between the Ambrosian rite and the ancient liturgies of Spain and Gaul have also been demonstrated, but the origin of what was shared and whether the relationship was particularly significant have yet to be established.

It is clear that Ambrosian chant was initially open to outside influences and shared in some of the developments documented in Gregorian books. *Sequentiae* – the melismatic extensions of the alleluia jubilus mentioned by Notker and specified in Gregorian manuscripts as early as the end of the 8th century – have exact counterparts in the *melodiae* of Ambrosian antiphoners. But it is significant that the texted versions – the sequences – were not admitted in Ambrosian books, neither were any of the other interpolations generally known as tropes. The surface elaboration of the melodies aside, the development of the repertory seems to have been notably constrained after the Frankish conquest. A few chants were added locally in the late medieval period, but it appears that in general the Milanese were reluctant, or unable, to add to their repertory. The late Gregorian Office employed thousands of antiphons for its psalmody; yet the Ambrosian count is in the hundreds. At the beginning of the 12th century there were more than 400 Gregorian Mass alleluias; Ambrosian books contain only ten. The explanation for this conservatism must be the Gregorian hegemony. Whether Charlemagne made a serious attempt to suppress Ambrosian chant in favour of Gregorian chant is not known. Milan, however, soon found itself surrounded by customs all the more difficult to resist because their universality had become a symbol of the universal authority of the papacy.

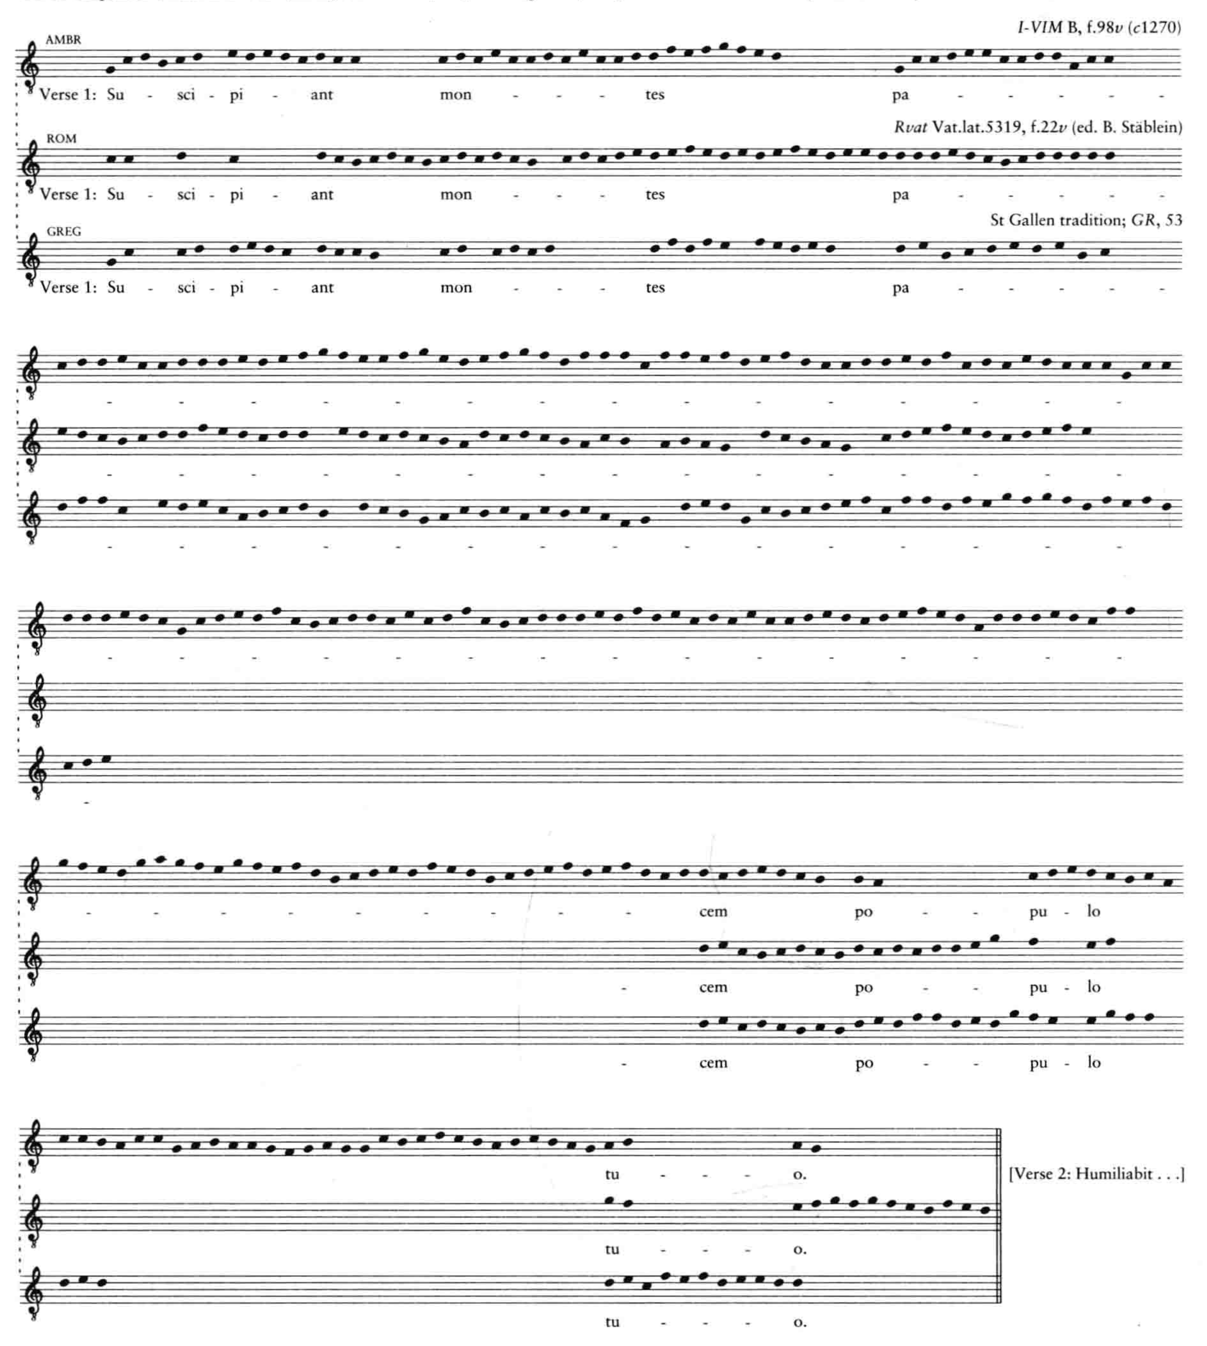
2. Written tradition. Books containing complete texts of the Ambrosian Mass and Office survive from the 11th century, and a small number of fragments from as early as the 8th. However, except for a few neumes copied into Ambrosian books otherwise lacking musical notation, and for a few pieces included in Gregorian sources, Ambrosian melodies appear not to have been notated until the 12th century. Before then, it seems, the oral tradition sufficed. The oldest and best sources of Gregorian chant are written in cheironomic neumes. The earliest Ambrosian music books are already pitch-accurate: the melodies are written on lines in a notation that belongs to the Guidonian type used generally in central Italy. That the Milanese notation does not derive from one of the notations in use in the north is probably an indication that there is no lost cheironomic tradition for the repertory. The late codification is in some respects unfortunate, because the written chants display unmistakable signs of decline. It is reasonable to suppose that in earlier times, before the oral tradition began to decay, Ambrosian melodies were finely variegated by the kind of ornaments and other nuances preserved in 9th- and 10th-century Gregorian cheironomic manuscripts. But Ambrosian notation includes almost none of these subtleties; for example, the *quilisma*, despite its appearance in modern practical editions, is entirely absent from the manuscripts.

The Ambrosian antiphoner, which contained both Mass and Office chants, was divided into two parts: the *pars hiemalis*, for the period from the third Sunday of October until Holy Saturday, and the *pars aestiva*, the chants for the rest of the year. This division corresponded to a division in the Milanese liturgy. During the Middle Ages the city had two cathedrals, each with its separate baptistry; before the destruction of these edifices in the 14th and 15th centuries (to make room for the present enormous Duomo), the venue of the episcopal Office alternated between the Winter Church (S Maria Maggiore) and the Church of Summer (S Tecla). The surviving copies of the antiphoner are in remarkable agreement and may have descended from a single archetype. There can be little doubt that this archetype was executed in Milan and that the versions of the chants given official status by the codification were those sung in the cathedral liturgy. No Ambrosian monastic antiphoner has been discovered; perhaps none was executed. It may be that Ambrosian monasteries (like so many ancient foundations on both sides of the Alps) were compelled, in the wake of the

Frankish conquests and the reforms of Benedict of Aniane, to adopt the Benedictine Rule.

3. CHARACTER OF THE CHANTS. Ambrose was celebrated as the father of Latin hymnody. According to Augustine he introduced hymns – presumably his own – into the public liturgy in Milan. But metrical texts were no more important in the medieval Ambrosian liturgy than in the other Latin rites. Ambrosian chants are overwhelmingly biblical (the Psalter being the principal source) and this scriptural basis had a profound influence on their rhythm. The original Hebrew and Greek of the Bible – even the psalms, canticles and other poetic portions – had been rendered into Latin prose, whose irregular rhythm is reflected in the musical settings of the excerpts employed as liturgical formulae. Although the performance of the hymns may well have differed from that of other chants, the medieval notation gives no indication that the hymn melodies reinforced the metrical accents or quantities of the texts.

The style of Ambrosian melodies varies remarkably. Many chants, for example, the antiphons for the ferial psalms, are brief and simple, with most syllables set to one or two notes. Other forms, however, such as the *cantus* (the counterparts of the Gregorian tracts) and the Mass alleluias, are elaborate compositions containing melismas of impressive length. The distinctive stylistic contrasts found in Ambrosian chant are not compelling evidence of an origin independent of Gregorian chant. The simplicity of certain genres can be explained by the conservative attitude of the rite towards some parts of the liturgy, for example, the ferial Offices, whereas the exaggerated melismas found in certain other chants, particularly those for the great festivals, are clearly late additions of a kind also found in Gregorian books. It would be unreasonable to suggest that all ecclesiastical chants were originally simpler, but progressive elaboration does seem to have been a general phenomenon. Gregorian melodies – the first to be codified – are for the most part freer of extravagant melismas than the repertories recorded later. The suggestion is that the versions of the Roman melodies fixed by notation represent the general level of elaboration in 8th- or 9th-century ecclesiastical chant. The Old Roman repertory, first notated two or three centuries later, is considerably more elaborate than the Gregorian; and the Ambrosian, codified later still, is the most elaborated of the three, at least with regard to some of its chants (see the responsory verse *Suscipiant montes pacem* in ex.1).



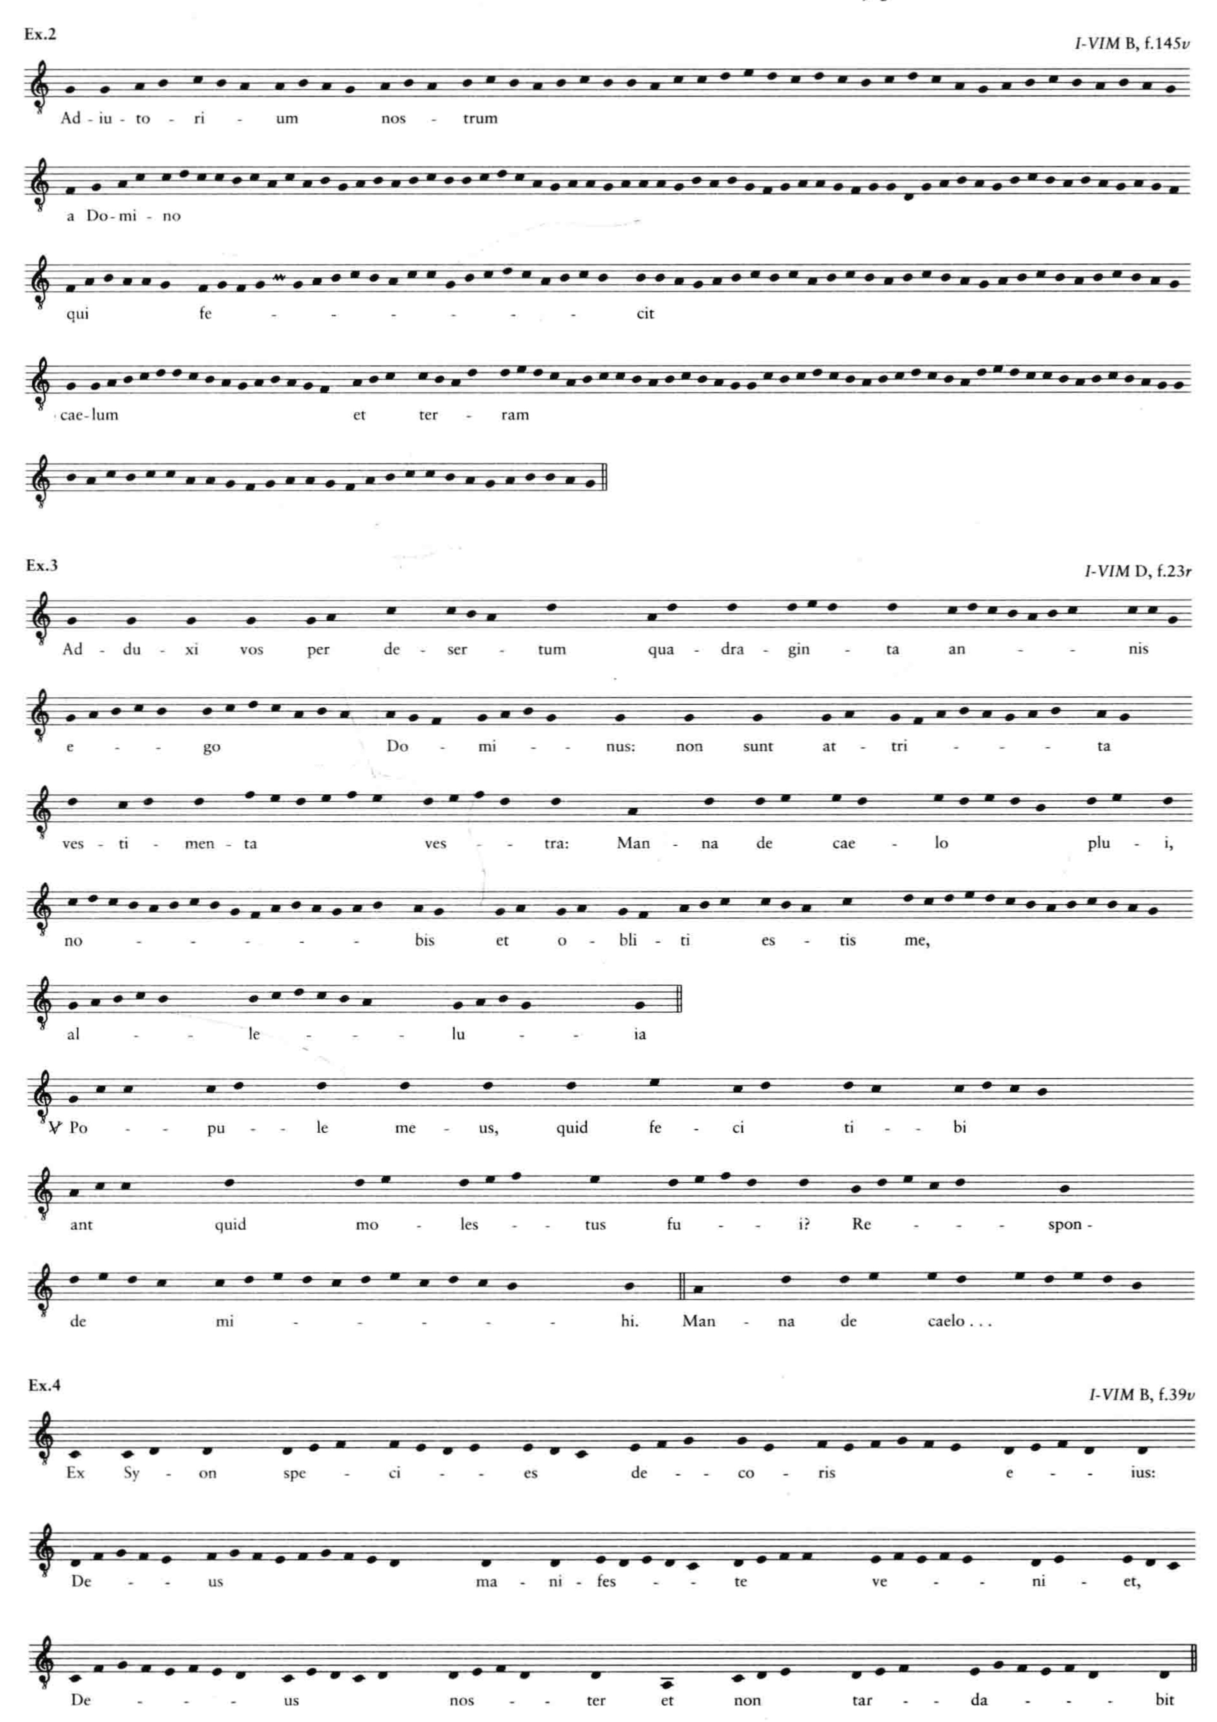
Another distinctive feature of Ambrosian melodies may perhaps be similarly explained. The Gregorian, Old Roman and Ambrosian repertories are closely related; indeed, they share many melodies. The Ambrosian versions of these shared chants, especially the longer ones, are as a rule more stepwise than the Gregorian. This markedly conjunct style is general in elaborated Ambrosian music: Ambrosian melodies are often wave-like, with an undulating motion even more pronounced than in Old Roman chant, where similar tendencies can be seen. A striking but typical example of the conjunct Ambrosian style is the setting of *Adiutorium nostrum a Domino*, the third verse of the *cantus* for the Lenten Sunday *De samaritana* (ex.2). The filling-in of intervals which produced this smoothness, like the decoration with inserted melismas (see above), is probably the result of a change of fashion in ecclesiastical music – a stylistic change that was unimpeded in an oral tradition but constrained (as in Gregorian regions) where the melodies had been fixed forever by notation.

4. MODAL CLASSIFICATION AND TONAL STRUCTURE OF THE MELODIES. In Ambrosian antiphoners there is no sign of the classification of the melodies by modes, nor of the operation of such a system in the choice of recitation tones in the psalmody. This is not to say that the tonal basis of Milanese chant differs significantly from that of Gregorian, but rather that the cultural influences that led the Franks near the beginning of the 9th century to apply the Byzantine *oktōēchos* to the repertory they had recently imported from Rome were not so strongly felt in Milan. Most Ambrosian chants end on the notes D, E, F, or G; but a greater proportion than in the Gregorian repertory have A or C as the final. To some extent this divergence must be due to a regularization of the Gregorian repertory, to make it fit better with the imposed eight-mode system. In any case, the difference seems not to be significant. Nearly all the Ambrosian chants with *finales* that would be considered irregular in the Gregorian system are simple transpositions: their melodies belong to families, all or nearly all of whose other members are written at levels that correspond to one of the four Byzantine and Gregorian *maneriae*.

5. CHANT FORMS. Ambrosian chant forms, like Gregorian and those of the other Latin rites, may be divided into three general categories: psalmodic refrains, recitation formulae and hymns. There are two main classes of chant in the first category, both of them found in the Mass and the Office: (1) responds, which appear in the medieval books with the remains of the more extensive psalmody that in the early Church was stipulated between liturgical readings; and (2) antiphons, which were (or had been) sung in connection with other psalms or canticles, either those that accompanied actions (such as processions) or those that were part of the routine cycle of scriptural recitations.

The responds are elaborate chants, obviously (in their present form) meant to demonstrate the art of the singer: their ambitus is normally wide, and although syllabic passages and recitation on one pitch are occasionally encountered, most syllables are set to three or more notes (see ex.3, *Adduxi vos per desertum*, the *responsorium in choro* for the first Sunday after Easter). Many of the responsories assigned at Matins and Vespers on important occasions are extended by means of striking *melodiae*, melismas that were presumably added about the time similar elaborations of the Mass alleluias became fashionable.

The antiphons are more varied. Those that kept their association with extensive psalmody remained relatively simple, their style ranging from strictly syllabic to moderately melismatic. Antiphon refrains sung with no psalm verses, or with only vestigial psalmody, range from moderately melismatic to very elaborate. Within such chants there are passages where several consecutive syllables are set to single notes, sometimes to a single pitch; but melismas of six to nine or more notes are dispersed regularly throughout. Many self-standing antiphons are sufficiently elaborate (see ex.4, *Ex Syon species*, the *antiphona in choro* for Saturday in the fifth week of Advent) to make it impossible to distinguish them from responds on the basis of musical style alone. For the same



Ex.1 A comparison of the Ambrosian [AMBR], Old Roman [ROM] and Gregorian [GREG] versions of the verse *Suscipiant* from the *psalmellus Benedictus Dominus*

reason it is also difficult to decide whether or not such chants developed from the relatively small number of melody types that are the basis of most of the simpler psalmodic antiphons.

Recitation tones encompass the widest variation in style. Generally speaking, the ones used for extensive psalmody are simple and those for abbreviated psalmody are elaborate. The simple psalm tones consist mostly of recitation on a single note. Some of the responsory verses seem like decorated versions of simple tones (see the setting of *Popule meus quid feci* in ex.3); but others are so elaborate that the rules governing their adaptation to another psalm text are obscure. Many responsory verses have the appearance of free melodies, indistinguishable in style from their responds.

The third category – hymns – is perhaps of lesser importance than the Saint's reputation might suggest: 40 sufficed for the 12th-century Office and these were sung to fewer than 30 melodies. The latter vary somewhat, but most fall within a comfortable ambitus and their prevailing style is simple: largely syllabic but with occasional groups of two or three notes (rarely more).

6. Office chants. The Ambrosian Offices of Prime, Terce, Sext, None and Compline were very simple; even

in the last stage of their development they included little music. By the 11th century each of the Little Hours began with a hymn, but their psalmody was performed without antiphons, and the *responsoria brevia* were sung to simple formulae. The elaborate Ambrosian music was sung only at Matins, Vespers and at an extra Office called Vigils (*vigiliae*), which took place in the cathedral on saints' feasts after Vespers and before the procession to the stational church. *Matutinae* (Matins), which combined observances divided in the Roman rite between Matins and Lauds, was by far the most important of the Offices. Gregorian and Ambrosian Vespers were very similar (some of the correspondence is almost certainly due to later revisions). At Vigils, as at Matins and Vespers, there were hymns, responsories and antiphons, but nearly all the chants were borrowed from (or, at least, shared with) Vespers.

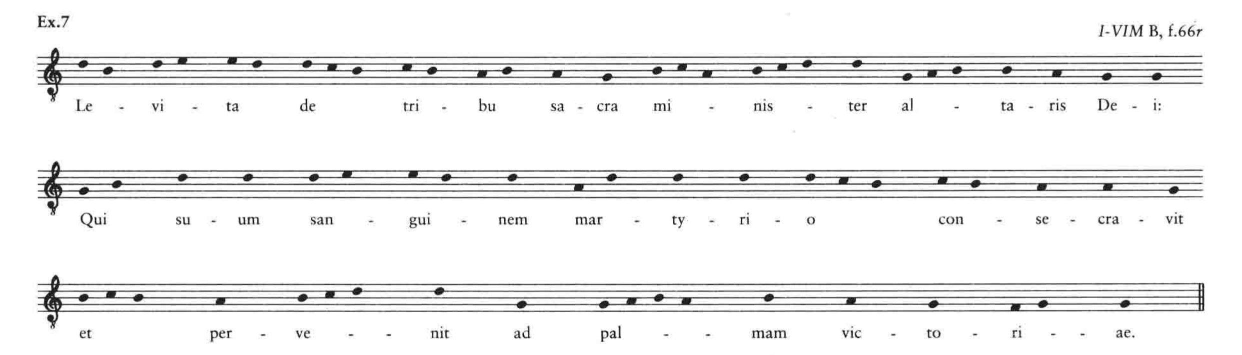
(i) Antiphons connected with psalmody. 15 types of antiphon accompanied the psalmody of Matins, Vespers and Vigils. For the six to 16 ferial psalms of Matins, three antiphons sufficed; but between four and 24 were needed when the psalms were specially chosen. At Vespers, the ferial psalms required five antiphons; but there were only two Proper psalms for saints' feasts and only one for important occasions of the *Temporale*. Additional antiphons were sung with the unvarying psalms and canticles of Matins and Vespers. Moreover, on most days these Offices did not conclude in the cathedral but in one of the baptistries, where there was additional psalmody: four or five psalm verses sung with special antiphons and the *Gloria patri*. The 15 antiphon types are defined by function, and the repertories are virtually discrete. Most of the refrains employ a phrase from the psalm or canticle with which they are sung, and it is this feature, rather than sharp stylistic differences, that explains their classification. The style of the refrains varies considerably, but by and large the difference between the antiphons used for important occasions and those used on ordinary days is greater than that between antiphons of different categories.

The variation between the antiphon types is more a question of length than elaboration. But it is typical of Ambrosian chant that there is sufficient diversity within the individual repertories to preclude classification by either of these criteria. As might be expected, most of the refrains of the ferial psalms are minimal. For instance, *Sedes tua Deus* (the antiphon for Psalms xliv–xlvi at Matins on Thursdays of the first week of the cycle) is almost perfectly syllabic. However, *Iubilate Deo omnis terra* (for Psalms lxv–lxvii at Matins on Mondays of week 2), whose melody belongs to the same family, is decorated with groups of two, three and four notes; moreover it has two phrases, where the first alone would have been grammatically sufficient. (Both antiphons are given in ex.5.)

The refrains for the fixed psalms and canticles of the Office are usually longer and more developed than the antiphons of the ferial cursus, although the simplest of the former could be mistaken for the latter. The length and degree of elaboration depend generally, though not in every instance, on the occasion. In ex.6 the antiphons for the 'Laudate' psalms (cxlviii–cl) at Matins, *Stellae et lumen* and *In potentatibus eius*, illustrate the range of styles; the melodies belong to the same family, but the

first (for Fridays in Lent) is minimal, while the second (for Sundays) is much more developed.

The longest Office antiphons still used as psalm refrains in the Middle Ages are the *antiphonae duplae*. The name may simply refer to the two sections of the antiphons (textually independent, sung from opposite sides of the choir); but in most, the same melody is adapted to both parts (see ex.7, *Levita de tribu/Qui suum sanguinem*, the antiphon for Psalm cxiv at Vigils on the feast of St Stephen).



(ii) Other antiphons. At Sunday Matins (except in Lent) and on festivals, there was an elaborate procession involving three crosses, one of them surmounted by lighted candles. During this impressive ceremony an *antiphona ad crucem* was sung five or even seven times, concluding with the *Gloria patri* that was normally associated with psalmody, but no psalm verses are assigned in the medieval books. The *antiphona in choro* (ex.4) was sung in the choir (by the precentor and singers arranged around him in a circle) at Vespers on Sundays and feast days (except at the solemn Ambrosian Vespers that included a Mass). This antiphon retained no trace of psalmody. The chants sung during processions were known as *psallendae* – the name referring, no doubt, to the psalmody that was traditionally involved (the Ambrosian term for procession was 'psallentium'). *Psallendae* are antiphons – they are occasionally so designated in antiphoners – and are generally similar in style to the *antiphonae ad crucem*, the *antiphonae in choro* and the Mass antiphons. They constitute the largest category of Ambrosian antiphon: more than 700 are assigned in various processions and more than 500 have no other assignment. In the medieval books only a few are allocated psalms (generally the first in each procession), raising the question of whether the remaining antiphons were sung alone or whether those who compiled the books merely thought it unnecessary to specify the psalms.

(iii) Simple psalm tones. In the Ambrosian liturgy these were employed only in the Office. Antiphoners – if what was written can be taken at face value – contain a great many formulae (more than 150), but this is misleading. There is evidence that 'seculorum Amen' cues were not included in the archetype of the antiphoner, and there are clear signs that the neumes indicating these formulae were in the first instance jotted down, rather carelessly, *in campo aperto*. Ambrosian simple psalmody is unsystematic. The ordering by mode, such as is found in Gregorian books, is not in evidence; the recitation tone and termination had to be indicated in each instance. Ralph of Tongers, writing towards the end of the 14th century, makes it clear that no median cadence was employed: 'the Ambrosians sing all psalms plainly in the middle; only the ends of the verses vary according to the modes'. His statement is confirmed a century later by Gaffurius, who also records that there was no introductory inflection (*initium*): the Ambrosians 'begin their psalmody, of whatever mode [*tonus*] on the note written at the beginning of its *seculorum amen*; and on this same note they continue, with no cadence interrupting, until the *seculorum amen*'. Initial inflections like those in Roman psalmody are included in modern Ambrosian chant books, but evidence for these *initia* is slight and contradictory; they are probably the result of Gregorian contamination.

(iv) Responsories. In most cases, responsories are associated with assigned readings or with hymns (which in this respect were treated as though they were readings). Three responsories were normal in the morning Office, and when Matins terminated in the baptistry, a fourth was sung there. In the evening Office, similar assignments were made: the hymn was followed by the *responsorium in choro*; when there were readings, they were separated by *responsoria ad lectiones*; and when the Office concluded in the baptistry, there was a *responsorium in baptisterio*. Although the latter may originally have been connected with a reading, none is assigned in the medieval books. At the special Ambrosian Office of Vigils, three responsories were usually sung, the first following the opening hymn, the others in connection with assigned readings. Additional responsories were assigned for other lessons that took place outside the regular Office, especially in Lent.

(v) Other items. The first hymn of the day, at the beginning of the morning Office, was invariable, as were (at least originally) those that began each of the Little Hours. The second hymn at Matins (in the part of the Office corresponding to Gregorian Lauds), the hymn at Vespers and that at Vigils varied in accordance with the day or season. The Ambrosian liturgy, like the Roman–Benedictine, made use of brief introductory and closing formulae, for example, the versicle *Deus in adiutorium meum intende* and its response *Domine ad adiuvandum me festina* from Psalm lxix ('Make haste, O God, to deliver me; make haste to help me, O Lord') that opened Matins. These, and similar formulae employed in the Mass, were usually intoned in the simplest manner. Of greater interest are the *lucernarium*, the chant that introduced Vespers, and the *completorium*, which was sung at Matins and Vespers to conclude the ceremonies in the baptistry (two were sung when both baptistries were visited). *Lucernaria* and *completoria* are found only in small numbers. For the sake of variety, there was a choice of Ordinary chants for Sundays, for Saturdays, for

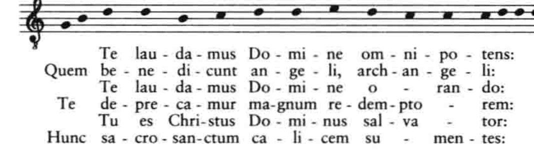
Ex.7

weekdays and for saints' feasts. Proper *lucernaria* were provided for a few occasions.

The texts of the *completoria* are set to recitation tones, some very simple, others decorated here and there with moderate melismas. It is more difficult to determine the category of the *lucernaria*, or even whether all belong to the same musical type. The two parts of the chant assigned on ordinary weekdays and the *lucernarium* for Saturdays are obviously nothing more than slightly ornamented examples of a versicle and response. But the *lucernaria* for Sundays, saints' feasts, Christmas, Epiphany and a few other special occasions are elaborate two-part chants resembling Office responsories or *psalmelli.*

In the Ambrosian rite the *Gloria in excelsis Deo* was sung not only at Mass, but also (until the 16th-century reforms) after the *psalmum directum* at Matins. Antiphoners of the 12th and 13th centuries contain two *Gloria* melodies: one is a simple recitation tone, decorated only by a 12- or 13-note melisma repeated at the conclusion of certain phrases and a similar melisma on the closing 'amen'; the second seems to have begun as an elaboration of the first but is significantly related to one of the oldest Gregorian settings, 'Gloria A'.

7. Mass chants.



(i) Proper chants. At the time of the earliest antiphoners there were nine Proper chants in the Ambrosian Mass, as many as eight of which were sung at Christmas, Epiphany and Easter (the only occasions with *antiphonae ante Evangelium*). The chant types represented in the Mass include antiphons, responsories and embellished recitation tones, although the curtailment, or complete suppression, of the psalmody – and the subsequent melodic elaboration – have obscured in most instances the original stylistic differences between these categories. By the 12th century none of the antiphons at Mass (except the *offertoria*, whose classification is disputed) retained verses. It is thought that Mass antiphons were originally sung with a series of psalm verses to accompany liturgical actions: the *ingressa*, while the celebrants made their way to the altar at the start of the Mass; the *antiphona post Evangelium*, while the celebrants returned to the altar at the conclusion of the readings; the *offertorium* (also called the *offerenda*), during the ceremonies that preceded the oblation (*see* Offertory, §3); the *confractorium*, during the breaking of the bread that was to be consecrated; and the *transitorium*, which, according to an early missal, was sung while the priest 'transferred that book to the other side of the altar'. The texts of a number of *transitoria* are known (or believed) to be translations of Greek originals. Whether the melodies of such chants are also Byzantine is difficult to say, but in some cases their repetitive structure sets them apart from other Ambrosian chants (see *Te laudamus Domine* in ex.8). The three *antiphonae ante Evangelium* were meant, perhaps, to accompany processions to the pulpit with the Gospel book.

The remaining Proper chants of the Mass were sung in connection with readings. In earliest times, there were three lessons: St Ambrose wrote, 'first the prophet is read, then the Apostle, then the Gospel'. The lessons of the Ambrosian Mass were separated by what had been responsorial psalms. In the case of the first of these chants (the counterpart of the Gregorian respond–gradual) this origin is revealed by the name *psalmellus* – 'little psalm' (not all the *psalmelli* were assigned at Mass: about a third were sung in connection with readings after Terce on Lenten weekdays). In the Middle Ages, whenever three lessons were retained, *psalmelli* separated the first (normally taken from the Old Testament or from the Acts of the Saints) from the second (taken from the letters of the Apostles). The Epistle was originally separated from the Gospel by the *cantus* (the counterpart of the Gregorian tract), the remnant of a psalm sung *in directum*; this was later replaced (except in penitential times) by the alleluia, a chant inaugurated as a joyful introduction to the Gospel that followed.

Almost all *psalmelli* have a single verse, although three have two verses and *Foderunt manus meas* (for Good Friday), has six. All the authentic Ambrosian *cantus* (a few chants so identified in the antiphoners properly belong to other chant classes) are psalm verses set to variants of the same highly decorated recitation tone (ex.2). Most *cantus* consist of only a single verse, always the first of the psalm, an indication that they are the remains of a more extensive recitation. However, something of the earlier practice does survive: the four *cantus* for the first four Sundays in Lent consist of three verses; and *Laudate Dominum omnes*, the chant for the Saturday of the fifth week, includes the whole of the brief Psalm cxvi. *Cantus* consisted of whole poems or extensive psalmody on three other occasions outside Mass. A variant of the Mass melody was used on Good Friday and Holy Saturday for the recitation, after Terce, of two compilations from the Canticle of Daniel (*Benedictus es, Domine*), and was employed a second time on Holy Saturday for the complete Canticle of Moses (*Cantemus Domino gloriose*). The repertory of Ambrosian Mass alleluias did not receive the kind of development seen in Gregorian books. Only ten basic melodies are used for the alleluia proper, which is characterized by a melisma or jubilus on its final syllable ('IA', the name of God) and ten melodies for the 52 authentic alleluia verses. The Ambrosian and Gregorian Mass alleluias are similar in style, but only the Ambrosian preserve the developed jubili – Notker's *longissimae melodiae.* On important occasions successively longer *melodiae primae*, *secundae* and even *tertiae* (the 'francigena') were provided for the repetitions after the verse.

(ii) Ordinary chants. During the Middle Ages the Ambrosian Mass regularly required three Ordinary chants: the Gloria, Credo and Sanctus. At this period there was only one Mass Gloria (the *Antiphonale missarum* of 1935 contains four settings, but these include the melodies intended for the (abandoned) *Gloria in*

Ex.8 *I-Rvat* Vat.lat.13156, f.119*v* (14th century)

excelsis at Matins) and also only a single Credo melody, the latter constructed of two simple recitation tones that alternate irregularly, except for the last few words and a brief melisma on 'amen'. There are two Ambrosian Sanctus settings, but the *Sanctus festivus* is nothing more than a moderately decorated version of the simple, mainly syllabic, *Sanctus ferialis*. Late copies of the antiphoners sometimes include additional settings of the Sanctus taken over from Gregorian books; the *melodies ad libitum* published in the antiphoner of 1935 are modern fabrications.

Although there is no Ambrosian Mass chant corresponding to the Roman Kyrie–Christe–Kyrie eleison, a triple Kyrie (*ter kyrie*) was chanted chorally at three points in the Mass: after the Gloria, after the reading of the Gospel and after the distribution of communion. The antiphoners do not include the melodic formulae for these supplications; it is likely that they were very simple (and similarly the *ter kyrie* that periodically punctuated Ambrosian Matins and Vespers).

TERENCE BAILEY

Ambrosian Singers. London choir formed in 1952 by John McCarthy. *See* LONDON, §VI, 3(ii).

Ambrosianum (Lat.). A term used in the Rule of St Benedict for the hymns composed by St AMBROSE; *see also* ANTIPHON, §1; BENEDICTINE MONKS, §2; HYMN, §II, 1.

Ambrosini, Claudio (*b* Venice, 9 April 1948). Italian composer. After gaining a degree in foreign languages and literature from Milan University (1972), he attended the Venice Conservatory studying electronic music (1975) and early instruments (1978) as well as graduating from the university there with a degree in music history (1978). Since 1976 he has worked on computer music at Padua University with Alvise Vidolin and since 1978 has taught music history at Padua Conservatory. In 1979 he founded the Ex Novo Ensemble which he has conducted on a permanent basis in Italy and abroad; he is director of the CIRS (Centro Internazionale per la Ricerca Strumentale) which he founded in Venice in 1983. Two years later he became the first non-French composer to win the Prix de Rome. Ambrosini is keenly aware of his place in the history of his native city and his electronic works are full of watery sounds evocative of the back streets of Venice. He shares with the later Nono (who considered him one of the most interesting of contemporary composers, and described him as 'an alchemist of sound') an interest in exploring the conditions of listening (especially the polarities of solo and tutti writing) and the spatialization of sound. Even in the *Rondò di forza* of 1981 Ambrosini was speaking of virtual polyphony: the frequency and speed of musical events lead the listener to superimpose

other musical images on top of the written counterpoint to arrive at a diversity of personal perceptions. With its exploration of new instrumental techniques and attention to timbre, his writing reveals a love of sound; he has used early instruments (as in the oratorio *Susanna*) and appreciates generally undervalued instruments such as the upright piano. An awareness of the physical qualities of music explains his inclination towards dance forms (*Rondò di forza*, *Ciaccona*) and movement has served as inspiration for cycles of instrumental dances (*Grande ballo futurista*) and ballets (*Pandora librante*). Ambrosini is an artist who takes an undisguisedly ethical approach to the challenges of his day (*Proverbs of Hell*, *Il giudizio universale*), and his rebellious attitude has led him to refuse publishers' contracts in order to maintain his independence.

WORKS
(*selective list*)

Stage: Orfeo, l'ennesimo (op, C. d'Altilia), 1984, Ferrara, 15 June 1984; Il sogno (lyric nocturne, Ambrosini), 1989, Trento, 25 Nov 1989; Canzoniere ballato (ballet, G. Baffo and others), 1991, Paris, 15 Feb 1992; Il giudizio universale (comic op, Ambrosini), 1996, Città di Castello, 1 Aug 1996; Pandora librante (lyric sym. ballet, I. Calvino and others), 1997, Rovigo, 3 Oct 1997; Le cahier perdu de Casanova (2 pt scenic concert, Ambrosini), 1998, Ludwigsburg, 22 July 1998

Vocal: Proverbs of Hell (cant., W. Blake), S, Mez, T, Bar, chorus, pf, perc, orch, 1990–91; Tutti parlano (V. Guidi), S, fl, vc, 1993; Susanna (orat, S. Cappelletto), S, Tr, C, T, Bar, B, small chorus, early inst ens, 1995–6; Acrobata (E. Sanguineti), vocal qt, 1997; L'usignolo (anon. It. 13th century text), S, Mez, fl, vn, perc, 1997 Passione secondo Marco (orat, Cappelletto), S, Mez, T, Bar, speaker, ens, 1999–2000

Orch and chbr: Attimo relativo, variable ens, 1973; 'Oh, mia Euridice . . .', frag., 1v/cl, va, 1981, rev. 1990, rev. 1991; Trompe-l'oreille, vib, fl, 1981; Una forma, chiusa, fl, vn, va, 1981; Trobar clar, fl, ob, cl, tpt, sax, 1982; Nell'orecchio di Van Gogh, una pulce, pf, upright pf, 6 insts, 1983; Vietato ai minori, upright pf, 5 insts, 1983; De vulgari eloquentia, pf, 4 insts, 1984; Veneziano, conc., pf, orch, 1984–5; Trobar clus, pf, ens, 1985; Dettaglio sacrilego, perc, ens, 1987; Doppio concerto grosso, pf, fl, ob, cl, hn, tpt, sax, 2 vn, va, vc, db, perc, orch, 1987; Dove c'è un tabù c'è un desiderio, Renaissance insts, 1990; Ballo da sfioro, spezzato in due cori, ens, 1991, rev. 1996; Ballo sghembo, 2 pf, 2 perc, 1994; Prélude à l'après-midi d'un fauve, fl, vn, pf, 1994; Labirinto armonico 'Fantasia strumentale su "Kleines harmonisches Labyrinth" di J.S. Bach', fl, ob, cl, bn, perc, pf, 2 vn, va, vc, db, 1995

Solo inst: Notturno (Tombeau per Jimi H.), gui, 1975; A Sound a Day Keeps Time Away (Calendario musicale per comporre e suonare), any inst/v, 1977; A guisa di un arcier presto soriano, fl, 1981; Icaros, vn, 1981; Rondò di forza, pf, 1981; Grande ballo futurista, upright pf, 1982; Capriccio, detto l'Ermafrodita, b cl, 1983; Rousseau, le douanier: "Follia d'Orlando", cl, 1983; For a Month We Loved Forever, perc, 1994; Preludio, a sguardi, pf, 1994; Rap, gui, 1994

El-ac: Solo/Tutti, insts, audiovisual circuit with hearing conductor, 1973–5; Uno & Trino, amp fl, ob, cl, 1979; Negli sguardi di Eurialo e Niso, fl, cl, plants in water, elecs, 1980; Cadenza estesa e coda, amp fl, elecs, 1981; Il satellite sereno, 6 insts, elecs, 1989; Frammenti d'acque, wind insts, hp, glass insts, perc, elecs, 1996

Arrs.: G. Gabrieli: Canzon XIII a 12, Canzon I a 5, Sonata XIX a 15, orch (Milan, 1998)

Ame (Fr.: 'soul'). A term used to denote the SOUNDPOST of instruments of the violin and viol families. In certain French sources, the bow also is called the 'soul' of the instrument. L'abbé *le fils* (*Principes du violon*, 1761) wrote: 'On peut appeller l'archet L'Ame de l'Instrument qu'il touche' ('one can call the bow the soul of the instrument it touches'). Italians use the same term: *anima*.

DAVID D. BOYDEN

Ameling, Elly (Sara) (*b* Rotterdam, 8 Feb 1933). Dutch soprano. Her principal teachers were Jo Bollekamp and Jacoba Dresden-Dhont in Rotterdam and Pierre Bernac in Paris. In 1958 she won first prize at the International Music Competition at Geneva, and embarked on a career devoted almost entirely to recital work and oratorio. Her first concerts had been given in Rotterdam as early as 1953, and she subsequently sang throughout the world in a career which lasted for more than 40 years. Her reputation spread early through recordings, particularly of Bach cantatas and Schubert lieder. In 1959 she sang in the première of Frank Martin's *Mystère de la nativité* and was the soloist in Mahler's Fourth Symphony at Salzburg. She made her British début in 1966 and her American début in New York in 1968. Although she appeared with leading orchestras and conductors, Ameling sang only one role in opera, that of Ilia in *Idomeneo*, with the Netherlands Opera in 1973 and in Washington, DC, the following year. Her recital programmes broadened to include songs of many nations, but *mélodies* and lieder were always at the centre of her repertory. The expressiveness of her singing increased over the years, but its special pleasure owed much to the purity and freshness of her tone and to her reliability in all aspects of her musical work. She has won many awards, including a knighthood presented in 1971 by the Queen of the Netherlands for services to music. In later years she has taught, both privately and in public masterclasses. Her legacy of recordings is one of the largest among singers, encompassing a wide repertory, not the least delightful part of it being a stylish and totally unexpected collection of American popular songs called *After Hours*.

J.B. STEANE

Ameln, Konrad (*b* Neuss, 6 July 1899; *d* Lüdenscheid, 1 Sept 1994). German musicologist and choir director. He studied musicology with Ludwig at Göttingen University (1919–21) and subsequently with Gurlitt at Freiburg University, where he received the doctorate in 1924 with a dissertation on the melodies *Innsbruck, ich muss dich lassen* and *Ach Gott, vom Himmel sieh' darein*. He was a

lecturer at the Bauernhochschule in Rendsburg (1924–5) and at the Volkshochschule in Kassel (1925–6). He then acted as music consultant to the Central Office for General Librarianship in Leipzig (1926–8) and lectured in Protestant church music at the University of Münster (1930–39). After the war he lectured at the Landeskirchenmusikschulen of Hanover (1947–8) and the Rhineland (1949–57).

In the early 1920s Ameln embarked on a fruitful career as a choral and orchestral conductor and director of choral courses. His object was the authentic performance of old music, and this was coupled with considerable editorial work. He edited the journal of the Finkenstein League, *Die Singgemeinde* (1925–33). In 1935 he founded the Lüdenscheider Musikvereinigung, which he ran until 1973, and in 1938 he initiated the Kleine Musikfeste in Lüdenscheid. His most important writings on church music are the *Handbuch der deutschen evangelischen Kirchenmusik* which he edited with C. Mahrenholz and others (Göttingen, 1935–), and his hymnological studies which since 1935 appeared chiefly in the *Jahrbuch für Liturgik und Hymnologie*, of which he was an editor. He also made numerous facsimile editions of sacred songs and hymn books. In 1959 he founded the Internationale Arbeitsgemeinschaft für Hymnologie and he was co-editor of *Das deutsche Kirchenlied*, an interdenominational critical collected edition of hymn tunes. He wrote extensively on Bach, Handel and Leonhard Lechner and continued into old age preparing a cumulative bibliography of hymnology for the *Jahrbuch für Liturgik und Hymnologie*.

HANS HEINRICH EGGEBRECHT

Amen (Heb.: 'truly', 'so be it'; from the root *'mn*, 'to be secure', or 'certain'). A word of affirmation, often employed as a cultic acclamation by Jews, Christians and Muslims. In the Old Testament 'Amen' commonly seals commands, blessings, curses, doxologies and prayers. While used in non-liturgical settings (*1 Kings* i.36), it frequently functioned as a ritual response in prayer (Psalm xli.13). Its importance as a cultic response is underlined by texts noting explicitly that the people are to say 'Amen' (Psalm cvi.48, *1 Chronicles* xvi.36). Evidence for its usage in the Temple is scant, partly because in Temple worship the role of ordinary people, who would usually have added the amen, was limited. Talmudic evidence (*Sukkah* 51b) shows that the amen was an important response in the later Synagogue, and before the Christian era it may have been included in some Synagogue prayers. Its responsorial role in Jewish domestic prayer before the 1st century CE is firmly established.

The New Testament confirms that 'Amen' was a commonly employed response in early Christian worship (*1 Corinthians* xiv.16 *2 Corinthians* i.20); *Revelation* provides particular evidence for such usage (v.14, vii.12 etc.). In Pauline literature the amen seals various blessings and doxologies (*Romans* i.25, *Galatians* i.5 etc.) and concludes some letters (*Romans*), demonstrating both a liturgical and a literary usage. Unusual are the 70 or more occurrences of 'Amen' as an introduction rather than conclusion in some sayings of Jesus (e.g. *Matthew* v.18). This could reflect Jesus's own language, or it may be a literary technique employed by the Gospel writers for affirming his sayings as truthful (Chilton, p.186).

In early Christian worship the untranslated amen was not only a common congregational response but epitomized the role of the laity in worship. In East and West it sealed orations, doxologies, blessings, reception of communion, some readings and especially eucharistic prayers (e.g. Justin Martyr, *First Apology*, lxiv.3–5); St Jerome commented that in Rome the 'amen resounds so that it crashes like heavenly thunder' (*Commentary on the Second Epistle to the Galations*, Preface). The amen was eventually added to the Gloria and Credo and became a fixed conclusion to the lesser doxology.

During the early Middle Ages, as the role of the assembly in official worship declined, the singing of the amen increasingly became the responsibility of the choir, with ensuing musical elaboration. In plainchant, syllabic or neumatic settings were complemented by new melismatic amens, such as that concluding Gloria IV. In polyphonic settings of the Gloria and Credo composers such as Machaut often set the amen separately. During the Reformation, one symbol of Luther's emphasis on the community's role within worship was his addition of amens to the Agnus Dei, litanies and other liturgical chants. At the same time, composers in England were writing brief polyphonic settings of the amen as part of the Preces and responses of the Anglican Offices.

In the 17th century composers such as Antonio Bertali (1605–69) began to write extensive closing amens in fugal style, in which the word was continuously repeated. These amen fugues were common in liturgical music (e.g. the Credo from Mozart's 'Coronation' Mass) and non-liturgical (e.g. the 'Amen' chorus from Handel's *Messiah*). J.G. Naumann (1741–1801) provided a threefold setting of the amen for the royal chapel at Dresden; commonly known as the 'Dresden Amen', it was later cited by numerous composers, including Mendelssohn (Reformation Symphony) and Wagner (*Parsifal*).

Amens sung to a plagal (or 'amen') cadence were frequently appended to congregational hymns in Protestant Churches in the 19th century, and the congregational amen as a shout, affirmation or sung response has played a significant part in 20th-century Jewish, Christian and Muslim worship. In present-day Synagogue services it punctuates the *qaddish*, and with few exceptions is the ordinary response to blessings. Some Christian Churches have given renewed prominence to the sung congregational amen; in the revised Roman Catholic Mass, for example, the 'Great Amen', which is to be sung at the end of the eucharistic prayer, is considered one of the most important musical elements in the rite. Muslims also use the word to seal certain prayers, its most prominent usage in Islamic worship being at Friday noon (*Jum'a*) prayer, where it is recited by the congregation after the reading of the first *sūra* (the *Sūrat al-fātiḥa*) of the Qur'an by the *imām*.

GEOFFREY CHEW/EDWARD FOLEY

Amenábar (Ruiz), Juan (*b* Santiago de Chile, 22 June 1922; *d* Santiago, 3 Feb 1999). Chilean composer and writer. Introduced to music by his father, a cellist, he studied theory and the piano at the Catholic Conservatory from 1935 to 1939. After graduating in civil engineering at the University of Chile (1945), he pursued work in composition with Jorge Urrutia Blondel at the National Conservatory (1948–52). He made his first experiments in electronic music when he was planning music programmes for Chilean Radio (1953–6), and in 1956 created the Experimental Sound Workshop at the Catholic University of Santiago. He taught both at the Catholic University and on the arts faculty of the University of Chile.

Amenábar wrote for the voice, chamber groups, solo instruments and ensembles, and composed incidental music for the cinema and theatre. His electro-acoustic music carries special importance: such works as *Los peces* (1957), *Klesis* (1968), *Preludio en High Key* (1970), *Sueño de un niño* (1970), *Amacatá* (1972) and *Ludus vocalis* (1973) opened new paths and were influential throughout Latin America. As a scholar, his sensitivity to the climate of change is evident in much of his research work. His essay 'Consideraciones acerca de la obra musical en la sociedad de consumo' presents an original view of a revolutionary phenomenon that he discerned with all its implications from its first appearance in Chile.

Amen cadence. *See* PLAGAL CADENCE.

Amendola, Giuseppe (*b* ?Palermo, *c*1750; *d* ?Palermo, ?1808). Italian composer. In 1772 he was in the service of the Duke of Ciminna, and for the next 20 years was active in Palermo, where several of his cantatas were performed as well as an *Orfeo* (text by G. Azzoli, Teatro S Cecilia, 1788). His only known opera, the *dramma giocoso Il Begliar-Bey di Caramania* (probably to a

libretto by G. Tonioli; scores *D-Dl*, *Rtt*, *F-Pn*), was apparently first performed in Madrid in 1776; it was probably given in Bologna in 1778 (as *La schiava fedele*), and subsequently achieved notable success in other European capitals. About 1790 he is believed to have given the young Isouard lessons in harmony involving study of the operas of Leo and Durante. Various vocal and instrumental scores are held in Palermo (*I-PLcon*), including excerpts from a setting of *Lo speziale*, and some sacred music.

JAMES L. JACKMAN/REBECCA GREEN

Amendola, Ugo (*b* Venice, 28 Aug 1917; *d* Venice, 20 Feb 1995). Italian composer, pianist and teacher. He studied at the Venice Conservatory, where he took his diploma in the piano (1938, with Tagliapietra), in composition (1946, with Gabriele Bianchi, a Malipiero pupil), and choral and orchestral conducting (1947, with Sante Zanon, Sanzogno and Scherchen). He had a concert career as a pianist, and was a coach for the opera seasons at La Fenice, where he also conducted from 1973 to 1985. He was awarded international prizes for composition, and received honours in recognition of his commitment to teaching, which manifested itself in a series of pedagogical texts, many of which remain in manuscript. The influence of the *generazione dell'ottanta* can be seen in his Sonata for string orchestra (1947), in which rigorous, economical contrapuntal writing is supported by a solid formal awareness, Classical in nature; melodies cultivate a French kind of archaism, tinged with modality. These elements remained typical of Amendola's work, along with a predilection for the piano, for which he wrote some technically complex works (e.g. Fifth Sonata, 1985) which betray the influence of Prokofiev.

LICIA MARI

Amener (Fr.: 'to lead'). A 17th-century dance in moderate triple metre characterized by six-bar phrases usually grouped into either three-bar units or a four-bar and a two-bar unit. The *amener* is generally considered to have derived from the *branle de Poitou à mener*, in which one couple led the other dancers. Its characteristic phrasing is similar to that of the BRANLE and the early MINUET, and the resemblance to the latter led some writers (Michael Praetorius and, later, Pierre Rameau) to posit a relationship between the two. Examples of music for the *amener* are quite rare, but may be found among the dance music collected by Ecorcheville (*Vingt suites d'orchestre*, Paris and Berlin, 1906/*R*), the theatrical dances of Alessandro Poglietti, and the suites of Biber and J.C.F. Fischer.

□

Amengual(-Astaburuaga), René (*b* Santiago, 2 Sept 1911; *d* Santiago, 2 Aug 1954). Chilean composer and pianist. He studied with Allende for composition and Renard for the piano at the Santiago National Conservatory (1923–35), where he then held appointments as coach at the opera department (1935), assistant professor of the piano (1937), professor of analysis (1940) and director (1945). At the same time he taught at the Liceo Manuel de Salas in Santiago. He was secretary-general to the Instituto de Extensión Musical (from 1941), a founder-director of the Escuela Moderna de Música, Santiago (1940), and a member of various arts societies. In 1943 he went to the USA as a guest of the Institute of International Education and in 1953 he was in Europe for the performance of his Wind Sextet at the ISCM Festival. His early compositions show the influences of French music and Chilean folklore; from the late 1940s his work became more Expressionist and abstract.

Amenreich [Ammenreich, Armenreich], **Bernhard** (*b* Heilbronn, *c*1535; *d* after 1575). German composer, Kantor and organist. He studied at Heidelberg in 1553 and at Tübingen in 1554, gaining the BA in 1555. He was Kantor at Mergentheim in Franconia in 1555 and from about 1560 to 1564 was organist at Feuchtwangen. In 1565 he was probably a court musician at Ansbach. In 1557 he applied for the post of Kantor at Hipoltstein, and in 1563–4 he applied unsuccessfully for the positions of organist at Windsheim and court musician in Württemberg. From 1569 to 1575 he was Kapellmeister and organist to Landgrave Philipp the Younger of Hesse at Schloss Rheinfels and organist at St Goar, south of Koblenz. However, he lost these posts over a dispute with the citizens of St Goar and was imprisoned. In an autobiographical threnody, *Bis in den Himmel clage ich über Tyrannei* (in *A-Wn*), he complained to the emperor of his unjust treatment by Margrave Georg Friedrich of Ansbach-Brandenburg and Landgrave Philipp of Hesse. He composed *Magnificat* settings on the eight tones for organ (lost), which he sent to Ochsenfurt in 1561, to Windsheim in 1562 and to Stuttgart in 1564, and a wedding song for Landgrave Philipp of Hesse in 1569

(also lost). In 1576 he composed a four-part Tenorlied to words by Elector Palatine Friedrich III (*I-Rvat*).

FRIEDHELM BRUSNIAK

Amerbach, Bonifacius (*b* Basle, 11 Oct 1495; *d* Basle, April 1562). Swiss humanist, musician and lawyer. The son of the printer Johannes Amerbach, he began studying the classics in Engental (near Basle) as the private pupil of Conrad Leontorius, who in 1507 described him as 'both talented and lazy'. Between 1507 and 1509 he continued his education in Schlettstadt at the distinguished humanist school run by Hieronymus Gebwiler and by 1510 had matriculated at the University of Basle. In 1513 he was awarded the degree of *baccalaureus artium*, and upon graduation moved to Freiburg im Breisgau, where as a candidate for the degree of *magister artium* he specialized in ethics, physics and grammar. While in Freiburg he also began studying law under Ulrich Zasius and later continued these studies with Andrea Alciati in Avignon where, in 1525, he was awarded the degree of *doctor juris*. It was during his student days that Amerbach's close relationship with Erasmus began; when the Dutch humanist died in Basle in 1536, Amerbach was appointed heir and legal executor of his estate. Between 1524 and 1555 he taught law at the University of Basle, was appointed Rector of the university on no fewer than nine occasions, and regularly served as legal advisor to the city council.

While Amerbach's education clearly prepared him for his successful juridical career, it also instilled in him a strong interest in the arts. As well as being one of the first important patrons of Hans Holbein *der Jüngere* (see illustration), Bonifacius was a connoisseur and practitioner of contemporary music. Between 1510 and 1551 he amassed a significant collection of manuscript and printed music. These sources, housed today in Basle's University Library (*CH-Bu*), document his musical activities, tastes and abilities in extraordinary detail. As early as 1510 he owned two sets of manuscript partbooks containing songs by Hofhaimer, Isaac, Compère and Obrecht. In 1512 he acquired a copy of Antico's *Canzoni nove*. In 1513 he was reading Gaffurius's *Practica musice*, and in the same year he began compiling a manuscript of German keyboard music under the supervision of his teacher, the organist Hans Kotter. This famous collection of free instrumental pieces and dances, and intabulations of vocal compositions by such composers as Hofhaimer, Isaac, Josquin and Sermisy occupied Amerbach's attention for nearly 20 years. In 1514 he was also playing the recorder and buying wind instruments, and between 1518 and 1524 he was again collecting vocal music, this time mostly the music of Senfl. Other sources documenting his musical interests include a lute manuscript copied by Amerbach himself in 1522, a copy of Hans Buchner's *Fundamentum* compiled by Christoph Piperinus in 1551, printed books of vocal music by Sixt Dietrich and Thomas Sporer, and several treatises by Glarean, Virdung and Balthasar Prasperg.

Bonifacius Amerbach: portrait by Hans Holbein (ii), oil on panel, 1519 (Kunstmuseum, Basle)

As an influential member of Basle's academic community, Bonifacius played an important role in the development of the university's musical curriculum. As a father wishing to pass on his love of music to his only son Basilius (1533–91), he employed Piperinus in 1546 to teach his son the 'art of singing', and these music lessons resulted in the compilation of several other manuscript partbooks. On the death of Basilius, the Amerbach library was passed on to Basilius's nephew Ludwig Iselin (1559–1612) who, like Bonifacius and Basilius, also cultivated a strong interest in music while attending the university in Basle.

America. *See* AMERICAS and LATIN AMERICA; *see also* UNITED STATES OF AMERICA and other individual countries.

American Brass Quintet. Brass quintet, formed by trombonists Arnold Fromme and Gilbert Cohen in 1960; its present members are Chris Gekker and Raymond Mase, trumpets; David Wakefield, horn; Michael Powell, tenor trombone; and John D. Rojak, bass trombone. The group gave its first public performance at the 92nd Street 'Y' and made its official New York début at Carnegie Recital Hall in 1962. At that time the brass quintet was little

heard in the concert hall, and the ensemble played a major part in introducing audiences to brass instruments in the chamber context. Its commitment to the expansion of the brass chamber literature and its renowned virtuosity, precision, and stylistic accuracy have resulted in the composition of more than 100 new works by such composers as Carter, Thomson, Druckman, Schuman, Starer, Sampson, Bolcom and Schuller. The group's concerts usually include premières and the performance of 'rediscovered' older pieces. The quintet has also explored performance practice on older instruments, and its many recordings include two of 19th-century American brass music played on period instruments. The group became ensemble-in-residence at the Aspen Music Festival in 1970, and at the Juilliard in 1987.

ELLEN HIGHSTEIN

American Composers Alliance [ACA]. American organization of composers. It was founded in 1937 by Copland, Thomson, Riegger and others to promote the interests of American composers of serious concert music. The Composers Facsimile Edition (known as the American Composers Edition from 1972) was established for the ACA in 1952 by Roger Goeb to make copies of members' works more accessible in the interim between composition and publication; in 1967 the service was extended to non-members. By 1995 the catalogue contained more than 8000 titles. Rental materials for members' scores are kept by the ACA, and perusal copies of smaller works by the AMERICAN MUSIC CENTER. The ACA sponsors concerts and radio broadcasts and produces recordings through CRI (Composers Recordings, Inc.). Founded in 1954, CRI aims to keep its more than 600 recordings permanently in print. In 1972 the ACA became affiliated with BMI, which collects performance royalties for its members and pays salaries and rent in return. In 1977 the ACA sponsored the initial season of the AMERICAN COMPOSERS ORCHESTRA, an independent organization. A bulletin was published in 1938 and again between 1952 and 1965. The ACA's Laurel Leaf Award (since 1951) recognizes achievement in the encouragement of American music, while Friends of American Composers, an offshoot of the ACA, promotes outreach programmes. The ACA had over 300 members in the mid-1990s.

RITA H. MEAD, FRANCES BARULICH

American Composers Orchestra. American orchestra. It was founded in 1977 by the composer Francis Thorne and the conductor Dennis Russell Davies, and devoted exclusively to performing and promoting American music, including that of Latin America. The orchestra, drawing on a pool of first-rate freelance musicians, is based in New York City and maintains a subscription series at Carnegie Hall. The recipient of numerous awards, the orchestra has sought to link the American past and present by regularly commissioning new works, reviving neglected repertory and programming forgotten classics from the 20th century. The American Composers Orchestra also provides support and resources for young composers. Over 300 American composers have had works performed by the orchestra, and by 1998 it had commissioned almost 100 new works, including the first orchestral commissions for Ellen Taaffe Zwilich and Joseph Schwantner, both of which won the Pulitzer Prize. The orchestra has recorded music by Colin McPhee, Lou Harrison and Roger Sessions. The composer Robert Beaser has been associated with the American Composers Orchestra since 1988 and leads the orchestra's pre-concert discussions. The orchestra holds annual reading sessions for young composers, and Davies is frequently joined by the flautist and conductor Paul Dunkel in presenting works by a wide range of young composers. Under Davies' leadership the orchestra has maintained an eclectic aesthetic and given some of the best performances of contemporary American orchestral music in New York City.

LEON BOTSTEIN

American Conservatory of Music. Conservatory established in Chicago in 1886. *See* CHICAGO.

American Federation of Musicians. Trade union founded in 1896 for professional musicians. Membership was extended to Canadian musicians in 1900, when 'of the US and Canada' was added to its title. Affiliated with the AFL-CIO in the USA and with the Central Labor Council in Canada, in 1996 it had 130,000 members in 300 local affiliates, which have jurisdiction over local areas of employment, while the international union has exclusive jurisdiction over recordings, film and network broadcasting. The federation publishes the *International Musician* (1901–), which appears monthly.

RITA H. MEAD/R

American Guild of Musical Artists [AGMA]. Trade union founded in 1936 and affiliated with the AFL-CIO. It has jurisdiction in the professional fields of opera, dance, concert and oratorio, and operates in the USA, Canada and Central America, negotiating contracts and providing benefits for its members. The union's headquarters are in New York; its official publication is *AGMAgazine*, issued quarterly since 1949.

□

American Guild of Organists. Professional association of organists and choral musicians. Founded in 1896, the guild in 1997 served 20,000 members in 351 chapters throughout the USA and Europe. It seeks to maintain high musical standards and to promote appreciation of organ and choral music. Its educational programmes include a comprehensive series of examinations for professional certification and an extensive catalogue of publications and learning resources. The guild sponsors competitions in organ performance and improvisation and in organ and choral composition. Its official magazine, *The American Organist*, is published monthly.

□

American Institute of Musicology. Organization founded in Cambridge, Massachusetts, by Armen Carapetyan in 1944 as the Institute of Renaissance and Baroque Music.

The primary purpose of the institute is to publish scholarly editions of compositions and theoretical works, chiefly those of the Middle Ages and the Renaissance, and thus to promote the study of these sources in the humanistic disciplines in institutions of higher education. In 1946 the new name was adopted, and headquarters were moved to Rome (though offices were maintained in Cambridge and in Dallas, the latter's circulation office moving to the firm of Hänssler-Verlag in Stuttgart in 1974). A group of eminent scholars served as an advisory board until 1949, when Carapetyan became the sole director. A choir was established in 1947, and summer sessions featuring advanced studies in medieval and Renaissance music history were held in 1947 and 1948; both were soon discontinued.

In its range of publications the institute has always aimed at high standards of scholarship and book production; following Carapetyan's death in 1992 permanent series editors were appointed, helping to ensure the future of its several series. Corpus Mensurabilis Musicae (general editor Frank D'Accone) covers the principal musical sources of the Middle Ages and Renaissance, including collected works and transcriptions of manuscript sources; its ultimate goal is a complete collection of polyphonic vocal music from the 14th to the 16th centuries. Corpus Scriptorum de Musica (general editor Gilbert Reaney) presents theoretical treatises of the 11th to the 16th centuries, published in the original languages; Renaissance Manuscript Studies (general editor Charles Hamm) consists of catalogues of complete archives with incipits. The series Musicological Studies and Documents (general editor Ursula Gunther) consists of monographs on a wide variety of topics of medieval and Renaissance music history, including commentaries on treatises, source facsimiles, indices, and studies on theoretical subjects, genres and forms. Corpus of Early Keyboard Music (general editor John Caldwell) presents keyboard works of the 14th to the 17th centuries in modern notation whilst Miscellanea, founded by Carapetyan in 1951, covers other studies and sources; most significant in this series is the facsimile edition of Rameau's collected theoretical works. The institute's yearbook, *Musica disciplina* (founded in 1946 as the *Journal of Renaissance and Baroque Music* and renamed the following year), is devoted to research studies and inventories of primary sources. Articles are frequently related to editions in other AIM publications. The institute maintains a website which provides bibliographical and ordering information for its publications.

PAULA MORGAN

American Musical Instrument Society. American organization founded in New York in 1971 'to promote study of the history, design, and use of musical instruments in all cultures and from all periods'. In 1998 it had over 500 members, including museum curators, collectors, performers, instrument makers and scholars in the USA and abroad, as well as over 200 institutional members. The society holds annual meetings, devoted to symposia, performances and the presentation of papers. Its *Journal* (published annually since 1974) and *Newsletter* (triannually since 1971) contain articles, bibliographies, acquisition lists and news of worldwide activities of interest to members. The Directory of Musical Instrument Museums in the USA and Canada functions under its auspices. The society maintains a website with information on its activities and links to other sites of interest to its members.

JOHN SHEPARD/JANET K. PAGE

American Music Center. Organization founded in 1939 by Marion Bauer, Aaron Copland, Howard Hanson, Otto Luening, Quincy Porter and Harrison Kerr. By bringing together composers, performers and presenting organizations, the centre encourages the creation, performance, publication and distribution of American concert music and jazz. In 1947 it was named the official American music information centre by the National Music Council. In addition to collecting and disseminating information it maintains a circulating library of more than 55,000 scores and tapes representing the work of over 8000 composers, and assists composers in copying their music. The centre awards a Letter of Distinction annually to a person or organization that has made a significant contribution to American music and administers grant programmes for the Aaron Copland Fund for Music and the Mary Flagler Cary Charitable Trust. In 1995 the centre had some 2200 members.

□

American Musicological Society [AMS]. Organization founded in 1934 to advance scholarly research in the various fields of music. It grew out of the American Library of Musicology (1932–8, an organization devoted to the publication in English of important works of musical scholarship), the New York Musicological Society (1930–34) and a small contingent of the Music Teachers National Association. Seeger and Yasser had been officers, with Blanche Wetherill Walton, of the American Library of Musicology; they invited other scholars to a meeting at Mrs Walton's home in New York on 3 June 1934 at which the society was created and Otto Kinkeldey was elected its first president. The society, with over 3300 individual members and 1360 subscribing institutions, holds annual meetings (sometimes in conjunction with those of other societies) where presentations, symposia and concerts are given; members also read papers at meetings of the 15 regional chapters. In addition the society gives awards, prizes and fellowships. It was admitted to the American Council of Learned Societies in 1951 and participates in several international organizations including RISM and RILM.

Most of the society's resources are dedicated to publications. Most notable is the *Journal of the American Musicological Society*, published three times a year since 1948; it was preceded by the *Annual Bulletin* (1936–47) and *Papers* (1936–41). It also issues a *Newsletter* twice annually. Other studies and documents published by the society include the *Complete Works of William Billings*, edited by Karl Kroeger and others (four vols., 1977–90); the series Music of the United States of America (including *In Dahomey* and works by Ruth Crawford, Irving Berlin, Amy Beach, Daniel Read and Timothy Swan, 1993–); Ockeghem's collected works, edited by Dragan Plamenac and Richard Wexler (three vols., 1966, 1992); Dunstaple's complete works, edited by Manfred Bukofzer, published jointly with Musica Britannica (2/1970); Joseph Kerman's *The Elizabethan Madrigal* (1962); E.R. Reilly's *Quantz and his Versuch* (1971); E.H. Sparks's *The Music of Noel Bauldeweyn* (1972); *Essays in Musicology: a Tribute to*

Alvin Johnson, edited by Lewis Lockwood and Edward Roesner (1990); and, in conjunction with the International Musicological Society, *Doctoral Dissertations in Musicology*, edited by C.D. Adkins and A. Dickinson in succession to Helen Hewitt (1952, 1957, 1961, 1965, 1971, 1977, 1984, 1990, 1996).

RITA H. MEAD/R

American organ. A term for the REED ORGAN. It is generally used in Europe to distinguish those instruments activated by suction bellows from those activated by pressure.

American Piano Co. American firm of piano manufacturers. *See* AEOLIAN (ii), (2).

American Society for Jewish Music [ASJM]. Organization founded in New York in 1974. It was a successor to the Mailamm (active 1931–9, whose name is a Hebrew acronym for 'Jewish Institute of Musicology'), created by Miriam Zunzer, and to the Jewish Music Forum (1939–63), established by Abraham Wolf Binder, which later became known as the Jewish Liturgical Music Society of America (1963–74). The ASJM evolved from the latter, under the leadership of Albert Weisser, its first president. He established a wider scope for the society, including secular and art music. The society has published a scholarly journal, *Musica judaica*, almost annually since 1975, edited initially by Weisser and Israel J. Katz. The society presents a variety of public programmes, sponsors seminars and workshops, and organizes concerts and conferences.

ISRAEL J. KATZ

American Society of Ancient Instruments. Society founded in Philadelphia in 1925. *See* PHILADELPHIA, §1.

American Society of Composers, Authors and Publishers [ASCAP]. *See* COPYRIGHT, §V, 14(i).

American Society of University Composers. *See* SOCIETY OF COMPOSERS.

American String Quartet. American string quartet. It was formed in 1974 by students at the Juilliard School, its present members are Peter Winograd (*b* New York, 5 Feb 1960), Laurie Carney (*b* Englewood, NJ, 28 Sept 1956), Daniel Avshalomov (*b* Portland, OR, 23 May 1953) and David Geber (*b* Los Angeles, 2 Feb 1951). The original first violinist was Martin Foster, and the original violist Robert Becker. The quartet made its New York début at Alice Tully Hall in 1975 and won the Coleman Competition and the Naumburg Award the same year. It has often collaborated with other artists and has toured throughout the USA, Europe and Asia, including concerts in all 50 states during its 25th anniversary season. With a sound that is polished and well balanced, and a style at once authoritative and unmannered, the American String Quartet performs a wide-ranging repertory, including the complete works of Mozart, Beethoven, Schubert, Schoenberg and Bartók. It has given the premières of Claus Adam's String Quartet no.2 (1979), Lester Trimble's Third Quartet (1980) and George Tsontakis's String Quartet no.4 (1988), and has also recorded works by Mozart, Schoenberg, Prokofiev and Corigliano. Equally committed to education, the ensemble has taught and performed at Mannes College, the Aspen Music Festival (from 1974), the Taos School of Music (1979–1997), the Peabody Conservatory and the Manhattan School (from 1984) and has given educational seminars, broadcast performances, and published articles.

SUSAN FEDER

American Symphony Orchestra League [ASOL]. Organization founded in 1942 to provide artistic, financial and organizational support for American orchestras. In 1999 its members included nearly 900 symphony, chamber, youth and university orchestras. In addition to offering seminars and workshops for orchestra managers, staff and volunteers, the league sponsors an Orchestra Management Fellowship Program and provides scholarships for black American student musicians. In 1975 it formed the Conductors Guild (now independent) and continues to assist in the training and professional advancement of young conductors. The organization also works on legislative issues affecting orchestras and lobbies for government support for the arts. The league publishes a bimonthly magazine, *Symphony*, as well as newsletters, reports and studies. □

American Women Composers. *See* INTERNATIONAL ALLIANCE FOR WOMEN IN MUSIC.

Americas. This article examines the musical traditions of North and South America. The two continents, joined by a land bridge and embracing the Caribbean islands, present a multitude of genres and styles performed in a complex network of contexts by communities of diverse cultural and religious backgrounds. The regions, and often the countries, are often described separately (e.g. Chase, 1967; Béhague, 1979; Manuel, 1995). In spite of their differences, certain continuities extend far beyond the boundaries of any nation state, or even continental land mass. These continuities stem from somewhat similar histories of settlement, cultural development and technological innovations and long histories of intense trade and cultural exchange.

I. Music traditions of the Americas

1. INTRODUCTION. In order to understand similarities in musical processes throughout the Americas, chronologies associated with specific centuries must be discarded. Social processes that influenced musical styles occurred at different times and in different places. Amerindian populations were converted to Christianity and their traditional music replaced or modified by Christian church music in the late 16th century and in isolated locations in the Amazon in the late 20th century. Slavery ended at different times, and free African populations varied widely

in size in different countries according to the importance of plantation economies. Immigrants moved to different places in the Americas at different times, and musical maintenance and innovation within immigrant traditions were often affected by the number of generations that lived in a country, as well as relationships with neighbours. The influence of mass media was felt in the USA and Canada in the 19th century, and radio and television had a tremendous impact on regional culture in the USA and Canada by the mid-20th century. But in places without large-scale literacy in the 19th century or electricity in the 20th, the mass media may have had a more limited impact on local traditions; in small countries without television programming, the only broadcasts available in the late 20th century were from transnational providers. Thus, when speaking of the Americas, it is sometimes better to describe the processes at work than to focus on particular periods, because the dates vary more than the processes themselves.

Most of the musics performed in the Americas at the end of the 20th century were musical hybrids, unique musical traditions that were distinct from their originating cultures. There is a continuum on which musical traditions may be imagined to fall; at one extreme they are identical with an original, extra-American or pre-Columbian tradition, and at the other extreme they are completely subsumed by a different tradition. Amerindian performances might thus fall on a scale from vocals with drum to electric guitars, drum set and reverb, with only textual indications of Amerindian origins. African-influenced traditions similarly range from sacred music with percussion and song texts close to the West African originals to compositions for orchestras strongly characteristic of the Western European tradition but with African rhythmic and timbral influences. The same may be said of European, Asian and other traditions performed in the Americas today. In many cases, a musical tradition is not described by its practitioners as 'a little bit of this and a little bit of that' but as 'our music' (Seeger, 1997). A style may be claimed as truly 'African', 'European', 'Amerindian' or belonging to an originating community, although musically it reveals a unique mixture of sounds and rhythms found in no single place. The sections that follow focus on the social determinants and interpretations of the musical forms practised today, and historically, in the Americas.

The terms used to describe the musical traditions in the Americas reflect political processes and academic sensitivities that have changed over the decades. While national identity was a preoccupation of the 19th and early 20th centuries, the use of ethnicity and cultural distinctions as organizing concepts (both within a single nation or throughout a multinational region) grew in importance during the latter part of the 20th century (Béhague, 1994). The musical traditions of ethnic or cultural groups within each nation in the Americas resulted from local variations of general historical and musical processes. The specific mixture of groups in a given region, their economic and political interaction with one another and with transnational economic and cultural processes, and the influence of individual composers, musicians, critics and local cultural policies have created specific music histories for nations and specific regions within nations.

Music has been used to create boundaries and express the frustrations and aspirations of groups formed by nationality, ethnicity, gender, social class and religion, as well as political and economic power. Technology, law and commerce also have significantly shaped musical styles throughout the Americas. But the performance of and identification with musical styles does not always divide clearly along any single social dimension. Members of an ethnic group do not necessarily perform or attend the same type of music; they may divide their interest by class, gender or other factors. When social or political conflicts become intense, however, music has often been the subject of conflict between groups, and a focus of solidarity within them, whether the conflict is between nations, classes, political parties or generations.

2. History and sources. Most late 20th-century accounts of the music in any given nation or region of the Americas tend to be historical in approach and fusion-oriented in their conclusions (*see* Amerindian music, Latin American music and individual country articles); the present is often viewed as the combination of past influences. Yet histories are as much the products of specific groups' ideologies as the musical traditions they describe. Both the facts and the interpretations of the traditional histories of music in the Americas are hotly debated today. In many countries, scholarship and music education are complex and emotionally charged parts of conflict-ridden political processes. A history cannot be presented without reflection on its limitations.

One such limitation is that a great majority of the early historical documents and a large number of histories were written by members of the European ruling élite. Many histories relegate other social groups to being 'people without history' (Wolf, 1982) through their almost exclusive reliance on written manuscripts. Descendants of the Amerindian groups that were already in the Americas and of groups that were forced to come to the Americas as labourers often feel that their history and their contributions to contemporary musical life have been slighted or misrepresented. Attribution of the origins of specific emergent musical styles of American music was a particularly complex and heatedly argued subject. In the sections that follow, the development of musical styles among large ethnocultural groups of all types is traced, often using ethnomusicological documents and recordings from the 20th century to supplement historical sources. Yet the history of some groups is still to be written.

The passage of centuries has seen a transformation in the type of documents available to researchers. The earliest musical documents are archaeological artefacts (instruments) preserved without writing. Written documents later supplemented the objects. Transcriptions of music and dance were relatively rare and restricted to certain genres until the late 19th century. After about 1890, audio recordings and silent (and later sound) film and videotape transformed the nature of musical documentation. Audio and visual materials have superseded printed documents as central documents for musicological research in the 20th century.

Our musical sources before about 1500 are restricted to archaeological remains, especially those in the highland region of the Andes and in parts of Mexico. The presence of musical instruments, or their depiction in pottery or carvings, indicates relatively little about how they were played and what they sounded like. They do, however, establish the presence of wind instruments and some drums, as well as their performance in ensembles that

were of sufficient significance to be preserved or memorialized in artistic depictions. Most instrument collections are found in natural history museums, in association with other artefacts, and necessarily but unfortunately quite removed from issues of sound and their musical attributes.

After 1500, and throughout the colonial period, many important documents were kept by the colonial powers and can be consulted today in archives in Spain and Portugal, and to a lesser extent France, England, the Netherlands and other countries. Bureaucratic reports often mention musical events, and ecclesiastical documents also refer to the principal musical affairs of colonial churches. Later colonial church documents are housed in the national, regional and church archives of each country. These are sometimes difficult to consult, and discoveries of new documents continue to this date. These can often be supplemented with the accounts of travellers or explorers such as the German scientists Humboldt, Steinen, Koch-Grunberg and others whose ethnographic descriptions of local life often include detailed descriptions of dances and musical performances.

Nationalist movements in the Americas were frequently accompanied by the documentation and valorization of local folk and Amerindian cultures. This expanded in the late 19th century with the efforts of folklore archives and museums such as the Brazilian Folklore Institute, the Mexican Museum of Anthropology, the US Archive of Folk Culture and the Canadian Museum of Civilization, to name just a few.

By the late 20th century many communities had founded their own museums and were actively documenting and representing their own cultures. The Shuar in Ecuador and Amerindian communities in Canada were among the many groups that wanted to control the ways in which they represented themselves and in which they were represented by others. Community control over self-representation changed the nature of many national museums and created new formats for representing them. National museums have been increasingly complemented by regional and local museums.

In the late 20th century, too, the archives of local, regional, national and transnational communications companies became important resources for studying the evolution of musical styles. The condition and accessibilty of such archives varied greatly. In addition, sheet music publishers, radio and television stations and record companies provide massive exposure to certain types of music. There are also vast collections amassed by private collectors that are often more accessible than those of commercial enterprises.

Secondary sources on the musics of single countries and regions are legion (see entries on individual countries). Many nations have created their own musical dictionaries or encyclopedias, such as the *Enciclopédia de la música popular brasileira* (1977), as well as their own musicological journals and carefully researched historical studies. Certain scholars have written books about continental regions (Béhague, 1979; Hamm, 1983) and others are particularly well known for their extensive research on a given time period (Stevenson, 1968).

In spite of the difficulties of writing history, chronology has its benefits for narrative presentation. There is no doubt that a great deal of the complexity of musical life in urban neighbourhoods and rural settlements, in kitchens, churches, shopping malls and concert halls, on compact disc and the internet in the Americas today can be traced to specific historical processes. And today, using technologies once unimaginable, musicians and their audiences continue to revitalize and transform earlier styles as well as create new ones in the radically multicultural and multinational musical environment of the early 21st century.

3. Social categories. The study of music in the Americas requires an understanding of the peoples who make it. The arrival of Christopher Columbus and other Europeans in the Americas during the period following 1492 was the first contact with Amerindian societies that appears to have had a strong impact on both Europeans and Amerindian communities. The initial European interest in the Americas was mercantile, and Europeans came to dominate the other groups in the Americas by the force of their technology, the power of their commerce and the virulence of the diseases they transmitted. Europeans soon established trade networks throughout the Americas for extracting wealth in the form of gold, brazil-wood, dyes, furs and export crops such as tobacco, sugar-cane and later cotton.

The European nations' division of the Americas among themselves had a strong impact on subsequent musical developments in the region. The Portuguese and Spanish divided the South American continent between them (except for part of the coast on the Caribbean); the Spanish also ruled Middle America. The British, French, Spanish, Dutch and Russians all claimed parts of North America, and all but Russia claimed parts of the Caribbean. With the possible exception of the Russians, each ruling country left a strong mark on the music in its colonies. (*see* Colonialism.)

Wherever Europeans established colonies, distinct sets of social groups emerged, partly defined by and defining themselves through their musical tastes and activities. The terms for these groups are partly ethnic and partly cultural and are often reflected in the musical activities of their members. Although the terms are unsatisfactory, they are commonly encountered in the literature about music in the Americas.

(i) Europeans. In every colony, Europeans were at the top of the social, economic, governmental and ecclesiastical hierarchy. This social group was initially constituted of native-born Europeans whose cultural orientation intellectually, and in food, architecture, clothing, music and dance, was towards Europe. Europeans created most of the documents from which we now write the history of music in the Americas. In addition to European religious and secular art music, they must also have practised children's songs, ballads, popular lyrical songs and other secular genres from the regions of their origin. Members of this group often established cultural policies and educational systems that promoted their own musical forms rather than those of the other social groups who attended the schools. They encouraged composers and performers from European home countries to perform and establish schools to teach European musical forms.

(ii) Creoles. Although it came to have different meanings in different places, the word 'creole' is often used to designate a distinctive emergent local group, culture or language that grows out of the meeting of two or more ethnic groups, cultures or languages. Initially it referred to a social group of lower status than European-born

colonists, comprised of people born in the Americas of European descent who shared an orientation towards Europe and things European. In the Spanish colonies they were usually called *criollos*, in French Louisiana *créoles*. A slightly different meaning evolved in Trinidad, Guyana and Brazil where the term was used to refer to any person of African descent (Manuel, 1995, p.14, n.3). In general, the word has been used to mean 'distinctive local' as opposed to specifically 'European'. Some local traditions of music, cuisine, clothing, architecture, religion and language emerged in the Americas that were unlike those of any particular originating country or community.

(iii) Emigrant communities. Many communities emigrated to the Americas from homelands in different parts of the world over the past 500 years, a process that was continuing at the end of the 20th century. These emigrants had often fled from war, famine or religious persecution, and looked to the Americas for improved living conditions. Emigrants were rarely members of the ruling élites of their home countries (although there were exceptions). Emigrant communities often broke ties with their homeland, and either moved to fairly isolated rural communities or settled in urban areas. The Mennonites, who founded rural communities in Canada, the USA, Brazil, Paraguay and elsewhere are an example of rural migration, while many Italian emigrants formed urban neighbourhoods and established strong urban traditions. Irish and Scottish emigrants brought fiddle tunes and dances that spread to other groups, as did Scandinavian emigrants to Canada and the USA.

Most emigrant communities encouraged the maintenance of traditions of their home countries for at least a generation. Apart from European art music, the older court-related traditions of emigrants had fairly small audiences in the Americas, and many emigrant artists found they were more often called to perform less elaborate genres at celebratory events such as birthdays and weddings. While traditions related to local religious practices and family ceremonies were often maintained for one or two generations, others were abandoned and new traditions were frequently adopted from other communities, as a result of exposure in schools and local secular settings. Communities differed considerably in the degree to which they maintained 'homeland' traditions. New emigrants continued to refresh older traditions, and social, economic or political conflicts with other groups sometimes led to revivals or renewals of earlier community musical forms. In the 20th century, local festivals, often encouraged by tourism councils or nationalistic policies, provided venues for public performances of older traditions.

(iv) Enslaved Africans. Enslaved and freed Africans comprised a significant proportion of the non-Amerindian population during the colonial period in the Americas. Enslaved African populations were concentrated in large plantations that stretched from north-eastern coastal Brazil through most of the Caribbean to south-eastern North America. Their forced transport from Africa continued from the early 16th century to the 19th, and the characteristics of the plantation system created a specific culture dynamic. Free Africans outnumbered enslaved Africans in Peru, Argentina, Brazil, Colombia, Venezuela and Ecuador by 1800, but the ratio was the reverse in the islands of Jamaica and Cuba and other strong plantation economies. As time passed, however, an increasing population of free black citizens played important roles in the sacred and art music of the Americas.

Important, too, were communities of escaped slaves, who set up self-governing communities in a number of countries, including Jamaica, Brazil, Guyana, Mexico and the USA. These communities often established enduring social and cultural traditions distinct from those of African communities. Because of the distinction between African and European musical traditions, especially concerning musical instruments, rhythm and the interaction of melodic parts, the contribution of musicians with musical roots in African styles was clearly marked and has come to dominate the musical expressions in many regions, as well as popular music.

(v) Mestizos. 'Mestizos' (*caboclos* in Brazil, *métis* in French Canadian usage) denotes the offspring of the union of Europeans or Creoles and Amerindians. Mestizos often occupied an ambiguous position between Europeans and Amerindians, especially in the Andes. The word is also sometimes used to indicate individuals of Amerindian descent who have made cultural decisions based on European models, including wearing European clothing, living in urban areas, speaking only Spanish or Portuguese, and performing or attending European music genres. Mestizos are thus defined by both cultural and physical attributes.

(vi) Amerindians. Amerindians are called Indians or *indios* (Spanish and Portuguese), Native Americans (in the United States) and First Nations (in Canada) and are the descendants of the original inhabitants of the Americas prior to European colonization. In most countries, the Amerindians were relegated to the bottom of the social hierarchy headed by the Europeans. Deemed unsatisfactory as slaves in most parts of the Americas and, until baptized, condemned as heathens, they were frequently the victims of genocidal wars whose objectives were to remove them from lands they occupied. Thousands of communities disappeared completely (most strikingly in the Caribbean, but also in many other parts of the Americas) or were absorbed by neighbouring groups, but others managed to preserve a degree of linguistic and cultural singularity nearly impossible for the enslaved Africans.

In the Andean region of Chile, Peru, Bolivia and Ecuador and parts of Mexico and Central America, Amerindian populations were large enough to survive the epidemics and continued to occupy much of their traditional lands as labourers under Spanish domination. Elsewhere, Amerindians were frequently forced to resettle on less desirable lands or moved away from frontier diseases and violence. The communities that survived often maintained or revived some forms of traditional music and abandoned others in the face of missionary and government pressures. Many Amerindian communities today include different factions, whose attitude towards European values and music are a significant issue of contention.

II. Encountering and mixing communities and traditions

1. INTRODUCTION. Most local music in the Americas is a mixture of musical traditions, creating something quite distinctive and unique to the hemisphere. This uniqueness has sometimes been intentional, as in many of the nationalist compositions of the 19th century, and sometimes it has been the product of interaction between musicians of different styles. The members of the different social groups described above often encountered each other both in urban and rural areas, influencing one another in a variety of ways. The issue of how one describes musical styles that clearly combine traces of traditions from two or more communities can be a sensitive one. Many musical genres in the Americas are described as mestizo or mixed; they are sometimes referred to as hybrid or syncretic in the sense that a given style mixes, combines or synthesizes two or more traditions. From a sonic point of view, the terms are all correct; a string band comprised of a banjo, fiddle and guitar (or winds, harp and drum in Andean South America), combines instruments and sounds from different sources, producing something quite new and unique to the Americas. Even though most of the musical forms combine traditions, it is appropriate to outline the characteristics of the principal originating traditions, and then discuss some of the products of these encounters.

2. AMERINDIAN TRADITIONS.

(i) Pre-Columbian. Anthropologists generally agree that the pre-Columbian inhabitants of the Americas came across the Bering Strait in a series of migrations, settling into most parts of North and South America over a period of thousands of years. The dates of the earliest occupation of the Americas are often revised as remains of earlier settlements are discovered, and some Amerindian communities maintain that they originated in the Americas. The migrating communities probably brought with them some musical traditions from north-eastern Siberia – similarities between Inuit and Siberian traditions exist today – and moved easily southwards and eastwards through rich hunting and gathering areas. As they travelled, their languages and cultures became differentiated. Their interaction with one another and with their environments led to the development of somewhat distinct cultural regions.

Some Amerindians lived in small settlements, subsisting largely by hunting and gathering, and used only a few musical instruments to accompany singing. Other Amerindians lived in large communities, supported by sophisticated agricultural systems. These communities were organized into large empires with complex social and political structures which included musical ensembles, formal musical training and increased musical specialization. Many communities, however, fell between the two extremes.

20th-century musical ethnographies (McAllester, 1954; Merriam, 1967; Seeger, 1987; Turino, 1993; Olsen, 1996; Beaudet, 1997) and videotapes of Amerindian musical performances (e.g. *JVC*, 1990, tape 29; *JVC*, 1995, tapes 5–6) indicate that certain stylistic and functional continuities stretch from the Arctic regions of Canada to the southern areas of Chile and Argentina. This homogeneity is partially due to the common ancestry and history that unite these extensive communities. Other factors contribute to the homogeneity, including the elimination of musical traditions of Amerindian ruling élites in Peru and Mexico following the Spanish conquest (Stevenson, 1968) and the massive depopulation suffered by almost every group in the Americas. To a certain extent, the most elaborate musical forms have been removed or replaced by European-influenced genres, thus producing a substratum of similar forms.

From southern Argentina to northern Canada there are broad continuities in purpose, style, performance practice and dance in Amerindian musical performances. These include: (1) the association of music with powerful spirits, animals or gods; (2) the use of music in shamanism, healing and direct contact with spirits or gods which is often accompanied by the use of tobacco, alcohol or hallucinogens; (3) a preponderance of vocal music and elaborated speech styles over instrumental ensembles; (4) the unity of music and dance; (5) the general appearance of the body in dance; (6) the types of musical instruments employed; and (7) certain structural features of music, including the extensive use of repetition and the widespread presence of 'non-musical' sounds. These are discussed briefly below.

Amerindians describe music throughout the Americas as originating from outside sources, such as from the spirit world, ancestors or semi-human beings, and maintain that its performance is often the means through which a connection is established or renewed between humans and a powerful spiritual entity. Music is often thought to be imbued with the power of the original source, and the performance of music re-creates and re-introduces the original power back into the community.

The association between music and spirituality is expressed in the practice of shamanism in many communities from Chile and Argentina to the USA and Canada. Shamans are humans who enter into direct contact with spirits to cure sickness or spirit attack and to ascertain the future. Many shamans employ song (sometimes accompanied by the use of tobacco and narcotics) to 'travel' to distant places and later report on their travels to spirit lands. The shamans' musical instrument, a drum among the Argentine Mapuche (Grebe, 1978) or a rattle among the Venezuelan Warao (Olsen, 1996), is often both a highly symbolic and sacred object and a sound-producing instrument. Shamans' songs are sometimes the means through which cures are effected. Not all shamans employ song. In some societies tobacco, other narcotics and hallucinogens are used without musical accompaniment.

Music is associated with physical and spiritual metamorphosis. Musical performance frequently facilitates a transformation in both shamanic and ritual music, such as the transformation of a shaman into a flying spirit, of a singer or dancer into a being that is at once human and spirit or animal, or an individual to a new social status in a rite of passage. These metaphysical transformations may occasionally be brought about by musical sounds themselves, but musical performances were often accompanied by strenuous dance, the use of tobacco (found throughout the Americas), mind-altering drugs (among them hallucinogens in the Amazon and Peyote in North America) (Harner, 1973), or significant quantities of alcoholic beverages (in parts of the Andes, Amazon and Central America; Fuks, 1988). An alteration of perception is a widespread feature of musical performance, often facilitated by ingesting specific substances, or alternatively by fasting.

The most important and widespread category of Amerindian music is song. Although musical instruments are employed by many communities, they are most often used to accompany song and far less often are played alone, although a variety of wind instrument enembles is found in parts of the Amazon (Bastos, 1978; Beaudet, 1997), the Andes (Turino, 1993) and North America (Nettl, 1954). The emphasis on song is paralleled by widespread, highly formalized speech forms. Such forms are characteristic of many Amerindian communities, and value is often ascribed to speaking and listening (Sherzer and Urban, 1986). There is frequently not a binary distinction between speech and song. Instead there may be a gradation between informal speech and various genres of more formally structured speech forms, among them oratory, keening, formal greeting, myth-telling and actual song (Graham, 1995). The language used in songs varies considerably among Amerindian communities. In some communities songs use everyday language; in other communities only special 'song syllables' (without referential meaning) are used, and in yet others, communities sing in languages they do not understand, but which are meaningful to other communities.

Musical knowledge is highly valued among Amerindian communities. Musical instruments are played mostly by men, but both women and men sing and dance. Musical pieces may belong to, or be associated with, an individual or a social group such as a clan, moiety or age group.

A few families of musical instruments are widespread in the Americas (Izikowitz, 1935). Idiophones, especially rattles, are found almost everywhere. Gourd rattles and leg rattles are widespread and made from many raw materials, each with its own timbre. Membranophones, especially single-headed drums, are widespread but not ubiquitous; they are rarely encountered in the Amazon. There is ample archaeological and contemporary evidence for a wide variety of wind instruments made of wood, bamboo, animal bone, human bone, ceramics and other materials. Wind instruments are highly elaborate in South America, where some contemporary South American communities are reported to have as many as 60 distinct varieties. Some communities, however, use very few, if any, instruments.

Music and dance are intimately associated in many Amerindian communities. In some native languages, the words for music and dance are the same. Performances of certain sounds often require associated movements of the body in a fixed space, or of a group of dancers moving through significant spaces (e.g. from forest to village or from one area to another). Although local styles differ, there is a characteristic Amerindian dance posture found in both North and South America: a semi-erect, forward-leaning posture, with foot stamping for percussion and an accentuated vertical leg motion with a fairly rigid upper body and little pelvic movement.

Certain temporal features of Amerindian music are widespread. Specific song genres are frequently seasonal, and musical performances are often associated with agricultural and hunting cycles. The seasons might be temporal, agricultural (planting and harvesting) or religiously delineated. The solstice, for example, was carefully calculated in some communities, and more recently the Catholic calendar of saints' days is used to structure many performances.

Another feature common to many Amerindian communities is the gradual addition of simultaneous performances during a long ceremonial period. Many Amerindian communities perform (or performed at one time) collective religious or secular ceremonies that last for days, weeks or even months, within which many musical events occur. The increasing intensity of a performance is often marked by simultaneous parallel performances. Simultaneous performances of multiple sounds are found in isolated Amazonian villages where cries, whistles and individual songs accompany group songs, in crowded Peruvian plazas where competing bands perform at the same time, and in parts of North America and Canada as well.

Most Amerindian musical structures are heavily melodic with relatively few phrases that are repeated many times. The structure is often marked by a strong pulse provided by drumming and/or stomping. Metrical combinations are not static, however, especially in the western Plains of the United States and Canada where metrical shifts are common. Harmony of any kind is rare, except in cases where European influence is evident. Singing styles vary considerably among Amerindian groups, and several distinct styles are often used by a single community for different genres.

Repetition is highly prized among Amerindian communities, yet negatively evaluated by European travellers. Sometimes there are subtle differences in repeated sections, such as slight alterations in text, pitch or tempo, that are not obvious to an outsider. In other cases a melody might be repeated until a ritual action or dance pattern is completed. Sometimes the number of repetitions or sections is itself related to significant cosmological ideas, but more frequently it is the passage of time (e.g. from night to dawn), that is the overriding consideration in determining the length of a performance.

So far we have described the pre-Columbian characteristics of Amerindian music. Amerindian musicians also learnt music from other groups and innovated. This was true of the Ghost Dance and Native American Church in North America, and of the Tor'e in north-east Brazil, and the intertribal powwow in Canada and the USA (*see* UNITED STATES OF AMERICA, §II, 4(i)). Some communities consciously perform songs of more than ten other Amerindian groups. There has also been considerable musical interaction between Amerindians and European and African genres, instruments and performance styles.

(ii) Amerindians and other musical forms. One of the most important outside influences on Amerindian music has been the music of Christian churches. Both Catholic and Protestant missionaries discouraged or prohibited Amerindian communities from performing traditional music and provided instruction in European musical forms. In addition, many Amerindians converted to Christianity, and Amerindian hymn-singing is now found in many communities in North and South America, in a variety of styles that reflect the denomination and the period of their conversion. In some cases, such as the Waiwai of Brazil, hymn-singing is the only musical genre still performed. In other cases, hymn-singing survives alongside traditional social music. The result is often syncretic, but the process was sometimes violent, sometimes voluntary and sometimes a combination of the two.

Similarities between pre-Columbian and European functions of music may have stimulated musical syncretism. Both Amerindians and Europeans used music as

part of religious performances. Amerindian hymn-singing and the elaborate celebrations at large festivals on Catholic saints' days in the Andean highlands and among the Mayan communities of Central America represent both a departure from pre-Christian traditions and a continuation of the tradition of celebrating important days with music.

Amerindians learnt many styles from their European and African neighbours. Amerindians throughout the Americas were quick to adopt European instruments, such as the violin, guitar and harp (Schechter, 1992), all of which were popular among colonists. Many groups later took up the accordion, brass instruments, electric guitar and synthesizer and can often play two or more distinct repertories, maintaining a distinction rather than fusing traditional Amerindian style with contemporary rock or country music styles.

A good example of the complexity of enduring musical traditions in a community is found in the upper Midwest of the USA and Canada. The Plains Chippewa and *métis* musical genres reflect their complex history; some elders sing songs in French passed down from when French settlers controlled their territory, others perform Scottish and Irish fiddle tunes in a unique local style, others sing in a Plains Indian vocal style accompanied by a drum; and yet others have formed country music and rock and roll bands that play for local events (*Plains Chippewa/Métis Music*, 1992). Such diversity is quite common among large Amerindian communities that have diverse contacts with non-Indians. 'Indian music' in the early 21st century is whatever Amerindian communities perform, and the range is very large. The significance of the genres differs, but many different types of music are often performed during a given year.

Pre-Columbian Amerindian musical styles have had relatively little impact on local European- and African-derived genres. This lack of influence is probably due to the relative isolation of many Amerindian groups from national population centres, as well as profound sonic and structural differences between Amerindian and European or African styles. Some musical instruments, however, were adopted by non-Indians. *Maracas*, gourd rattles found in many local traditions in the Americas, take their name from the language of the Tupi Indians of Brazil, where *maraká* can mean 'rattle' or 'music' (Bastos, 1978). With the exception of Peru, where national popular music styles like the *huyano* can be clearly identified with Andean Indian origins, there has been little obvious borrowing of Amerindian styles in popular music in the Americas, although some Amerindian performers in Canada have become popular in their own right. Some regional dance forms in South America may have been influenced by Amerindian communities, but the evidence is not conclusive. Unlike the genres that emerged from encounters with African and European musics, most of the uniquely Amerindian musical features have not been adapted in other traditions (Seeger, 1997).

3. European music in the Americas to 1850. Immigrants from different parts of Europe brought their own genres and styles to the Americas. Several broad types of music continued in the Americas: domestic forms such as children's songs and ballads, social dance genres that were elaborated upon by both local performers and professional composers, and music of religious contexts. Different social classes often participated in distinct musical traditions. European music can be characterized as music comprised of fairly regular metres, a fixed set of modes, compositions based on harmonic structures, the creation of intricately interrelated melodic parts with complex harmonic relationships performed by instrumental or vocal ensembles, plucked, struck and bowed string instruments, and an increasing tendency to use written scores and a concept of fixed melodies. While there is obviously much more to European music, these are among the principal features that distinguish it from the other contributors to American music today.

Wealth and patronage were stimulants of European art music, and both were found in the Americas. Secular and sacred administrative structures in Spanish-ruled America required secular and sacred performance. Composers, choruses and musicians were mobilized in the administrative centres. The wealth of the colonies encouraged the creation of administrative and urban centres that supported a small élite and a group of musicians whose activities had a considerable influence on the rest of the population through music education and emulation. In Mexico, Colombia, Peru and Bolivia, large cathedrals provided chant and other church-related musical forms both to the expatriate communities and new converts.

Catholic priests introduced the institution of *cofradrías* or confraternities (brotherhoods) to the Americas. *Cofradrías* were officially sanctioned organizations whose activities centred on a particular patron saint. Of all the festive rites the Catholic Church introduced into the Americas, the celebrations of saints' days were the most pervasive (Moreno Cha, 1992). *Cofradrías* were also self-help and social organizations. Most social classes had their own *cofradrías* (Europeans, creoles, enslaved Africans, mestizos and Amerindians), and some descendants continue to perform today. One writer estimates that 300 *cofradrías* are active in Chile alone (Moreno Cha, 1992).

Although they often used their music to impose their government and religion on Amerindians and enslaved workers, there is early evidence that some Europeans took interest in the non-religious musical traditions of their subjects. Hernando Cortés took a troupe of Aztec musicians and dancers, whose precision he greatly admired, to Europe in 1527 to perform for royalty and the Pope. The musical skills of Africans were also recognized early and employed in ceremonial events; African drummers were used to welcome the arriving viceroy to Lima in 1551, in addition to Amerindian performances. The music of the large African population in Mexico was quite popular among both Spanish and Amerindians. Many of the music schools established by Catholic priests trained both Amerindians and Africans in the elements of European music. Musicians and members of different communities became acquainted with one another's styles, if only limitedly.

The social and musical processes begun in the 16th century continued in Latin America through the 17th century and into the 18th. Missionaries taught Indians in Argentina and Paraguay not only to read and write music, but to manufacture musical instruments.

In the 18th century there was tremendous growth of colonial cities in South America. In wealthy mining areas, money was allocated to religious institutions and the arts. Thus European artists began to travel to some of the earliest theatres constructed in the mining cities of Potosí and La Plata in what is today Bolivia. In the mid-18th

century Brazil provided nearly half of the world's gold from the Minas Gerais province. This regional wealth stimulated an impressive flowering of creative arts: sculpture, architecture and music. During this period, too, Buenos Aires became a regional capital, and spectacles combining music and theatre were performed for the new viceroys. Some wealthy plantation owners also became music patrons. In Brazil, enslaved Africans and their descendants were taught to play European music as early as 1660, and the owners of large plantations trained them to perform in orchestras for their entertainment and social functions. The musical activities of both groups were no doubt influenced by this process.

Colonization of the English colonies intensified during the 17th century, and the pilgrims and other immigrants brought hymnbooks with them (Chase, 1967). Secular dance music was discouraged, but church music was encouraged for its association with appropriate comportment and beliefs. As a result, debates about appropriate ways to sing hymns occupied many written discussions of music in the British colonies. Emphases on participation in church services through music and the correct singing of hymns led to the formation of 'singing schools' that taught large segments of the population to read musical notation and set the stage for the growth of the music publishing industry with its diffusion of hymnbooks and later distribution of popular sheet music.

When English and French colonists settled in the Americas, there was less of a stigma attached to being born in the colonies than there was in the Spanish colonies. French, English, Scottish and Irish emigrants moved into what is today eastern Canada (*see* CANADA, §II, 3), bringing with them music and dance styles that had an enduring impact on the regional musical traditions in the USA and Canada.

The French, particularly from Normandy and Brittany, began to colonize New France in 1604 by moving inland to the region now known as Quebec, and they soon controlled the waterways leading to the interior of the continent. Stimulated by the fur trade and conflicts with the English, they forged alliances with many Amerindian communities in the interior. The intermarriage of French and Amerindians created the *métis*, and the French cultural influence on interior Amerindian communities was strong. The French and English competed for control over the coastal regions of what is now eastern Canada; the area known as Acadia changed hands more than ten times before being permanently ceded to the British in 1713. New France fell in 1759 after repeated attacks. Mass deportation of French-culture Acadians (1755–63) did not eradicate French culture in eastern Canada, however. But a strong impact was made on the culture of Louisiana with many Acadians moving to French Louisiana to escape British domination. In Acadia, the removal of the clerics and the élite created a rural French culture that was not renewed by contacts with France. Its musical culture consisted largely of vocal and instrumental dance music that has been maintained despite considerable cultural persecution (*see* UNITED STATES OF AMERICA, §II, 1(ii)(b)). Additional genres learnt from Scottish and Irish emigrants were also embraced. Similar cultural upheavals occurred in the Caribbean, where islands changed hands among colonial powers, sometimes several times within a decade.

The firm hold of European colonial powers was weakened in the 19th century by independence movements in many colonies, as well as by the purchase or appropriation of lands by the USA. Enslaved workers were emancipated (at different times in different places), and emigrants replaced them as manual workers in some countries. The establishment of national capitals in Latin America further stimulated secular musical performances. With the growth of civil society, secular musical institutions such as music conservatories and military music institutes were increasingly founded in newly independent countries. Emigrant musicians trained in Europe were extremely important in the establishment of secular musical institutions, such as opera houses and music societies throughout the Americas. Music education was increasingly available to women as music became part of secular domestic life.

Another international musical phenomenon that swept through the Americas was the brass band, partly as a result of the new responsibilities of independent countries. Military bands were an important part of musical life in most capital cities and became part of the musical experience of members of all ethnic groups that served in armies or local militias. Schools for military bands preceded the establishment of symphony orchestras and national conservatories in a number of countries, and financial support for armed forces bands sometimes represented a considerable portion of a nation's musical arts support. Civilian brass bands were soon associated with communities, schools and commercial organizations, straddling the distinction between art, popular and folk music. They could perform many genres, and played in many civic and feast day celebrations, sporting events and band competition. In addition, brass bands contributed to the development of such urban genres as jazz.

Opera and parlour music were increasingly popular among members of the élites and the growing class of traders and manufacturers. Opera and other forms of urban popular stage shows were composed and/or performed in a number of countries, and opera houses were established in most capital cities. An impetus for operatic composition was certainly the emergence of musical nationalism.

Nationalism spread in 19th-century Europe, along with interest in national composers and local folk traditions as integral parts of a 'national character'. These issues also became a central concern of the arts in the Americas. Visual arts, literature, theatre and music were consciously fashioned to express national aspirations in nearly every nation. From 1880 to 1950 composers of many backgrounds expressed what they took to be the unique history of their countries through musical and dramatic forms (Béhague, 1979). Composers increasingly looked to local vernacular music forms in their countries for inspiration. They refashioned early musical interactions with Amerindians into operas, spectacles and heroic stories, from *Il Guarany* to *Pocahontas*, and often found inspiration in Amerindian-influenced and African-influenced musical genres. During the nationalistic period many countries also closely identified with particular dance forms: Argentina with the tango, Brazil with the samba, Venezuela with the *joropo* and the USA with square dancing.

The same nationalist inspiration that stimulated art music composers also led to the collection, documentation and publication of rural musical and narrative forms

labelled 'folklore', resulting in the establishment of library collections and archives in many countries, among them Argentina, Brazil, Canada, Cuba, Mexico, the USA and Venezuela. Interest in 'authentic' national cultures and concerns about possible threats to them contributed to the establishment of state-run 'folklore weeks', folklore museums, folk festivals and government-sponsored audio and video recordings that document regional traditions.

4. African music in the Americas. Although free Africans were among the first explorers of the Americas, the largest influence of African music in the Americas came from the approximately 11 million enslaved Africans brought to the Americas between the 16th century and the late 19th. As early as 1530, enslaved Africans worked in the Spanish and Portuguese colonies in response to a desire for additional labour to replace Amerindian slaves. At times there were more enslaved Africans in some colonies than resident Europeans.

The settlement of enslaved Africans in the Americas had both regional specificities and general features. One general feature was that members of different cultures were frequently mixed together in the Americas, either purposefully in an attempt to eradicate their original languages and cultures, or by happenstance. Out of this forced cultural encounter the descendants of enslaved Africans developed new cultures in the Americas, which were unlike any ancestral cultures in Africa. This occurred not only on plantations but also in the free communities of escaped slaves, or maroons, established in Jamaica, Guyana, Brazil, Colombia and elsewhere (Price, 1979).

Although there were considerable cultural differences among the original peoples brought from Africa, there were some shared cultural and musical values as well. Among West African retentions were frequent use of layered, interlocking rhythmic patterns, an aesthetic based on the blending of a variety of timbres, active interaction between audiences and performers, the integration of sounds and dance, and the use of music to express emotional states (Hampton and Sykes, 1995). Performances emphasized active participation through movement, rhythmic clapping and dancing, and the frequent use of antiphony. Improvisation was probably widespread. In West Africa some music was associated with religions in which worshippers directly experienced divinities through spirit possession, which took place in rituals involving percussion (often a drum ensemble) and singing; this music continued to be performed in parts of the Americas. When drums were banned, complex patterns of foot stamping, body slapping and the use of other percussion instruments created enduring opportunities for musical transmission. Percussion ensembles are found in many communities of African descent in the Americas. A three-drum ensemble with one large, one small and one medium drum is common to a number of religious rituals. Instruments with jingles, such as tambourines, are also widespread. All of these musical features were maintained to some degree in the traditional genres that continued, or the African-influenced musical genres that emerged in the Americas.

West African dance can be called polycentric, where the total motion is created by moving different parts of the body to different rhythms. The feet, often remaining close to the ground, may move to one of the rhythms, the hips to a second and the shoulders to a third. This is different from both Amerindian and European dancing, where the entire body usually moves to a single rhythm and accentuated hip movements are rare. These African influences are found in a widespread rural dance called *juba* or *patting juba* in North America where the participants sing and clap in a ring, while solo dancers take turns in the centre of the ring, often demonstrating polycentric virtuosity. A similar dance called *samba de roda* is performed in Brazil, and variants are found in the Caribbean and southern USA.

Improvisation is an important part of many West African traditions. West African drum ensembles often create new patterns of rhythm as the drummers interact with the audiences and dancers (Nketia, 1975). In the Americas, rhythmic, melodic, verbal and dance improvisation are found in many genres, from children's games to blues, jazz and hip-hop. The most familiar genre is probably jazz, where the structure is usually a harmonic progression, but the realization of that progression involves both group and solo improvisation.

Africans also introduced a number of musical instruments to the Americas. Among them were the ancestor of the modern banjo, a string instrument with a skin head, and the marimba, a large wooden xylophone, which was popular in Mexico, Central America and northern South America. Several drums were clearly African in origin, among them pressure drums with variable pitch. The musical bow used in Brazilian *capoeira* is much more likely to have its origins in Africa where they are widely used, than in the Americas where Amerindian use was rare. In some countries, there are historical documents that record African instruments no longer played in contemporary traditions.

Enslaved Africans were brought to the Americas over a period of centuries, with earlier and later arrivals certainly influencing one another. In countries that abolished slavery quite late, such as Brazil and Cuba, or in early established free states, such as Haiti, the most conservative religious music shows the clearest relationship to existing West African spirit possession religions: *candomblé* (Brazil), *santería* (Cuba) and *Vodou* (Haiti). Interlocking rhythms and texts in African languages clearly demonstrate the continuities of African music in the Americas. Spirit possession religions, which often involve dance and trance, were forbidden at various times and usually condemned by Christian churches. In the late 20th century, however, *candomblé* spread from north-east Brazil to the rest of the country and to Uruguay, Paraguay and Argentina. *Santería* and *Vodou* have also spread from Cuba and Haiti to many parts of the USA, where they are fast-growing religions.

Countries that either ended the use of slaves earlier than Brazil and Cuba or had a smaller percentage of enslaved Africans in the total population tended to create musical genres in which African-influenced styles and percussion have been combined to a greater degree with European-influenced harmonic structures and instruments. Yet even in countries with relatively small communities of African descent, such as Venezuela, there are strong influences of African-derived traditions in the instruments and musics played on them.

Religious institutions played important roles in the preservation and evolution of African musical genres and styles in the Americas. The *cofradrías* in Spanish and Portuguese colonies served as both social and religious organizations for enslaved Africans. Associations that

were comprised entirely of enslaved Africans were often grouped according to 'nations'. In the USA, African Americans organized themselves into communities of worship in Protestant churches.

The earliest African confraternities were established in the Americas during the 16th century. For example, there are references to a fraternity of *negros* in Pernambuco, Brazil, that date back to 1552. Religious confraternities were used by enslaved Africans to protect and preserve African beliefs and identities from the ruling establishment. This was achieved partly by the identification of Catholic symbols with African deities, and partly by the maintenance of distinct musical styles within the confraternities.

In the late 20th century, confraternities of peoples of African descent or secular organizations that descended from confraternities were still found in many parts of Latin America and the Caribbean, where they were responsible for organizing and performing music and dance associated with Carnival (Mardi Gras in New Orleans), the *Reis Magos*, many saints' days (among them celebrations of black saints) and other religious holidays. Some confraternities also presented song-dance-theatre productions that dramatized the conflicts between Christians and Moors or between two kings of the Congo (an African representation of the Christians and Moors) or stories about the Three Kings (the Magi) and other subjects. These dramatizations were often filled with elaborate oratory, dramatic dancing and complex rhythms. Other confraternities organized parades or processions with music, song and often dance. The music of these groups often retained African-influenced features, such as drums, rattles, tambourines, and other local instruments, rhythmic features and vocal styles (Lins, 1992). The confraternities provided enduring voluntary organizations within which music which was produced for hundreds of years (Moreno Cha, 1992).

In the English colonies, it was the participation of enslaved Africans in the Baptist Great Awakening, which peaked around 1720, and the subsequent establishment of black Baptist churches and independent black churches that provided the church-based institutional framework for the development of a unique musical style in North America. The emotional appeal of the Great Awakening perhaps resonated with many West African religions, and the independent churches soon published their own hymnbooks and interpreted existing hymns in new ways (Sobel, 1979). Spirituals, and later composed gospel music, developed into internationally known styles through the work of noted African American composers and educators (Reagon, 1992). African American churches were also important community institutions whose influence was dramatized in the 20th-century civil rights movement in the USA, in which churches and the music of churches played an important role in mobilizing large numbers of participants (*Voices of the Civil Rights Movement*, 1997).

Enslaved Africans were rarely permitted to practise their favoured musical traditions without impediment. Colonial decrees indicate attempts to curb public celebrations and the repression of drumming and religious activities. Enslaved Africans were also instructed in the use of European instruments by both churches and large plantation owners.

Free Africans found that musical creativity was a profession in which they could succeed even during the colonial periods. With the end of slave labour in the Americas, peoples of African descent were freer to migrate from plantations, and their musical influence on non-African populations increased in many countries, among them the USA, Caribbean islands, Guyana and Brazil.

5. Immigrant musics, 1800–present. In the early years of the colonies, most emigrants came from different parts of the colonizing country. In addition to the administrators and clerics came less wealthy people who brought with them musical instruments and traditions from Spain and Portugal. Musical cultures of the Iberian peninsula varied greatly, and peoples of different parts of the country often emigrated to distinct regions of the Americas, as emigrants from Andalusia settled in what would become Venezuela or immigrants from Normandy and Brittany settled in New France.

There was also internal migration within the Americas; European powers conquered and traded colonial areas, royalists moved out of newly independent countries and enslaved workers escaped or were transferred. French-speaking emigrants from Canada and Haiti moved to the southern USA and Cuba. Escaped slaves created their own settlements in the interior of Guyana, Brazil and Jamaica. Cultural expressions of these population movements survive in many regions today, such as in the Cajun traditions of Louisiana (*see* United States of America, §II, 1(ii)(b)), the *tumba francesa* of Cuba (Alén Roderíguez, 1993) (*see* Cuba, §II, 1(iii)), and Maroon music of Jamaica (*Drums of Defiance*, 1992) (*see* Jamaica, § 2). In some cases, emigrant traditions not only survived, but spread widely to other communities.

The 19th century was a period of large-scale emigration to the Americas from Europe and Asia. Heavy periods of migrations began after individual nations abolished the slave trade or slavery itself. Favourable policies and incentives encouraged large numbers of emigrants during these periods. The English brought large numbers of South Asians and Indonesians to Guyana and Trinidad as contract workers. Many stayed and form important segments of the populations and regional cultures, with distinct musical genres and traditions that maintain South and South-east Asian roots.

In Argentina and Uruguay, national populations grew tremendously due to heavy emigration towards the end of the 19th century, especially from Italy and Spain. These new emigrants had a profound impact on the development of national musical forms. In Brazil the largest influx occurred after emancipation in 1888; Italians and Portuguese were the largest groups. German and later eastern European and Mediterranean settlers moved to many of the countries, from Canada in the north to Argentina and Chile in the south. German and eastern European dances and bands, such as polka bands, exerted a tremendous influence on local musical styles in North and South America. The USA, Peru and Cuba encouraged sizeable Chinese migrations in the 19th century. Large groups of Japanese emigrants came in the early 20th century, settling in Brazil, Peru and the USA. In the late 20th century, refugees from wars in Asia, Africa and the Middle East also moved to the USA, Canada and other countries. War, oppression and unequal economic development within the Americas led to considerable internal migration in the late 20th century. Emigrant communities had varying

degrees of impact on local musical traditions in each country, but virtually all of them influenced local musics.

In addition to emigration to the Americas, there were groups that returned to their original countries and subsequently exerted influences on cultural traditions in their former homelands, thus increasing the spread of the new musical traditions that had developed in the Americas. Some of the freed slaves who left the Americas and returned to various parts of Africa established an enduring legacy in architecture and music. Brazilians of Portuguese descent had a dramatic impact on the music and television of Portugal in the late 20th century. People of Italian descent returned to Europe from a number of countries as economic opportunities there improved, and Peruvians and Brazilians of Japanese descent returned to work in Japan. In the aftermath of the restrictions on travel imposed by the former Soviet Union and the USA, people with eastern European backgrounds also travelled back and forth.

Communities that moved to the new world and settled in industrial urban areas often lived in distinct neighbourhoods, either by choice or force. These neighbourhoods offered opportunities for local musicians and local, ethnically specific, entertainment industries. Chicago, New York, Toronto and later São Paulo were famous for such distinct immigrant neighbourhoods. Many cities such as Havana and San Francisco also had distinct neighbourhoods of Chinese residents, known as 'Chinatowns'. Freed Africans also moved to the cities and often resided in distinct neighbourhoods in the USA. The large-scale emigration of Jewish intellectuals and musicians from Europe to the Americas in the first half of the 20th century had a strong impact on art music performance in a number of countries, as well as preserving musical styles they had practised in Europe, such as *klezmer* (*see* JEWISH MUSIC, §IV, 3(ii)).

In the cities, community traditions were often supplemented by popular urban traditions and nationalist genres as a result of public education and mass communications. The musical result of this varied emigration was that most countries became profoundly multi-ethnic, with a proliferation of emigrant groups and a variety of local styles that were performed largely for members of the same ethnic groups. In the late 20th century these traditions were often lumped together under the term 'folklore', but within emigrant communities there were often different genres that were distinctly 'classical', 'religious', 'traditional secular' or 'popular' to members of the community (Slobin, 1993; Levin, 1996).

III. Music of the Americas as commodity

One of the most important influences on musical performances in the past 200 years has been the transformation of music into commodity. This change occurred gradually and unevenly. By the end of the 20th century, entertainment software was one of the USA's largest exports; several other countries in the Americas, including Canada, Brazil, Mexico, Peru and others, had established large internationally recognized entertainment industries, and some musical genres from the Americas had spread around the world.

Commodification and market capitalism powerfully shaped musical creativity, production and experience. Commodification necessitated that music be made commercially available to a large body of people and considered 'a kind of thing produced for use or sale' and that it be objectified in the process of trade. It also required a large and motivated group of people to purchase musical products. Although some European composers created exclusively for patrons, it was the protection of music publishers and instrument manufacturers through copyright and patent laws that created newly favourable conditions for large-scale commodification of music and its sale to increasingly large and affluent groups (Channan, 1995).

1. COPYRIGHT LAW AND MUSIC PUBLISHING. Copyright law was extended to music publishing in the late 18th century, and both copyright and patents were established in the USA shortly after independence. Sheet music and instrument manufacture were transformed by evolving technologies and growing markets during the 19th century, and recorded sound and video industries wrought further changes in the 20th (Frith, 1993) (*see* SOCIOLOGY OF MUSIC, §8).

The music publishing industry would have been of little influence without important changes in music education. In the USA, singing schools and church choirs, in which participants learnt to read music and to sing in groups, created a market able to use printed sheet music. The foundation of secular music academies, conservatories and amateur musical groups in the new national and provincial capitals also stimulated music publishers and the music market. Piano makers in the USA patented numerous changes in the design of the piano, and the centre of piano production shifted from Europe to the USA for over 100 years, before moving to Asia in the late 20th century. In the 19th century, the guitar was also a fashionable instrument for accompanying popular song, but the accordion was replacing other instruments in ensembles throughout the Americas and used to play European dances such as polkas and waltzes at social gatherings. The African-introduced banjo underwent a transformation from a homemade, gut-string and fretless instrument with a gourd resonator to a steel-string, metal-rimmed, fretted and mass-produced instrument that was well suited to playing in ensembles. Whether purchased in showrooms or through rural mail order, musical instruments that could accompany song and encourage dancing became popular throughout the Americas.

Although art music composition was copyrighted from the 19th century onwards, the largest profits for many years were in church music and popular song publications. The collaboration of popular theatres with publishers of songbooks created an integrated and profitable industry. Popular songwriters such as STEPHEN FOSTER sold over 100,000 copies of their most popular compositions, although they often received little in royalty payments. Hymnals and other religious music were also a large business, and some music publishers hired bands that toured widely and sold their songbooks. Sheet music and the instruments with which to perform it were also popular and widely distributed in the 19th century. In the USA, many of the songs that were later labelled as 'folk songs' were first distributed as sheet music, then entered oral tradition to be later collected by folklorists. There was a strong interdependent relationship between regional styles and printed music, with one often influencing the other.

Issues of copyright and intellectual property were accentuated when artists adopted and popularized traditional musical forms from the Americas. International copyright law did not recognize orally transmitted knowledge as a community's intellectual property, and such materials were widely appropriated and copyrighted by popular performers (Malm and Wallis, 1992). Several countries enacted or considered new intellectual property laws to protect local or Amerindian knowledge from external exploitation. By the end of the 20th century, intellectual property law had become an issue of international contention, a reflection of its importance to individual, corporate and national interests.

2. MUSIC BROADCASTS AND MASS MEDIA. The commodification of musical sounds, beyond the sales of admission tickets in the burgeoning concert halls, required the invention of audio recording in 1877. Within a few years, several competing formats for audio recording battled for supremacy in the markets and in courts of law. A recording made by the renowned tenor ENRICO CARUSO, the first to sell over 2 million copies, is generally credited as the first large-scale hit in the emerging recording industry. With the spread of radio, first commercially broadcast in the 1920s, and talking and musical films in the 1930s, and eventually with the addition of television, popularized in the 1950s (music television in the 1980s), a complex and integrated entertainment industry grew up around popular music. This industry sought to promote hits through the constant introduction of new performers and recordings that were marketed through radio and television, sold in recording stores and exported from the USA to the rest of the world. Broadway musicals and film songs were also very popular and continued to be so throughout the 20th century.

Audio recordings and radio did not become limited-repertory, hit-driven industries immediately. The audio recordings and radio programming of the first half of the 20th century in the USA demonstrate the tremendous musical diversity among immigrant communities and regional styles in rural areas. A seven-volume discography of emigrant music between 1893 and 1942 (Spottswood, 1990) documents the amount of recording in emigrant communities in the USA. Radio also presented live performances of local musicians during the first half of the 20th century, but increasingly depended on recorded sound after that. European art music, too, was programmed separately and often played only on specific radio stations. Local programmes, when they existed, were sometimes used to serve local emigrant communities (Olumba and N'Diaye, 1996). A great deal of what we know or learn about emigrant and regional music in the USA can be found on early recordings and broadcasts.

With the large influx of emigrants and nascent industrialization, cities in the Americas began to generate their own specific musical genres, which were later popularized in recordings. Among them were the TANGO in Argentina, the HABANERA and RUMBA in Cuba, RAGTIME and JAZZ in the USA, and the CHORO in Brazil. These genres were established or influenced by Black musicians and have features that can be traced to African roots. Arising in port cities, they were also strongly cosmopolitan and popularized by sheet music, live performances and recordings.

In most countries there were several distinct genres of popular recorded music in the late 20th century, often directed towards different audiences. In addition to urban popular musical styles in such countries as Brazil, Mexico and the USA, there were also genres characterized as rural or country which received extensive radio play time and achieved high sales in specific regions. Award programmes often indicate areas of commercial interest. The annual awards of the National Academy of Recording Arts and Sciences (NARAS) or 'Grammy Awards' in the USA present a set of 'American native music categories' for recorded sound in that country; awards are granted in the categories of popular, alternative, polka, traditional folk, modern folk, children's music, spoken word and classical music, among many others. Yet actual musical variety is greater, as many independent record companies in different countries respond to different markets that are unrepresented in such national awards.

The emergent technologies of sound recording, radio, films and television not only increased the reach of musical performances, they also encouraged particular sounds through their limitations and potentials. Wax cylinders held no more than two to four minutes of music, and for decades most recorded songs were three minutes long, a length that remained common even after long-playing records and CDs freed musicians of the four-minute limitation. The radio microphone was more effective if a singer did not project loudly, thus radio performances encouraged the use of a soft, crooning voice that became standard in some forms of popular music. Amplification and electric instruments both increased the size of audiences and created new musical possibilities. Music television also encouraged the use of visual images in popular music performances, and musicians emerged who danced to their prerecorded sounds.

The spread of mass communications media throughout the Americas carried recorded musical performances to distant places. Rural electrification, the transistor radio and satellite television discs are important steps in the globalization of access to music throughout the Americas. Mass media also raised a number of critical political and cultural issues for many nations and created considerable concern about political influence, national identity, intellectual property and the contrast between local values and national or international broadcasts.

In the political arena, mass media were effectively used by governments for propaganda purposes, and censorship bureaux or more informal blacklists were used to keep 'undesirable' artists or musical genres from being heard. In many countries, including the USA in the 1950s, Brazil in the 1960s and Chile in the 1970s, musicians who were considered threats to national security were prevented from performing for radio and television, exiled or killed. Issues of politics and morality were often invoked in efforts to increase censorship or restrict access to certain types of music such as rap music in the 1980s and 90s in the USA, and the development of a computer chip to restrict access to performances deemed immoral or obscene.

The preponderance of American and European recordings broadcast in Latin American and Caribbean countries raised concerns about the integrity of national cultures and the survival of national genres. Attempts by nations to restrict international influence by legislating a certain percentage of airtime for national music were only partially successful. Short-wave radio and television satellite dishes enabled people to receive direct interna-

tional broadcasts, thus evading all local control. Many national governments began to produce their own recording series that focussed on national genres, among them Argentina, Brazil, Cuba, Mexico, Peru, the USA and Venezuela.

A number of countries established local recording industries, radio networks and television channels; Canada, Mexico, Brazil and Cuba are among the largest. Canadian broadcasting was controlled by the CBC, a state corporation, but the prominence of the free-market approach to broadcasting and the power and production quality of the transnational entertainment industry often made it difficult for national music industries to compete in more than a few genres. Cultural policies related to music and mass media continue to be heatedly debated in every country in the Americas.

3. Tourism. Music and dance were part of the development of tourism, and, reciprocally, tourism influenced the way music and dance were performed. Music was part of the search for the exotic in tourism from early in the 20th century, as demonstrated in films about Hawaii, Brazil and the Caribbean. Music and dance became a principal attraction of travel, whether to a nearby urban area to go to the theatre or opera, to a theme park in the USA to be impressed by illusion, to a 'tropical paradise' in the Caribbean where typical and often dated styles of local music were played in hotels, or on an ecological tour in the Amazon where Amerindian music might be heard.

Tourism had antecedents in the 19th century, but became a major source of income throughout the Americas during the 20th century. While tourism sometimes benefited local musicians by encouraging state support, creating new performance venues in hotels and at festivals and raising wages, the tourists' stereotypes, lack of knowledge of local language and culture, and tight schedules often transformed traditional musics into something quite different (Lewin and Kaeppler, 1988).

4. Performance and music education. By the late 20th century, residents of the Americas could access an unprecedented number of musical traditions through radio, television, satellite dishes, individual players and computers. Some musicians sought to increase their understanding and mastery of their own traditions, others embraced new sounds and experiences by adopting entirely new traditions. University music departments supplemented offerings in European art music with performance courses in Indonesian gamelan, Caribbean steel band, Brazilian samba, Bulgarian song and old-time Scottish fiddle music, among others. Ethnomusicology courses on world music were well attended in a growing number of universities and colleges, and many community culture centres welcomed pupils from other communities who wished to learn the intricacies of dance or musical performance. While European missionaries taught Amerindians and Africans to compose and perform European genres as early as the 16th century, the influences were reciprocal in the 20th century. For example, tango clubs became popular in Helsinki, (although the dance originated in Argentina), Amerindian music and traditions were popular in Germany (although relatively few Amerindians had moved there) and African musicians emulated African American styles and were in turn emulated in the United States.

Opera halls and symphony orchestras found it increasingly difficult in the latter half of the 20th century to raise the funds necessary to perform full seasons, and many domestic genres disappeared as the contexts in which they were performed were replaced by other forms of entertainment such as radio and television. Audio-visual archives became repositories of traditions that were no longer performed. The commodification of music has spread some musics worldwide and driven others into silence.

From the inequities and tragedies and the successes and celebrations in the Americas have arisen musical forms that express their history in their very structure and performance style. In nation-states now characterized more by diversity of origin and culture than by homogeneity, the music of the late 20th century often provides both intense satisfaction and provokes intense concern. But no matter where they are in the world, people everywhere hear sounds influenced by social and musical processes that were generated in the Americas.

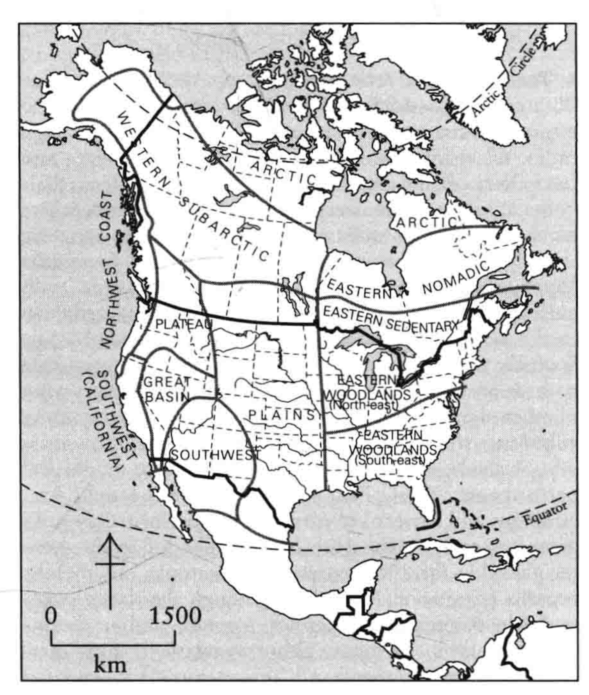
ANTHONY SEEGER



Amerindian music. In this article the term 'Amerindian' is used in a conventional sense to refer to the native peoples, also known as American Indians or Native Americans, who occupied the North American continent above Mexico before the arrival of the Europeans in the 15th century. (For a general discussion of Amerindians throughout North and South America *see* AMERICAS and for the music of Amerindian cultures in Central and South America, *see* LATIN AMERICA, §I and the relevant country articles.) The Amerindians are so called because of the belief prevalent at the time of Columbus that the Americas were part of the East Indies. The Amerindians appear to have come into the Western hemisphere from Asia in a series of migrations; from Alaska they spread east and south. Their common origin explains the physical characteristics that Amerindians have in common, while the several waves of migration are supposed to account for the many native linguistic families. There is evidence of the presence of Amerindians in the Americas for more than 15,000 years. In pre-Columbian times the Amerindian population of the area north of Mexico is estimated to have been between one and two million.

I. Introduction. II. Regional survey. III. Musical instruments. IV. Developments after European contact. V. Research.

I. Introduction

1. Geographical and cultural style areas. 2. Music and society. 3. Composition, learning and rehearsing.

1. GEOGRAPHICAL AND CULTURAL STYLE AREAS. In certain respects, Amerindian culture appears homogeneous: its musical styles are broadly similar throughout the continent, as are its myths and religious practices, which show similarities to those of Central and South America. In other respects, however, the Amerindian cultures as they were before the forced moves to reservations may be divided into distinct areas, coinciding with the physical divisions of the continent (fig.1): the Eastern Woodlands (known as Eastern Sedentary in Canada and subdivided into north-east and south-east in the USA), the Plains, the Southwest and California, the Great Basin, the intermountain Plateau (largely in Nevada and Utah), the Northwest Coast and the far North (subdivided into Western Subarctic and Arctic). These areas appear to have developed more or less independently for several centuries: each area had its own political and economic system,

1. *Map of North America showing the culture areas of the Amerindians*

largely shaped by the exigencies of the natural environment.

Scholars have identified approximately 1000 tribal units, almost as many languages, and about 60 independent language families in North America. But the boundaries of the language groups did not at all coincide with the boundaries of the cultural areas, which shows that the cultural areas became defined fairly late in Amerindian history. There is substantial evidence that Amerindian cultures were influenced by cultures outside the North American borders. Traits from the cultures of Mexico and Central America, for instance, are found among the Indians of the Southwest, the Southeast and the Northwest Coast; the Amerindians of the far North and the Inuit (Eskimo) share certain traditions with tribal groups of north-east Asia.

2. Music and society. Since the 20th century, music has played a special role in Amerindian culture, both underscoring the Amerindians' ethnic identity and providing a focal-point for their view of their past. Music seems also to have played a significant role in Amerindian cultures before contact with Europeans. In most cultures, it was intimately connected with religion: it was the most important element in worship and in rituals such as the ceremonies of age-grade (peer group) societies and gambling games. Music was also used to accompany social dances, games, calendar rituals and events in the life cycle.

Music evidently symbolized and personalized supernatural power: it was believed that spirits gave this power to human beings by teaching them songs, and individuals who were thought to have a supernatural association had a special relationship with music. As well as being an accompaniment to ceremonies, music was in many instances a form of prayer, and its presence was an important factor in religious experience. Music and performance were judged less by specifically musical criteria than by how well they fulfilled religious and other functions and were effective in providing food, water, healing and so on. Although most Amerindians had relatively simple material cultures and economic systems, each tribe had many varied ceremonies, public and private, which required songs, and Amerindian song repertories often included thousands of items.

Music and dance are closely related in Amerindian cultures. Traditionally, most musical genres accompanied dances performed during communal ceremonies. These dances, many of which persist, are thought to unite members of the community with one another, with the spirits of their ancestors and with supernatural beings. Although each tribe has its distinctive style, Amerindian dances generally move in a circular pattern and feature a dignified style of frontal body movement. Often dance steps, hand gestures and spatial designs have symbolic meaning linked to the ceremony. Depending on performance context and community practice, dance outfits range from everyday attire to intricately detailed costumes, head-dresses and body paint. Often the dancers are also the singers and accompany themselves with hand-held rattles or sound-makers worn on their bodies or sewn on their outfits. The structure of the music usually reflects the structure of the dance. Dancers follow the beat of the rhythmic accompaniment, and the duration of a song is often determined by the time required for all the dancers to complete a full circuit of the dance ground.

Similarly, since most Amerindian poetry is sung, there is a close relationship between the structures of poems and songs. Amerindian song texts often use verbal structures that do not normally occur in the spoken language. One typical example is the Plains tribes' use of non-lexical syllables, which surround the meaningful text and are interpolated in it. In the Southwest, archaic words or words borrowed from neighbouring tribes are often used in songs. Indeed a great many Amerindian songs have no lexical words at all; in such songs, however, a fixed succession of syllables constitutes the poetic text. This practice is exemplified by Peyote songs, which are used in connection with the Peyote ceremony (see §IV, 2 below) by many Amerindian cultures of the USA. These songs have a distinctive musical style and a repertory of fixed non-lexical syllables and syllable sequences that closely follow the rhythmic patterns of the melodies. The absence of lexical words, particularly in the songs of certain Plains tribes, may be connected with the relative lack of instrumental music; the songs fulfil both vocal and instrumental roles.

The relationship between music and language in Amerindian songs has not yet been fully investigated. There is some indication that syllabic and melodic elements coincide well, though not precisely, and that non-lexical syllables may be used to shift important words of the text to a rhythmically logical position. The Amerindians of the Southwest have elaborate poems set to music, in which the relationship between musical and textual lines is very close. In the Great Basin of Nevada, song forms such as *AABBCC* are accompanied by precisely the same textual forms. The content of Amerindian song texts varies from simple description of everyday events to symbolic and philosophical statements. However, in some Amerindian cultures, the words and music of a song are not inextricably bound; indeed, new words may be added to an existing melody and a new melody may be composed for an old text.

Formerly, Amerindians had few professional musical specialists or professional training of musicians. Nevertheless, certain individuals in each group were regarded as superior performers or as the originators of music – composers in Western terms. Because of the close association of music with spirituality, the ritual specialist, shaman or medicine man has usually been the person most involved with music.

Traditionally, men have had a more public role in ceremonial life than women, leading earlier scholars to assume that music in Amerindian cultures is a largely male domain. Recent research has challenged that assumption, showing how the development of new performance contexts for traditional repertories has created new performance opportunities for women. Beginning in the 1960s, women have also played a central role in the development of syncretic popular music.

3. Composition, learning and rehearsing. Amerindian attitudes to musical composition contrast with those found in other cultures. Generally speaking, human beings were not considered to be the active originators of music, but rather the recipients of music imparted to the tribe by spirit beings, either through dreams and visitations or, more directly, at the legendary time of the tribe's origin. Plains tribes, for example, believed that songs could come to a tribe either through its members' visions or as borrowings from other tribes, although a few songs

are traditionally thought to have been with the tribe from its beginning. The Pima, according to George Herzog, seem to think of songs as having an independent existence, and a person to whom a song appears in a dream is said to have 'unravelled' the song.

Song learning is accomplished by rote, and the accuracy with which it is done reflects the degree of the culture's interest in precise reproduction. On the Northwest Coast, for example, and among the Navajo of the Southwest, a single lapse in accuracy of performance may invalidate a ritual, so a fairly stable tradition can be assumed. The Plains tribes, by contrast, do not expect great precision, so that one might expect that their songs have changed substantially over a period of time. The idea of learning songs from human beings is related to that of learning songs from guardian spirits in dreams or visions; in the latter case, a visionary was thought to be able to learn a song in a single hearing, and Amerindians have maintained that they are able to learn a song very rapidly, perhaps after having heard it only once, even where visions are not involved. Rehearsing of songs is found in a few cultures, such as those of the Northwest Coast or Pueblos; generally, however, systematic musicianship is unusual.

Amerindians have developed several different modes of communicating about music, most of which involve gestural and cosmological systems rather than musical notation. However, some tribes have developed graphic notations as mnemonic aids, for example, song-counting sticks of Osage singers, roll-call canes of the Cayuga Condolence Council ritual and Ojibwa birchbark rolls or music boards.

Amerindians believe that the best way to learn and appreciate music is through direct experience, and traditionally most Amerindian singers do not verbalize about music theory. Nevertheless, clearly formed musical thought, values, aesthetics and concepts of musicianship underlie all Amerindian performances, and compositional guidelines as well as details of form and design are articulated by experienced singers. The ability to perceive melodic difference and to distinguish hundreds of songs within a stylistically homogenous and sometimes narrow repertory is highly developed. In repertories of recent origin, such as pan-Indian music (*see* UNITED STATES OF AMERICA, §II, 4(i)), names for sections within a song form and for types of drumbeat are common.

II. Regional survey

The value of dividing Amerindian North America into musical areas has been debated by scholars because it depends on static traits, artificial models and generalities. In reality, musical boundaries are fluid and permeable. Indigenous communities have a long history of musical interaction and exchange, often resulting in the adoption or adaptation of instruments, repertories or styles from neighbouring tribes. Since the time of Columbus, borrowing has included aspects of European music. While the area approach provides a helpful overview of Amerindian musics, the music of each individual tribe or community must be experienced more fully in its cultural and historic context.

1. CANADA.

(i) Introduction. The indigenous peoples of the area now known as Canada have been and continue to be referred to by labels applied by outsiders to their particular culture, either by another indigenous group or by European settlers and their descendants. The following discussion, however, uses self-assigned terms of individual cultures wherever known and places commonly used labels from the past within brackets. In the oral history of these peoples, their origin is placed within North America, although travel to and from the Asian continent is acknowledged. Today their descendants speak some 55 different languages within several language families, including Inuit-Inupiaq, Algic (Algonquian, Ojibwayan), Nadene, Wakashan, Salishan, Tsimshianic, Plateau Penutian, Siouan-Catawba, Iroquoian plus several isolated languages.

In addition to the diversity of language, the basis of their different traditional economies varied considerably due to the wide variety of terrain and climate within Canada. This, in turn, has produced an assortment of genres and styles for what is commonly referred to as musical expressions, even though not one of the indigenous languages has a word equivalent to the English term 'music'. Furthermore, indigenous cultures do not strictly distinguish various forms of discourse such as calling, speaking and singing. Instead these forms are experienced as on a continuum 'from singing, to sing/chanting, to oral reading, to a religious rhetorical style, to "everyday" talk' (Valentine, p.12). Many public presentations of musical expression are accompanied by dancing, theatrical devices such as acting, use of masks and story-telling. These additional activities and props are closely interrelated with the oral history, economic base and world-view of the culture involved. Dance-floor patterns can be symbolic of the direction of 'life' as viewed in a particular area (e.g. Iroquoians go anti-clockwise in a circle while Algonquians and Dene favour a clockwise motion).

Vocal musical expressions have accompanying text. Some cultures will tell an extensive story through this text in their own cultural language (e.g. Inuit *pisiit*), while other songs will use only a few words of the language concerned. These words or phrases may suggest a number of associations for the singer or listener (e.g. Innu *nikamun*). Certain texts can consist partially or exclusively of vocables (syllables without specific lexical connotation), as in Dene tea or drum songs. Because of continuing interactions with Europeans and Euro-Canadian settler societies since the 1500s, Latin, French and English words occur in otherwise traditional songs.

Within each culture, the traditional songs are 'owned'. Many indigenous cultures within Canada traditionally required each young man and woman to spend a period of time in isolation to test their survival skills and to receive a personal song. This personal song was deemed to have been received from a creature of the natural world such as an animal, bird or insect and was carried by that person as a talisman for the remainder of his or her life to be used in times of danger or need. As such, it could not be used by another person unless specifically given as a gift. In cultures such as the Algonquian, songs were thought to be received in dreams. Songs accompanying certain rituals or objects could be inherited or bought, depending on the specific culture and the nature of the particular event involved. Many cultures prized individuals who were able to 'make' good songs. In some cases, these individuals would be considered composers in Euro-Canadian terminology and fulfilled the role of creating new songs on request for important events (e.g. potlatch ceremonies) for which payment would be made.

For the purposes of this discussion, broad cultural areas based to a large extent on geographical and economic features of traditional society are used, beginning from the west coast for Amerindians and from the east for the Inuit. Within each area, examples are drawn from usually only one nation and must not be regarded as typical of the whole region.

Most of the terminology used with reference to genres of music consists of terms applied by outside observers. Within each culture, a song's melody may, depending on the circumstances, belong to several different genres with distinction as to its specific genre dependent in the moment on aspects such as vocal timbre, the number of performers, whether or not there is an accompanying percussive instrument and its type, the rhythmic line used in a multi-part rendition and the occasion.

(ii) Northwest Coast. In the Northwest Coast area – a slim strip about 100 miles wide between the Pacific Ocean and the Cascade Range, extending from the panhandle of Alaska to northern California in the USA – the major groups are Comox, Gitxsan, Haida, Haisla (Kitimat), Halq'emeylem, Heiltsuk (Bella Bella), Homalco, Hul'qumi'num, Klahoose, Kwakwaka'wakw (Kwakiutl, Kwagiulth), Nisga'a (Niska, Nishga), Nuu'chah'nulth (Nootka), Nuxalk (Bella Coola), Oweekeno, Sechelt (Shishalh), Sliammon, Squamish, Straits Salish, Tsimshian, Tsleil Waututh (Burrard) and Taku Tlingit. These wood-working peoples lived in large rectangular houses of permanent villages in the winter, but travelled to gather, hunt and fish during the remainder of the year. Although shamans' songs were used all year round, songs connected with fishing, hunting, love and gambling were used mainly in the warmer weather, while the winter season featured ceremonial music.

In winter ritual complexes, dancing societies re-enacted rhythmic and visionary encounters with supernatural beings. The Kwakiutl (Fort Rupert) of the Kwakwaka'wakw refer to the winter ceremonial complex as the *'ceqa*or cedar bark dance, which had as its centrepiece the *hamatsa*, a performance to restore to society the young initiates from the land of supernatural beings. The whole performance with its required songs and musical instruments is a microcosm of the Kwakwaka'wakw universe. Certain of the wooden carved rattles used in the performance bear representations of beings referred to in songs and legends and are used at designated points to accompany particular dances and songs. Some idiophones incorporated shells and the hooves of animals. Among other musical instruments are drums, either box-shaped and made out of wood in the carpentered tradition, or with a wooden frame and a skin-head, as well as various kinds of whistles. Multi-tubed whistles could produce two, three or four tones at once. In certain performances to conceal from where the sound was emerging, a whistle could be activated by bellows under the arm.

In connection with a winter ceremonial or a potlatch, welcome, entrance, paddle and farewell songs were performed. The potlatch, a central event of most Northwest Coast cultures, is given by an individual who provides a gift for each guest along with daily entertainments of dance, musical theatre and magnificent feasts that could last as long as a month. During these potlatches given for life-cycle observances, initiation of dancers, name-givings, transfers of title, or memorials, song and dance would delineate the lineages of the persons taking part, the history of the clans and effect a coalescence of the identity of the participants.

The songs of the Kwakiutl belong to three basic types: ceremonial songs, which include totemic crest songs, potlatch songs and songs connected with specific rites such as the *hamatsa*; love/mourning songs, which centre on themes of pain, longing and sadness; children's songs, which adults sing to children or children sing among themselves. Ceremonial songs are handed down through generations and thus 'owned' by specific individuals or members of one of the four exogamous matrilineal *numina* (Eagle, Ground Shakers, Noble Ones, Great

Ones), which make up the clans (now based in villages). In addition, there are functional songs for certain activities such as those used in the gambling games.

Crest songs and some *hamatsa* songs are lyrical in nature, but the lyrical love/mourning songs use a falsetto voice and fast vibrato meant to imitate crying. Many ritual and potlatch songs use elevated language and are declamatory, characterized by recitative-like singing, with fixed pitches for each text and no improvisation. The range of most Kwakiutl songs, a major 6th, is wider than other Northwest Coast groups, with some special songs even extending to an octave. The most common intervals used are the minor 2nd and major 3rd, and the predominant melodic movement is undulating with a tendency to move downwards, possibly imitating the cry of a gull. There is a limited number of pitches, often concentrating on a single pitch, but the rhythmic organization is complex with three or four durational values and often varying rhythmic layers. 'The Kwakiutl's use of jagged rhythms has been compared to the "steady, yet broken beat of the sea", an appropriate simile since the tribe is known for its fishing skills and knowledge of the sea. The rhythms ... contain a great deal of contrast, including triplets and syncopation as well as repetition. Constant drumbeats precede and underlie but do not strictly coincide with vocal melodies' (Teskey and Brock, p.42).

Formally songs consist of several sections, some of which may recur (e.g. Introduction *AB AC AC′ AD AE*). The recurring section is often attached to the vocables. Though many patterns are repeated, they are usually varied in melody or rhythm.

(iii) Western Subarctic region. East of the Rockies the cosmologies of indigenous cultures are based on circular, domical or spherical conception rather than the rectangular cosmos of the Northwest Coast. In the Western Subarctic region, the cultures speak languages of the Nadene and include the tribes of the Dene (meaning 'people of the barrens') nation (Chipewyan, Dogrib, Gwich'in, Slavey or Dene-thah, Hare, Mountain, Yellowknives), as well as Han, Kaska, Nat'oot'en (Babine), Sekani, Tahltan, Tanana, Tutchone and Wet'suwet'en (Dakelh, Carrier). Camps were temporary or semi-permanent in nature because of the need to move to wherever the game might be in a climate notable for its short summer and long winter.

Men of wealth and influence were recognized as leaders but held no established position or authority, while women and men gifted with shamanic or medicine powers were highly respected. The Dogrib (Tłı̨chǫ), situated between Great Slave and Great Bear lakes, usually led a nomadic existence within a small family group. Consequently, the occasions of meeting with other groups were always marked by dancing and feasting. Between 1769 and 1772 Samuel Hearne observed Dogrib and Chipewyan peoples performing a dance at night to a song with vocables of 'hee, hee, ho, ho' and the accompaniment of a drum and sometimes a rattle, 'made with a piece of dried buffalo hide skin' (1911, p.318)

During a *toghà dagowo*, an 'all night dance', Dogribs also perform *tado'a t'a dagowo* (tea dance) to the music of singing voices without drum accompaniment where men and women, facing inwards, form a circle and move in a clockwise formation. The men tend to use more arm movement and more energetic steps than the side-shuffle used by the women. Many of these songs originated as the dance-song of totemic animals, such as those of Raven, and may also occur in stories related about these animals. The monophonic tune consists of several short phrases, often repeated, with a limited number of pitches in a descending contour.

The whole evening of dance begins and ends with a prayer or prophet song (*nadats'e ti zhi*). These were made by shamans or medicine persons in the past, but in the mid-19th century came from angels or in dreams to persons regarded as prophets, such as Yats'sule of Tulita and Andrew Dolpheus of Deline. Most songs performed by the group of two to 18 drummers and singers will be a drum dance (*eye t'a dagowo*) where the dancers move single file in a clockwise circular direction. The couples' or partners' dance (*lila nats 'I to t'a dagowo*), a 'lady's choice' dance with the man on the outside and the woman on the inside holding hands and moving similarly to the drum dance, was introduced in the 1960s from the Dene-thah. Around this period the line dance or fast partner dance (*nake k'e dagowo*) appeared. The dancers use a lengthways formation and move forwards and back from one another, performing specific dance-steps to a song accompanied by a double drumbeat. In the mid-1990s another dance was introduced with specific song in which dancers move in a shuffle/hop step that involves the whole body.

Each drummer/singer has a repertory of 50 to several hundred songs, and each group is led and taught by a respected elder. The hand-held, round, single-headed Dogrib drum has two snares across the head to provide specific timbre. (Other groups in this area may have drums with one to three snares located over or under the head.) These drums are also used to accompany the hand game (*idzi*), a complex guessing game that the Dogribs used at gatherings to settle disputes and to provide recreation on large hunting expeditions for caribou. The teams with up to 20 men per side would alternately hide objects in their hands. The leader of the other team has to indicate by means of stylized hand signals the exact location of the object and in which hand of all eight active playing members of the opposing team it is held. Meanwhile through beating drums and vociferous singing, the team hiding the objects has a supporting group of drummers/singers who try to confuse their opponents' guesser. Accompanied by drums, the chanting-cry is delivered 'with wide-open mouth, head thrown back, with strained features by some, and full voice by all' (Dene Nation, 1984, p.114). A gambling song sung unaccompanied can be used to begin each round of play.

Because the people live in small family groups, dances and songs performed by one or two persons make up a large part of their expressive culture. The *ptarmigan* dance is a solo dance performed out on the land in which the actions of the bird are imitated. Other personal songs of the Dogrib are divided by them into *ets'elá* (love songs) and *ndè gho' shi ts'et'i* (love of the land songs). Love songs are of two types: one of a teasing nature used to make people laugh; the other of a more personal nature expressing longing or sorrow. The love of the land songs are often sung while performing a work action such as cutting up meat in the barren land. Similarly, the singing of the love songs reconfirms the social values of the Dene whose society is based on respect for the elders.

Musically the Dogribs have a stock of musical gestures that can be used in various ways (e.g. it was acceptable to take the tune of a tea dance-song and put words and vocables to it to make a personal song). Structurally, these songs often use two main phrases in various permutations such as *ABB′ ABB′* or *ABA′B′*. The resultant contour is normally one that leaps up to a higher point at the opening or begins approximately the interval of a 5th above the resting tone and gradually descends through both gestures using a limited number of pitches. For dance-songs, a pulsating, nasal, vocal quality is desired for projection. A non-nasal, more even vocal quality characterizes the singing of personal songs, lullabies and story-songs.

(iv) Plateau region. The cultures of the Plateau region live in the mountainous western area where there are sharply demarcated environmental zones – grasslands stopping abruptly at river terraces, montane forests on mountain slopes and at higher elevations alpine meadows. This region has an unusually complex culture of hunter-gatherers operating with private ownership of key resources, hereditary élites and, in pre-European contact times, intense trading, slavery, polygyny, some seasonal sedentary life style and high population densities. There were Salishan-speaking tribes, the Okanagan, the Nlaka'pamux (Ntlakyapamuk, Knife or Thompson), the Secwepemc (Shuswap), and the Stl'atl'imx (Lillooet), the Nadene-speaking Tsilhqot'in (Chilcotin) and the Ktunaxa (Kutenai, Kootenay) speaking the Kootenayan, possibly of the Hokam linguistic group. During the spring, summer and fall they traversed the valleys and mountains by foot, later by horse, gathering roots and berries, fishing and hunting. Bands of kin-related persons worked and travelled together during the warmer seasons and then wintered in fairly permanent locales where the preferred winter dwelling was a pithouse.

During the winter, dancing, feasts, social gatherings, games and story-telling were common. Above-ground lodges were designed for summer use, and people met at summer gathering-places to celebrate the mid-summer solstice with dancing. Each group had various male chiefs, some of whom could inherit the responsibility, with each designated to make certain decisions, only after much consultation, for the community as a whole.

For the Plateau peoples, each thing in nature had a soul and was a being. Therefore, the women who plucked the plants from the earth had to carry out acts of respect similar to the male hunters who killed animals and fished. Prayers, which sometimes involved song, would be offered on each occasion. Song was a central life-tool as the special medium through which these nature-spirits communicated with humans. There were three categories of spirit songs: personal guardian spirit songs and doctoring songs; special songs given to the people by their earliest ancestors; songs given to the people via prophets from the Old One (Wickwire, p.87).

The guardian spirit songs were obtained by each individual during a training period in puberty. A proper dreamlike state was induced by a combination of fasting, running, sweating, swimming and dancing, during which a spiritual being would teach a song to the initiate and advise when to use the song – whether in hunting, fishing, gathering, gambling stick-games, illness or other trouble. To obtain curing powers, longer periods of training in the mountains by particularly sensitive male and female individuals would be undertaken.

During the puberty training, young persons used songs given by their ancient ancestors while dancing around a fire shaking deer-hoof rattles and addressing the dawn of the day. There was also a song used in the sweat-house to request purification, relief from pain and success in hunting. The bear had given the people a mourning song, which was to be sung whenever a bear was killed.

A special mourning song was also used at the birth and rearing of twins. Among the Nlaka'pamux, the father of twins, immediately after their birth, put on a headband, went outside and walked around the house in a circle hitting the ground with a fir-bough and singing the song. A young man was engaged by the parents to sing the song whenever the babies cried, walking around them four times and, during the first month, at least four times a day. Male and female versions of war songs in which prayers were addressed to the sun were used. The men's version was danced in an anticlockwise circle. Dressed in feathers, paint and full armament, each participant imitated the sounds of his guardian spirit to the accompaniment of drums in imitation of a battle. After the departure of the men on a raid, the women, led by an elder who represented the war chief, similarly painted themselves, wore armaments and carried wooden spears, danced in anticlockwise circles, throwing out the spears and then pulling them back.

Songs given by the Old One, also known as the chief of the Dead or Chief of the Land of Souls, were transmitted by prophets 'male or female, who had died (visited the spirit-land) and then had been reborn on earth' (Wickwire, p.92). These appeared to be songs transmitted to the people carrying texts on how to behave in difficult times and supposedly giving added strength through adversities. Other songs were given to use at specific points in the life-cycle, such as the lullaby and songs at death.

Some songs were acknowledged as 'composed' by the persons who sang them and are called 'lyrical songs' by Teit. They express personal feelings and emotions, such as sadness, nostalgia, sorrow, loneliness, grief, pity, love and happiness. Women in particular composed many of these songs, often during their puberty rituals, and then sang them while digging roots or picking berries. Teit's 'going home' songs were used by groups returning home from expeditions.

The melodies of Plateau songs use predominantly three or four different pitches, with a descending direction through an interval mid-way between a Western tempered major 3rd and 4th occurring most frequently. Teit's informants enumerated diverse reasons for the words and vocables imbued with meaning that were placed with these pitches. There were words used by the Manitou when the protégé obtained the song; words used by the singer descriptive of the incident of obtaining the song; words descriptive of the appearance and peculiarities of the Manitou; and words descriptive of the Manitou's powers. There were words describing powers of the protégé's power; words spoken by the protégé to the Manitou; words in praise of the latter; supplication of the Manitou; and words spoken familiarly or jokingly to the Manitou.

The vocables often imitated the sounds made by animals or birds, such as 'hwa' for a bear. The vocable 'ō' used in mourning songs is comparable to the English 'oh!' or 'alas' and when combined with the descending four-note gestures conveys the feeling of crying. In stick-game songs,

the gambling game of the Plateau that was somewhat similar to the Dogrib hand game, the vocables 'ho! ha! hau!' occur. Structurally two musical phrases recur, *AB AB'AB'*, often being varied to a small degree on repetition.

A few percussion instruments were used as an accompaniment for some songs. Drums were constructed of birch bark or boards, a piece of hide, basket bottoms or bark kettles. Single-headed, handheld drums gradually became more common during the 19th century, and the large double-headed war drum for four to eight players came into general use (*c*1890) along with an infusion of Plains-style war and circle dances. Sticks were used on occasion to provide a rhythmic line and in stick-games were struck on boards. Rattles often incorporating deer-hooves played a role in certain songs, and in puberty ceremonies deer-hoof rattles were tied around the arms and legs. A rasp, a serrated stick scraped with a bone, accompanied war dances. Flutes made of elderwood, or bone, had specific uses as courting instruments, protection in war and as signal devices.

(v) Plains. The common feature of the vast Plains area was the dependence of its cultures on the buffalo (prairie bison and wood bison) whose population in 1800 was estimated to be 60 million, but only 40 million by 1830. Its excellent meat and superb hide provided the foundation of the economic survival for the Nadene cultures of Tsuu T'ina (Sarcee, Dunne-za/Beaver), Algic-speaking Nehiyaw (Cree), Anishnaabe (Saulteaux; Plains Ojibwa), Atsina (Gros Ventre), Siksika (Blackfoot), Kainah (Blood), Siouan-Catawba groups of Hidatsa, Nakoda (Sioux Assiniboine, Stoney, Dakota, Nakota, Lakota).

In this region, the Nehiyaw have a larger geographic distribution than any other indigenous Canadian culture. They moved from parkland to grassland following the movements of the bison and other game, which they hunted traditionally with stone-tipped spears and bows and arrows. In summer they travelled by birch canoe and in winter by snow-shoes or toboggan, living in conical or dome shaped lodges known as tipis, clothed in animal skins, and making tools from wood, bone, hide and stone. For most of the year they lived in small bands or hunting groups and gathered into larger groups in the summer for socializing, exchanges and ceremonies. Religious life was based on belief in spirits, which revealed themselves in dreams. Each individual was expected to be responsible for his actions and their consequences. Leaders were selected to direct group hunts and raids, but there was no tradition of inherited leadership.

Father Pierre-Gabriel Marest accompanied Le Moyne d'Iberville in 1694–5 and was the first to write about the Nehiyaw as 'sprightly, always in motion, always dancing or singing' (Marest, p.123). The most important occasion for dancing and singing on the Plains was the annual thirst or sun dance, which was usually held around the summer solstice. Preparations for this major event took place during the previous year, such as the ceremonies associated with certain medicine bundles, including the songs for each object contained within, and practice sessions for all of the thirst dance-songs. A leader would select the location for the lodge, and the members of the chicken dance society organized the tipis in a wide circle around the spot. The object of the dance is to pray for rain and to obtain personal strength by participating. The participants go without food or drink for two full days. After the drums have been prepared, the leader blows on his whistle a few short notes to give the order to find a great tree, some six metres high. Young men and women go out to look for the tree, singing songs, and then bring a suitable specimen back to the site. The dance leader, with a rattle in one hand and the wing of an eagle in the other, sings his song three times before the tree is raised at the centre of the lodge site. Then the inner and outer walls of the lodge are built. For the dance the drummers and singers sit in a circle on the north-east side. The dance leader gives a speech and then sings the songs that have been taught to him in a vision by the thunderbird and other spirits, accompanying himself with a rattle. The drums begin at a medium fast tempo and the dancers, each with a whistle in his mouth, must keep perfect time to the beat of the drums. During the dance, the singing and drumming must be kept up continually. At the conclusion, gifts are distributed among the aged and needy, and there is a magnificent feast.

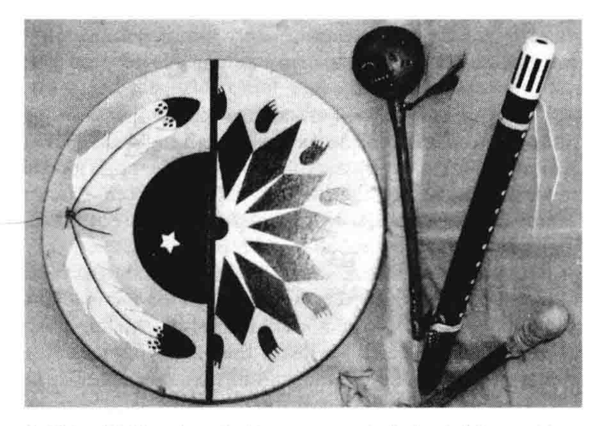
The Plains cultures had various societies to look after certain ceremonies and provide fellowship and entertainment for one another. For the Nehiyaws these include the Prairie Chicken Society, the Buffalo Dance Society, while the male bachelors belonged to a society that did the Cannibal or *Witigo* dance, in which the participants wore masks. The women had the Elk or *Wapiti* Society, usually led by an elder.

The men also performed other dances not connected with societies. These included the Horse dance, the Bear dance in which the dancers clad in bear skins danced on their knees, and the Chicken dance, done before sunrise and imitating the actions of the prairie chicken. For the latter, the drummers would gather at the centre of the camp circle, while a leader with a rattle in hand circled the camp imitating the call of the grouse. When a second dancer appeared, the drums would be beaten in a fast tempo and a monotonic 'He ha ha-ah he ha ha' would be uttered. Each dancer carried a rattle in his hand and was clad with a robe that he could stretch out to imitate the wings of a bird. Often two dancers would vie with each other in their performances, dancing on their knees, striking their rattles and then rising for a more rapid foot dance. The Tea dance was performed by everyone dancing where he or she stood. It required only a hot beverage to be prepared to be drunk. Gradually in its performance, this *pee-tchi–tchi* favoured the circle formation of people dancing side by side with the men forming one side and the women the other.

Medicine dances (*mitewok*) took place during the 'rutting moon' and were followed by the Ghost, Give-away and Calumet dances. As part of the medicine dances, persons wishing to join the medical society had to pay a fee of eight articles. The drum used for the medicine dances was 'made by hollowing out a length of log a foot or more in diameter and about two feet in length. Rawhide is stretched tightly over the open ends' (Dion, p.49). The low hollow sound created by this drum blended well with the specific chants used during these ceremonies. When properly trained, a shaman could perform the shaking tent or curing rituals using only a rattle called a *sisikwanis*. During the ritual, this rattle and various voices would be heard with wild beating against the sides of the tent, consisting of four strong posts and rawhide, itself over one metre by one metre and two metres high.

The Ghost or Spirit dance commemorated those who had died and was held during one night only. The dancers,

including children and often carrying 'burdens' (containing some article of a departed loved one), moved one behind the other in a continual chain while the four singers/drummers sat along the north wall of the dwelling. 'Each leader of four singers had his own songs; he could use three of these before he called a halt' and allowed another group of singers/drummers to take over (Dion, p.51).



The Give-away dance lasted for several days and was held in a large round tent with the head man and his wife sitting at its north-west side with a pile of presents. The drummers/singers would begin, and at the end of a song the dance maker would pick out a gift and would approach an individual to the accompaniment of a new song and different drum accompaniment. Before the individual could accept the presents, he would have to dance. The woman would do the same for the females present until five presents had been given away. Feasting would then take place and the ceremony would recommence. This cycle would continue until the gifts began returning back to their original owner.

The Calumet (Peace pipe) dance (*oskitchy*) belonged to a certain individual for life and was participated in only by the male elders. After a feast provided by the women, the drummers/singers using a slow tempo would provide an accompaniment for the dance owner holding the peace pipe with which he would make two or three rounds. He would then pass the pipe to another person who would have to do a dance before passing the pipe on. After five or six dances, the tobacco was lit and the pipe smoked before the cycle of dances recommenced. At the close all followed the owner of the dance three times around in a circle.

The Nehiyaw regularly held practice sessions using a rattle, rather than drums, to refresh their memories and to teach the specific songs that went with each dance and ceremony. Each person also had personal songs, one of which was obtained as a puberty rite, and others to use for various life rituals. For events in which a group of singers participated, there was a leader who began the song, with the others then joining in, continuing to make a structure of the leader's introduction *A B C*, with perhaps another phrase added in a wide ambitus of well over an octave, usually descending from the highest pitch to the resting tone.

Instruments consisted of a variety of drums, most of which were single-headed (fig.2), around 45 cm in diameter, decorated with significant designs that made each one specific for a particular purpose. For instance, there was a particular kind of painted drum used by a midwife among the Anishnaabe. Most drums in the Plains region did not have snares, but certain groups did have some, usually with the snares under the head. A water-drum, hollowed out of a log, was used in the *midewiwin* (medicine society) ceremonies. For the sun dance, a slight hole was made in the ground and a rawhide stretched over it was struck with willow wands. The grass dance and later powwow dances generally were accompanied with a large, flat double-headed drum suspended horizontally with four stakes in the ground.

Specific kinds of rattles were designed for particular ceremonies. Some consisted of a hollow ball of dried hide with pebbles inside fastened to a stick, while others had a doughnut shape for the Cree war dances and the Siksika

2. Plains (Nehiyaw) musical instruments: single-headed drum with padded beater; decorated hide rattle native flute (loon carving as external duct)

All Brave Dog Society. Strips of rawhide to which deer-hooves were attached appeared for the horse dance. Various kinds of rattles could be worn or attached to outfits. The use of whistles has been noted several times, and these were made from the bone of a bird's wing and contained only one hole. Certain, if not all, of the cultures of the Plains had the end-blown courting flute with block: for the Nehiyaw this was a piece of birch bark, while for other cultures it was often carved in the shape of a bird or horse. Women would blow against the edge of a leaf held between the cupped hands. Buzzers and bullroarers were used as sound-producing instruments. Because the Nehiyaw used bows and arrows for hunting, the principle of the mouth bow had been discovered by them and used to provide both a drone and a melody through manipulating overtones. The Anishnaabe used a rasp, a stick with notches rubbed by another stick.

(vi) Eastern Nomadic region. The Eastern Nomadic region covers a large area of eastern Canada featuring the boreal forest, stretching between southern grassland and mixed hardwood trees, north to the tundra. This forest with its interspersed lakes and waterways is the essential underpinning of the Anishnabek (Algic-speaking) indigenous cultures of the region. The particular culture selected is that of the Ojibwa (Anishnawbeg), a group that was initially centred on present-day Sault Ste Marie on Lake Superior. After fishing, hunting and gathering maple and birch tree sap (which was used as a drink, in cooking foods, and boiled down for sweetening), the Ojibwa would offer a paean of gratitude to Kitche Manitou (the Great Spirit).

Each politically independent band had its own chief selected on the basis of hunting or shamanic prowess and hunting territories. For much of the year, a band dispersed into family hunting units and then congregated in larger gatherings during the spring and summer. The society was divided into clans, each identified by a *Do-daim*, a clan symbol or totem. Children inherited their totem from their father and could not marry a person of the same totem. The elders taught about life through stories, songs, chants and dances. All male children between the ages of 12 and 14 had to undergo a vision process before being accepted as an adult. Although women, because of their gift of being able to give birth, were not obliged to undergo a vigil, they were expected at the onset of menstruation to spend a period of several days away from

the camp. The self-revelation or awakening that would come to either men or women was considered personal, not to be disclosed to another.

Those persons who were recognized as having medicine powers had undergone an extensive training period from various teachers in the use of plants and the appropriate songs and paraphernalia for each plant and need. After a deadly disease among the Ojibwa, possibly one of the first scourges brought by Euro-Canadians in the 16th century or the early 17th, the medicine practices were organized into a specialized hierarchical society called the *midewiwin* (*midewewin*). 'No person could apply for membership in the medicine society; instead, the society invited men and women of good character into the fraternity . . . In all, there were four orders through which the candidate must pass before he gained accreditation' (Johnston, 1976, p.84). For the first order, the candidate studied with a tutor assigned to him for a year, the names of the plants, their uses, character, quality, songs and the prayers to be rendered for each. If successful, after each level the candidate could add another stripe of paint across his face and would be then recognized as having greater powers.

Because there was a great deal of material to learn and retain as a member of the medicine society, the Ojibwa had a pictographic system of symbols for various parts of ceremonies with a specific symbol for each song, written on scrolls of birch bark as mnemonic aids. In the early 1900s Densmore discovered that if she showed the symbol of a particular song to an informant, she would hear exactly the same song as she had had from another informant hundreds of kilometres distant. Symbols were also used to represent the hunting songs used by the Ojibwa.

Many songs and dances were associated with other important events in Ojibwa society. Each spring the pipe of peace dance had to be performed at least once for the renewal and regeneration of peace. The keeper of the pipe would remove it from its case, perform prayers and chants, offering it skywards, earthwards and to the four cardinal points, then danced it around the central fire. The pipe was then passed to each celebrant in turn to dance with the pipe.

Songs and often dances were used at the important life ceremonies of each individual including: the naming ceremony; the first kill of a boy, where the feast ended with dances representing a hunt or enacting the habits and conduct of game animals; marriage; and the Feast of the Dead held annually in the autumn to honour all who had died during the previous year. At least twice annually, there was a thanksgiving ceremony for the first flow of sap, and before the Ojibwa left for their isolated wintering habitats. Of the two forms of the Festival of the Dog, one included as participants only the warriors, while the second reminded those taking part of famine and survival through dance. For the war dance, the evening before a war party set out, a drum summoned the village to dance. A victory dance was held after a victorious return. Other dances included the deer dance, in which the movements of the dancers imitated the grace and watchfulness of the deer, the snow-shoe dance, the begging dance and the partridge dance. For each of these, there were different movements combined with specific songs accompanied by rattles and/or drums in a particular rhythm and beat.

For the Ojibwa 'songs were the utterances of the soul. Most were of a personal nature composed by an individual on the occasion of a dream, a moving event, a powerful feeling' (Johnston, 1976, p.148). Although these songs arrived in dreams or during the puberty fast, they could be used for a variety of purposes ranging from war dances and doctoring moccasin games – the type of Ojibwa gambling game where two pairs of moccasins were used to conceal four objects, one of which was specially marked. The songs were often strophic in nature. The tune might consist of several different sections such as *ABCDE*with perhaps a section repeated within the strophe. Towards the end of the 19th century, an incomplete repetition form became more common (e.g. *ABCDEB′C′D′E′*).

The Ojibwa utilized a wide variety of musical instruments. Drums used in the *midewiwin* included the 'grandfather', a water-drum made from a tall, hollow log, and a smaller 'little boy' drum whose membrane has seven stones (signifying the seven fires, prophecies or teachings) tying it down, both played with appropriate non-padded beaters. Single-membrane hand-drums that are frequently painted according to designs received in a dream by the maker can be played with either padded or non-padded drumsticks at the distal end. Other double-membrane drums have specific kinds of drumsticks, one of which is made from a loop of cedar branch, for certain ceremonial usage. A particular kind of drum was used for the moccasin game, beaten in a pattern of a strong accented stroke followed by a short, lighter upbeat.

There were disc rattles where skin covers a circular wooden circle that is so made to provide a handle as well, rattles made from fish-skin or other animal/bird parts, and those representing certain totems. Other rattles are associated for use with certain dances while the rattle made of deer-hooves could transmit news from one group to another. Flutes similar to those described for the Plains but with the external block shaped as an animal rather than a bird were used for courting purposes and also in the *midewiwin*. In addition, whistles and animal callers were utilized.

Because of the wide area encompassed by this region and the number of cultures included, there is considerable variety in the shape, decoration and construction of both rattles and drums. Some drums were quite large, even though played by only one person with snares to which pieces of bone or teeth were fastened across both membranes, such as those of the Innu culture.

(vii) Eastern Sedentary region. In the Eastern Sedentary region, agriculture was the basis of the economy, with hunting and fishing as supplementary food resources. In what is now south-western Ontario and a portion of the St Lawrence valley the Wendat (Huron), Petuns (Tobacco), Neutrals and Mohawk cultivated what were known as the three sisters, that is corn, beans and squash, as well as tobacco in pallisaded settlements, with fields surrounding the buildings. They made maple syrup and gathered apples, berries and nuts.

In 1626 the Neutral nation had 28 towns and also 'several hamlets of seven or eight cabins, built in various parts convenient for fishing, hunting and agriculture' (Jury, p.3). The Jesuits estimated their population to be around 40,000 or more in 1634. The cabin or longhouse, each of which was constructed with poles bent overhead and lashed with roots and vines to form a rounded roof

with the framework covered with bark, could have several families and as many as 200 persons living in it.

Father Bressani praised the Neutrals' 'exceedingly acute vision, excellent hearing, an ear for music and a rare sense of smell' (Jury, p.7). They loved feasts and dances, which were often combined with the games of lacrosse and a winter game that they played with curved sticks, sliding them over the snow to hit a ball of light wood. Their shamans were skilled in the use of herbs and other natural remedies for illness, while the use of the sweat-house with attendant singing was encouraged to prevent illness. There were calendrical ceremonies throughout the year connected with the planting and harvesting of the various crops, while an important ceremony that took place every decade was the Feast of the Dead. Several villages would take part in this elaborate ceremony, which lasted a few days, during which the bones of the dead were placed in a communal burial pit (Jury, p.16). As at the time of death, the women sang lamentations during the ceremony.

By the early 1640s the Neutrals were being devastated by European-brought diseases. In 1650–51 the Neutrals were attacked by the Seneca and Mohawk Iroquois, who destroyed their main villages. Those who survived were taken as captives or managed to scatter to the west and the south to be assimilated into other nations. A somewhat similar fate befell the Wendat, but a small group managed in the 1640s to get to present-day Quebec City, where their descendants live at Lorette. Because of the severe upheavals in their cultural traditions and the strong influence of the French, only sparse information is known about the musical practices of the Wendat in the early contact period.

Certainly the males had an important personal song called *adònwe'*, which was used for empowerment while hunting, fishing, in council meetings of the chiefs, at feasts and as the last song before death. The singing feast (*atouronta ochien*) was probably held at different times throughout the year depending on the purpose and occasion. The master of the feast supervised the messengers who were sent out to the other villages with invitations in the form of a bundle of sticks with each stick indicating one person to come, the assistants who prepared the meals and any paraphernalia such as masks and costumes necessary for the ceremonies. The singing feast lasted up to 24 hours and took place in the communal longhouse. Such a singing feast, given by a man who wished to display his goodwill, could have a traditional set of dances to the accompaniment of songs that were usually led by two chiefs, each carrying a tortoiseshell rattle. Chieftainship was organized around the matrilineal clans, but the chiefs earned their rank by virtue of pre-eminence, eloquence, courage and wise conduct and were responsible for any problems, decisions and important affairs that concerned their village, nation or the entire confederacy. Singing feasts were also an important element of the naming of a chief.

The available documentation emphasizes tortoiseshell rattles as an instrument used during singing feasts and also by shamans in medicine ceremonies. Other idiophones indicated are sticks beaten against pieces of bark or, as a substitute, the striking of the fist on the ground. These cultures used the external block courting flute. The 78 traditional Wendat songs recorded by Marius Barbeau in 1911 bear descriptions such as amusement, amusement songs around a kettle, pipe, snake dance, ceremonial song of welcome, canoe, cradle, song in a myth, invitation to dance, dance for women, vision and lyric songs. These titles indicate songs and dances that would have been used with singing feasts, others for life-cycle events and everyday activity.

Structurally the songs have one to three sections, each of which can be repeated with variation. These vary between material largely based on one pitch used in a recitative-like manner and more lyrical sections that are undulating or primarily descending towards the end of the phrase. Some songs are sung at a fast tempo, while others are slow. Often only five or fewer pitches are used and the ambitus is within an octave for each section. Different accompanying patterns can be used in each section, with some having a tremolo-like use of a rattle, while another section can have specific beats, sometimes subdivided. These are characteristics to be found in the musical expression of other Iroquoian groups who settled in south-western Ontario in the 18th century. The membranophone used by these cultures is a water-drum. The water placed within the drum is periodically used to dampen the head for the proper timbre.

(viii) Maritime region. The area of present-day Newfoundland and the Maritime provinces is the region of longest continuous contact with Europeans. With the archaeological evidence of the Norse settlement at L'Anse aux Meadows site in northern Newfoundland, *c*1000 CE, the indigenous persons of that area were affected in many ways. The Portuguese Gaspar Corte-Real captured 57 Amerindians, possibly Beothuks in 1501. The only clue about Beothuk musical expressions are the one- and two-holed whistles found in archaeological sites, plus small pebbles and seeds that were probably used in rattles.

From European-brought diseases over half of the Mi'kmaq (Micmac) and Maliseet (*Malecite*) people had died by 1640. Although there were many similarities between these two cultures, the Maliseet were more of an interior culture and cultivated small plots of corn, while some 90% of the Mi'kmaq diet came from the sea. During the winter they travelled with toboggans employing dogs. According to the season, the size of social groups varied: in winter small groups worked together, while the summer was a period of larger aggregations. Each Mi'kmaq or Maliseet group had a *saqamaw/sakom*who was highly respected in the community and a *kinap/ginap* who looked after defence. Their dwellings, wigwams constructed of birch bark on a pole frame with a fire in the middle of the circle, usually held ten to 12 persons.

The Mi'kmaqs used their songs, rituals and oral traditions to teach their belief system based on the medicine wheel, an ancient symbol representing the four grandfathers, four winds, four directions, four stages of life and the balance of mind, body, heart and spirit. They developed a pictographic system, which seems to have been used to represent words as well. Le Clercq noticed in 1677 that children were making marks with charcoal upon birch bark as he spoke. Perhaps in a manner similar to the *midewiwin*, the shaman used this system as mnemonic aids for their cures, rituals and songs. The men and women shamans usually carried a medicine bag, in which each object had its particular song. Through pressure from the Jesuits, these were replaced by Christian songs. By 1845 Kauder reported 'that there is no other song in their language, if you except a few war songs, than ecclesiastic, pious songs' (1868, p.252).

To accompany their songs, the Mi'kmaq had various rattles made of dew-claws, rawhide or of the basket type. Turtles made into rattles were very special since Turtle was the uncle of Glooscap, their central mythological figure: the 13 plates on his shell represented the lunar year of 13 moons. The Mi'kmaq would beat a piece of bark, tree or kettle for rhythmic accompaniment. Their unique *jigmaqn (ji'kmaq'n)* is variably described in the literature but constructed today as a kind of slap-stick made from a piece of white ash split into layers along the grain and held together at one end by a leather binding. 'The player slaps the *jigmaqn*against the palm of one hand to accompany a dance or song' (Leavitt, p.75). The courting flute figures prominently in their myths.

(ix) Arctic region. The Arctic area of Canada above the tree-line was inhabited first by Paleo-Eskimos and the Pre-Dorset culture until around 2000 BCE. After the Dorset culture became established, a warming trend occurred around 1000 CE and they were gradually replaced by the Thule who developed a very sophisticated technology to hunt sea mammals, including whales. Until *c*1850 the climate cooled gradually and the people had to make adjustments to survive on locally available foods. This resulted in the different Inuit cultures known today in the Arctic. Although there are some individual differences within groups, the main Inuit cultures have been recognized as from east to west: Ungava (of northern Quebec), Baffin Land, Caribou, Iglulik (Iglulingmiut), Sadlermiut (Padleirmiut), Copper, Netsilik and Inuvialuit (of Yukon and Mackenzie Delta).

In 1888 Franz Boas published the first major monograph on the Inuktitut-speaking peoples within Canada called *The Central Eskimo*, a product of his travels in 1883–4 to carry out cartographic work on Baffin Island. In this study, he noted the major role of musical expression by describing how the driver of sled dogs makes a certain sound to call his dogs and then sings out to them as he pulls tight on the reins. Boas included a section on poetry and music, where he published 23 transcriptions in Western musical notation drawn from his own experience and four from other sources (Boas, 1964 edn, pp.240–50). This selection details the use of songs in stories (*chantefables*), personal songs as 'every man has his own tune and his own song' (Boas, 1964 edn, p.241) and songs used with games such as playing ball and string games.

Songs were used in the drum dance with a drum called *kilaut* and played sometimes by the drummer with the wrist of the right hand, a bone/antler or wooden beater, while the male dancer would dance in one spot swaying the upper body. These songs, often satirical in nature, would have the women singing the chorus for the performance. The structure of strophes vary in length due to the different amounts of text used and the neutral syllables of '*aja*' being interjected to keep the rhythm and delineate units. Repetition of musical phrases could be iterative (sectionalized repetition) or reverting (varying previous melodic material) or in short songs completely through-composed. The importance of rhythm and text in a language dependent on prefixes and suffixes also influenced the use of recitative-like passages where words were enunciated on the same pitch. The melodic contours could be limited to an ambitus of a 2nd or be as wide as a 10th. The contour itself might have a leap up at the beginning followed by undulating or plateau materials. A small majority of the examples tended to have a descending contour for the final phrase. When the final tone was considered as a tonal centre, the other pitches if five in number were most frequently arranged in the pentatonic form of *A–G–E–D–C*. Another scalar form was approximately *E–D–C–B–A–G♯*.

Rasmussen's observations on the Caribou refer to animal songs and magic songs. The drum dance, which may be performed without a drum, is a major event in autumn and winter. A male dancer, swaying his hips, performs in the middle, while a chorus of women each on one knee surround him. More recently, Pelinski has studied this culture and pointed out the occurrence of multi-part performance of drum songs in parallel 4ths. Two types of co-ordination between song and drumbeat may occur: either the drumbeat remains steady in a 1:1, 1:2 or 1:4 proportion with the beats of the song or the drumbeat gradually increases from a proportion of 1:4 at the beginning to 1:1 at the end. The general principle is that the *qatiurtuq* (person drumming) should follow the *imik*(rhythm) of the song. The two styles of beating the *kilaut* (drum) with the *katuk* (beater) are the *tuqaqpuk* (hitting the drum frame perpendicularly with a straight horizontal movement of the *katuk*) and the *anaupaa* (using a sliding movement to touch the frame of the drum from below to above).

Among an Iglulik group, Rasmussen found that a drum dance was held to welcome visitors, among other purposes. The drum (*kei-is-ou-tik*, *kittegaru*), almost a metre in width, had a caribou skin stretched across a wooden hoop or whale fin and fastened with sinew. Its beater *kentoon* was about 26 cm long. It was struck on its rims up to 160 strokes per minute. The drummer was also the dancer standing in the middle, knees slightly bent, swaying his upper body in time with the drum. Occasionally the drummer would sing (fig.3), but most songs were sung by the chorus of women led by the dancer's wife. Each Iglulik man has a song partner whom he challenges with the beauty of his songs. They exchange gifts and wives. The drum dance in a special igloo (*qaggi*) that can hold around 25 persons can last all night, as long as 16 hours. To prepare for it, men, women and even children would compose songs and carefully practise in their homes. These drum dance-songs are known as *pisiq*. They are often constructed by putting together several different fragments. Each fragment can consist of two or more phrases, each of which is varied in repetition using from three to five different pitches within an octave. This was the type of song also used in singing duels to settle disputes.

The Iglulik *angakpq* (shaman) had *sakausiq* (spirit-songs), which were believed to come from the souls in the Land of the Dead and were therefore the beginning of all song. The shaman used hand-clapping when talking to the spirits. *Tivaijok* included songs used in the masked dance that resulted in sexual partnerships. Other Iglulik songs were songs in stories, those for children such as lullabies, *aqausiq* (affectionate song composed for a specific child) and game-songs for hide and seek, string games and juggling. Vocal games (*kataksatuk*) constituted a large category. There are canonic genres similar to the *katajjaq* of the Ungava culture and the *pirkusirartuq* of the Netsilik and Caribou. These are performed by two persons (usually women) or a multiple of two where syllables made up of voiced and unvoiced sounds is repeated. The alternation of breathing in and out of air

3. Iglulik drummer/singer Phanuelle Paliuq

creates a rhythmic structure that must never be synchronized for each pair. Demanding extensive breath control, the game is won by the person who continues the longest. Other narrative vocal games are distinguished by the syllables and sounds used. *Qatipartuq* uses the refrain 'hapapi, hapapi, ha', while *qiarpalik* refers to the peritoneum of the seal and the performer must keep her balance while performing certain gestures and lowering and raising herself. *Quananau* makes and refers to the sound made by a baby being carried in the special hood of the woman's garment. Both *haangahaaq*and *marmartuq* are types somewhat like tongue-twisters. Certain of these games have been documented across the Arctic region.

The Copper used the drum dance to honour members of the family, to express gratitude, to welcome and to say farewell to visitors. These dances were held most often in winter in a structure of two attached igloos to hold some 60 people. Each community had one drum *kilaun* about a metre across and with a 16 cm handle of poplar attached by sinew. The beater, about 35 cm long, was covered with seal-skin. Both men and women used the drum, which was held above the head and hit on the rim while between sections the drum was lowered and tapped in the middle. The drum represented the ring around the sun and was a good omen. A woman began the dance, while the drummer started the song and a chorus led by the father or the wife joined when they recognized it.

A distinction is made between *pisik*, where the words must fit exactly with the drumbeat, and the *aton*, which has a slower tempo and for which a hat and possibly mitts would be worn for the performance. In the latter, the dancer did not beat the drum. Different types of songs were used for the drum dance, including hunting songs and sentimental ones that frequently change tempos. Songs have two parts, which are rarely connected as to text. Dance associates may be male or female, and when a dancer chooses an associate, the associate goes around the circle, rubs noses with the initial dancer and then dances next. Special apparel could be used, including a cap with a loon's beak since the loon was considered the bird of song. After a drum dance, seances might be held to sing songs to control the weather or to release seals. Visitors could request a session to learn songs that they had heard during the dance. Other instruments are the bullroarer and the buzzer, which children used with their songs. Also different pitches were obtained by flicking the fingernail against the upper teeth.

The Netsilik performed the drum dance at happy times throughout the year in a specially constructed *qaggi*. The drum *kelaudi* of wooden hoop, caribou hide with handle was struck by a small wooden club covered with seal-skin. The male dancer who began would wear a cap and gloves while the women's chorus would keep time with the dancer. Composed by men, women or children while in a solitary place, songs that included riddles were highly valued. The lead dancer would hand the drum to his song partner (*iglua*) who would dance next. Songs were also used to settle disputes in the drum duel. Each disputant would compose songs to state his case with ridicule and amusement and the community would judge or, if necessary, a wrestling match would take place to settle the dispute. The shaman and magic songs had special words with melodies that had to be sung slowly.

The Mackenzie Delta area has Inuit cultures that include the solo dancing of the east but also has dance forms similar to cultures situated in Alaska. The Inuvialuit square-shaped dance-house *kashim* was built in the centre of the village and was mainly built underground with an entrance. The drum has a narrow (4 cm) wooden frame covered by a whale-liver or walrus-stomach membrane and a wooden handle. Its beater is a long slender unpadded stick that is used for two different strokes, one lightly touching the underframe and a harder one that strikes both the frame and the membrane simultaneously. For the *o'ola-ho'ola*dance, a group of four or more usually male drummers/singers provide the music. Meanwhile, the dancers, restricted to one gender at a time, wear special gloves and dance out various stories using much more movement than is found in the eastern Inuit cultures.

2. USA.

(i) Introduction. Amerindian music in the area that now constitutes the USA consists of numerous individual styles, yet there are some common elements. In traditional repertories, the emphasis is on singing rather than instrumental performance. Most of the music is monophonic; singing in octaves by men and women is widespread. In some areas, such as the Eastern Woodlands, singing in antiphony or call-and-response is common; polyphonic singing occurs occasionally. The way in which the voice is used and the preferred tone-colour

varies greatly by region. However, because of the immense popularity of powwow music, the most common vocal style is characterized by glottal tension, pulsations on longer notes and high-pitch or falsetto singing. Amerindian music has a wide variety of musical structures, including many strophic and sectional forms. Repetition is important in most Amerindian music; depending on the tribe and genre, repetition may be precise, or involve variation or elaboration. Most Amerindian melodies have a descending contour or undulate with a descending inflection. Phrase lengths are often asymmetrical, which may obscure patterns of repetition or other design elements. Scales are most frequently tetratonic, pentatonic or hexatonic, although other types are used. The most common intervals are major 2nds and minor 3rds and their near equivalents.

Most Amerindian songs are accompanied by percussion instruments, including drums and idiophones (especially rattles). The percussion rhythm is usually a succession of equally spaced beats, although in some areas, such as the Northwest Coast, it has more complex patterns (ex.1).

Ex.1 Drum rhythms found in Northwest Coast music

(a)

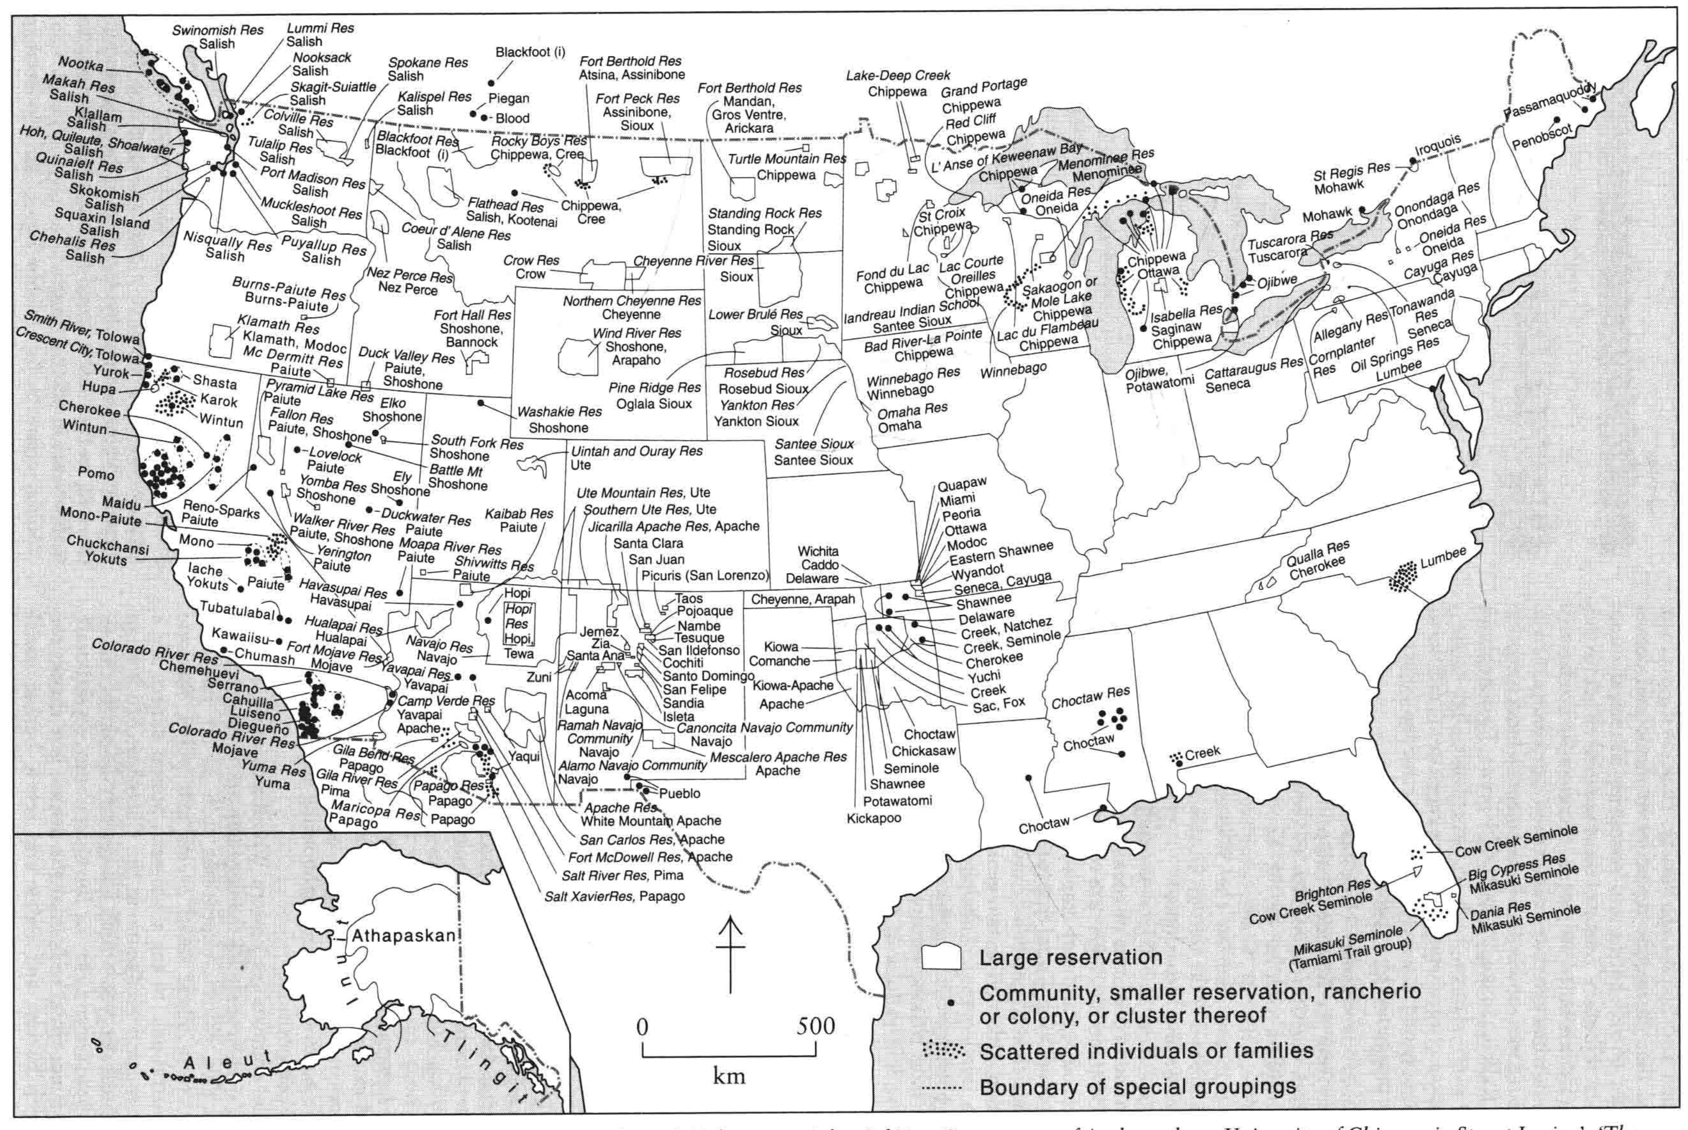
(b)

(c)

Because most Amerindian music is performed to accompany dances, it usually has regularly recurring patterns of beats and accents, although unmetred song introductions are common in the Eastern Woodlands. Beat patterns within a song tend to change frequently and often involve odd-numbered groupings that create subtle rhythmic complexity. In the Plains region, the drumbeat may not correspond with the melodic beat; the Pueblo people of the Southwest use strongly patterned pauses and some South-eastern genres use one metre in the music and a different metre for the dancing. Aside from these generalizations, each Amerindian group has its own distinctive musical repertories, styles, instruments and performance contexts.

Helen Roberts, Bruno Nettl and others have tried to map the distribution of Amerindian musical styles. The musical culture of the Plateau tribes – principally the Flathead and the Salish – share traits with the cultures of the Plains and the Northwest Coast respectively. The usefulness of these groupings is limited since, of the hundreds of separate cultures, reliable information exists for only about a hundred. Music was collected at different times, and a repertory recorded in the late 19th century cannot be compared with one known only from the 1950s, perhaps changed by intertribal contacts and Western influence. In general, stylistic boundaries tend to coincide with cultural boundaries (though not necessarily with language groupings); the music of a culturally and geographically homogeneous group of tribes also tends to be homogeneous. The greater cultural diversity in the western half of the country (fig.4) is reflected in its greater musical diversity, resulting perhaps from its geographical diversity and isolating effect of the mountain ranges.

(ii) Plains. The best-known regional style is that of the Plains tribes, whose territory extends from the Mississippi river to the Rocky mountains, and from Texas to south-central Canada (see §1(v) above). This region includes such tribes as the Arapaho, Blackfoot, Crow, Omaha, Kiowa, Pawnee and Sioux; the area is shared by some Plateau tribes, notably the Flathead. Plains musical style is characterized by tense, nasal vocal production, with heavy pulsations on sustained tones, especially at phrase endings (in musical transcriptions, this is shown as a row of dots over the sustained note). Typically Plains melodies have a descending contour, often with stepwise progressions known by scholars as 'terraced descent'. Groups sing in unblended monophony. A variety of scales are used, but the most common types are anhemitonic tetratonic or pentatonic scales (ex.2). Plains song texts



Ex.2 Arapaho song, transcr. B. Nettl

are largely or entirely of vocables, non-lexical syllables that are fixed and constitute an integral part of the poetry. Words in song texts are used sparingly and are framed by vocables. Plains drumming is distinguished by an off-the-beat style, the drumstrokes sounding just before or after the melodic beats.

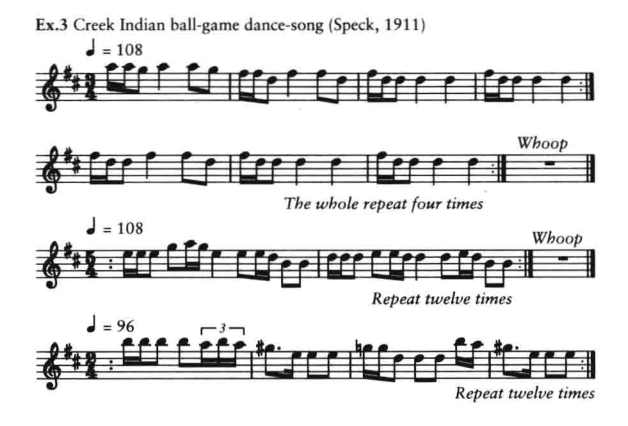
The most common song form of the Plains is a strophic style known by scholars as 'incomplete repetition'. The strophe is divided into two sections: the first, called the 'lead' or 'push-up' by Plains musicians, is performed solo by the song leader. The other singers join in to repeat the lead, called the 'second'. The second is often a variation or expansion of the lead. The lead and second constitute the first section of the strophe. The 'chorus', or second section of the strophe, contains two or more phrases sung in unison by the entire ensemble. The chorus is repeated once, completing the strophe (*AA′ BCD BCD*). Ideally, the entire strophe is repeated four times. Plains tribes compose new songs, borrow songs from other groups and also believe songs are given by spirits in dreams or visions.

One of the most important social contexts for the performance of Plains music is the powwow. Other contexts include sacred rituals, ceremonies performed by men's warrior societies and a variety of more recreational social events. Sacred music from this area includes songs for communal ceremonies such as the Sun dance, ceremonies associated with ritual objects such as pipes or medicine bundles, curing songs and personal songs believed to be received by individuals from guardian spirits. Music associated with warrior societies or men's age-grade organizations includes songs for the Omaha *Hethuska*, Pawnee *Iruska*, Kansa *Inloshka* and Kiowa

4. Map of the USA showing the location of Amerindian groups in the mid-20th century (after Sol Tax, Department of Anthropology, University of Chicago, in Stuart Levine's 'The American Indian Today', Deland, FL, 1968)

Tiah-pah and Black Legs Society. Each of these events had its own distinctive repertory of music and dance, focussed on recounting and honouring historical events and acts of bravery. Many of these societies remain active or have contributed to the development of a relatively new intertribal ceremony called the Gourd dance. Music orientated more towards entertainment includes songs for Owl, Rabbit, Snake, Round, Oklahoma Two-step and 'Forty-niner' dances. Each of these dances has its own distinctive musical style and song repertory. Traditional gambling games that involve finding a hidden object are also accompanied by a special song genre.

(iii) Eastern Woodlands. The Eastern Woodlands region extends from the Atlantic ocean to the Mississippi river, and from the Gulf of Mexico to New Brunswick. This area includes peoples of the Southeast, such as the Cherokee, Choctaw, Creek, Seminole and Chickasaw; of the Northeast, such as the Wabanaki, Iroquois and Delaware; and of the western Great Lakes region, such as the Ojibwa and Menominee.



Singers from this region generally use a moderately relaxed and open style of vocal production, although in some communities singers use vocal pulsation to articualte phrase endings and may employ other special techniques such as yodelling, glottal stops and rapid vibrato. Melodic contours tend to descend or undulate with a descending inflection, although certain genres, such as curing songs, have a level contour. Anhemitonic scales with four, five or six pitches are most common.

The most striking feature of Eastern Woodlands music is the widespread use of antiphony or call-and-response in many genres of dance music, a choral style not heard elsewhere. Shouts on indeterminate pitches may be performed to mark the beginning or end of a song. Song texts emphasize vocables, although curing songs and some genres of communal dance-songs also include words. In Eastern Woodlands music percussive accompaniment usually coincides with the melodic beat.

Eastern Woodlands singers use several kinds of iterative, sectional and strophic forms. Songs in iterative form have several brief, repetitive phrases strung together in rapid succession; these occur in genres such as the Stomp dance and Standing Quiver dance-songs. Songs in sectional form, particularly in the south-east, have two or more self-contained sections, each of which is musically and textually distinctive. Strophic forms are most common in animal-dance songs; often the strophe begins with an unmetred introduction, which may by performed solo by the leader. Song leaders express individuality through their choice of repertory and by their improvised variations. Among many peoples in this region, the music of sacred rituals is believed to have been a gift from the Creator at the time of origin; other sources of music include borrowing from neighbouring cultures and individual composition.

Social contexts for Eastern Woodlands music include curing rituals, seasonal thanksgiving and world renewal ceremonies, ritual competitions such as the Ballgame (ex.3), recreational social events and public folkloric demonstrations. In the south-east, Stomp dances are a major musical event among the Cherokee, Muskogean and Yuchi peoples. Stomp dances may be performed as part of the Green Corn (or *Busk*) ceremony, an elaborate midsummer ritual to honour the deities, give thanks for the corn harvest and repair and renew human social relationships.

Ex.3 Creek Indian ball-game dance-song (Speck, 1911)

Among the Iroquois peoples of the north-east, musical performance centres on longhouse ceremonies associated with the religion founded by the Seneca prophet Handsome Lake in 1799. The most important longhouse event is the annual midwinter ceremony. The rituals of Iroquois medicine societies, such as the False Face (*Kakoh'sa*) and Husk Face (*Gadjisa*) societies, also involve extensive musical performance. Social dancing occurs on many occasions among the Iroquois and includes the Standing Quiver (or Stomp) dance.

(iv) Southwest and California. The Southwest region includes New Mexico, Arizona, the northern part of Sonora (Mexico), the southern parts of Utah and Colorado and parts of California. Inhabitants include: the Pueblo Indians (including the Hopi, Zuni, Acoma and Rio Grande Pueblos); the Apache and Navajo (related to other Athapaskan-speaking peoples in western Canada, from where they migrated before 1500); desert-dwelling tribes such as the Yuma, Pima and Papago; and peoples from southern to central California. These groups have had extensive cultural and musical interchange, so that Yuman songs can be found in the Pima repertory and substantial Pueblo influences can be found in Navajo music and ceremony.

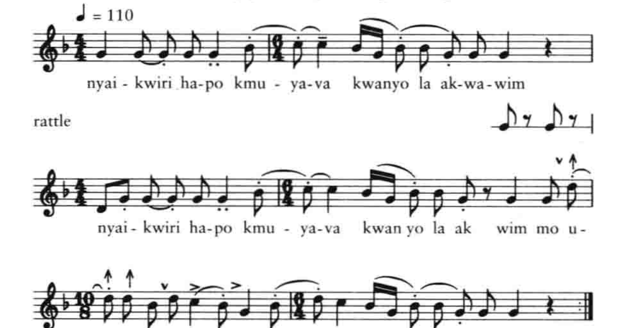
Pueblo music features an open, relaxed style of singing that emphasizes the lower part of the vocal range. Melodies are long and complex, and ceremonial songs are performed by large choruses in blended monophony. Pueblo songs have pentatonic, hexatonic and heptatonic scales with intervals of approximately a major 2nd. Song poetry focusses on water imagery, spirit beings and other symbolism associated with horticulture; elaborate lexical texts may be framed by and interspersed with vocables. Pueblo songs are rhythmically complex, with frequent changes of metre, hemiola and patterned pauses. Ceremonial songs are generally composed in five sections, each with several phrases of music and poetry articulated by introductory and cadential formulae. The form (*AABBA*) is integrated with the choreography of the dance. A traditional composition method of the Pueblos involves a process of collective revision. The composer creates a song, which is revealed to a performing group during preparation for a ceremony; members of the group modify the song as they learn it and further adapt the song for performance in other settings.

Social contexts for Pueblo music include seasonal communal ceremonies for preparing, planting and har-

Ex.4 Laguna Pueblo corn-grinding song (Herzog, 1936)

vesting crops. These ceremonies include *kachina* dances (with masked representations of ancestral spirits), maskless *kachina* dances, dances to honour game animals and corn dances that are sometimes connected to Catholic feast-day observances. Other Pueblo genres include lullabies, songs for healing, story-telling, corn-grinding (ex.4) and gambling games. Some eastern Pueblos also perform the *matachinas*, a Spanish-derived dance ritual accompanied by fiddle and guitar.

Navajo and Apache singers cultivate a tense, nasal vocal style emphasizing the upper or middle vocal ranges, with occasional use of falsetto. Group songs are performed in unblended monophony. A variety of scale types and melodic contours are used, depending on the song genre. The content and structure of southern Athapaskan song poems vary by genre, but vocables are combined with words in most songs. Most Apache songs have a strophic form that alternates verse and chorus; the verse may be sung in a parlando style on one or two pitches, in contrast with free-ranging melody of the chorus. Navajo music uses strophic forms as well as a variety of sectional forms with intricate phrase designs and interwoven motifs (ex.5).



The most important contexts for traditional Athapaskan music are life-cycle rituals and curing ceremonies. Among the Apache the girls' puberty ceremony is the central musical event. During this four-day ceremony, long song cycles tell the story of White Painted Woman, the source of fertility and creator of human beings in the Apache origin narrative. The Navajo perform curing ceremonies to restore balance and harmony within the person who is ill. These curing ceremonies re-enact episodes from the Navajo creation story and may include hundreds of songs performed over several days. Other southern Athapaskan genres include social dances and moccasin game-songs.

The third style of the Southwest belongs to speakers of the Yuman language family, shared with some of the small tribal groups in southern and central California such as the Luiseño, Diegueño, Cahuilla and Yokuts. Their musical style is characterized by relaxed vocal production, undulating melodic contour and pentatonic and heptatonic scales. Many songs have a special sectional form known as the 'rise', a melodic unit (phrase or several phrases) repeated several times, occasionally interrupted by a slightly higher-pitched melody (*AAAAB AAB AB AAAB AAB*; '*B*' is the rise; ex.6). During the rise, the dancers raise their hands. In this area, major contexts for musical performance include epic stories, mourning rituals, puberty ceremonies and gambling games.

(v) Great Basin. The Great Basin region ranges from the eastern slopes of the Rocky mountains to the Sierra Nevada and the Cascade range, and from the Colorado river basin to the Fraser river. Peoples include the Washo, Ute, Paiute and Shoshone. Great Basin singers use a relaxed, open vocal quality, emphasizing the middle range; they perform subtle melodic ornamentation through special breathing techniques, such as aspirated attacks and releases. Great Basin songs typically have tetratonic or pentatonic scales, using major 2nds and minor 3rds. The melodies are short with a narrow range and tend to undulate, sometimes with a descending inflection. Historically, communal dance-songs were performed monophonically and, unlike most Amerindian

Ex.5 Gift Song from the Navajo Enemyway ceremony (McAllester, 1954)

Ex.6 Yuma Amerindian song, part of myth-telling (Herzog, 1928)

dance-songs, were not accompanied by percussion instruments. Great Basin song texts may be composed entirely of vocables or a mixture of vocables and words. However, story-telling songs from this region have long, detailed lexical texts, and songs from seasonal ceremonials involve a subtle, evocative imagery. Great Basin songs have a variety of iterative and strophic forms. Most seasonal round dances have a paired-phrase structure (ex.7), single,

Ex.7 Ute Amerindian song (Herzog, 1935)

consecutive repetitions of each phrase in such combinations as *AABB* or *AABBCC*. The Great Basin style was the basis of the widespread Ghost dance style, which diffused throughout the Plains in the late 19th century.

The most important social contexts for the performance of traditional Great Basin music include life-cycle rituals such as birth, naming and puberty ceremonies, shamanistic curing rituals, mourning rites, hand games, story-telling and seasonal first-fruits celebrations, such as the Paiute Round dance or the Ute Bear dance. Another genre from this region is the 'song recitative', sacred narratives in which each animal character has its own distinctive melodic and rhythmic style.

III. Musical instruments

Amerindians have a great variety of instruments, most of them confined to a percussive role. The main melodic instruments are flutes; other melody-producing instruments, now known only from descriptions in the ethnographic literature, appear to have served mainly as drones. In some cases, instruments are used purely for their tone-colour; sometimes they imitate sounds of nature (e.g. animal cries and birdcalls) or suggest the voices of supernatural beings. Instruments of indeterminate pitch are often associated with ceremony and ritual, often as a background to singing. An example is the bullroarer, whose non-melodic sonorities serve both to accompany singing and to mesmerize when they help to induce the shaman's state of trance.

1. Idiophones. 2. Membranophones. 3. Chordophones. 4. Aerophones.

1. IDIOPHONES. The most widespread Amerindian instruments are those that vibrate when struck, shaken, rubbed or plucked. Among the simplest are those that are rhythmically struck with sticks: boxes and poles have been used for this purpose on the Northwest Coast and by the Salish tribes; bark idiophones are found among the tribes of the north-east; baskets have been used similarly by the Yuma and Apache tribes of the Southwest and in southern California; and turtle shells were once important rhythmic instruments in southern Mexico. Among the Plains Indians, a suspended piece of unmounted hide (technically a membranophone, not an idiophone) was beaten by several singers simultaneously; one might well regard this as an ancestor of the drum. Finally, the 'foot drum', a plank or log rhythmically stamped upon, was known in California, the extreme Southwest and possibly also on the Northwest Coast.

Among the more complex idiophones, the log drum was evidently diffused from central Mexico to cultures on the West Coast of North America; in a simplified form (without a slit), it became an important instrument of the Northwest Coast tribes.

The most frequently used idiophone was the rattle, which still exists in innumerable forms; most prominent is the container rattle (fig.5), essentially a handle and a closed container holding pebbles or seeds. Most, if not all, Amerindian cultures had some form of container

5. Amerindians with container rattles: engraving from Captain John Smith's 'Historie of Virginia' (1624)

rattle, but the materials used varied from area to area, and the different ceremonial uses in each tribe gave rise to a great regional variety of decoration. Many Amerindian rattles are art objects as well as sound-producing instruments.

The most widespread containers were gourds (found throughout the USA, but particularly in the eastern half of the country) and leather spheres sewn from rawhide (used in the Plains). Basket rattles were used on the West Coast, coconuts in parts of the south-east and cocoons in California. Turtle shells were used for container rattles in the Eastern Woodlands and the Southwest and horn in isolated spots throughout the country. After the coming of Europeans and the introduction of metal, bells of the cascabel type (e.g. sleigh bells) came to be used as container rattles among some Apache groups and have since spread to other tribes, where they are sometimes worn on ceremonial costumes, enhancing the dance with rhythmic jingles.

The other important rattle, particularly in the west, is the suspension type, consisting of a series of perforated objects that are strung together and shaken. Among the objects used are deer-hooves (particularly in the Great Basin area of Nevada and Utah), rattles taken from rattlesnakes (in the Southeast and California), bird beaks, bones and animal claws (on the Northwest Coast), animal shells (by the Pueblo of the Southwest) and, in more recent times, metal (in many different areas).

Finally, there are split-stick clappers, played in California and on the Northwest Coast, and the rasp, a notched stick placed on a basket or an inverted piece of pottery for resonance and scraped with another stick. The rasp is used in the Great Basin, the Plains and in the area round the Gulf of Mexico.

2. MEMBRANOPHONES. Membranophones are, with idiophones, the only type of instrument widely used by Amerindians. Most widespread is the single-headed frame drum (sometimes erroneously called 'tambourine'), held in one hand and struck with the other (fig.3). Its one skin

is attached to a frame typically about 30–60 cm in diameter, with four thongs (or sets of thongs) tied on the opposite side from the skin into a massive knot that is used as a handle for the instrument. This type of drum is found in the vast majority of Amerindian cultures; the only important exception appears to be the California culture area.

Double-headed drums are found aboriginally in only a few places: isolated spots in the Great Lakes area, the Gulf Coast, the Great Basin and New England. They may be of recent origin, influenced by European bass and snare drums. In any event, drums with two heads, particularly large drums capable of being beaten by several players, have become widespread throughout the eastern two-thirds of the USA during the 20th century.

Small kettledrums, held and beaten by one player, are found in much of the USA, from the East Coast to the Plains. In the Plains area, they are filled with water to permit tuning and to effect a distinct sonority. The Plains Indians appear to have adopted the kettledrum only recently (in the 19th and early 20th centuries) and use it only for the Peyote ritual (see §IV, 2 below).

Throughout the USA, drums are generally beaten with wooden sticks whose ends are sometimes padded with rawhide. The beating of drums with hands or fingers has been relatively uncommon and is restricted to a few tribes in the Great Basin and California.

3. Chordophones. The only chordophone used by the Amerindians before their first contact with Europeans was the musical bow, though the presence of even this simple instrument is not substantially documented: its existence is inferred only from reports, and hardly anything is known of its music. The musical bow occurred only in the Southwest, California and (sporadically) the Great Basin. In most cases, it appears to have been a simple hunting bow, occasionally adapted to musical use. Among the Apache it was fitted with a resonator, and in California bows were sometimes built specifically for music. Information about the music produced on the musical bow can be inferred from the music of certain Indian tribes in South America, where it has been used as a solo instrument or to accompany singing, normally with a range of two or three notes within an interval of a 4th. Related to the musical bow is the ***kízh kízh díhí***, also called the 'Navajo violin' or 'Apache fiddle' (fig.6).

4. Aerophones. The most important melodic instrument is the flute, found in many different forms over much of the country, but especially in the west and south. Flutes are almost always solo instruments, though in some cultures, such as that of the Plains, the flute repertory appears to have consisted largely of music that could also be sung.

The most important materials used to make flutes have been wood, cane or bark. Pottery flutes have been sporadically used in the Southwest, and bone flutes on the Northwest Coast, in California and on the Plains. The number of finger-holes in flutes has varied from three to six. The majority of Amerindian flutes are end-blown, but there are also duct flutes, in which a hole is drilled into the side of the flute, a plug inserted and the hole partly covered by a separate, often elaborately sculpted piece of wood that is tied to the instrument. Occasionally (in the Great Basin and among the Salish-speaking tribes of the plateau of Washington and Idaho), side-blown flutes have

6. Apache Indian playing the kízh kízh díhí (fiddle): photograph, c1885

been used and nose flutes appear to have been known in the Great Basin. Single-note bone and wood whistles were widely used, for musical and ritual purposes, in the west; in California, they were sometimes tied together in groups to form panpipes.

Multi-tubed whistle flutes are also found in the Northwest Coast cultures. Bone flutes, either without finger-holes or having up to six, were used as a courting instrument in Plateau cultures and have also been located in archaeological sites in Newfoundland. Whistles made out of quills or goose feathers had ceremonial uses in the Inuit cultures of Baker Lake and the Mackenzie Delta. The willow flute, with from one to six finger-holes, occurred in cultures as widely separated as the Mi'kmaq (Mi'kmaw; Micmac), Nlaka'pamux (Thompson), Caribou Inuit and the Slavey. The most distinctive type is the vertical whistle flute with a sliding external block and gasket to cover the tone-hole. In Canada this instrument was used by Eastern woodlands groups, both nomadic and sedentary, in the Northern Plains, the Plateau and some of the Northwest Coast cultures. It uses a whistle mechanism to produce the sound, with the 'block' (also referred to as saddle, bird or rider) forming the windway for the air located on the outside of the flute. In length and diameter it may vary from 34·3 to 84 cm and 2 to 5 cm (Conlon, 34). Its mouth end may be blunt, tapered or a small tube. Many examples are beautifully carved from wood and decorated with leather, beading, feathers etc. Usually there are six open finger-holes but both the literature and examples found in museums indicate that these varied from four to seven holes. The ideal flute was one that produced a full, vibrating sound when all of the

holes were closed. Its main use was as a courting instrument by young men but it could also be used for signalling in wars.

Reeds have occasionally been used for producing sound, and there have been trumpets of various sorts – gourd, shell, wood and bark. Little is known about these instruments, but they appear to have been used ceremonially and to have played only single notes.

The bullroarer consists of a flat piece of bone or wood with serrated edges, which is attached to a string or rawhide thong and whirled rapidly through the air. It has been used most widely in the west, extending eastwards into the Plains. Shamans used the bullroarer when seeking to control the weather (as in the Great Basin area of Nevada and Utah) or to invoke a trance; sometimes it was a signal for the assembly of the tribe, and in recent times it has been a toy. A similar instrument, the bone buzzer, consists of a rounded piece of bone with holes; two pieces of twined string are attached and as they are pulled apart the buzzer rotates rapidly, producing a low, whining sound.

IV. Developments after European contact

Amerindian musics, like all other musical traditions, have continually changed, reflecting native concepts of history and underlying attitudes towards change itself. Many groups believe that history proceeds along a recursive spiralling path rather than a linear chronology. Therefore, Amerindians tend to adapt historic repertories to new social realities, blending older styles with fresh components and merging the genres of one community with those of another. Western influence has sometimes resulted in more abrupt musical change. Entire tribes were obliterated through disease and war brought by contact with Europeans. Conversion to Christianity and the Westernization of native social and economic patterns prompted the adoption of new repertories and the creation of new performance contexts. During the 20th century, tourism played a significant role in the development of Amerindian music and dance. Through adaptation, blending and merging, Amerindians have selected European musical values, styles and instruments to enrich and diversify their own traditions.

1. Early influences. 2. Peyote music. 3. The Ghost dance. 4. New Amerindian musics.

1. EARLY INFLUENCES. The first substantial contact that the Amerindians had with European music occurred in the Southwest as early as the 16th century. Little is known of the effect of these first contacts on the Amerindians' musical life. One description tells of an early 17th-century incident in which friars taught the Pueblo Indians to sing and to play instruments. A Navajo chief came to visit the Santa Clara Pueblo, and the friars, who wished to convert him to Christianity, had bells rung and trumpets and shawms played, which evidently impressed him greatly.

Throughout the continent, the teaching of Western church music to Amerindians was a major missionary activity. Nevertheless, Amerindians usually kept their knowledge of Western music separate from their traditional music. They did not develop the kinds of mixed styles that arose in Africa, in black cultures of the New World, in India and in the Middle East. This stylistic separatism is probably due to the great differences between the Amerindian styles and those of the European music known to them.

The greatest degree of integration occurred in the Southwest, where Spanish became a common language. The Pueblo have many rituals of Hispanic origin that exist side by side with their Amerindian traditions. An example is the Tewa Pueblo *matachines* dance described by Kurath and Garcia, which has acquired a respected place in Pueblo ceremonial repertories and is performed around Christmas. Some of the tunes are European in origin, with guitar and rattle accompaniment, but some are probably of Amerindian origin. Pueblo music, with its variety of scales and melodic forms, evidently lent itself better to the creation of mixed styles than did other North American styles.

It is thought that contact with Europeans may have given rise to the *kízh kízh díhí* used by the Navajo and the Apache in the Southwest (fig.6), which is a combination of the musical bow and a string instrument. It consists of a length of century-plant stalk 45 to 60 cm long and 7 to 10 cm in diameter, along which is stretched a single string of horsehair supported by bridges and tuned by a peg (examples with two strings are also known). It is played with a simple horsehair bow. Its repertory consists of songs in the traditional Apache and Navajo styles but occasionally includes Westernized tunes, which can also be performed vocally.

2. PEYOTE MUSIC. The peyote cactus, whose buttons are chewed for hallucinogenic effect, was the basis of a religious cult in central Mexico several centuries ago. By the early 18th century, the cult had penetrated to the south-western USA, where it was practised by the Apache. After that time, it spread to many tribes, particularly those of the Plains and the west, bringing with it a special religious cult and a peculiar musical style. By the middle of the 20th century the Peyote religion – officially the Native American Church, with headquarters in Washington, DC – was the most important religious movement among Amerindians (fig.7), and Peyote music perhaps their most prominent musical style.

Peyote meetings consist largely of singing, and Peyote songs may be sung outside the religious context. The tenor of the religion is conciliation with non-Amerindians and it has Christian overtones. The rapid spread of the religion has given many tribes a new musical style and repertory, which have accompanied or sometimes supplanted older traditions. This religious and musical phenomenon is primarily a result of modernization, arising from the greater need for mutual support and friendly contact among Amerindians facing the problems resulting from Westernization.

The style of Peyote music probably derives from Apache and Navajo styles. It has long tunes made up of short phrases, frequently using a single main rhythmic motif and closing with a standardized final formula (ex.8). The form is frequently the incomplete repetition form of the Plains. The melodic contour may be undulating or

descending in the terraced fashion common in Plains music. The singing style is more relaxed and gentler in tone than Plains singing and, indeed, is different from all other known Amerindian singing styles. The tempo is quick, and the accompaniment uses a gourd rattle and a small kettledrum partly filled with water. The texts are frequently non-lexical but use characteristic configurations of syllables such as 'he yo wi ci na yo' or 'he ne yo wi ci ne'. Such syllabic combinations are employed by all Amerindian tribes using the Peyote ceremony and are thought by each tribe to have originated in another. Occasionally words in the Amerindian vernacular are used and sometimes English words with Christian content as well.

↑ = pitch slightly raised
↓ = pitch slightly lowered

3. The Ghost dance. In contrast with the Peyote religion, which has a history of several centuries and finally became a movement of reconciliation with non-Amerindians, the Ghost dance was cultivated for only a short time, representing a final attempt by some Amerindians to rid themselves of the effects of Westernization. Like the Peyote religion, its practice became an intertribal movement and gave rise to a peculiar musical style that was adopted by various tribes and provided diversification.

The Ghost dance began in 1870 among the Paiute of western Nevada and spread rapidly during the 1880s, particularly among the Sioux, culminating in the 'Sioux Outbreak' of 1890, after which it was outlawed. The musical style that accompanied it was derived from that of the Great Basin of Nevada, whence the movement came, and consisted of relatively simple songs with a small melodic range and a characteristic form in which each phrase was repeated (e.g. *AABB*, *AABBCC* or *AABBCCAABB*). The phrases are short and unequal, and the singing style relatively tense and pulsating. In contrast to the Peyote religion, which was still flourishing in the mid-20th century and for which many songs were being composed, the Ghost dance survives largely in the memory of older individuals, and new songs have not been added to the repertory. The style is found mostly in Plains Indian repertories; the Ute Indian song (see ex.7 above) also shows the characteristics of the Ghost dance style.

4. New Amerindian musics. In addition to the development of Christian hymnody and pan-tribal styles such as the Ghost dance and Peyote music, Amerindians have adopted styles and repertories from other American ethnic groups. Many tribes have developed fiddle traditions based on those introduced by their European neighbours in the 18th and 19th centuries. Native composers and performers participate in the full range of popular idioms, including rock and roll, folk rock, jazz, gospel and country and western music.

Bands such as Xit write song lyrics that comment on current sociopolitical concerns and issues, or reflect the realities of contemporary Amerindian life. Some individual performers, including Buffy Sainte-Marie and Jim Pepper, have achieved widespread popularity in the

7. Peyote meeting of Comanche Amerindians, c1923: Marcus Poco (centre) and Chebabta (extreme right) hold gourd rattles; the body of the drum (left of centre) is an iron pot and its skin is fastened by rawhide thongs wound round stones

mainstream of American music. The group Ulali has explored inter-ethnic musical and historical connections through native south-eastern song genres with lyrics in English and performed with African-American vocal harmonies. Finally, the Plains courting flute has become a musical icon of the New Age movement through the success of composer/performers such as Carlos Nakai.

In the 19th century, some Amerindians began to compose in European genres using European notation. Thomas Commuck (1805–55), of the Narragansett tribe, wrote and published a collection of 120 hymns for the Methodist Episcopal Church in 1845. More recent native composers include Jack Kilpatrick (Cherokee), Louis Ballard (Cherokee-Quapaw) and Brent Michael Davids (Mohican). Davids, who has received international acclaim, has had commissions from the Joffrey Ballet, the Kronos Quartet and the National Symphony Orchestra. His works reflect images and concepts from contemporary Amerindian life, incorporating Amerindian musical instruments and instruments of his own design into the European symphony orchestra, string quartet and other ensembles.

V. Research

The music and musical culture of the Amerindians have been studied since the late 19th century, and extensive collections of recordings have been deposited at various archives – notably in the Library of Congress (Washington, DC), the Archives of Traditional Music, Indiana University (Bloomington), and the National Museum of Canada (Ottawa).

1. Canada. 2. USA.

1. Canada. Recording of indigenous music began with cylinders made by Franz Boas (of Plateau and Northwest Coast material) and Alexander Cringan (Iroquois) in the 1890s. At this time, a policy of assimilation was being pursued by the Canadian government which had banned the potlatch and religious rituals of Northwest Coast Amerindians in 1884 and the sun or thirst dances of the Plains area in 1895. These prohibitions remained in effect until 1951. Consequently there was an urgency with many projects undertaken in the 20th century to record songs that would be otherwise irrevocably lost. Hundreds of songs were recorded, but often without full exploration or documentation of context or informants, or a translation of the texts being obtained. Subsequently some of these recordings were released commercially without receiving clearance from the nation concerned or from the particular owners of the songs. In many cases some of these songs should only be heard traditionally by certain persons and in particular situations. As a result of this misuse of their musical heritage, many indigenous nations within Canada during the 1980s drew up guidelines on what may be recorded, released commercially and used for demonstration purposes by outsiders of the culture. Emphasis is being placed on preparing videos, making recordings and preparing courses of studies including traditional music to be used in schools, but these are normally restricted for use within the territory of the nation. This direction has encouraged indigenous elders and students to research and write about their own musical traditions. With the commencement of the new territory of Nunavut (official languages Inuktitut, Inuinnaqtun, English and French) and the western territory (official languages North Slavey, South Slavey, Nehiyaw; (Cree), Chipewyan, Dogrib, Gwich'in, English, French and Inuvialuktun) of the former Northwest Territories beginning in 1999, preparation of such materials is increasing dramatically.

A careful reading of existing written documentation and oral accounts by indigenous persons verifies that traditional music has constantly undergone some change. Those changes often became more dramatic through contact with other cultures, particularly that of Euro-Canadian settlers. Christian missionaries soon realized the attraction of their sacred music for the indigenous peoples. Nehiyaws using a hymn to calm turbulent waters, Mi'kmaqs and Mohawks using hymns instead of traditional dirges for wakes, Iroquois gathering to sing hymns at a house-party rather than traditional social songs, a Dene drummer performing a 'prayer song' modelled on the traditional medicine song within a mass, or the Innu praying in a country tent by singing hymns turned outwards to the tent wall beyond which the spirits are encircled, all indicate that Christian hymnody is functioning in a manner parallel to the musics of indigenous parent cultures.

The Canadian government gave responsibility for the schooling of indigenous peoples largely to church organizations. The music of the church according to the denomination responsible was reinforced in these usually residential schools. To support the assimilationist governmental policy, use of indigenous languages and traditional music was banned, while many schools had bands, and instruction in string and keyboard instruments to perform European-derived compositions.

Involvement with Euro-Canadian music increased rapidly in the 20th century through better transportation systems and the media including recording devices, radio and television. Today Canadians of indigenous heritages are working in a wide variety of musical styles depending on what musical influences and kinds of education they have had. (For a brief overview of their contributions to concert music and fiddle music, contemporary popular musics, *see* Canada, §II, 4.).

2. USA. Amerindian music has been much studied by American scholars because the groups have been readily accessible and because most Amerindians have, for several generations, been able to speak English. Other causes have been the growth of American musical nationalism during the late 19th and early 20th centuries and the growing interest of Americans in the cultures of minority groups.

Scholars have published transcriptions of Amerindian songs in Western notation, comparative studies covering

the entire continent, monographs on individual tribal styles and investigations of special historical and theoretical topics. Among the most enterprising and distinguished have been Frances Densmore, who recorded, transcribed, and published songs of many tribes for the Bureau of American Ethnology; Alice C. Fletcher, Theodore Baker and Benjamin Ives Gilman, who were early pioneers in this field; Willard Rhodes, who made large numbers of recordings and published a number of studies; David P. McAllester, whose interest has been confined largely to music of the Southwest, especially the Navajo tribe; Gertrude P. Kurath, whose contributions have been mainly in the area of Amerindian dance; Helen H. Roberts, who published the first monograph relating the musical styles to different geographical areas; George Herzog, who used the methodology of the Berlin ethnomusicologists E.M. von Hornbostel and Carl Stumpf in several studies of individual Amerindian tribes; Alan P. Merriam, who in his monograph on the music of the Flathead tribe gave equal attention to the anthropological and structural aspects of their music; and Bruno Nettl, whose work on Blackfoot music and ritual drew on ethnohistory and mythology as well as contemporary fieldwork. Nettl is also known for his contributions to mapping the musical areas of the Amerindians (1954). The ethnomusicologists Hornbostel, Stumpf, and Otto Abraham and the anthropologist Franz Boas, though their main work lay elsewhere, also made important contributions to the study of American Indian music.

Scholars of the next generation include Charlotte Frisbie, who has focussed on the Navajo; Leanne Hinton, who has studied Havasupai music and language; William Powers, Orin Hatton and Tara Browner, who have emphasized the Plains region; Thomas Vennum, whose work centres on the Ojibwa; Richard Keeling, who has focussed on northern California; Judith Vander, who has studied Shoshone music and the ghost dance; Charlotte Heth, Marcia Herndon, David Draper and Victoria Levine, who have focussed on the Southeastern region; Richard Haefer and Brenda Romero, whose work emphasizes the Southwest; and Virginia Giglio, who has worked with southern Cheyenne singers.

While 20th-century Amerindian music is fairly well-known, scholars have only recently begun to develop methods to research its earlier history. Some tribes used graphic notations, but these were not widespread, and tended to convey information about song texts, and their number and sequence in ceremonies, rather than melodies or rhythm. Archaeology has not contributed greatly to music research as most Amerindian musical instruments were made from natural materials subject to deterioration. Scholars interested in historical processes have worked with ethnohistorical materials, sacred narratives and oral history, combined with what is known of the movements of tribes and the geographic distribution of stylistic features. Therefore, most scholars have concentrated on the period since 1890 when sound recording began; many historic and contemporary recordings are available commercially from the Library of Congress Archive of American Folk Culture, Smithsonian/Folkways Recordings, Indian House and Canyon Records.

BRUNO NETTL/VICTORIA LINDSAY LEVINE (I; II, 2; III; IV; V, 2), ELAINE KEILLOR (II, 1; V, 1)

Amerus [Aluredus, Annuerus, Aumerus] (*fl* 1271). English theorist, active in Italy. He was a clerk and a member of the household of Cardinal Ottobono Fieschi (later Pope Adrian V), and wrote his *Practica artis musice* in the cardinal's house, perhaps in August 1271 at Viterbo where the cardinal was staying for the conclave. The work is explicitly designed for teaching practical music to boys and includes all the conventional notions of the period concerning *musica plana*. The central part of the work

contains the tonary according to the practice of the French and English churches and the Roman curia. There is a chapter towards the end devoted to the composition of polyphonic music (*cantilene organice*); this chapter may be the first treatise on measured music written in Italy. The simple notes described are the long, *brevis* and *semibrevis*, in a binary relationship (i.e. the long equals two *breves* and four *semibreves*). Ligatures are equated to various rhythmic feet, and the greatest value is normally assigned to the last note.

F. ALBERTO GALLO

Amerval, Eloy d'. *See* ELOY D'AMERVAL.

Ames, Charles (*b* Pasadena, CA, 1 March 1955). American composer, theorist and computer programmer. He studied at Pomona College (mathematics and music composition, BA 1977) and SUNY, Buffalo (MA 1979, PhD 1984); his teachers included Morton Feldman, Lejaren Hiller, Kohn, Kotoński, John Steele Ritter and Dorrance Stalvey. In 1995 he was appointed Senior Programmer Analyst with Client Logic Corporation (also known as the Softbank Services Group, UCA&L and Upgrade Corporation of America). He has also served as a visiting instructor for numerous courses in computer music, automated composition and systematic compositional procedures at SUNY, Buffalo, the New England Conservatory and the Kurzweil Foundation.

Ames is most noted for his work in systematic approaches to music composition. His use of computers in the composition of works for acoustic instruments has been influenced by techniques originated by Xenakis, Gottfried Michael Koenig and Hiller. His interests range from music cognition and hierarchical structures in music to computer-verified modelling of musical styles. His computer music programs, most notably Cybernetic Composer (1986–8, designed for jazz, rock and ragtime composition), Markov (1988) and Compose (1989, based on elements of serialism and systems devised by Joseph Schillinger, Xenakis, Koenig, Andre Andreevich Markov and Noam Chomsky) are inexorably intertwined with his compositional style.

KRISTINE H. BURNS

Ameyden, Christian (*b* Oirschot, Brabant, *c*1534; *d* Rome, 20 Nov 1605). Flemish singer and composer. After studying with his uncle, who was a singer at Antwerp Cathedral, he went to Rome, and by 1 March 1564 was a tenor in the papal chapel. He was released from this appointment on 31 August 1565, with 13 other musicians. On 10 March 1569 he was appointed a singer in the Cappella Paulina, made a canon, and given the prebend recently vacated by the death of Simon Sauvage. Returning to the papal chapel, he became abbot on 2 January 1572 and *punctator* (responsible for choir attendances) in 1573. In 1593 and 1594 he was named head of the singers' society, and in 1596 he retired from his singing duties and was pensioned. The last significant Flemish musician in the papal chapel, Ameyden was highly regarded by his fellow chapel members. He is buried in S Maria dell'Anima, Rome. *I-Rvat* C.S.30 contains a five-part mass, *Fontes et omnia*, and C.S.29 a four-part *Magnificat primi toni*. Lassus's third book of five-part madrigals (Rome, 1563, 8/1589; RISM 1563[11]) included Ameyden's *Quel dolce suon*.

LAVERN J. WAGNER/MITCHELL BRAUNER

Amfitheatrof [Amfitheatrov; Amfiteatrov], **Daniele (Alexandrovich)** (*b* St Petersburg, 16/29 Oct 1901; *d* Rome, 7 June 1983). Italian composer and conductor of Russian origin. A grandson of the composer Nikolay Sokolov and a brother of the cellist Massimo Amfitheatrof, he studied with Vītols in St Petersburg and Křička in Prague, but the greater part of his training was undertaken in Rome, where he studied composition with Respighi at the Conservatorio di S Cecilia (diploma 1924) and the organ at the Pontifical Academy of Sacred Music. He was engaged as a pianist, organist and chorus assistant at the Augusteo (1924–9), also conducting the orchestra under Molinari's supervision. Thereafter he was artistic director of the Genoa and Trieste radio stations and conductor and manager for Italian radio in Turin; he also conducted elsewhere in Europe. In 1937 he went to the USA as associate conductor of the Minneapolis SO, and in 1939 he settled in Hollywood as a film composer, becoming an American citizen in 1944. He moved to New York in the 1950s and then to Venice.

Most of Amfitheatrof's works are in a Respighi-like Romantic-Impressionist style marked by vivid orchestral colouring. His more than 70 film scores are occasionally experimental in their instrumentation, and, though lacking in personality, reveal considerable versatility. Amfitheatrof worked with such directors as Max Ophüls, Fritz Lang, Henry Hathaway, Anthony Mann, Sidney Lumet, George Cukor and Sam Peckinpah, gaining Academy Award nominations for *Guest Wife* (1945) and *Song of the South* (1946). He did not, however, adjust to the profound linguistic changes in film music of the 1970s, and this led to his prematurely cutting short his work.

CHRISTOPHER PALMER/SERGIO MICELI

Amicis, Anna Lucia de. *See* DE AMICIS, ANNA LUCIA.

Amiconi [Amigoni], **Jacopo** (*b* Venice or Naples, 1682; *d* Madrid, 1752). Italian designer. He studied in Naples and with Belluchi in Düsseldorf, and was employed at the court of Bavaria (1717–27). He went to England with Farinelli and Giovanni Bononcini in 1729, and probably through their influence was engaged as principal painter at the King's Theatre in London. According to Henry Angelo (*Reminiscences*, i, London, 1828, pp.12–13), 'nothing had been seen equally splendid and imposing with this department of stage effect, in England, before this epoch'. John Rich engaged him for the opening of the Covent Garden Theatre in 1732, for which he designed the ceiling and where he worked as scene painter. He returned to Venice in 1739 and was also in Paris and at the court of St Petersburg. He returned to the King's Theatre in 1741, remaining there for only one season, after which he became court painter at Madrid, where he decorated palaces and theatres for Fernando VI. His self-portrait appears twice: with Metastasio, Teresa Castellini and Farinelli, about 1750 (now in the Gallery of Victoria, Melbourne); and with Herrando, Farinelli and Domenico Scarlatti, about 1752 (*see* SCARLATTI, fig.6).

SYBIL ROSENFELD

Ami du clavier, Un (*fl* 1738). Pseudonym of the composer of *Sei concerti a cinque, cembalo concertino, violino primo, violino secondo, alto viola e violoncello, avec quatre fugues pour l'orgue* (Strasbourg, 1738), of which an incomplete manuscript copy exists in the Bibliothèque Nationale, Paris. An engraved 'nouvelle édition' (1751) contains the concertos only. Handel's influence is clear, especially in an air with variations inspired by the 'Harmonious Blacksmith', and that of Hasse is likely. There are many oddities, including finales in which the violin takes over completely as the solo instrument while the harpsichordist accompanies from a figured bass. (B. Gustafson and D. Fuller: *A Catalogue of French Harpsichord Music, 1699–1780*, Oxford, 1990)

DAVID FULLER (with BRUCE GUSTAFSON)

Amiens. City in France, capital of Picardy. Christianity was introduced in the 4th century, St Firminus being the city's first bishop. The cathedral of Notre Dame, the largest in France, was built between 1220 and 1270. During the Middle Ages the town's prosperity was based on the cloth trade. By the Treaty of Arras (1435) King Charles VII ceded Amiens to Duke Philip the Good of Burgundy, but Louis XI recaptured the city in 1471 and, except for brief occupations by the Spanish in 1597 and the Germans in 1914 and 1940, the town has since remained part of northern France.

The history of the city's music centres on the cathedral. The first evidence of plainchant dates from after the Norman invasion, when Bishop Gervin (1091–1102) engaged several choirboys, clerks and a cantor named Rogerus. Surviving manuscripts include a late 13th-century 'Liber ordinarius' in troped plainchant and a 14th-century 'Liber organicus' in polyphony. By 1146 a *schola cantorum* was established to train the choristers and the adult *vicarii*. During the 13th century the choir was increased from ten (including four boys) to 16, under a precentor and by the early 16th century the number of boys had increased to ten. The trouvères Simon d'Authie and Richard de Fournival were canons in the Chapter in 1228 and 1246 respectively. The late 13th-century composers – Guillaume d'Amiens and Petrus de Cruce (Pierre de la Croix) – were both from Amiens. The cathedral musicians included Firmin Caron (1422), Jean Mouton (*Maistre des enffans*, 1500), François Dulot (1514) and Laurent Bonard (1547–53). The composer Vulfran Samin was a chorister at the brotherhood of the Notre Dame du Puy in 1543–4. In 1500 Mouton petitioned the town council to present a Mystère de la Passion which had previously been given at the nearby town of Doullens; and in 1559 a company of actors and musicians led by Roland Guinet offered ten days of moralities and farces with 'jeux de viole et de musique'.

During the 17th century outstanding musicians in the cathedral included Jean de Bournonville (choirmaster 1619–31), his pupil Artus Aux-Cousteaux (choirmaster, *c*1632–4), Valentin de Bournonville (choirmaster, 1643), Jean Cathala (*c*1650) and François Cozette (1658–64) who was perhaps the composer of two masses published in Paris by Ballard. In the 18th century the *vicarii* were chosen according to their talent as singers or instrumentalists and apart from the organist, two serpent players were engaged (one doubling on bassoon), supplemented by two cellos on feast days. Choirmaster-composers included Nicolas Grogniard (1710–16), Esprit Blanchard (1736–8) and Dominique Leuder (*c*1770–75) whose choirboys included J.-F. Le Sueur. The choirmasters generally directed the concerts of an Academy of Music active from 1738. This later continued as a Music Society known as Les Apollons which, between 1745 and 1776, gave concerts with music by Percolesi, Tartini and Leclair and Jolliez. The cathedral's strong musical tradition survived until the Revolution, under the direction of Antoine Blanchard (1734–99) and others, but subsequently Amiens lost its importance as a musical centre.

FRANK DOBBINS

Amiot, (Jean) Joseph (Marie) (*b* Toulon, 8 Feb 1718; *d* Beijing, 8 Oct 1793). French writer on music. After a classical education, he entered the Society of Jesus as a novice in 1737, taught in Jesuit colleges for ten years, then, on being ordained, requested assignment to the China mission. He arrived in Beijing in 1751 and remained there until his death.

Amiot's remarkable output of monographs, translations, dictionaries and voluminous scholarly correspondence includes several extensive works on Chinese music – among the first serious Western studies of any non-Western music. He first translated the 17th-century book *Guyue jingjuan* ('Commentary on the Classic of Ancient Music') by Li Guangdi; although paraphrased by Amiot and others, the translation was never published and the manuscript was lost. His next work on Chinese music, the *Mémoire sur la musique des Chinois*, was edited for publication by Abbé Pierre Joseph Roussier, a theorist specializing in ancient and foreign music; however, Roussier added lengthy, pedantic notes of little value while deleting many plates, all Chinese characters, and significant portions of the text, thus obscuring the original and impairing its value for future scholars. Other important manuscripts remain unpublished, including a study of contemporary Chinese music practice and a notebook containing 54 tunes transcribed into staff notation.

Amiot was a competent and sincere scholar who attempted to convey Chinese music in a Chinese manner. His work was frequently quoted throughout the 19th century; used with caution it is still a significant source for the state of Chinese music and theory at the end of the 18th century, and for the history of ethnomusicology.

FREDRIC LIEBERMAN

Amiran-Pugashov, Emanuel (*b* Warsaw, 8 Aug 1909; *d* Yakum Kibbutz, Israel, 18 Dec 1993). Israeli composer and teacher of Russian descent. He received his early musical education in Moscow. In 1924 he emigrated with his family to Palestine, where he continued his musical studies with Shlomo Rozovsky (1928–9). He began to compose in 1930. From 1934 to 1936 he studied music education at Trinity College, London, and composition with Bantock and Rowley; at the same time he also studied at Tonic Sol-fa College, London. With the formation of the Israeli Army, he was appointed First Officer for music, founding the orchestras of both the army and the cadets. In 1949 he became the central inspector for music education at the Ministry of Education, a post he held until his retirement in 1975.

Amiran was one of the *Ereṣ Yisrael* composers who developed the character of what became known as typical Israeli folksong. His vast number of songs (around 600), many of which set biblical texts, were published in a wide array of pamphlets and song books. The most notable of these include: the nursery songs *Yad el yad* ('Hand in hand', 1941); *'Amir* ('Sheaf'), songs for the seasons (1943); and three song books, *El ha-ma'yan* ('To the (water) spring'), *Har ha-mor* ('The Mor mountain') and *Li-lakh* ('To me – to you') (1980), which together contain 430 songs. He also published 120 choral arrangements (1982). His other works include incidental music, compositions for national events, festivals and celebrations (including the Tel-Aviv Purim carnival, 1929–35; the Harvest celebrations in Haifa, 1933–5 and the Beit Hasho'eiva celebration in Jerusalem, 1933) and film scores. His book on musical philosophy, *Traffic-Lights and Sign Posts in Musical Education*, was published in 1976.

NATAN SHAHAR

Amirkhanian, Charles (Benjamin) (*b* Fresno, CA, 19 Jan 1945). American composer and administrator of Armenian descent. He studied at Fresno State University (BA in English 1967), San Francisco State University (MA in interdisciplinary creative arts 1969) and Mills College (MFA in electronic music and recording media 1980), where his teachers included David Behrman, Robert Ashley and Paul de Marinis. He has served as music director for KPFA Radio (Berkeley, California, 1969–92), executive director of the Djerassi Artists Program (1993–7), and both artistic (from 1993) and executive director (from 1998) of the Other Minds Festival (San Francisco). His honours include ASCAP's Deems Taylor Award for innovative musical programming (1989) and residencies at the Tyrone Guthrie Centre, Ireland (1997), and the Bellagio Study and Conference Centre, Italy (1997).

Amirkhanian's experiences as a percussionist and radio presenter have informed all of his works. Between 1961 and 1969 he wrote many pieces for live performance, often involving percussion or tape. In 1965 he began to compose tape pieces using the spoken voice and ambient sounds, sources he continued to employ in later music. His vocal settings, the texts of which are sometimes drawn from literature, take words out of context and exploit them for their rhythmic and timbral qualities. Works such as *Seatbelt Seatbelt* (1973) and *Dutiful Ducks* (1977), made up largely of the words in their titles, display a laconic, affectionate humour and a taste for surreal combinations. He has also created *Hörspiele* that process both abstract and representational sounds; these include

Metropolis San Francisco (1985–6), *Walking Tune 'A Room-Music for Percy Grainger'* (1986–7) and *Pas de voix* (1987). Among his other works are homages to Nicolas Slonimsky and Lou Harrison and compositions that refer to American and Armenian culture. He has devoted much of his career to publicizing and producing the works of other composers, and to administrative work in new music; he is a central figure in the network of West Coast composers and musicians.

WORKS
(*selective list*)

LIVE PERFORMANCE

Genesis 28 Four Speakers, 4 spkrs, 1965; Sym. no.1, 2 solo perc, perc duo, amp perc, tpt trio, trbn, pf/cl, va, 1965; Composition nos.1–5, amp ratchet, 1965–7; Ode to Gravity (theatre piece), graphic score, any medium, 1967; Serenade II 'Jance Wentworth', graphic score, any medium, 1967, collab. T. Greer; Egusquiza to Falsetto (theatre piece), chbr orch, tape, 1979, collab. M. Fisher; Spoilt Music (theatre piece), 1v, tape, 1979; collab. C. Law; His Anxious Hours, chbr ens, tape, 1987; Octet, 8 ratchets, 1998; many other works

TEXT-SOUND (TAPE)

Words, 1969; Oratora konkurso rezulto: autoro de la jaro (Portrait of Lou Harrison), 1970; Radii, 1970, rev. 1972; If In Is, 1971; Dzarin bess ga khorim, 1972; Just, 1972; Sound Nutrition, 1972, rev. 1972; Heavy Aspirations (Portrait of Nicolas Slonimsky), 1973; Mugic, 1973; Seatbelt Seatbelt, 1973; Much-Rooms, 1974; RAY MAN RAY, 1974; she she and she, 1974; Mahogany Ball Park, 1976; Dutiful Ducks, 1977; Dreams Freud Dreamed, 1979; Church Car, 1980; Dot Bunch, 1981; History of Collage, 1981; Hypothetical Moments (in the Intellectual Life of Southern California), 1981; Andas, 1982; Dog of Stravinsky, 1982; Gold and Spirit, 1983; Metropolis San Francisco, 1985–6; Dumbek Bookache, 1986; Walking Tune (A Room-Music for Percy Grainger), 1986–7; Pas de voix (Portrait of Samuel Beckett), 1987; Politics as Usual (1988); Bajanoom, 1990; Im Frühling (1990); Loudspeakers (for Morton Feldman), 1990; Vers les anges (for Nicolas Slonimsky), 1990; Chu Lu Lu, 1992; Miatsoom, 1994–7; Ka himeni hehena, 1997; Marathon, 1997; Son of Metropolis San Francisco, 1997; Varsity Pewter, 1998; many other works

PAUL ATTINELLO

Amirov, Fikret (Meshadi Jamil') (*b* Gyandzha [later Kirovabad], 22 Nov 1922; *d* 2 Feb 1984). Azerbaijani composer. The son of a famous *tar* player and singer, he studied at the Kirovabad Music College (*tar* class 1938) and then at the Baku College in the composition classes of Burshteyn and Karnitskaya. In 1939 he entered Zeydman's composition class at the Azerbaijan State Conservatory, and he also studied the foundations of Azerbaijani music under Hajibeyov with enthusiasm. His years at the conservatory, marked by active creative work, were interrupted by the war. He was wounded at the front and, being demobilized, returned to his studies, which he completed in 1948, presenting as his diploma work the opera *Ulduz*. Other compositions of this period include his most famous pieces: the symphony *Pamyati Nizami* ('To the Memory of Nizam', 1947), *Shchur* and *Kyurd Ovsharï* (1948), both symphonic *mugam*, and the opera *Sevil'* (1953). Throughout his career he has taken a leading part in music administration: he was artistic director of the Kirovabad PO (1942–3) and the Baku PO (1947), director of the Azerbaijani State Theatre of Opera and Ballet (1956–9) and secretary to the Azerbaijani Composers' Union. In 1965 he received the title National Artist of the USSR.

Amirov's best orchestral works are the first two symphonic *mugam*, which won him a State Prize in 1949. In them he created a new symphonic genre based structurally on the folk *mugam* form; the majority of the traditional divisions are retained, as is the principle of alternating episodes of a quasi-improvisational type with rhythmically strict passages in song or dance style (for these Amirov used carefully selected folk melodies). The free development inherent in the traditional *mugam* combines naturally with the variational and polyphonic treatment. In 1970 Amirov produced a further symphonic *mugam* showing his mastery of the form, *Gyulistan – Bayatï shirazi*.

Sevil', the first national lyrical-psychological opera, holds a very important place in the operatic art of Azerbaijan. The plot, after Jabarlï's play, concerns the liberation of Azerbaijani women, and the work has met with widespread success by reason of the sharpness of its dramatic conflicts, the delicate musical characterization of its personalities and its decisively national idiom. Vocally the work is dominated by an aria style; indeed, free vocal melody is native to Amirov's talent, and the melodic style of his opera strongly influences its harmony. In general his music combines the traditions of Azerbaijani folk music with those of Russian and European art music. His use of the orchestra is notable above all for its clarity and, at times, picturesqueness.

WORKS
(*selective list*)

Ops: Ulduz (I. Idayat-zade), 1948; Sevil' (T. Yeyubov, after D. Jabarlï), 1953, Baku, 1953

YURY GABAY

Amish and Mennonite music. The Protestant denominations of the Amish (56,200 adult members in the USA in 1990) and Mennonites (380,500 in North America) have a common source in the Anabaptist movement of 16th-century Europe. In the 1520s the first group, the Swiss Brethren, separated from the early Reformers and the Roman Catholics for reasons more radical than those of Luther or Zwingli: believers' baptism (thus Anabaptists, Rebaptizers), separation of Church and State, and the commitment to discipleship of Christ to the point of rejecting participation in war. Anabaptists emerged in Bohemia, south Germany and the Netherlands within the following decade.

Although a few Anabaptist leaders followed Zwingli's example in advocating the complete elimination of music from church services, Anabaptists who were persecuted for their faith soon produced a distinctive hymnody. The first publication, *Etlicher schöner christlicher Geseng* (1564), was a collection of 53 hymns composed by prisoners at Passau between 1535 and 1540. It was followed by *Ausbund, das ist etliche schöne christliche Lieder* (1583), its first part consisting of 80 Anabaptist hymns from as early as 1524 onwards and its second of all but three of the 53 hymns from the 1564 collection. Up to 1838 the *Ausbund* appeared in 11 known European editions.

Mennonites, as 17th-century Anabaptists were called – after Menno Simons (*d* 1561) – took the *Ausbund* to America in 1683, when they began a long succession of emigrations. The Amish, following the Swiss bishop Jacob Ammann, broke away from the Mennonites in Europe in 1693 over matters relating to stricter discipline and adherence to uniformity of dress. They first emigrated to America in about 1720 and also took the *Ausbund* with them. It was printed at Germantown, Pennsylvania, in 1742 and has remained in print ever since. The *Ausbund*, still the most used hymnal of the Old Order Amish, is thus unique in Protestant hymnody in having been in continuous use for over 400 years.

The retention of past traditions is essential to the Amish, who still speak in a German dialect, dress in 17th-century fashions and reject many aspects of a technological age. Their church singing is unique: always monophonic, melismatic, unaccompanied, non-metrical and extremely slow. Because they do not record their worship on principle, few recordings exist. The *Ausbund* had no printed tunes. However, a heading to each hymn indicated its association with a secular or sacred folktune, a Latin hymn or a melody from other Reformers; a few hymns named their own tunes. Jackson, the first to trace relationships between the ornamented versions the Amish now sing and the 16th-century forms of the specified tunes, speculated that oral transmission of the melodies at a slow tempo gradually resulted in group alterations and embellishments of the original. (For transcriptions of Amish melodies, see Yoder, 1942; Burkhart; and Hohmann.)

In contrast to the Amish, the Mennonites have, slowly but continuously, assimilated the culture around them. They moved beyond the *Ausbund* in the early 19th century with two German hymnals: *Die kleine geistliche Harfe der Kinder Zions* (1803), published by the descendants of the Germantown settlers, and *Ein unpartheyisches Gesang-Buch* (Lancaster, PA, 1804). Both books consist of selected German hymns, and French Calvinist psalms in Ambrosius Lobwasser's translation; the 1804 book borrowed 68 *Ausbund* songs as well.

The most important Mennonite tunebook is Joseph Funk's *A Compilation of Genuine Church Music* (1832, rev. 5/1851 as *Harmonia sacra*, rev. 12/1876 as *New Harmonia sacra*, 25/1993). Funk had published a German tunebook in 1816, but *Genuine Church Music* reflected the Mennonites' appropriation of English. Its oblong format and didactic function paralleled similar American books. Funk began with the rudiments of music and music-reading in the four shapes (*mi*, *fa*, *sol*, *la*) of W. Little and W. Smith's *The Easy Instructor* (1798; *see also* SHAPE-NOTE HYMNODY). The music of Part II, for public worship, included English psalm tunes, American hymn tunes, and revival melodies of the early 19th century. Funk notated some of the oral folktunes, possibly for the first time, and incorporated early American anthems, which are still used in Mennonite congregations. Part-singing – three parts, with the melody in the middle, expanding to four parts in the 12th edition – probably entered Mennonite worship through Funk's influence.

The first Mennonite hymnal in English was *A Selection of Psalms, Hymns, and Spiritual Songs* (1847, 7/1877/*R*; title from 2nd edn, *A Collection . . .*). It consists only of texts, and the editors specified that *Genuine Church Music* be used as the companion tunebook, recommending specific combinations of text and tune. *Hymns and Tunes for Public and Private Worship, and Sunday School Songs Compiled by a Committee* (1890) borrowed heavily from it.

The General Conference Mennonite Church, organized at Donnelson, Iowa, in 1860, chose and republished a hymnal from south Germany. Successive emigrations from Prussia and Russia greatly enlarged the group. Through these German-speaking immigrants the chorale and hymn traditions of the German Lutherans and Pietists were revived and strengthened. They brought their hymnal, *Gesangbuch in welchem eine Sammlung geistreicher*, published in Russia in 1844 but harking back to the Prussian *Geistreiches Gesangbuch* of 1767. Its roots probably extended back to the Dutch Anabaptist martyr hymns of *Veelderhande Liedekens* (1556). The Old Colony Mennonites of Mexico still use it. In 1890 the General Conference Mennonites published a hymnal, *Gesangbuch mit Noten* (16/1936), which combined their German traditions. They turned to a mainline Protestant book, *Many Voices*, when in 1894 they also needed an English hymnal.

In 1969 the Mennonite Church and the General Conference Mennonite Church published *The Mennonite Hymnal* (in both round- and shape-note editions), which drew together these historical strands and incorporated songs from the Moody-Sankey revival as well. In 1992 North American Mennonites and the Church of the Brethren published jointly *Hymnal: a Worship Book*. Mennonites today tend to sing in four parts, either *a cappella* or accompanied, although until the mid-1960s the Mennonite Church vigorously rejected the use of

instruments in worship; the first organ appeared in the General Conference Mennonite Church in 1874.

Other groups of Mennonites have unique musical traditions that reveal their religious, geographic or ethnic situations. The Mennonite Brethren, for example, who began their emigrations from Russia in 1874, were influenced by German Pietism, and their hymns tend to be evangelical and folklike in character.

In 1982 the Mennonite Indian Leaders' Council published a book of Cheyenne spiritual songs, *Tsesema'heone-nemeototse*, based on traditional Cheyenne music. It illustrates the expansion of Mennonites beyond their Germanic roots to 78 languages on six continents. The Mennonite World Conference handbook of 1990 indicated a total membership of 856,600 adults. This Conference produced an *International Songbook* in 1978 (3/1997).

MARY K. OYER

Ammerbach, Elias Nikolaus (*b* Naumburg, *c*1530; *d* Leipzig, bur. 29 Jan 1597). German organist and keyboard music arranger. In the foreword of his 1571 tablature Ammerbach stated that he had 'from childhood on, even from birth, a singular desire and love, charm and inclination' towards music so that he 'proceeded to eminent masters in foreign lands, to probe, bear, and endure much for it'. He enrolled for half a year at the University of Leipzig in 1548–9. From 1 January 1561 to April 1595 Ammerbach served as organist at the Thomaskirche in Leipzig. The civic records during his long tenure testify to an easy-going attitude (perhaps even resignation) to his financial difficulties and the death of his first two wives. His third wife and five children survived him.

In his first publication Ammerbach introduced what has since been called new German organ tablature in which pitches are expressed in letter notation with rhythm-signs above them. The decoration of vocal pieces when played on instruments, however, is a technique that undoubtedly predates even the earliest known written instrumental music. Ammerbach's first tablature is also the first printed German organ music. 'Instrument' in the title, according to Ammerbach, includes 'positive, regal, virginal, clavichord, clavicembalo, harpsichord and the like'. Ammerbach arranged the contents of this book, *Orgel oder Instrument Tabulatur* (1571), into five progressively more difficult categories. Little or no coloration occurs in the first group of 44 German songs in four voices (for nos.37 and 38 see illustration). The composers of many are unknown; some pieces have been borrowed from Le Maistre, Forster, Buchner, Senfl, Isaac and others. A group of 27 dances, several of them paired, follows. These employ repeated chords and a minimum of decoration, except in the passamezzos of the third section, where the varied top voice requires considerable decora-

Two German songs from Ammerbach's 'Orgel oder Instrument Tabulatur' (Leipzig, 1571)

tion. In the fourth section (12 four-part vocal works) and in the fifth (seven five-part vocal works) lavish coloration occurs on every line. The sacred and secular vocal models are by Clemens non Papa, Zirler, Senfl (2), Heintz, Hofhaimer, Buchner, Lassus (4), Scandello and Ivo de Vento. The bass range extends to C, the treble to *a″*. (In the tablature of 1583 Ammerbach extended the treble to *c‴*.)

Ein new künstlich Tabulaturbuch (1575) includes 40 vocal intabulations and one praeambulum. The 26 sacred works, with one exception, have Latin titles; the remaining secular works have German titles. Identified composers of the sacred repertory include Lassus (10), Clemens non Papa (3), Formellis (2), Meiland (2), Arcadelt, Berchem, Crecquillon, Dressler, Gastritz, Ville Font (1 each). The secular songs were composed by Lassus (7), Scandello (5) and Ivo de Vento (2). Five-part settings outnumber six-part settings, with even fewer four-part settings. These pieces, more than the ones in the first book, come from the popular international repertory. All lines carry profuse ornamentation.

In 1583 Ammerbach revised and expanded his 1571 publication. He added more works with German titles than with French and Italian. Composers new to this edition include Meiland, Regnart, Josquin, Sandrin, Rore, Crecquillon, Godard, Ferrabosco, Berchem and Arcadelt. In the 1583 tablature Ammerbach gave all these songs without coloration; some may in fact have been simplified for students, to whom the work is addressed. The number of dances was substantially increased, since pieces found also in instrumental publications of Gervaise, Le Roy, Phalèse and others were added.

CLYDE WILLIAM YOUNG

Ammon [Amon], **Blasius** (*b* Imst, Tyrol, *c*1560; *d* Vienna, between 1 and 21 June 1590). Austrian composer. He may have belonged to a Franconian family who moved to Imst from Bamberg in the mid-16th century. He was a choirboy in the Hofkapelle of Archduke Ferdinand I at Innsbruck and probably attended the choir school there (it was founded in about 1569). According to the first of two dedications in his 1590 motet collection, he later went to Venice for further study, presumably when his voice broke. After he returned (in 1577 or 1578) he was in the employ of the Franciscan order until 1580, when he probably entered the service of Johannes Ruoff, abbot of the Cistercian monastery at Zwettl, north-west of Vienna, to whom he dedicated his 1582 book of introits. He was Kantor at the Cistercian monastery of Heiligkreuz from 1585 to 1587, when he entered the Franciscan monastery in Vienna. He later took his vows at this house and died there during the printing of his 1590 collection.

Ammon was perhaps the first of a number of late 16th- and early 17th-century composers north of the Alps whose work was strongly influenced by Venetian music. His 1582 introits, by their very nature, are in short sections, and he seems to have been concerned with rich sonority, all five voices being kept busy for most of the time. Chordal writing predominates, enlivened by strong, verbally derived rhythms and syncopations of one voice against the rest. Imitation is usually found only at the beginning of a piece and in the more melismatic codas on such words as 'Alleluia'; it is for the most part short-winded. The motets of 1590 for four to eight voices are much more varied and make use of the split ensembles so beloved of the Venetians. The three eight-part motets are real double-choir pieces, much in the style of Andrea Gabrieli, with long passages for single choir punctuated by tuttis and close echo effects. Many short passages in the six- and seven-part motets, and even in the five-part *Magi videntes*, are scored for two contrasting groups. The five-part *O vos omnes* is a remarkably expressive piece, in contrast to the fanfares of *Canite tuba*, for instance, and it uses at the outset a remarkable A-G♯-A ostinato that is heightened to E-D♯-E in the soprano part. Ammon seems to have adopted a forward-looking, tonal attitude to leading notes and to accidentals generally.

WORKS

Edition: *B. Ammon: Kirchenwerke I*, ed. C. Huigens, DTÖ, lxxviii, Jg.xxxviii/1 (1931/*R*) [H]

Liber sacratissimarum quas vulgo introitus appellant cantionum selectissimus, 5vv (Vienna, 1582); H
Missae quatuor ... quibus unica ... pro fidelibus defunctis est adiecta, 4vv (Vienna, 1588)
Sacrae cantiones, quas vulgo moteta vocant, quibus adiuncti sunt ecclesiastici hymni de nativitate, resurrectione & ascensione Domini, 4–8vv (Munich, 1590); H
Breves et selectae quaedam motetae, 4–6vv (Munich, 1593)
Introitus dominicales per totum annum, 4vv (Vienna, 1601)
Works (possibly incl. some reprs. from above vols.) in 1603[1], 1609[1], 1627[1], 1628[2]
Ave Maria, 4vv, *A-Wm* (according to *EitnerQ*)
Vocavit me Dominus, 5vv, *D-Z* (according to *EitnerQ*)

ANTHONY F. CARVER

Ammon, Conrad. *See* PRAETORIUS, CONRAD.

Ammon, Wolfgang (*b* Elsa, nr Coburg, 26 Jan 1540; *d* Marktbreit, Bavaria, 26 Jan 1589). German clergyman and hymn writer. He matriculated at the University of Wittenberg on 13 October 1561, at the University of Jena in September 1562 and at Wittenberg again in October 1564; he took the MA in 1565. Ordained at Ansbach in 1566, he first went to work at Weidelbach, near Dinkelsbühl, Bavaria, and from 1567 was deacon of the Protestant Spitalkirche at Dinkelsbühl. He lost this post in 1579 because his teaching was out of line with Lutheran christological doctrines, but in the same year he was reinstated as a vicar at Marktbreit. He published *Libri tres odarum ecclesiasticarum, de sacris cantionibus* (Frankfurt, 1578, repr. 1579) which contains 66 German congregational songs, with Latin translations and 64 well-known melodies. *New Gesangbuch teutsch und lateinisch*,

darinn die fürnembste Psalmen und Gesänge der Kirchen Augsp. Confession (Frankfurt, 1581, 5/1606) is an edition of it in four books instead of three and with 20 songs added. In supplying Latin translations of the German texts Ammon had the needs of schools in mind, for with the help of his work the Protestant services could be celebrated in Latin by 'pupils and scholars'. Moreover as he pointed out 'foreigners who had a grasp of Latin but no German would have access to the true doctrine and would therefore be better able to unite in a proper understanding of the Christian faith'.

AUGUST SCHARNAGL/CLYTUS GOTTWALD

Ammonius. *See* HAYMO OF FAVERSHAM.

Amner, John (*b* Ely, bap. 24 Aug 1579; *d* Ely, bur. 28 July 1641). English composer and organist. He was born into a family which had close connections with the music of Ely Cathedral; a Michael Amner, who was a lay clerk there from 1576 to 1588, was John's uncle, and a Ralph Amner (possibly John's brother or cousin) was a lay clerk successively at Ely, Windsor and the Chapel Royal. John himself left Ely to study music at Oxford under the patronage of the Earl of Bath, but returned in 1610 to succeed George Barcroft as *Informator choristarum*. He did not, however, graduate BMus until 1613. Two years later his only publication, *Sacred Hymnes of 3, 4, 5 and 6 parts for Voyces and Vyols* appeared. Amner was subsequently ordained to the diaconate, and later appointed *vicarius* (minor canon); so he drew the annual stipends of both organist and prebendary. Throughout his tenure of office (31 years) he continued to compose for the Anglican liturgy. As late as 1640 he graduated MusB of Cambridge. Only two years after his death, choral services were discontinued at Ely at the instigation of Oliver Cromwell personally.

As a contemporary of Orlando Gibbons, Thomas Tomkins and Weelkes, Amner occupies an interesting period in the history of provincial cathedral music between the Reformation and the Commonwealth. His early compositions reflect the stylistic patterns of his predecessors at Ely – Tye, Robert White, John Farrant, William Fox and George Barcroft – clearly favouring a simple syllabic setting of readily intelligible texts. But with the rise of the high-church movement of such men as Laud and Cosin (as well as of his own dean, Henry Cesar, a generous patron of the cathedral's music), he adapted his idiom to that of the more intricate verse-anthem and polyphonic choral styles.

Of Amner's service music, two sets of Preces survive, both for five voices; the first belongs with a festal setting of Psalm lxxxix for Evensong on Christmas Day, while the second was evidently intended for the morning Office, as it is followed by *Venite* in the manuscripts. The lack of concomitant settings of the responses after the Creed precludes their frequent use today. Of the four settings of the daily canticles, only two survive complete. One is cast in the form of a 'short' service, avoiding repetitions and lengthy elaborations. The other, known as 'Cesar's Service', is a verse setting of great beauty in which the verse sections are allocated to groups of soloists rather than single voices. Of the incomplete settings, the evening canticles, known as the 2nd Verse Service, are of particular interest: the surviving organ part indicates that the verse sections were disposed among all the different voices, singly as well as in ensemble. The final 'Amen' is identical with the ending of 'O ye little flock', suggesting that the service was in six parts.

Of the shorter four-part anthems, the surviving sources of *O God my King* and *O Lord of whom I do depend* show that they were simple note-against-note settings without contrapuntal points, while *Blessed be the Lord God* is built around short overlapping imitative phrases. *Come let's rejoice*, a madrigalian setting of a paraphrased text from *Venite*, ending with a melismatic 'Alleluia', is only of passing interest. *Woe is me* is a simple but effective lament about the exile of the Jews. *Christ rising again* begins as a straightforward homophonic setting of part of the Easter Anthems, but the intensity of the text prompted Amner to expand the original texture by dividing the meane, alto and tenor parts.

Among the five-part anthems, *Lift up your heads* is the most interesting, both in its tonal scheme and in its treatment of the text. Here Amner attempted a rapprochement between the full and the verse styles: of the three sections, the second uses a three-part verse texture to pose the question 'Who is the King of Glory?', and the final section brings in the full choir with the answer 'It is the Lord'. The penitential *Remember not, Lord, our offences* sets a collect from the Litany with unusual poignancy; the opening section makes use of the lower tessituras of the voices as well as chromatic vocal lines. In contrast, *He that descended* sets a joyful Ascensiontide text with great verve, at one point using the voices to imitate trumpet calls, as Byrd had done in *Sing joyfully*. The exuberant *O come hither and hearken*, which follows 'Cesar's Service' in the York Partbooks as 'the anthem to the service', culminates in a joyful homophonic outburst, 'Praised be God which hath not cast out my prayer'. The two seven-part anthems, *Sing, O heav'ns* and *O sing unto the Lord*, represent Amner's most ambitious choral writing in the full style. They are both settings of laudatory texts, and both feature overlapping imitative phrases of the doubled voices which lend a driving rhythmic inevitability to the rich vocal texture.

The verse anthems show Amner's superb ability to match music with text in an antiphonal context. The two long Christmastide pieces from the *Sacred Hymnes*, *O ye little flock* and *Lo how from heav'n*, skilfully juxtapose verse and full sections. Perhaps Amner's most beautiful anthem is *Consider, all ye passers by*, a setting of a Passiontide text of great fervour for solo counter-tenor with five-part chorus. *I will sing unto the Lord* features a solo tenor; here the main interest is in the verse sections, where Amner used sequential writing to good effect for the repetitions, especially when triplet movement is introduced for 'my joy shall be in the Lord'. The whole anthem builds up to an impressive climax for the full 'Praise the Lord'. In *My Lord is hence removed* Amner again made use of a tenor soloist, but this time a single verse section leads into the full 'Alleluia'. The only verse anthem to make use of a solo bass is *Glory be to God on high*, which is described in the manuscripts as 'an anthem

for Easter Communion'. In *Hear, O Lord* two solo meanes imitate and complement each other during three verses, while a four-part chorus echoes both music and text of the soloists.

Amner's only extant keyboard piece is unique in that it is the only known set of variations on a metrical psalm tune. The melody appeared in Day's *Certaine Notes* (1565), composed by Tallis for *O Lord in thee is all my trust*. Each of the eight variations bears testimony to the scope of Amner's rhythmic, melodic and contrapuntal invention, as well as to his skill as a performer.

ANTHONY J. GREENING

Amodei, Cataldo (*b* Sciacca, nr Agrigento, *c*1650; *d* Naples, *c*1695). Italian composer. He went from his native Sicily to Naples to complete his musical education and remained there until his death. He was *maestro del coro* of S Paolo Maggiore and later of the Conservatorio di S Onofrio (1681–8). On 14 September 1687 he was appointed second *maestro di cappella* of the Conservatorio di S Maria di Loreto 'to teach the boys, in the morning, to play and sing'. The governors there described him as 'one of the outstanding personalities of the city', but in 1689 he had to resign 'because of his many commitments', as is stated in the governors' document appointing Alessandro Scarlatti in his place. He dedicated his op.1 to the Emperor Leopold I of Austria.

RENATO BOSSA

Amon, Blasius. *See* AMMON, BLASIUS.

Amon, Johannes Andreas (*b* Bamberg, 1763; *d* Wallerstein, nr Nördlingen, 29 March 1825). German conductor and composer. He studied singing with Fracasini and the violin with Bäuerle at Bamberg. After his voice broke, he studied the horn with Punto, who took him on concert tours in Germany, France and Austria. From 1781 to 1782 they stayed in Paris, where Amon studied composition with Sacchini. During his subsequent travels, Amon met J.A. Hiller, Reichardt, Hoffmeister, Haydn and Mozart. He continued to tour with Punto until 1789, when he accepted the post of musical director at Heilbronn. Poor health forced him to give up playing the horn, and he concentrated on improving his violin, viola and piano technique. In 1817 he became Kapellmeister to the Prince of Oettingen-Wallerstein, in whose service he remained for the rest of his life.

Amon was an expert conductor and a versatile musician, a good performer on the horn, and later on the violin, viola and piano; he also taught singing and a variety of instruments. His many compositions include duos, trios, quartets, quintets, symphonies, marches, solo sonatas for various instruments and sonatas and variations for piano. He also wrote concertos, two Singspiels, two masses, cantatas, songs and a requiem which was performed at his funeral. Many of his works are unpublished. His eldest son Ernest wrote a set of variations for flute and orchestra.

JEFFRY MARK/GAYNOR G. JONES

Amorevole. *See* AMOROSO.

Amorevoli, Angelo (Maria) (*b* Venice, 16 Sept 1716; *d* Dresden, 15 Nov 1798). Italian tenor. He established his reputation in serious roles at a remarkably early age, singing in *Amore e gratitudine* and in Vivaldi's *Ottone in Villa* (both 1729, Treviso), in Porpora's *Mitridate* and *Siface* (1730, Rome) and in Hasse's *Dalisa* (1730, Venice). Thereafter, he appeared in major productions at Turin, Milan and eslewhere in northern Italy (1731–5) before transferring to Naples (1736–40), where he sang in 11 operas, including Sarro's *Achille in Sciro*, which inaugurated the Teatro S Carlo (4 November 1737). His appearances in Vienna also attracted attention, most notably in Vivaldi's *Feraspe* (1739), and he was highly prized as a tenor in Florence, at least until 1741. Holmes (1993) has shown that Amorevoli was paid an unusually high salary as the primo uomo. Horace Mann heard him in Giuseppe Scarlatti's *Arminio* (1741, Florence) and recommended him to Horace Walpole, who reported that the pasticcio *Alexander in Persia* (1741, London) owed its success entirely to Amorevoli. After singing in ten productions at the King's Theatre (October 1741 to May 1743) and in Milan (1744–5), he made Dresden his home from 1745 in order to sing Hasse's music, except for visits to Vienna (where Metastasio praised his singing in 1748) and Milan (1748–9 and from 1759). After his retirement from the stage in 1764 he returned to the Dresden court as a chamber and church singer, retaining the post unitl at least 1771. Burney wrote that he had heard better tenor voices 'but never, on the stage, more taste and expression'. An engraved portrait of Amorevoli with a group of singers was made by Antonio Fedi and printed between 1801 and 1807.

SVEN HANSELL/KAY LIPTON

Amoroso (It.: 'loving', 'affectionate', 'amorous'). A performance direction found throughout the 18th century. Rousseau (1768) equated it with the French *tendrement*, with the qualification that *amoroso* had 'plus d'accent, et respire je ne sais pas quoi de moins fade et de plus passionné' ('more emphasis and is perhaps a little less insipid and more impassioned'). Other forms encountered include *amorevole* (also an adjective) and *con amore*.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Amoyal, Pierre (*b* Paris, 22 June 1949). French violinist. He studied the violin with Rolland Charmey privately and at the Paris Conservatoire, winning the *premier prix* aged 12. He won the Ginette Neveu Prize (1963) and the Paganini Competition at Genoa (1964) before studying with Heifetz – at the latter's invitation – in the USA (1966–71) and winning the Enescu Prize (1970). He made his début in Paris in 1971 playing the Berg Concerto with the Orchestre de Paris under Solti, his Wigmore Hall début in 1978 and his Carnegie Hall recital début in 1985; he subsequently appeared with leading international orchestras and conductors. He has given first performances of works by contemporary composers, including Hoddinott's Violin Sonata no.4 (1976) and René Koering's Violin Concerto 'Allegria Kochanski' (1992). Amoyal has also made some notable recordings; and his Brahms and Fauré sonatas with Pascal Rogé won special critical acclaim. From 1977 to 1986 he was a professor at the Paris Conservatoire, and he began teaching at the Lausanne Conservatoire in 1987. He is artistic director at the Lausanne Summer Music Academy, which he founded with the pianist Alexis Weissenberg in 1991. His playing shows the influence of Auer (through his training with Heifetz) and he plays the 'Kochanski' Stradivarius dated 1717.

MARGARET CAMPBELL

Ampadu, Nana Kwame (*b* Adiemmra, Ghana, 31 March 1945). Ghanian popular guitarist, singer and master of guitar-band. HIGHLIFE and concert parties. He formed the African Brothers International Dance Band in 1963, a band that produced important musicians such as the late Eddie Donkor. Ampadu acquired rudimentary guitar skills with the help of P.K. Yamoah and worked briefly at the Ministry of Agriculture in his home district area. He performed briefly with the T.O. Jazz band led by T.O. Ampoma in 1962, but it was not until 1966 that he landed his first major recording contract with Philips West Africa Limited in Accra with the song, *Agyanka Dabere*. His most popular highlife single release was *Ebi Tie Ye* (1967), a song that illustrates his skills as musician, storyteller, moralist, satirist and social commentator. As a master of the concert party genre and a musician rooted in Akan verbal lore, the songs of Ampadu address a wide range of personal, political and social issues in very humorous and satirical ways.

Ampadu's music has won several national awards, including the 1972 National Guitar Band Competition, and typically draws on a variety of sources, including afrobeat, reggae and indigenous musical traditions. Ampadu's band included up to four guitars, an organ and a selection of local and imported percussion instruments. African Brothers has toured internationally, and Ampadu was featured in the 1984 British television series, *Repercussions*. He has produced over 50 albums and 110 singles; he also served as vice-president of the Musicians' Union of Ghana (MUSIGA).

DANIEL AVORGBEDOR

Amphion (i). Ancient Greek mythological figure, son of Zeus and Antiope. When he and his twin brother Zethus built the walls of Thebes (Homer, *Odyssey*, xi.260–65), the stones set themselves in place through the power of his lyre (Hesiod, frag.96, ed. Evelyn-White). According to Pausanias (ix.5.8), Hesiod's near contemporary Eumelus of Corinth called Amphion the first lyre player, taught by Hermes; late sources made further claims typical of the feats credited to Orpheus, Marsyas and other names in the pre-history of Greek music. To Virgil Amphion was simply a pastoral singer (*Eclogues*, ii.23–4); Horace mentioned the miraculous power of Amphion's singing (*Odes*, iii.1–3, invocations to Mercury and the lyre).

Amphion (ii). French firm of music publishers. It was founded in 1943 in Grenoble by Hervé Dugardin (1910–69). At first Dugardin published works of composers whom he knew (Arrieu, Pierre Auclert, Barraud, Daniel-Lesur, Mihalovici, Sauguet and Wissmer). In 1946 the firm was transferred to Paris, and a shop was opened in the Théâtre des Champs-Elysées. In the early 1950s Dugardin published some highly significant contemporary works including Boulez's First Piano Sonata (1951) and his *Sonatine* for flute and piano (1954), as well as Dutilleux's First Symphony (1954). In the 1960s Amphion published works by Ohana and Marius Constant. After Dugardin's death, Isabelle Berthou, the current director, took over, and in the course of the 1960s and 70s added several notable younger composers to the catalogue including Aperghis, André Bon, Antoine Bonnet, Fenelon, Thierry Lancino, Mâche, Manoury and Risset, alongside Amy, Eloy and Tona Scherchen-Hsiao. In 1986 Amphion was purchased by Durand, though the catalogue has retained its editorial identity.

Ampico. Trade name for a REPRODUCING PIANO introduced by the American Piano Co. (*see* AEOLIAN (ii), (2)) in 1913.

Amplifier (Fr. *amplificateur*; Ger. *Verstärker*; It. *amplificatore*). An electrical circuit which increases the strength of its input, and normally acts as an interface between an otherwise incompatible input and output. Certain hi-fi systems and large-scale amplification installations feature separate power amplifiers, which drive one or more loudspeakers, and preamplifiers, which boost and match the different electrical characteristics of a variety of inputs; preamplifiers are otherwise incorporated into other devices, such as mixing consoles and stereophonic hi-fi amplifiers. At its simplest the amplification chain can be seen as microphone (or other source)–amplifier–loudspeaker. The rock music 'amp' (combination unit or 'combo') consists of a portable loudspeaker cabinet containing an appropriate power amplifier and preamplifier. *See also* ELECTRONIC INSTRUMENTS, §I, 5(i).

In certain areas, primarily among hi-fi perfectionists and rock music keyboard players (and for diametrically opposed reasons), the precision or colouration of the sound produced by earlier amplifiers based on electronic valves is still preferred, and continues to be catered for by some manufacturers. In the case of rock music the valve-generated sound was coloured by distortion in louder music, in a manner very different from that produced by transistorized systems.

HUGH DAVIES

Amplitude. The maximum amount of disturbance from the equilibrium state in a vibration or wave. *See* SOUND, §5.

Amram, David (Werner) (*b* Philadelphia, 17 Nov 1930). American composer, horn player and conductor. As a youth he played the piano, trumpet and horn, developing a strong interest in jazz as well as classical music. After a year at Oberlin Conservatory (1948), where he studied the horn, he attended George Washington University (BA in history, 1952). He was engaged as a horn player with the National SO, Washington, DC (1951–2), and then played with the Seventh Army SO in Europe; during his three years there he also toured as a soloist, performed with chamber ensembles, and in Paris took part in jazz sessions. He returned to the USA in 1955 and enrolled in the Manhattan School, where he studied with Mitropoulos, Giannini and Schuller; he was also a member of the

Manhattan Woodwind Quintet. He was awarded honorary degrees from Moravian College, Bethlehem, Pennsylvania (1979) and St Lawrence University (1994).

In 1956 Amram began a long association with Joseph Papp, producer for the New York Shakespeare Festival, who commissioned incidental music for *Titus Andronicus*; during the period 1956–67 Amram composed scores for 25 Shakespeare productions at the festival, and in 1968 completed his comic opera *Twelfth Night*. Among his many subsequent commissions for television, jazz bands, films and the theatre is the incidental music for Archibald MacLeish's *J.B.*, which won a Pulitzer Prize in 1959. Amram formed friendships with Jack Kerouac and Allen Ginsberg and other writers of the 'Beat Generation', and provided notable film scores for *Pull my Daisy* (1959), narrated by Kerouac, *Splendour in the Grass* (1961) and *The Manchurian Candidate* (1962). Amram was the first composer-in-residence with the New York PO (1966–7), and in 1972 he was appointed conductor of the Brooklyn Philharmonia's youth concerts. He has also undertaken several State Department tours: he visited Brazil in 1969 (an experience that was to affect his compositional style), Kenya in 1975 (with the World Council of Churches), Cuba in 1977 with Dizzy Gillespie, Stan Getz and Earl Hines, and the Middle East in 1978. He became music director of the International Jewish Arts Festival in 1982. Amram's works reflect his love of music of all cultures; they are romantic, dramatic and colourful, and are marked by rhythmic and improvisatory characteristics of jazz.

WORKS

Dramatic: The Final Ingredient (TV op, A. Weinstein, after R. Rose), 1965; Twelfth Night (op, J. Papp, after W. Shakespeare), 1965–8; incid music, incl. Amsterdam. Capital city of the Netherlands. Its musical history reflects the city's rapid growth from a small settlement in the 13th century to a centre of world trade as a result of 17th-century Dutch colonial expansion. During this period the city government, merchants and patricians promoted music not only as a leisure activity, but also to add to their status. Civic encouragement of music has continued since then, notably in support of the Concertgebouw Orchestra (founded 1888), which has received international acclaim over many years.

1. Religious institutions. 2. Opera. 3. Concert life. 4. Education. 5. Music printing and publishing. 6. Instrument making.

1. RELIGIOUS INSTITUTIONS. Amsterdam's musically important churches in the late Middle Ages were the Nicolaaskerk or Oude Kerk (*c*1300), the Onze-Lieve-Vrouwekerk or Nieuwe Kerk (*c*1410), the Heilige Stede or Nieuwezijdskapel (1347) and the St Olofskapel or Oudezijdskapel (*c*1450): all had organs. From 1537 the Heilige Stede used the Occo Codex, from the workshop of Pierre Alamire, with polyphonic music by Josquin, Mouton, Isaac and others. In the 16th century laymen were admitted to the choirs, and in 1561 the parish schools acquired a songbook, printed in Leuven by Pierre Phalèse (i). Protestants took over the Catholic churches after 1578, and organ playing was forbidden during services until 1680; organs were used primarily as solo instruments. The government organized 'promenade organ concerts', open to the public. Peter Swybbertszoon was an organist of the Oude Kerk (*c*1564–73), as were his son Jan Pieterszoon Sweelinck (*c*1580–1621) and grandson Dirck (1621–52). After 1578 Catholics were initially forced to hold services in private homes, but these still included music. From 1691 to 1867 the Mozes- en Aäronkerk had a choir and an orchestra, Zelus Pro Domo Dei; among the conductors were Johannes Bernardus van Bree and his son Hermanus Johannes Jacobus van Bree.

2. OPERA. The Schouwburg on the Keizersgracht (see fig.1), inaugurated in 1638, soon became the cultural centre of Amsterdam, giving ballets, plays with music and French opera. The whole audience paid for their seats; enormous surplus profits were given to charities. In 1680 an opera house was opened on the Leidsegracht: it had an initial success, but failed financially and closed in 1682. In the 18th century the popularity of opera grew rapidly and some theatres thrived outside the city boundaries. Dutch, Italian and German operas predominated. The Flemish troupe of Jacques Toussaint Neyts performed French and other operas in Dutch. In 1772 the Schouwburg burnt down; the company moved first to nearby Haarlem, then to the Overtoomseweg just outside Amsterdam, and finally to the new Schouwburg (later the Stadsschouwburg on the Leidseplein, which opened in 1774); its principal conductor was Bartholomeus Ruloffs.

1. Interior of the Schouwburg on the Keizersgracht, Amsterdam, during a performance arranged for the official visit of Prince Willem V on 1 June 1768: engraving by Simon Fokke

After 1770, various societies were founded in Amsterdam to break the monopoly of the Schouwburg. The Collège Dramatique et Lyrique (founded 1781/2) built the Théâtre Français (1788–1853; rebuilt in 1948 as the Kleine Komedie) on the Amstel river; at first it was open only to members, but the invasion by the French (1795) forced its opening to the general public, with performances of French and Italian opera. The Hoogduitsche Schouwburg on the Amstelstraat (from 1852 to 1940 the Grand Théâtre) opened in 1791 and regularly staged German and Italian operas until 1853. Local Italian companies flourished only under Louis Bonaparte (1806–10), but foreign troupes often presented Italian opera, both in the Schouwburg on the Leidseplein and in the Hoogduitsche Schouwburg.

The demand for German opera, superseding French, increased throughout the 19th century. From 1846 to 1859 J.E. de Vries's Hoogduitsche Opera presented German repertory in the Stadsschouwburg and the Hoogduitsche Schouwburg was forced to close. 1858 saw the Dutch première of *Tannhäuser* before it reached London or Paris. After De Vries left in 1859, the Stadsschouwburg was used by visiting companies, principally those of the Koninklijke Franse Schouwburg of The Hague and the Hoogduitsche Opera of Rotterdam. The Wagnervereeniging was founded in 1883 by Henri Viotta, its regular conductor until 1919. In 1893 the society staged *Siegfried* in the Paleis voor Volksvlijt (Industrial Palace). Viotta conducted *Parsifal* in 1905, although Cosima Wagner wanted the work staged only in Bayreuth. He also introduced works by Richard Strauss, Humperdinck and other contemporary composers; Strauss conducted his *Ariadne auf Naxos* in 1924 and *Arabella* in 1934. The performances were generally given with the Concertgebouw Orchestra. The society gave its last performance in 1959. The Opera Italiana, formed in 1897 by Michel de Hondt, performed in the Theater Carré (opened 1887; still extant as the Koninklijk Theater Carré) on the Amstel river. In 1907 it staged *Salome* in the Paleis voor Volksvlijt, with Strauss conducting. The Hollandsche Opera (later Nederlandse Opera), founded in 1886 and based in the former Parkschouwburg (opened 1883), was the first of various short-lived Dutch opera companies around 1900.

The present Stadsschouwburg on the Leidseplein opened in 1894 (its predecessor had burnt down in 1890). The German occupation (1940–45) brought an increase of operatic activity there, necessitating an expansion of backstage facilities. In 1946 the Stichting de Nederlandse Opera was formed, the first state-subsidised opera company. From 1965 a new foundation, the Nederlandse Operastichting, gave numerous premières in Amsterdam, including works by Ton de Leeuw, Guillaume Landré, Peter Schat, Ton de Kruyf and Theo Loevendie. Productions of Baroque and early Classical operas attracted international attention. In 1966 the Opera Studio for training young singers was opened. The Muziektheater on the Waterlooplein opened in 1986.

3. Concert life. Whereas elsewhere in Europe cultural life was financially supported by courts, in Amsterdam

2. *Grote Zaal of the Concertgebouw, Amsterdam, opened 1888*

burghers took this responsibility in the 17th century. Public concerts were given for a paying audience in the Schouwburg in 1643, the earliest known instance of this practice in Western music. Collegia musica were formed; Sweelinck led such performances and dedicated works to his benefactors, and a group of leading poets, scientists and connoisseurs associated with Pieter Corneliszoon Hooft made music at the castle in Muiden. The city employed such musicians as Joseph Butler, Jacobus Haffner, the Sweelincks and the van Noordts. Local composers of the period included Carolus Hacquart, Hendrik Anders, Johannes Schenck and David Petersen.

Leading figures in the 18th century were Elias Bronnemüller, Pieter Hellendaal, Willem de Fesch and P.A. Locatelli (active in Amsterdam *c*1729–64). In 1777 the Maatschappij Felix Meritis (Felix Meritis Society) was founded by Willem Writs, with departments devoted to commerce, science and the arts. It opened a concert hall on the Keizersgracht in 1788, employing an orchestra until 1884–5 and giving regular concerts; performers included Robert and Clara Schumann and Brahms. From 1796 onwards concerts were also given on Sundays by Eruditio Musica in the Hoogduitsche Schouwburg with an orchestra of 75 players; this practice was discontinued in 1824. Both societies contributed much to the popularity of Mozart in the Netherlands. The Felix Meritis Society's concert activities ceased with the opening of the Concertgebouw in 1888.

In the 19th century a lively concert life – some 500 concerts and opera performances were given in 1840–41 – was dominated successively by J.B. van Bree and Johannes Verhulst. The latter was conductor of both the choir of the Afdeeling Amsterdam of the MAASTCHAPPIJ TOT BEVORDERING DER TOONKUNST (founded 1829), and the Maatschappij Caecilia orchestra (founded 1841) from 1864 and the Felix Meritis orchestra from 1865. Although a fine conductor, he was conservative: he never performed works by Wagner, Berlioz or Liszt or the contemporary French school. In 1886 he resigned his positions. The Parkorkest (founded 1849), one of the first professional orchestras in the Netherlands, was the house orchestra of the Parkzaal, which was the centre of Amsterdam concert life from when it was built in 1851 until its demolition in 1881. The Paleis voor Volksvlijt had a symphony orchestra from 1865 to 1895. The Odeon on the Singel was known for its excellent small concert hall. Daniël de Lange's Amsterdamsch A Cappellakoor and the Klein Koor A Cappella under Anton Averkamp were well known around 1900.

By the end of the 19th century the city's musical culture was profiting from renewed economic growth. The Concertgebouw Ltd was established in 1882 to construct a new concert hall to replace the Parkzaal, which had been demolished in 1881. The Concertgebouw, with the superb acoustics of its Grote Zaal (fig.2) and Kleine Zaal, was built in the Van Baerlestraat and inaugurated in 1888. Later that year the Concertgebouw Orchestra was formed. Its principal conductors have been Willem Kes (1888–95), Willem Mengelberg (1895–1945), Eduard van Beinum (1938–59), Eugen Jochum (1961–4), Bernard Haitink (1961–88) and Riccardo Chailly (from 1988). Kes created a skilled ensemble with a varied repertory, including contemporary works. Under Mengelberg the orchestra achieved international fame and he too included works by important contemporaries. He conducted Dutch music festivals in 1902, 1912 and 1935, as well as a Mahler festival in 1920 and a French festival in 1922. Many concerts were performed with the Amsterdam Toonkunst Choir (founded in 1829 and still extant), which was directed in turn by Verhulst, Julius Röntgen and from 1898 Mengelberg, who gave annual performances of Bach's *St Matthew Passion* from 1899 to 1944. Guest conductors of the Concertgebouw included Arthur Nikisch, Richard Strauss, Hans Richter, Felix Mottl, Felix Weingartner, Gustav Mahler, Arnold Schoenberg, Igor Stravinsky, Adrian Boult, Fritz Busch and Igor Markevich, some presenting their own compositions.

During the German occupation, from 1940, new regulations came into force. At first no music by Jewish and 'entartete' composers was to be played in public; then

in 1941 the 'aryanization' of Dutch orchestras began, which meant that all Jews were dismissed. With the consent of the German authorities new Jewish orchestras and ensembles were formed. The Joodsch Symphonie-Orkest, conducted by Albert van Raalte, gave 25 performances from 16 November 1941 to 9 July 1942, with works by Jewish composers, and with Jewish soloists, for an exclusively Jewish audience, in the Joodsche (formerly Hollandsche) Schouwburg on the Plantage Middenlaan. Shortly after the last performance the theatre became the gathering point for concentration camps. In 1947 the theatre was assigned to the municipality; in 1967 it was made a monument to the Jews who were transported from there.

Willem Mengelberg did not oppose the Nazi regime; after the liberation he was banned from Dutch musical life. His successor, Eduard van Beinum, is remembered for his performances of Haydn, Mozart, Beethoven, Bruckner, late 19th-century and 20th-century French music and new compositions including Dutch music. Bernard Haitink continued the impressive Bruckner and Mahler tradition and also became known for his interpretations of works by Richard Strauss and Shostakovich. Riccardo Chailly, a warm advocate of contemporary music, continued the symphonic tradition and also conducted opera. In 1952 the Concertgebouw Orchestra became independent of the organization and the building for which it was named; in 1988 it received the epithet 'Royal'. The second Mahler Festival in 1995 was held in cooperation with the Berlin PO and Vienna PO. The first of many recordings of the Concertgebouw Orchestra was made in 1926.

The Amsterdams Philharmonisch Orkest (Amsterdam PO), formerly Kunstmaandorkest, was founded in 1953 and the Nederlands Kamerorkest (NKO) in 1955, led for 22 years by the violinist Szymon Goldberg. In 1985 the Nederlands Philharmonisch Orkest (NedPhO) was formed from a merger with the Amsterdam PO, the Utrecht SO and the NKO. The Stichting Nederlands Philharmonisch Orkest has managed it and the NKO, both under the chief conductor Hartmut Haenchen since 1986. Vassili Sinaiski has been permanent conductor of the NedPhO since 1992–3, and Philippe Entremont of the NKO since 1993. From 1988 both orchestras were based in the Beurs van Berlage on the Damrak, the former Bourse (1898–1903), designed by H.P. Berlage. The Nederlands Balletorkest, founded in 1965, performs with the Nationale Ballet and the Nederlands Danstheater. The Nationaal Jeugd Orkest was formed in 1957, the Nederlands Blazersensemble gave their first public concert in 1960 and the Nieuw Sinfonietta Amsterdam was founded in 1988, under Lev Markiz. The Nederlands Kamerkoor, formed in 1937 by Felix de Nobel, from 1988 under Uwe Gronostay and from 1998/9 under Tõnu Kaljuste, specializes in *a cappella* repertory; Poulenc, Frank Martin, Hendrik Andriessen, Henk Badings and Rudolf Escher have all composed for it.

Touring jazz musicians and light music performers played in the Concertgebouw from the 1950s. The dance hall Sheherazade, in Wagenstraat, was for a short time the centre of Dutch jazz through performances by the percussionist Wessel Ilcken and the singer Rita Reys, as well as jazz musicians from abroad. In 1960 Boy's Big Band with Boy Edgar was founded. The jazz concerts in Paradiso on the Weteringschans, started by the saxophonist Hans Dulfer in 1968, achieved international renown. The Concertgebouw also staged rock concerts. Initiatives by the periodical *Hitweek* led to the founding of the multimedia halls Fantasio and Paradiso (both opened 1968), and later, in 1995, the Melkweg. In 1969 a group of musicians, Notenkraker (active until 1970), protested against established musical practices, and alternative ensembles were formed. From 1974 the BIM-Huis on the Oude Schans specialized in jazz and improvised music; notable in the field were Theo Loevendie, the Willem Breuker Kollektief and the Maarten Altena Ensemble (founded 1980). The De Volharding orchestra was formed in 1972 by the composer Louis Andriessen with classical and jazz musicians, including Breuker, performing improvised and socially engaging music. Contemporary music and young composers are supported by the GAUDEAMUS FOUNDATION, founded in 1945. Since 1981 De Ijsbreker on the Weesperzijde, which has a small concert hall, has been a centre for contemporary music. The summer HOLLAND FESTIVAL, held annually since 1948, is based in Amsterdam.

Since World War II Amsterdam has become important in the revival of early music, starting with the organist and harpsichordist Gustav Leonhardt. Ton Koopman founded the Amsterdam Baroque Orchestra in 1979 and, together with Simon Schouten, the Amsterdam Baroque Choir in 1992. In 1981 the Orkest van de Achttiende Eeuw (Orchestra of the Eighteenth Century) was founded by Frans Brüggen.

4. EDUCATION. Among Sweelinck's pupils were founders of the so-called North German organ school, as well as dilettantes from well-to-do families. During the 17th and 18th centuries instrument makers also gave music lessons to their customers and apprentices. Music, mainly singing, was taught in elementary schools in the 18th century. Didactic books were published and such societies as the Maatschappij tot Nut van 't Algemeen (1784) were founded with the improvement of music education among their aims.

In 1827 the Koninklijke Muziekschool opened (later called the Stedelijke Muziekschool, 1844–52). The Maatschappij tot Bevordering der Toonkunst started a new music school in 1853, with J.B. van Bree as its director; it closed in 1857. In 1862 Toonkunst opened a 'Zangschool' for dilettantes. The Amsterdam Conservatory was founded in 1884 with Frans Coenen as director, followed by Daniël de Lange and Julius Röntgen. Bernard Zweers, Willem Pijper and Ton de Leeuw taught composition there. The Orkestschool, an initiative of Willem Kes, was opened in the Concertgebouw in 1890. When Kes left Amsterdam in 1895, it was taken over by the Concertgebouw; it merged with the Amsterdam Conservatory in 1915. A group of teachers, dissatisfied with the conservatory, founded the Muzieklyceum in 1921. In 1976 the two institutions merged as the Sweelinck Conservatorium Amsterdam. Since 1994 the Sweelinck Conservatorium has been part of the Amsterdamse Hogeschool voor de Kunsten with the Hilversum Conservatory. Following a merger of the two in 1998, it was renamed the Conservatorium van Amsterdam.

The KONINKLIJKE VERENIGING VOOR NEDERLANDSE MUZIEKGESCHIEDENIS, the oldest surviving musicological society in the world, was created in 1868 by the Maatschappij tot Bevordering der Toonkunst (it received the 'Royal' in 1993). At the University of Amsterdam

music history was first taught by K.P. Bernet Kempers in 1929. Ethnomusicology was introduced in 1936 at the Koloniaal Instituut (now the Instituut voor de Tropen) by Jaap Kunst, and is now taught at the University of Amsterdam.

5. MUSIC PRINTING AND PUBLISHING. In the 17th century the increased demand for printed music led Amsterdam to become a leading printing centre. The first important Amsterdam music seller was the book publisher and wholesale dealer Cornelis Claeszoon (*c*1550–1609). Paulus Matthysz was the first in the republic to specialize as a music printer. The important music publishing firm of Estienne Roger (*fl c*1696–1716) was continued by Michel-Charles Le Cène after 1723; it was superseded in the second half of the 18th century by the Hummel firm. In 1898 G. Alsbach & Co. moved from Rotterdam to Amsterdam. Active until 1961, they published the majority of Dutch composers in the first half of the 20th century. The Stichting Donemus (Documentatie in Nederland voo Muziek; DONEMUS FOUNDATION), founded in 1947 to promote Dutch musical life, went on to become the most important publisher of contemporary Dutch music.

6. INSTRUMENT MAKING. Jan van Covelens (*d* 1532), who was based in Amsterdam, built, enlarged and repaired organs, creating a new organ type that served as the model for the northern Netherlands throughout the 16th century and exercised influence in the southern Netherlands and France. Van Covelens taught Hendrik Niehoff from Brabant, and probably also Claes Willemszoon and the Utrecht organ maker Cornelis Gerritszoon. Niehoff and his assistants built two organs in the Oude Kerk in 1539–45; the larger, later used by Sweelinck, was very modern in its day.

In the 17th and 18th centuries expensive organs were made in a number of churches by first-class builders: Jacobus Galtuszoon van Hagerbeer, Roelof Barentszoon, Johannes Duy(t)schot, Cornelis van Hoornbeeck, Christian Müller and Johannes Stephanus Strumphler. Amsterdam was also an important centre of house organs in the 18th century. In the 17th century, carillons were made by the brothers François and Pieter Hemony. The making of woodwind instruments flourished from about 1670 to 1810, with 1685–1735 as the peak, notable for recorders, flutes, oboes and bassoons. New inventions were applied and new instruments developed such as the 'akkoordfluit' (double recorder). The firm of Meincke and Pieter Meyer (established 1779) was the first of several in Amsterdam to specialize in the manufacture of fortepianos, continuing to 1840 and following instruments from centres such as London, Augsburg, Vienna and Paris. Violin-making has thrived in Amsterdam for centuries, notable periods being 1650–1728, 1760–1820 and since about 1900.

JAN VAN DER VEEN/JOHAN GISKES (1, 3, 4), MICHAEL DAVIDSON, JOHAN GISKES (2), JOHAN GISKES (5, 6)

Amsterdam Baroque Orchestra. Dutch period-instrument orchestra. Founded by TON KOOPMAN in 1979, it has toured widely and has made numerous recordings, notably of music by Bach (including a complete cycle of cantatas), Handel and Mozart. Koopman performs regularly with the orchestra both as conductor and as harpsichordist and organist. Under his directorship it has acquired a reputation for lively, warm-toned, stylistically distinctive playing.

NICHOLAS ANDERSON

Amu, Ephraim (*b* Peki-Avetile, 13 Sept 1899; *d* Peki-Avetile, Jan 1995). Ghanaian composer. After studying the rudiments of music and the harmonium at the Basel Mission Seminary at Kwahu Abetifi, Ghana (1916–19), he received formal lessons in harmony and composition from Emmanuel Allotey-Pappo; a teaching career at Akropong Teacher Training College gave him opportunities to embark on a series of choral works. The existing framework of African identity and personality, as proclaimed by Kwame Nkrumah, Ghana's first president after independence, greatly influenced Amu's attitude and general compositional language in his later years. After being dismissed from the college in Akropong for his overt articulation of African ideas, he moved to Achimota Training College (1934). Gordon Jacob was among Amu's teachers during his diploma studies at the RCM (1937–41), in which harmony and counterpoint were emphasized. He taught and served as head of music at the college in Achimota (1949–51), and continued in these capacities at the University of Science and Technology, Kumasi (1952–60); he was head of the school of music and drama (now the school of performing arts) at the University of Ghana from 1962 until his retirement in 1972.

His early works (*c*1923–7) are mostly choral and are characterized by homophonic textures and functional harmonies. In works from his middle period (*c*1928–40), such as *25 African Songs* (1932), he favoured complex rhythmic and contrapuntal treatments, emphasizing cross-rhythms, triplets and speech-tone contours. The late period (*c*1941–95) shows an avoidance of modulation, an increasing reliance on speech-tones and the employment of 2/4 as the predominant time-signature. Call-and-response and parallel and interlocked thirds are important compositional elements that are partly shaped by indigenous vocal and rhythmic traditions. His main sources of inspiration were the Akan and Ewe musical traditions; most of his songs are in the Twi language. His song *Yen Ara Asase Ni* is performed as an second Ghanaian national anthem. Together with the Asante court flautist Opanyin Kofi, Amu redesigned the indigenous bamboo flutes, the *atenteben* and the *odurugyaba*, both of which gained wide usage in schools, popular bands and concert works. In 1969 Amu toured the USA with his male-voice choir. His pioneering contribution, so broad that almost all Ghanaian composers have been influenced by him, is recognised in the annual Amu Choral Festival. His awards include a national Grand Medal, an honorary doctorate from the University of Ghana (1971) and a UNESCO international music performance prize (1977).

WORKS
(*selective list*)

Songs: 25 African Songs (1932); Bonwere Kentewene, Akwaabadwom, Mawue Na Ame, Tatanyeviwoe, 1v, pf (1961)
Mixed choral: Alegbegbe; Yen Ara Asase Ni; Nkradi; Miva Miva; Yaanom Abibirimma; Esrom Miele; Yi Bi Ma
Inst: Prelude, atenteben, pf; Pipe Trio, 3 atenteben; Pipe Tune no.1, 4 atenteben; Miato Agbema, atenteben ens; Pipes and Drums, 2 atenteben, odurugya, odurugyaba (1969)

DANIEL AVORGBEDOR

Āmulī, al- (*d* 1352). Persian scholar. The section on the mathematical sciences (quadrivium) in his encyclopedia *Nafā'is al-funūn* ('Treasures of the sciences'), written in about 1340, contains a chapter on music which is one of the few theoretical texts in Persian from the period between the works of Quṭb al-Dīn Shīrāzī (*c*1300) and 'Abd al-Qādir al-Marāghī (early 15th century). In addition to Quṭb al-Dīn it draws heavily on the earlier formulations of Ṣafī al-Dīn al-Urmawī and al-Fārābī to provide a succinct survey of concepts of sound, melody, intervals, mode and rhythm.

OWEN WRIGHT

Amy, Gilbert (*b* Paris, 29 Aug 1936). French composer and conductor. Having won national first prize in the philosophy Baccalaureat in 1955 he began to compose, and went to study music at the Paris Conservatoire (1955–60), where his teachers included Milhaud, Messiaen and Loriod. But his ideas about composition were particularly galvanized by meeting Boulez in 1956 and his subsequent attendance at the Darmstadt summer courses in 1958 and 1960; the first performance of *Mouvements* in 1958 by the Domaine Musical marked the beginning of international interest in his work. He began conducting professionally in 1962, and in 1965 he attended Boulez's conducting course in Basle, going on to succeed him as director of the Domaine Musical from 1967 until it disbanded in 1973. He was then appointed musical adviser to the ORTF, and in 1976 founded the Nouvel Orchestre Philharmonique de Radio-France, an ensemble of variable forces with a particular commitment to contemporary music; he was its chief conductor and artistic director until 1981. In 1982 he taught composition and analysis at Yale University, before taking up a post as director of the Lyon Conservatoire (from 1984); since then he has produced some of his largest and most ambitious works, and continues to attract awards and honours.

Amy's early works trace an assured and rapid progression from the refined and expressive songs of *Oeil de fumée* (1955), which are freely atonal, through the Variations (1956) with their delicate instrumental writing, deft handling of classic serial techniques and occasional reminiscences of Messiaen, to the *Cantate brève* (1957) which reflects Amy's recent discovery of *Le marteau sans maître* in its elusive serial workings and the constantly shifting relations between voice and instrumental ensemble. Subsequent works show how closely Amy identified with the ideals and aims of the European serial movement; their notation reflects the complexity of their underlying conception, and they require great interpretative sophistication as well as virtuosity from the performer. *Mouvements* for large ensemble (1958) works out an elaborate scheme of concurrent tempi, while the Piano Sonata (1957–60) explores mobile form, inspired by Boulez's 3rd Sonata, and is a *ne plus ultra* of labyrinthine multiplicity; the same preoccupations reappear in the more concise *Epigrammes* (1961) and *Cahiers d'épigrammes* (1964). *Inventions* (1959–61) is the first of six works written over the following seven years which explore the implications of similarly fractured, contrapuntal and highly unstable writing with ensembles of three to six players, though occasional passages of homophony also begin to appear. Aspects of mobile form are still apparent in these works, if necessarily curtailed and simplified by comparison with the solo piano music.

Amy had already shown that, for him, composing for orchestra meant working with the disposition of sound in space: his *Antiphonies* (1960–63) was written in the wake of hearing Stockhausen's *Gruppen* in 1958 and is scored for two principal orchestras (with separate conductors) mediated by a smaller 'concertino' group. Similar issues are explored more economically in *Diaphonies* (1962) for two symmetrically arranged ensembles with one conductor, a work in which the customary severity of Amy's writing at this stage in his career is tempered by an increased sensuality and delicacy of timbre. With *Triade* (1965) he embarked on a series of four orchestral scores: though these are still the product of a severely exacting compositional discipline, the typically nervous rapidity of volatile gestures begins to give way to a compelling and hallucinatory continuity.

In 1970 Amy completed the last of the numerous film and theatre scores which he had been producing alongside his concert music since 1957, and wrote five highly contrasted pieces for a variety of smaller ensembles. The sombre *Cette étoile enseigne à s'incliner* (1970) is the first of several works which show Amy's fine instinct for combining an electroacoustic tape part with live voices and instruments. *Récitatif, air et variation* from the same year is more extrovert and overtly dramatic, exploiting the full sonic capabilities of a vocal ensemble, while *Jeux* (also 1970) plays again with the interaction of interpretative choice and 'rules', allowing for varying possibilities both in the scoring (for one to four oboes, some of which may be recorded) and the (mobile) form. Like the spare but striking ... *D'un désastre obscur* for mezzo-soprano and clarinet (1971), *Jeux* led to a further work in which an added ensemble follows up ramifications of the original idea.

The following year Amy's return to orchestral forces again produced highly contrasted works, the muted restraint of *Refrains* (1972) complementing the grander and more elaborate *D'un espace déployé* (1972–3), scored for two unequal orchestras (with two conductors) and a solo soprano. Here as in the *Récitatif, air et variation* a new emphasis is placed on the physical drama implicit in the positioning of the performers; this sense of certain players taking 'roles' continues to inform his music throughout the later 1970s, especially when a soloist moves from one group of instruments to another during the course of the piece.

Other important changes can be heard during these years. The bare, long notes at the beginning of *Echos XIII* (1976) introduce a bold, harsh simplicity into Amy's vocabulary which became increasingly characteristic of his music in the 1980s. Rhythms and the coordination of different parts begin to reflect a regular underlying pulse, as the notational ingenuities of earlier works are renounced in favour of conventional metre and score-layout: what had been brief snatches of homophony in complex rhythms are now stately 'chorales'. Sometimes the pulse itself rises obviously to the surface, allowing opportunities for polymetre and (later) metric modulation. Though Amy's music had for a long time made use of separate 'blocks' of material, intricate elisions and overlaps served to disguise this from the listener; now the blocks emerge distinct and clearcut.

Amy's approach to word-setting changed too: rather than submitting a few words to phonetic fragmentation, he began to take on increasingly substantial texts and allow them a much greater degree of naturalistic continuity. An extreme case is represented by two works in which texts are spoken by an actor: in *Une saison en enfer* (1980) the narration of Rimbaud's 'fabulous journey' is divided among three personae (child, poet, man) and given a 'resonance' by the piano, percussion and electro-acoustic sounds. *Ecrits sur toiles* (1983) for reciter and ensemble brilliantly combines variation form with Rilke's descriptions of four paintings; Amy's pared-down harmonic style and blunter gestures now enable him to incorporate material from Stravinsky without stylistic strain. Stravinsky also haunts the *Missa cum jubilo* (1981–3), a monumental work in which the huge forces lend their weight to counterpoint of great sparseness and economy (often the orchestra simply doubles the vocal lines) and poignant moments of quasi-tonal harmony. The shorter but equally massive *Choros* (1989) is overtly dramatic, almost melodramatic in its projection of an apocalyptic vision (from Blake).

With these works Amy progressed a long way indeed from his early music, in almost every respect, from the scoring and form to the rhythmic and motivic language. Yet his music from the 1980s onwards, no less than before, stems from a rigorous attempt to realize the consequences of an initial problem or idea. This is well illustrated by *Orchestrahl* (1985–9), or his First String Quartet (1990–92), both works of great seriousness and stylistic purity, in which symphonic proportions are built from terse, concentrated material and lessons learned from Bach, Beethoven and Bartók are wholly assimilated into the structure. With the orchestral *Three Scenes* (1995) Amy approached the sound-world of his full-length opera *Le premier cercle* (1996–9), in which the orchestra plays a 'symphonic', even Wagnerian role, projecting and psychologically elaborating an oppressive, haunting drama drawn from Solzhenitsyn's novel. Though the musical idiom remains essentially modernist, the work encompasses an eclectic range of references, from overt quotations to 'filtered memories', and may be felt to emulate Berg's operatic achievement in its equivocation between synthesis and disintegration; no less Bergian is the beautiful and poignant lyricism of the vocal writing, especially for the female roles.

WORKS

Stage: Le premier cercle (op, 4, Amy, after A. Solzhenitsyn), 1996–9, Opéra de Lyon, 14 Oct 1999

Orch and large ens: Mouvements, 17 insts, 1958; Antiphonies, 2 orchs, 1960–63; Diaphonies, 24 insts, 1962; Triade, orch, 1965, rev. 1971; Trajectories, vn, orch, 1966; Chant, orch, 1967–9, rev. 1980; Jeux et formes, ob, 18 insts, 1971; Refrains, orch, 1972; Seven Sites, 14 insts, 1975; Echos XIII, hn, trbn, hp, pf, 9 insts, 1976; Adagio et stretto, orch, 1977–8; D'après 'Ecrit sur toiles', chbr orch, 1984; La variation ajoutée, 17 insts, tape, 1984, rev. 1986; Orchestrahl, orch, 1985–9; 17 juillet, orch, 1994; 3 Scenes, orch, 1995

Vocal-orch: Strophe (R. Char), S, orch, 1964–6, rev. 1977; D'un espace déployé (S. Mallarmé), S, 2 orchs, 1972–3; Shin'Anim Sha'Ananim (I. Gabirol), Mez, vc, cl, 18 insts, 1979; Missa cum jubilo, 4 solo vv, chorus, children's chorus, orch, 1981–3; Choros (W. Blake), 3 solo vv, chorus, orch, 1989

Other vocal: Oeil de fumée (L. Parrot), 5 songs, S, pf, 1955, orchd 1957; Cantate brève (F. García Lorca), S, fl, mar, vib, 1957; Cette étoile enseigne à s'incliner (Dante), male vv, 15 insts, tape, 1970; Récitatif, air et variation (R. Daumal), 12 solo vv, 1970; ... D'un désastre obscur (Mallarmé), Mez, cl, 1971; Sonata pian'e forte (Amy), 2 female vv, 3 insts, 1974; Après ... D'un désastre obscur, Mez, 5–7 insts, 1976, rev. 1996; Une saison en enfer (A. Rimbaud), S, child's v, pf, perc, tape, 1980; Ecrits sur toiles (R.M. Rilke), spkr, 7 insts, 1983

JEREMY THURLOW

Ana [Anna], **Francesco d'** [Franciscus Venetus, Francesco Varoter, etc.] (*b* ?Venice, *c*1460; *d* Venice, late 1502, or before 6 Feb 1503). Italian composer and organist. He was appointed the first player of the second new organ at S Marco, Venice, in 1490, having previously been organist at S Leonardo there. He held the position at S Marco until shortly before 6 February 1503 when he was replaced by Giovanni de Marino and was described as 'recently deceased'. He is therefore not identifiable with Francesco d'Ana of Padua who was appointed organist at Concordia Sagittaria Cathedral on 15 March 1554.

Many of Ana's works are marked only with the initials 'F.V.' in Petrucci's frottola books. In a list of corrections to *Tenori e contrabassi intabulati ... libro primo* (1509) Petrucci named 'F.V.' as Francesco Varoter (Francesco the furrier). On the basis of this, Disertori attributed to Varoter all the other works ascribed to 'F.V.'. This is improbable, and it is far more likely that the two musicians are the same. *Nasce l'aspro mio tormento*, ascribed to 'F.V.' in the 1509 book, was ascribed to 'Fran. Vene. Orga.' in the original source, Petrucci's *Frottole libro secondo* (1505), and it must be that Ana came from a family of furriers. In 1497 Ana (referred to as 'Francesco Varotaro') was to have taken a harpsichord to Ferrara for the great instrument maker Lorenzo da Pavia, whose shop was in Venice. Instead of doing this, however, he accompanied a member of the noble Venetian Grimani family to Padua, presumably for musical purposes. These notices, together with the overwhelmingly secular nature of his works, indicate that Ana was highly active in the secular, as well as sacred, musical life of Venice.

Ana wrote one motet and 28 frottolas. Two more frottolas may be by him: one that is also ascribed to Tromboncino, and one that is ascribed to 'F.'. He seems to have been one of the earliest of the important frottolists: his music appears in two early manuscripts (*I-MOe* α, F.9,9, compiled in Padua in 1496 and *GB-Lbl* Eg.3051), which also seems to predate Petrucci's first printed frottola collection of 1504. After Petrucci's *Tenori e contrabassi intabulati ... libro primo* no more music by Ana appeared; thus he seems to have played little part in the move towards higher-quality texts in the frottola. He did set two sonnets however: *Quest'è quel loco* and *Chi vi dara più luce*. The first of these is the earliest printed sonnet setting and treats a text by Niccolò da Correggio, one of the most important and artful of the frottola poets. In both sonnets Ana set both the first quatrain and the first tercet.

In his *barzellette* Ana generally set only the *riprese* and refrains: only four of his 16 settings provide new music for the stanzas. They are characterized by syllabic text settings and many repeated notes in the melodic lines. The lower voices alternate between non-imitative polyphony and homorhythmic movement with the cantus. *Dal ciel crudo* was still known in 1649 when King João IV of Portugal cited it as an example of an antiquated style. In contrast to the *barzellette*, Ana's 12 *strambotti* have extremely melismatic lines.

Ana's one sacred work, *Passio sacra nostri Redemptoris*, is not a true Passion, but rather a motet in two sections, using selected passages from the Gospels. It is generally homorhythmic and has many fermatas.

WORKS

1 motet, 1506[1]
28 frottolas, 1504[4], 1505[3], 1505[4], 1505[5], 1505[6], 1506[3], 1507[4], 1509[3]
Voi, voi che passate, attrib. 'F.V.' in 1509[3]; attrib. Tromboncino in 1507[3], *US-Cn* Capirola Lutebook: anon. in *GB-Lbl* Eg.3051 (may be by Ana)
Amati cor mio, attrib. 'F.' in *I-MOe* α, F.9,9 (may be by Ana)
Edns. in AMI, i (1897/*R*); R. Schwartz, Publikationen älterer Musik, viii (Leipzig, 1935/*R*); G. Cesari and others, *Le frottole nell'edizione principe di Ottaviano Petrucci*, IMa, 1st ser., i (1954); La Face Bianconi, *Gli strambotti del codice estense alpha.F.9,9* (Florence, 1990); P. Verardo, *Francesco d'Ana: Frottole, strambotti e una lamentazione per quartetto di flauti dolci o di strumenti antichi* (Milan, 1977)

WILLIAM F. PRIZER

Anabathmoi. In the Byzantine rite, a set of three or four short antiphons to the gradual psalms (verses from Psalms cxix–cxxx and cxxxii) sung at Sunday ORTHROS. There is a set for each of the eight modes. Although they were compiled in the 8th century, probably by Theodore of Stoudios (*c*794–7), the oldest surviving melodies are contained in manuscripts from the 10th and 11th centuries and are written in Chartres notation (*GR-ATSgreat lavra* γ 67; *ATSvatopedi* 1488; *see* BYZANTINE CHANT, §3 (i)(b)). These settings provide unique evidence for ancient psalmodic practice and the use of cadence formulae in the Byzantine psalm tones.

DIMITRI CONOMOS

Anabolē (Gk.: 'prelude'). A term used in ancient Greece in the period of Pindar for the prelude or introduction to a song but subsequently associated with the melodically extravagant, chromatically inflected solo songs or monodies of which Timotheus of Miletus was the most significant exponent. Hans Kotter used the term (in Greek) in the early 16th century for a freely constructed keyboard prelude in a tablature (in *CH-Bu*) assembled for the humanist Bonifacius Amerbach (ed. in SMd, vi, 1967; facs. in W. Apel: *The Notation of Polyphonic Music, 900–1600*, Cambridge, MA, 1942, 5/1961, p.29; transcr. also in HAM, no.84*g*).

MICHAEL TILMOUTH/R

Anacker, August Ferdinand (*b* Freiberg, Saxony, 17 Oct 1790; *d* Freiberg, 21 Aug 1854). German Kantor and composer. He studied at the Freiberg Gymnasium, then at Leipzig University, where he took the master's degree. He continued his education with J.G. Schicht, W.F. Riem, G.C. Härtel and Friedrich Schneider and lived in Leipzig as a singer, pianist and music teacher. In 1821 he was given a post in Freiberg as the city's music director, becoming the cathedral Kantor and a teacher at the Gymnasium and the teachers' training college; he also founded the Singakademie in 1823 and reorganized the Bergmusikkorps. He visited Beethoven in Vienna and became a champion of his music; he was also a friend of Mendelssohn, Reissiger and Wagner. His most important pupils were K.F. Brendel, Reinhold Finsterbusch and Robert Volkmann.

Anacker anticipated the modern German Kantor who was principally concerned with musical education and artistic competence. His compositions, mainly sacred and secular choral, are distinguished for their modernity and emotional intensity; the oratorio *Bergmannsgruss* (1831–2) was one of the most popular and best-known choral works of the 19th century.

WALTER HÜTTEL

Anacreon (*b* Teos, *c*570 BCE; *d* 490 or 485 BCE). Greek lyric poet. An Ionian by birth and upbringing, he spent his professional life in the service of Polycrates, tyrant of Samos, and later at Athens under the patronage of Peisistratus's son Hipparchus. His poetry reflects the gay, sophisticated atmosphere of the courts where he was musical arbiter; underlying it is the cultural heritage of his native Ionia, especially the distinctive tradition of lighthearted monody.

Although the writings of Anacreon include elegiac and iambic poetry as well as lyric, extant musical references occur only in the lyrics. He speaks of 'the lovely *pēktis*' and 'the 20-string *magadis*' of his homeland (Edmonds, frag.18.2–3; 19.1–2); he also mentions auloi with only three finger-holes instead of the usual six (frag.22). Critias, an early 5th-century writer (in Athenaeus, xiii, 600d), portrayed the poet himself as an antagonist of the aulos and fond of the BARBITOS. Anacreon is the first Greek musician of whom credible personal portraits are known, two vase-paintings that come from his own time. Both show him holding the barbitos (*see* ALCAEUS), and a late source (Athenaeus, iv, 175e) even credits him with having invented it. Many poems were written in imitation of his style until five centuries or more after his death; these had a literary and musical influence of their own.

WARREN ANDERSON/THOMAS J. MATHIESEN

Anacreontic Society. London society of aristocratic and wealthy amateur musicians founded in 1766. *See* LONDON, §V, 2.

Anacrusis. *See* UPBEAT.

Anagnino, Spirito. *See* ANAGUINO, SPIRITO.

Anagnōstēs. A reader in the Orthodox Church. His function is to announce the PROKEIMENON of the day and to chant the appropriate lessons from the Old Testament or the Epistles (*see* EKPHŌNĒSIS). The related term 'anaginōskos' (Gk.: 'reader') already appears in the description by Justin Martyr (*d c*165) of scripture reading in the Eucharist (*Apology I*, 67).

JAMES W. McKINNON

Anagrammatismos. A kalophonic ('embellished') setting of certain Byzantine *stichēra* (*see* STICHĒRON) used on festal occasions. Only a part of the hymn text is used, and this is preceded and followed by very florid *teretismata*; *see* KALOPHONIC CHANT.

□

Anaguino, Spirito (*fl* 1617–25). Italian composer. His name has sometimes been incorrectly spelt 'Anagnino' and 'Agnanino'. He was an Augustinian monk and lived for part of his life in Naples. He published several volumes of music but only two survive (and the second of these is incomplete): *Nova sacra cantica . . . liber secundus*, for one to four voices and continuo (Naples, 1617), and *Sacro convito celeste* op.6, for two to six and eight voices and continuo (Orvieto, 1625).

□

Analysis. A general definition of the term as implied in common parlance might be: that part of the study of music that takes as its starting-point the music itself, rather than external factors. More formally, analysis may be said to include the interpretation of structures in music, together with their resolution into relatively simpler constituent elements, and the investigation of the relevant functions of those elements. In such a process the musical 'structure' may stand for part of a work, a work in its entirety, a group or even a repertory of works, in a written or oral tradition. The relationship between the structures and elements proposed by analysis, and experiential, generative and documentary perspectives on music, has circumscribed analysis differently from time to time and from place to place, and has aroused debate. Less controversially, a practical distinction is often drawn between formal analysis and stylistic analysis; but this is unnecessary insofar as on the one hand any musical complex, no matter how small or large, may be deemed a 'style'; and on the other hand, all the comparative processes that characterize stylistic analysis are inherent in the basic analytical activity of resolving structures into elements.

I. General

1. THE PLACE OF ANALYSIS IN THE STUDY OF MUSIC. The phrase 'musical analysis', taken in a general sense, embraces a large number of diverse activities. Some of these are mutually exclusive: they represent fundamentally different views of the nature of music, music's role in human life, and the role of the human intellect with regard to music. These differences of view render the field of analysis difficult to define within its own boundaries. (Such a definition will be the concern of §§2 and 3 below.) Underlying all aspects of analysis as an activity is the fundamental point of contact between mind and musical sound, namely musical perception (*see* PSYCHOLOGY OF MUSIC, §II).

More difficult, in some ways, is to define where precisely analysis lies within the study of music. The concerns of analysis as a whole can be said to have much in common on the one hand with those of musical aesthetics and on the other with those of compositional theory. The three regions of study might be thought of as occupying positions along an axis that has at one extreme the placing of music within philosophical schemes and at the other the giving of technical instruction in the craft of composition. There are complicating factors, however, concerning theory and criticism. Music theories have been developed that find their practical expression not in composition but in analysis; from the obverse point of view one might say that such theories derive stable concepts by abstraction from the data that analysis provides. The relationship is thus one of mutual dependency. A similarly mutual though less dependent relationship might be thought to exist in principle between analysis and criticism. Many writings that are intended primarily as critisism and lie within its traditions are recognizably analytical in their concern with the direct description and investigation of musical detail. Conversely, analytical writing expresses a critical position, albeit sometimes merely by implication, but often in a sophisticated manner through the multiple connotations of the theories it applies and the comparisons it draws. Even a wordless analysis – which would seem the least capable of doing so – passes a value judgment in asserting that its musical subject is worthy of study and explication.

The analyst and the theorist of musical composition (*Satztechnik*; *Kompositionslehre*) have a common interest in the laws of musical construction. Many would deny a separation of any kind and would argue that analysis is a subgroup of musical theory. But that is an attitude that springs from particular social and educational conditions. While important contributions have been made to analysis by teachers of composition, others have been made by performers, instrumental teachers, critics and historians. Analysis may serve as a tool for teaching, though it may in that case instruct the performer or the listener at least as often as the composer; but it may equally well be a private activity – a procedure for discovering. Musical analysis is no more implicitly a part of pedagogical theory than is chemical analysis; nor is it implicitly a part of the acquisition of compositional techniques. On the contrary, statements by theorists of compositional technique can form primary material for the analyst's investigations by providing criteria against which relevant music may be examined.

Of greater significance is the fact that analytical procedures can be applied to styles of performance and interpretation as well as to those of composition. But the point at which composition ceases and interpretation begins is rarely incisive. Most Western analysis takes a score as its subject matter and implicitly assumes it to be a finalized presentation of musical ideas. If it is true that the notated form in which a medieval, Renaissance or Baroque work survives is an incomplete record, it is even more to the point that for the analyst of ethnomusicological material, jazz improvisation or popular music recorded on tape, vinyl or CD, a score is only an intermediary artefact which in no way marks off 'composer' from 'performer'. It provides a coarse communication of a recorded performance, much of which will have to be analysed by ear or with electronic measuring equipment. Similar considerations apply to the analysis of performing practice in Western music, though here the written score may be used as a constant point of reference in measuring and comparing different realizations of it in performance.

Briefly, then, analysis is concerned with musical structures, however they arise and are recorded, not merely with composition. Moreover, within the subject matter that analysis and compositional theory have in common, the former is by definition concerned with resolution and explanation, so that its reverse procedure – synthesis – is no more than a means of verification; the latter is concerned directly with the generation of music, and analytical method is only a means of discovery. The fields

overlap but with essential differences of subject, of aim and of method.

Similarly, the analyst, like the aesthetician, is in part concerned with the nature of the musical work: with what it is, or embodies, or signifies; with how it has come to be; with its effects or implications; with its relevance to, or value for, its recipients. Where they differ is in the centres of gravity of their studies: the analyst focusses his attention on a musical structure (whether a chord, a phrase, a work, the output of a composer or court etc.), and seeks to define its constituent elements and explain how they operate; but the aesthetician focusses on the nature of music *per se* and its place among the arts, in life and reality. That the two supply information to each other is undoubted: the analyst provides a fund of material which the aesthetician may adduce as evidence in forming his conclusions, and the analyst's definition of the specific furnishes a continual monitoring service for the aesthetician's definition of the general; conversely, the aesthetician's insights provide problems for the analyst to solve, condition his approach and method, and ultimately furnish the means of exposing his hidden assumptions. Their activities may overlap so that they often find themselves doing similar things. Nonetheless, they have two essential differences, which may be characterized in terms of the relative importance of empiricism and reflection: analysis tends to supply evidence in answer to the empirical questions of aesthetics, and may be content to explore the place of a musical structure within the totality of musical structures, whereas the aesthetician's concern is with the place of musical structures within the system of reality. (For further discussion, *see* PHILOSOPHY OF MUSIC.)

Criticism is inseparable on the one hand from aesthetics and on the other from analysis. Within criticism there has been constant debate as to the extent to which it is a descriptive or a judicial activity. The 'descriptive' critic tries to do either or both of two things: to portray in words his own inner response – to depict his responding feelings – to a piece of music or a performance, or to think his way into the composer's or performer's mind and expound the vision that he then perceives. The 'judicial' critic evaluates what he experiences by certain standards. These standards may at one extreme be dogmatic canons of beauty, of truth or of taste – pre-set values against which everything is tested; or, at the other extreme, values that form during the experience, governed by an underlying belief that a composer or performer must do whatever he is attempting to do in the clearest and most effective way. In none of the above does criticism differ categorically from analysis: there is also a latent debate within analysis as to whether the analyst's function is descriptive or judicial.

There is perhaps a difference of degree. In general, analysis is more concerned with describing than with judging. In this sense, analysis goes less far than criticism, and it does so essentially because it aspires to objectivity and considers judgment to be subjective. But this in turn suggests the other difference between analysis and criticism, namely that the latter stresses the intuitive response of the critic, relies upon his wealth of experience, uses his ability to relate present response to prior experience, and takes these two things as data and method, whereas analysis tends to use as its data definable elements: phrase-units, harmonies, dynamic levels, measured time, bowings and tonguings, and other technical phenomena. Again this is a difference only of degree: a critic's response is often highly informed and made in the light of technical knowledge; and the analyst's definable elements (a phrase, a motif etc.) are often defined by subjective conditions. Where subjectivities are acknowledged to be inevitable, the analytical mind will tend not to work with them directly, but to investigate their nature in relation to definable musical phenomena, thus drawing closer to aesthetics in general and to semiology in particular. To say that analysis consists of technical operations and criticism of human responses is thus an oversimplification, though it helps to contrast the general characters of the two. (*See also* CRITICISM, §I.)

A rather different relationship exists between musical analysis and music history. To the historian, analysis may appear as a tool for historical inquiry. He uses it to detect relationships between 'styles', and thus to establish chains of causality that operate along the dimension of time and are anchored in time by verifiable factual information. He may, for example, observe features in common between the styles of two composers (or groups of composers) and inquire by internal analytical methods and external factual ones whether this represents an influence of one upon the other; or, in reverse order, seek common features of style when he knows of factual links. Conversely, he may detect features out of common between pieces normally associated for one reason or another, and proceed to distinguish by comparative analysis distinct traditions or categories. Again, he may use an analytical classification of features as a means of establishing a chronology of events.

In turn, the analyst may view historical method as a tool for analytical inquiry. His subject matter is rather like sections cut through history. When under analysis they are timeless, or 'synchronic'; they embody internal relationships that the analyst seeks to uncover. But factual information, concerning events in time, may, for example, determine which of several possible structures is the most likely, or explain causally the presence of some element that is incongruous in analytical terms. Comparative analysis of two or more separate phenomena (whether separated chronologically, geographically, socially or intellectually) only really activates the dimension of time – becoming 'diachronic' – when historical information relating the phenomena is correlated with the analytical findings. Historical and analytical inquiry are thus mutually dependent, with common subject matter and complementary methods of working. (For further discussion *see* HISTORIOGRAPHY and MUSICOLOGY, §§I and II, 8.)

2. THE NATURE OF MUSICAL ANALYSIS. The primary impulse of analysis is an empirical one: to get to grips with something on its own terms rather than in terms of other things. Its starting-point is a phenomenon itself rather than external factors (such as biographical facts, political events, social conditions, educational methods and all the other factors that make up the environment of that phenomenon). But like all artistic media, music presents a problem, inherent in the nature of its material. Music is not tangible and measurable as is a liquid or a solid for chemical analysis. The subject of a musical analysis has to be determined; whether it is the score itself, or at least the sound-image that the score projects; or the sound-image in the composer's mind at the moment

of composition; or an interpretative performance; or the listener's temporal experience of a performance. All these categories are possible subjects for analysis. There is no agreement among analysts that one is more 'correct' than others, only that the score (when available) provides a reference point from which the analyst reaches out towards one sound-image or another.

Analysis is the means of answering directly the question 'How does it work?'. Its central activity is comparison. By comparison it determines the structural elements and discovers the functions of those elements. Comparison is common to all kinds of musical analysis – feature analysis, formal analysis, functional analysis, Schenkerian analysis, pitch-class set analysis, style analysis and so on: comparison of unit with unit, whether within a single work, or between two works, or between the work and an abstract 'model' such as sonata form or arch form. The central analytical act is thus the test for identity. And out of this arises the measurement of amount of difference, or degree of similarity. These two operations serve together to illuminate the three fundamental form-building processes: recurrence, contrast and variation.

This is a highly 'purified' portrayal of analysis, impartial, objective, yielding the answer 'It works this way ...' rather than 'It works well' or 'It works badly'. In reality the analyst works with the preconceptions of his culture, age and personality. Thus the preoccupation which the 19th century had with the nature of 'genius' led to the phrasing of the initial question not as 'How does it work?' but as 'What makes this great?', and this remained the initial question for some analytical traditions in the 20th century. Since the 'scientific', comparative method was predominant over evaluation in such traditions, and since only works of genius possessed the quality of structural coherence, it followed that comparison of a work with an idealized model of structure or process produced a measure of its greatness.

This is only one example of many. The history of musical analysis in §II below inevitably recounts the application of intellectual outlooks from successive ages to musical material: the principles of rhetoric, the concepts of organism and evolution, the subconscious mind, monism, probability theory, structuralism, post-structuralism and so forth. Ultimately, the very existence of an observer – the analyst – pre-empts the possibility of total objectivity. No single method or approach reveals the truth about music above all others.

3. The role of method in musical analysis. Many of the classifications that have been formulated for musical analysis have distinguished between types of analytic practice according to the methods used, which can then be grouped together into broader categories. For example, there is the widely accepted division into 'stylistic analysis' and 'analysis of the individual work' which was described above as pragmatic but theoretically unnecessary. There is the threefold classification into 'constructional analysis', 'psychological analysis' and 'analysis of expression' put forward by Erpf in *MGG1* (1949–51). This classification does not correspond exactly with, but is roughly equivalent to, Meyer's distinction (1967, pp.42ff) between 'formal', 'kinetic-syntactic' and 'referential' views of musical signification. Dahlhaus (*RiemannL12*, 1967) made a fourfold distinction: 'formal analysis', which explains the structure of a work 'in terms of functions and relationships between sections and elements'; '"energetic" interpretation', which deals in phases of movement or tension spans; and Gestalt analysis, which treats works as wholes; these three make up among them the field of analysis proper, which he distinguished from his fourth category, 'hermeneutics', the interpretation of music in terms of emotional states or external meanings. The first, second and fourth of these correspond broadly with the three categories of Erpf and Meyer, while the third deals with analyses based on the idea of organism.

The principal difficulty with these classifications is that their categories are not mutually exclusive. Thus, for example, Riemann is generally cited as the prime example of a formal and constructional analyst, and yet his work rests on a fundamental idea of 'life force' (*Lebenskraft*, *lebendige Kraft*, *energisches Anstreben*) that flows through music in phases and is actualized in phrase contours, dynamic gradings, fluctuations of tempo and agogic stress. This idea is closer to the kinetic view of music; it suggests that Riemann's work belongs to two of Meyer's three categories.

A different way of identifying analytical methods is partly historical in nature. For example, Schenkerian analysis, so called, has its origins in the work of Heinrich Schenker (1868–1935); but, as a label that identifies a type of analytical practice today, 'Schenkerian analysis' includes a number of developments that have accrued since Schenker's death and are due to his pupils, his pupils' pupils and others (see §II, 5–6). This 'method' is circumscribable because, seen as a tradition communicated orally by teaching and also through a modest number of written sources, it remains reasonably concise. The status of motivic analysis as an identifiable complex of methods is less easy to describe: naturally, it has a history (see §II, 3–5), but the accumulation of developments has been such that some filtering out has also taken place; significantly different synoptic descriptions of motivic analysis as practised today are thus possible. In the case of harmonic analysis, the range of meanings is such that no contemporary synoptic description of it as a 'method' can properly be offered: only its history retains a degree of integrity.

A good example of the emergence of a method by accumulation and selective filtering is seen in the analysis of form, which Cook (*Guide*, 1987) explicitly included in a category of 'traditional' methods. Broadly speaking, one may describe formal analysis historically, identifying principles and refinements as they were newly introduced; and one may present an overview of what is meant by formal analysis today. Neither of these approaches alone, however, can fully reflect the fact that formal analysis has a two-dimensional history of changing accumulations: that the difference between formal analysis around 2000 and formal analysis around 1900, for example, cannot be measured solely in terms of the new ideas that have been added in the intervening century. But it can be traced in the differences between attempts by responsible authors to provide synoptic definitions at various times and places.

The history of formal analysis tells us that during the late 18th century and the 19th, music theorists defined certain structural patterns – not genres or species such as concerto or minuet, but more widely applicable processes of formal construction common to many genres and species – that were reducible to two fundamental patterns: *AB* and *ABA*. These were subsumed in German terminology under the single term *Liedform* (first proposed by

A.B. Marx, 1837–47) in its 'two-part' (*zweiteiliges*) and 'three-part' (*dreiteiliges*) form, and distinguished in English terminology as BINARY FORM and TERNARY FORM. Broadly speaking, these terms referred to small-scale forms; they applied most directly to instrumental dance movements of the 17th and 18th centuries, and relied on the concept of regular phrase structure with the eight-bar period as the principal unit of construction. Later in the history of formal analysis, large-scale formal models came to be regarded as extensions to one or other of the two fundamental patterns: thus SONATA FORM was the extension of the binary pattern, and RONDO of the ternary.

An overview of what is meant by formal analysis might begin with the three basic form-building processes proposed in §2 above: 'recurrence', 'contrast' and 'variation', expressible as *AA*, *AB* and *AA′*. It might further identify a distinction between two basic processes of extension: that of a succession of formal units, and that of development. The former (in German, *Reihungsform* or *plastische Form*) relies on proportion and symmetry, and is architectural in nature; the latter (*Entwicklungsform* or *logische Form*) relies on continuity and growth. The rondo, *ABACADA*, extends ternary form by succession; sonata form extends binary form by development. And the two processes are both brought into operation in the so-called sonata rondo: *ABACAB′A*. There is a further process by which larger forms may be created out of one of the two basic patterns: by the operation of one or both patterns at more than one level of structure (*Potenzierung*, 'exponentiating'). By this means, such structures as *A (aba)B (cdc)A (aba)* are produced. Related to this is the concept of CYCLIC FORM, whereby movements in recognizable forms are grouped together to form larger units such as the suite and the sonata.

Many manuals of form have separate descriptions of 'the contrapuntal forms' and allow a category of 'free forms'. Nonetheless, the underlying idea of formal analysis is that of the 'model', against which all compositions are set and compared and measured in terms of their conformity to or 'deviation' from the norm. But if formal analysis may be distinguished from other kinds of analysis by its concern with the recognition of these processes and the description of works in terms of them, manuals of formal analysis vary in the ways in which they see the totality of musical formations, from the Middle Ages onwards and for all vocal and instrumental media, as governed by these fundamental patterns. Quite apart from the universality of the basic models, there are many difficulties in determining criteria for their recognition. For some analysts, identity or non-identity is determined by thematic character; for others, by key scheme; for others, by length of units. Thus, for Dahlhaus (*RiemannL12*, 1967), the prime conditions of the two-part *Liedform* |:*A*:||:*B*:| are, first, that the first part ends on a half-close in the tonic or a full-close in a related key, and, second, that the parts are melodically different (or related |:*AX*:||:*AY*:| or |:*AX*:||:*BX*:|). For Scholes (*Oxford Companion to Music*, 'Form') binary form rests on the same key scheme |:tonic–dominant (or relative major):||:dominant (or relative major)–tonic:|, and the absence of 'strong contrast' in thematic material. For Prout (1893–7, 1895), key scheme is not really a determinant at all for binary form, for he allowed |:tonic–tonic:||:remote key–tonic:|; nor is thematic relationship, for he allowed *AA′BA″* as well as *ABCB*. The basic determinant for Prout was that the form should constitute 'two complete sentences'. Thus the form |:*A*:||*BA*:|, which for Dahlhaus was three-part *Liedform*, was for Prout binary form unless the first part is itself a complete binary form, self-contained and rounded.

The question might be asked whether analysis as a whole can be described by listing and describing its methods – using this word in the sense explored above. Handbooks of analysis written largely for pedagogical purposes (e.g. Cook, 1987; Dunsby and Whittall, 1988) have adopted this approach virtually out of necessity. Such texts appeared at a time when analysis had emerged for the first time in the English-speaking world as a complex academic discipline it its own right, rather than as an adjunct, however valuable or essential, to other forms of musical activity or training. This moment in the history of analysis was brief, however – perhaps inevitably so, as the high profile of analysis encouraged the questioning of its assumptions and practices (see §II, 6). Arguably, those related disciplines from which this questioning emerged – notably criticism – have in the aftermath taken on many of the lasting priorities and occupations of analysis, themselves becoming significantly changed in the process. Conversely, analysis remains strong, but has revitalized its concerns through closer contact with disciplines that always left more room for debate about the nature and function of music than analysis had come to do.

It follows from all this that a thorough-going typology of musical analysis, widely applicable across times and places, would probably have to encompass several axes of classification. The analyst's view of the nature and function of music would certainly be one of these. But his approach to the actual substance of music would be a second; his method of operating on the music would be a third; and the medium for presentation of his findings would be a fourth. Other axes might be concerned with, for example, the purpose for which the analysis was carried out, the context in which it was presented, the type of recipient for which it was designed.

Under approaches to the substance of music would be categories such as that a piece of music is (*a*) a 'structure', a closed network of relationships, more than the sum of its parts; (*b*) a concatenation of structural units; (*c*) a field of data in which patterns may be sought; (*d*) a linear process; and (*e*) a string of symbols or emotional values. These five categories embrace the approaches of formal analysts such as Leichtentritt and Tovey, structuralists and semiologists, Schenker, Kurth and Westphal, Riemann, hermeneutics, stylistic analysis and computational analysis, information theory analysis, proportion theory, Réti and functional analysis, and much else. The categories are still not exclusive. For example, (*a*) and (*c*) are not wholly incompatible in that approach (*c*) may lead to approach (*a*). Then again, two approaches may co-exist at two different levels of construction: perhaps (*a*) or (*b*) for large-scale form and (*d*) for small-scale thematic development.

Under methods of operating would be categories such as (*a*) reduction technique; (*b*) comparison, and recognition of identity, similarity, or common property; (*c*) segmentation into structural units; (*d*) search for rules of syntax; (*e*) counting of features; and (*f*) reading-off and

interpretation of expressive elements, imagery, as well as symbolism.

Under media of presentation would be categories such as (*a*) annotated score or reduction or continuity line (see fig.12); (*b*) 'exploded' score, bringing related elements together (fig.28); (*c*) list, or 'lexicon' of musical units, probably accompanied by some kind of 'syntax' describing their deployment (see fig.23); (*d*) reduction graph, showing up hidden structural relationships (figs.17–20); (*e*) verbal description, using strict formal terminology, imaginative poetic metaphor, suggested programme or symbolic interpretation; (*f*) formulaic restatement of structure in terms of letter- and number-symbols; (*g*) graphic display: contour shapes (fig.22), diagrams (fig.16), graphs (fig.15), visual symbols for specific musical elements (fig.14); (*h*) statistical tables or graphs; and (*i*) sounding score, on tape or disc, or for live performance. Such media can be used together within an analysis, and elements of two or more can be combined.

II. History

1. Early history (to 1750). 2. 1750–1840. 3. 1840–1910. 4. 1910–45. 5. 1945–70. 6. Since 1970.

1. Early history (to 1750).

Analysis, as a pursuit in its own right, came to be established only in the late 19th century; its emergence as an approach and method can be traced back to the 1750s. However, it existed as a scholarly tool, albeit an auxiliary one, from the Middle Ages onwards. The precursors of modern analysis can be seen within at least two branches of musical theory: the study of modal systems, and the theory of musical rhetoric. Where, in either of these branches, a theorist cited a piece of music as illustrating a point of technique or structure, only a small amount of discussion was necessary before he was using what would now be called the analytical approach.

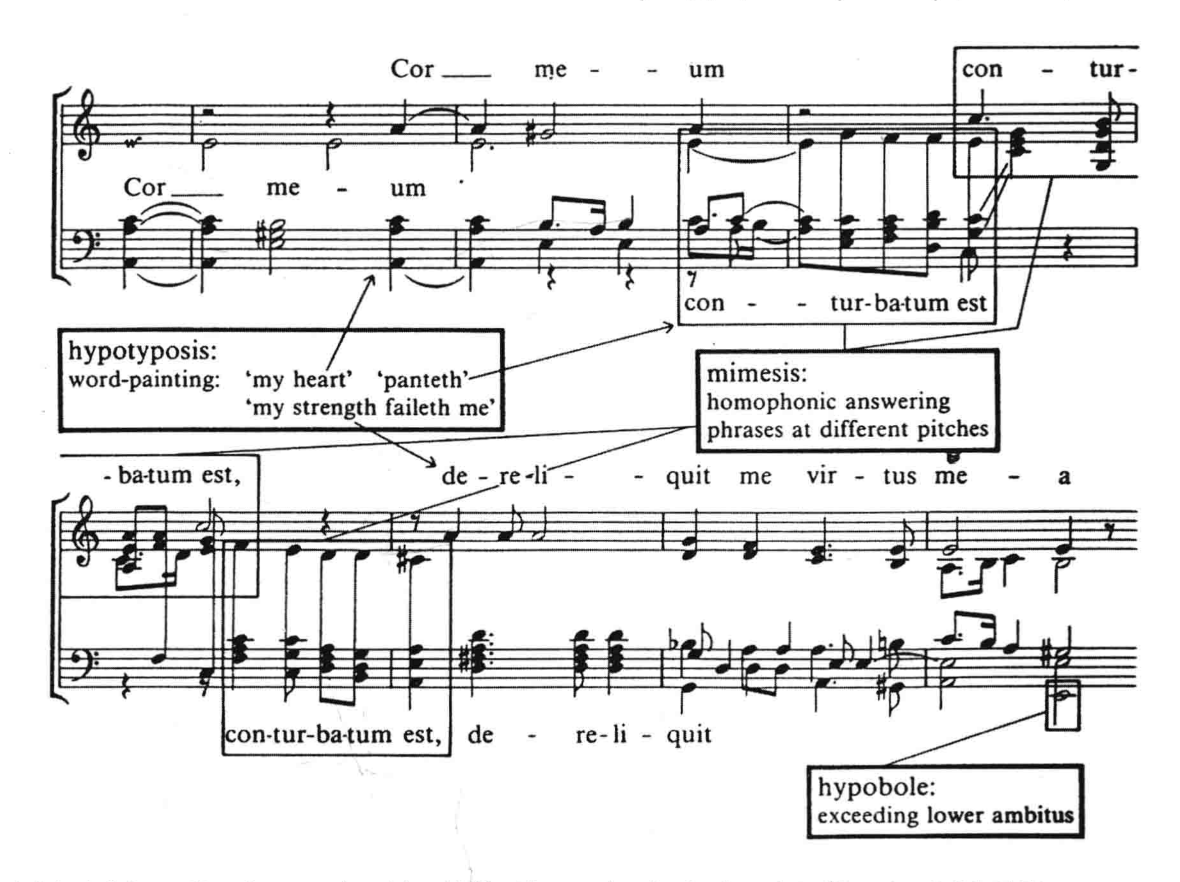
In a sense, the classificatory work carried out by the Carolingian clergy in compiling tonaries was analytical: it involved determining the mode of every antiphon in a repertory of chant, and then subclassifying the modal groups according to their variable endings ('psalm tone differences': *see* Tonary).

Such theorists as Wilhelm of Hirsau, Hermannus Contractus and Johannes Cotto in the 11th century cited antiphons with brief modal discussion, as did later theorists such as Marchetto da Padova and Gaffurius. Their discussions were essentially analysis in the service of performance. Renaissance theorists such as Pietro Aaron and Heinrich Glarean discussed the modality of polyphonic compositions by Josquin. (For examples *see* Mode, §§II, 2–4; III, 3, 4.)

Such citations of individual works were all concerned with matters of technique and substance. It was only with the development of musical rhetoric that the idea of 'form' entered musical theory. The literature of ancient classical Greek and Roman rhetoric was rediscovered with the finding of Quintilian's *Institutio oratoria* in 1416. But the application of the ideas of classical oratory has been traced back as far as the Notre Dame polyphony of the early 13th century, and its direct impact is clear in late 15th-century music. It was with Listenius (*Musica*, 1537; Eng. trans., 1975) that *musica poetica* – musical rhetoric – was introduced into musical theory. Dressler (1563) alluded to a formal organization of music that would adopt the divisions of an oration into *exordium* ('opening'), *medium* and *finis*. Pietro Pontio (1588) discussed the standards for composing motets, masses, madrigals, psalms and other genres, and similar discussions occur in Cerone (1613), Praetorius (1618), Mattheson (1739) and Scheibe (1738–40).

A plan similar to Dressler's appeared in Burmeister (1606). Burmeister had already proposed (1599, 1601) that musical 'figures' could be treated as analogous to rhetorical figures, and it was he who first set out a full formal analysis of a piece of music. It was Burmeister, too, who gave the first definition of analysis (1606, pp.71ff):

> Analysis of a composition is the resolution of that composition into a particular mode and a particular species of counterpoint [*antiphonorum genus*], and into its affections or periods. ... Analysis consists of five parts: 1. Determination of mode; 2. of species of tonality; 3. of counterpoint; 4. Consideration of quality; 5. Resolution of the composition into affections or periods.



He then discussed each of the parts of analysis in detail, and followed this by his analysis of Lassus's five-voice motet *In me transierunt*. He defined the mode as authentic Phrygian, and discussed the total range of the piece and the individual vocal ranges. He defined the tonality as 'diatonic', the species of counterpoint as 'broken' (*fractum*), the quality as *diazeugmenorum*. Burmeister then proceeded to the fifth stage (pp.73ff):

> Furthermore, the work can be divided up very comfortably into nine periods, of which Period 1 comprises the *Exordium*, which is elaborated with two kinds of ornament: *fuga realis* [regular imitation] and *hypallage* [imitation by contrary motion]. The seven middle periods are the *Corpus* of the work, just like the *Confirmatio* in oratory (if comparison be allowed with a kindred art). Of these, the first [Period 2] is ornamented with *hypotyposis* [word-painting], *climax* [repetition of a figure one step higher or lower] and *anadiplosis* [homophonic passages in multiple restatements at different pitches]. The second [Period 3] is ornamented in like manner, but has *anaphora* [pseudo-imitation of a figure, but not in all the voices] added to it. The third [Period 4] has *hypotyposis* and *mimesis* [homophonic phrases from different sub-choruses, answering each other at higher or lower pitches]. The fourth [Period 5] divides into two sub-choruses, and has *pathopoeia* [a semitone chromatic step expressive of sadness (on the words 'dolor meus' in Tenor I and Bassus)]. The fifth [Period 6] has *fuga realis*, the sixth [Period 7] *anadiplosis* and *noemate* [homophonic passages], the seventh [Period 8] *noemate* and *mimesis*. Period 9, the final one, is like the Epilogue in oratory. The piece ends with a principal cadence [with Tenor I falling to *E* and the Altus ascending to the octave above it].

Passages from this motet are cited elsewhere in Burmeister's treatise to illustrate rhetorical devices, thus giving a very full exegesis of the work. Fig.1 shows his analysis applied to Period 4.

Lippius (1612) discussed rhetoric as the basis of the *forma*, or structure of a composition. Throughout the Renaissance and Baroque periods the principles of rhetoric were prescriptive: they provided routine techniques for the process of composition rather than descriptive techniques for analysis. But they played an important part in the growing awareness of formal structure during these periods, and in particular of the function of contrast and the links between contrasted sections, out of which the analytical faculty was eventually to develop. Mattheson (1739) enumerated six parts to a well-developed composition such as an aria (p.236):

> *Exordium*, the introduction and beginning of a melody, in which its purpose and entire intention must be shown, so that the listener is prepared and his attention is aroused. ...
>
> *Narratio* is a report or a narration in which the meaning and nature of the discourse is [are] suggested. It is found immediately at the

1. Orlande de Lassus: Motet 'In me transierunt', bars 16–23, with annotations showing the analysis of Burmeister (1606), 64, 74

entrance of the voice – or the most important concerted [instrumental] part, and is related to the Exordium ... by means of a suitable association [with the musical idea found in the Exordium].

Propositio briefly contains the meaning and purpose of the musical speech, and is simple or compound ... Such propositions have their place immediately after the first phrase of melody, when actually the bass takes the lead and presents the material both briefly and simply. Then the voice begins its *propositio variata*, joins with the bass, and thus creates a compound proposition.

Confirmatio is the artistic strengthening of the proposition and is usually found in melodies by imaginative and unexpected repetitions, by which is not to be understood the normal Reprise. What we mean here are agreeable vocal passages repeated several times with all kinds of nice changes of decorated additions.

Confutatio is the resolution of objections [i.e. contrasted or opposing musical ideas]. In melody it may be expressed either by tied notes or by the introduction and rejection of passages which appear strange.

Peroratio, finally, is the end or conclusion of our musical oration, and must above all else be especially expressive. And this is not found just in the outcome or continuation of the melody itself, but particularly in the postlude, be it either for the bass line or for a strong accompaniment; whether or not one has heard the Ritornello before. It is customary that the aria concludes with the same material as it began; so that our Exordium also serves as a Peroratio.

Mattheson then went on to apply this sectionalization to an aria by Marcello, complete with discussion and musical examples (pp.237ff), introducing other technical terms as he did so. (*See* RHETORIC AND MUSIC, §II.)

So far this discussion has been occupied with principal developments up to 1750 in the analysis of structural organization. However, if a full appreciation is to be gained of the groundwork of analytical theory, then three other traditions of musical theory must be touched upon at this point: the art of embellishment, the technique of figured bass and the theory of harmony. None of these is itself centred on analysis, but each bears on it.

The tradition of embellishment manuals, stretching from Ganassi (*Fontegara*, 1535) to Virgiliano (*Il dolcimelo*, *c*1600) and then on to the 17th-century vocal and instrumental tutors, was primarily concerned with teaching graces and *passaggi* to performers. This was done by means of tables of ornaments, extended practical examples and formulated rules. In these manuals is established the fundamental concept of 'diminution'. This concept has two aspects: (1) the subdivision of a few long note values into many shorter values; and (2) the application to an 'essential' melodic line of a layer of less essential linear material. In both aspects a hierarchy is created, and in both the possibility exists of the hierarchy becoming multi-layered as an already embellished line is subjected to further embellishment. On the face of it this was a quest for the purely transient affair of the virtuoso performer. In reality much 16th-century music contained elements of embellishment as it was written down; and the modern style of 17th-century *seconda pratica* subsumed ornamentation within its notated exterior. The compositional notion of inventing (or adopting) a basic structure and then elaborating it, which goes back at least to the 9th century and was developed as *contrapunctus diminutus* by 14th-century theorists, was crystallized in

this instructional tradition and was absorbed deep into European musical consciousness. Nowhere was this truer than in the *stile antico* lineage, which led from Diruta (*Il primo libro*, 1580) through Berardi (*Ragionamenti musicali*, 1681; *Miscellanea musicale*, 1689) and Fux (*Gradus ad Parnassum*, 1725) right into the heart of the 19th century. It should not be forgotten that Beethoven was steeped in this tradition and to the end of his life remained profoundly influenced by his lessons from Albrechtsberger. This tradition was to be of incalculable importance to the theories of Heinrich Schenker at the beginning of the 20th century.

The teaching of figured bass was similarly performer-orientated. The line of treatises stretched from Agazzari (*Del sonare sopra'l basso*, 1607) into the 18th century. It tended to foster the concept on which it was founded: that of the chord as an indivisible unit. It evolved a new categorization of consonance and dissonance which, like the concept of diminution, was absorbed profoundly into the mainstream of musical thought. However, it masked the concept of 'root' by concentrating on the actual bass line.

Unquestionably the most influential music theorist of the 18th century was Rameau. Rameau was not himself concerned with analysis of form and large-scale structure. His theory of harmony nonetheless had latent significance for future analysts. Rameau 'conceptualized those principles of tonality which were so thoroughly revolutionizing harmony in the early eighteenth century' (Gossett, ed. and trans.: Rameau: *Traité*, 1971, p.xxi). He asserted the primacy of harmony over melody. At the heart of his theory are the three 'primary consonances', the octave, 5th and major 3rd, and the fact that they are contained within and generated by the single note. (This he saw first through mathematical subdivision of string lengths, as had Zarlino before him, and later through the observed overtone structure of a sounding body, or *corps sonore*.) He saw the octave as the 'replica' (*réplique*) of its source (ibid., 8). From these observations he posited the notion of transposing the natural order of sounds in a harmony, thus isolating the principle of 'inversion' (*renversement*): 'inversion is basic to all the diversity possible in harmony' (ibid., 13). The principle of 'implication' (*sous-entendre*) allows that sounds may be heard in a chord while not existing in their own right. Inversion, replication and implication together yield the notion of 'root' (a concept which had already been grasped by Lippius, 1612, and Baryphonus, *Pleiades musicae*, 1615, 2/1630) and thus also the series of such roots, some present and some implied, that underlies a harmonic progression containing inverted chords. This series of notes Rameau termed 'fundamental bass' (*basse fondamentale*).

What did this theory have to offer to analysis? First, it offered explanations for chordal structures, consonant and dissonant, thereby providing tools for chordal analysis. Second, it presented a highly centralized view of tonality, comprising a very few elements which could occur in a rich variety of ways. Together with the rules for the operation of 'fundamental bass', this paved the way for a reductionist approach to musical structure. Finally, by giving acoustical primacy to the major triad it offered the prospect of scientific verifiability to analytical systems.

Rameau's exact contemporary J.D. Heinichen was almost as prophetic in certain respects. His *Der General-Bass in der Composition* (1728) was written towards the end of the figured-bass tradition and brought that tradition into contact with the theory of composition. Heinichen came close to formulating a theory of chord-progression. Of particular interest to the analyst is his notion of 'fundamental roles' (*Fundamentalnoten*), by which he denoted the principal notes in a melody line after inessential notes have been stripped away.

2. 1750–1840. The origins of musical analysis as one now thinks of it lie in early 18th-century philosophy and are linked with the origins of the aesthetic attitude itself. For it was in the 18th century, and particularly with the English philosophers and essayists, that the idea came to the surface of contemplating beauty without self-interest – that is, without motive of personal improvement or utility. This new attitude was termed, by one of its earliest protagonists, Lord Shaftesbury (1671–1713), 'disinterested attention'. It embodied a mode of interest that went no further than the object being contemplated, and was engrossed in the contemplation itself. Leibniz, at about the same time, evolved a concept of perception as an activity in itself rather than as a processing of sense-impressions. This active concept of perception was important in the work of Alexander Baumgarten (1714–62), who coined the word 'aesthetics'. It was during this period that the notion of 'fine art' as such, divorced from context and social function, arose.

In Shaftesbury's equation of disinterested attention with 'love of truth, proportion, order and symmetry in things without' lies the germ of formal theory as it was developed in Germany during the second half of the 18th century. His declaration that '*the Beautiful*, *the Fair*, *the Comely*, were never in the *Matter*, but in the *Art* and *Design*; never in the *Body* itself, but in the *Form* or *forming Power*' (*Characteristicks of Men, Manners, Opinions, Times*, 1711, ii, 405) drew attention to the outward form as the object of contemplation rather than content. Such an attitude came through in, for example, *Der allezeit fertige Polonoisen- und Menuettencomponist* (1757) by J.P. Kirnberger, one of a number of publications that laid down a fixed chord scheme for dances, and supplied several motifs for each bar from which one was to be selected by throwing a dice.

However, it was not in the field of analysis or of criticism, as one might expect, that these perceptually based ideas were fully articulated in music for the first time. It was in composition teaching: in particular in the writings of the theorist H.C. Koch. The most significant aspects of Koch's important work *Versuch einer Anleitung zur Composition* (1782–93) were the twin subjects of phrase structure and formal model. Koch's principle of phrase extension had its forerunner in the *Anfangsgründe zur musicalischen Setzkunst* (1752–68) of Joseph Riepel. In his second chapter (Frankfurt, 1755) Riepel discussed the construction of eight-bar phrases in two four-bar units, designating each according to its type of cadence as *Grundabsatz, Aenderungsabsatz* or *Aenderungscadenz* (pp.36ff). He went on (pp.54ff) to discuss repetition and phrase extension (*Ausdähnung*) and interpolation (*Einschiebsel*). Riepel used graphic signs – the square, crosses and letters – to designate constructional devices. In his

fourth chapter (Augsburg, 1765) Riepel considered melodic 'figures' (*Figuren*) not in the rhetorical Baroque sense but as units of formal construction. He presented the first five bars of an aria, marking the four musical figures by brackets and numbers (fig.2*a*). He then took no.1 and showed how it might be repeated sequentially at the interval of a 3rd (marking the repetition with a double cross; fig.2*b*), then at the 2nd and the 5th. He then worked a sequential extension of no.2 which continued with no.4 (fig.2*c*), and so on (pp.81ff). The examples were still very much in the style of Baroque melodic construction, but Koch described Riepel's work as 'the first ray of light' (ii, 11).

There is evidence that Kirnberger too was influenced by Riepel in his writings. In *Die Kunst des reinen Satzes in der Musik* (ii/1, 1776), he employed a range of teminology for melodic structures that provides a halfway-point between Riepel and Koch. Each large-scale section of a piece, called *Hauptheil*, was subdivided into several units, each called *Periode* or *Abschnitt*. They were themselves subdivided into several units, each known as *Satz* or *Rhythmus*. They in turn were subdivided into the smallest unit of all, each known as *Cäsur* or *Slied*. The term *Einschnitt* equated sometimes with *Satz*, sometimes with *Cäsur*. Kirnberger offered rules (ii/1, 140–51; also briefly i, 1771, p.96; Eng. trans., 407–16, 114) on the construction of all these units, especially as to their length, rhythmic patterning and cadence-forms. In stating that the number of bars constituting a *Satz* should normally be a multiple of four, or at least of two, he made special allowance for interpolation. A one-bar unit, a repetition of the previous bar, could be inserted (ii/2, 143; Eng. trans., 409) without disturbing the feel of the unit. Moreover, the *Satz* could be extended by the elongation of the value of one or more of its main notes. This might result in five-, seven- or nine-bar *Sätze*. Fig.3 shows his graphing of a succession of three five-bar units by bar number and slur marks.

2. From J. Riepel: *'Anfangsgründe zur musikalischen Setzkunst', iv (Augsburg, 1765), 81–2*

3. From J.P. Kirnberger: *'Die Kunst des reinen Satzes in der Musik' (Berlin, 1771–9), ii/1, 147*

Kirnberger had apparently been a pupil of J.S. Bach, and certainly sought to disseminate Bach's methods; in turn he was the musical adviser to the great Swiss aesthetician J.G. Sulzer. He was also the direct heir of the two lines of harmonic theory that descended from Rameau and Heinichen. This may be seen in three harmonic analyses of pieces (two of them entire) that are associated with him. The first is an analysis of his own E minor fugue, which he appended to vol.i (1771) of *Die Kunst des reinen Satzes in der Musik* in order to demonstrate how to 'detect the true harmony as conceived by the composer', distinguishing it from passing notes, in complex situations. 'Once beginners have acquired skill in the accurate analysis of harmony in this piece, we recommend to all of them that they also study the works of great masters in a similarly thorough way' (Eng. trans., 266, 270ff). This analysis is laid out on five staves, the top two presenting the fugue entire. The fifth staff shows the fundamental bass as Kirnberger derived it, the fourth shows the inessential dissonances, and the third presents a figured bass for the composition, so as to show the inversions of chords. *Die wahren Grundsätze zum Gebrauch der Harmonie* (1773), published over Kirnberger's name, was probably written by his pupil J.A.P. Schulz under his supervision. Appended to this work are harmonic analyses of two works from Bach's *Das wohltemperirte Clavier*: the Fugue in B minor from book 1 (selected because of its apparent insolubility) and the first part of the Prelude in A minor from book 2. The latter is rather simpler, but the B minor Fugue (fig.4) is laid out on two pairs of staves (the top pair presenting the fugue in finished form), with two further individual staves below. The third and fourth staves give a figured bass (using the bass of the fugue where appropriate) with chords over it that simplify by removing all inessential dissonances. The fifth staff gives the fundamental bass, with figures that retain the essential dissonances. Finally, the sixth staff gives the fundamental bass with only the fundamental chords recorded in its figuring – that is only triads and chords of the 7th, in accordance with Rameau's principles.

Koch's exposition of melodic phrase structure in the 1780s and 90s was to be of the profoundest importance for music theory, ultimately also for analysis, and it led directly to Riemann's theory of dynamic and agogic. The exposition is in Part ii of the *Versuch* (section 2, subsection 3 'On the construction of melodic sections', and subsection 4 'On the combining of melodic sections, or the construction of periods'), occupying in all some 500 pages. It follows immediately on a discussion of rhythm and metre, and establishes a hierarchical framework in which two-bar 'segments' or 'incises' (*vollkommene Einschnitte*) combine in pairs to form four-bar 'phrases' (*Sätze*) which in turn combine to make 'periods' (*Perioden*). Koch then laid down rules as to how this framework might be modified without loss of balance. Chapter 3 of subsection

4. *From J.P. Kirnberger (?with J.A.P. Schulz): 'Die wahren Grundsätze zum Gebrauch der Harmonie' (Berlin and Königsberg, 1773), 64*

4 contains three studies 'Of the use of melodic extension'. The first is of extension by repetition of all or part of a phrase; here Koch conveyed the idea of function within a phrase rather than melodic material, speaking often of 'the repetition of a bar' when the content of that bar is different on second statement. The second study is multiplication of phrases and cadential figures. The third is of the highly significant concept whereby a two-bar or four-bar phrase-unit may be embedded within an existing melody. Koch explained with each extension device (*Verlängerungsmittel*) how it could be used without upsetting the general effect of symmetry. Thus for example he stated that 'When a phrase contains one-bar units of which the first is repeated, then the second must also be repeated', because if not 'the unequal handling of these small units stands out as an unpleasant effect' (ii, 63ff).

Chapter 3 of subsection 3 describes processes of melodic compression effected by the telescoping of two phrase-units to form a single unit. In this chapter he used a bar-numbering system that shows the bar at the point of telescoping as having two functions. Fig.5 shows the telescoping of two four-bar phrases into a seven-bar period, with the suppressed bar (*Tacterstickung*) marked with a square (ii, 455).

Koch's processes of extension and compression show his concern with symmetry and proportion on the smaller scale. Subsection 4 also presents the construction of compositions in ascending order of magnitude, from 'the combining of melodic sections into periods of the smallest size, or the organization of small compositions' (chap.2, iii, 39–152) involving the combination of four melodic sections 'of which two have a cadence in the home key' (p.57), 'of which one has a cadence in a related key' (p.81), and 'in which only a single closing phrase occurs' (p.111), and the combination of 'more than four sections in small compositions' (p.128) to 'the combination of melodic sections into periods of greater length, or the organization of larger compositions' (chap.4, iii, 231–430). In this way Koch drew all the musical elements of a composition into mutual relationship – for music is 'that art which expresses feelings through the relationships between notes' (i, 4).

It is in these two chapters that the other important aspect of Koch's work comes to the fore: that of the formal model. In this respect he cited as his authority Sulzer's *Allgemeine Theorie der schönen Künste* (1771–4), in which the idea of 'layout' (*Anlage*) or model is put forward. Such a model sets down a plan for a work and the most salient features. The artist, following this model, is then to proceed to the 'execution' (*Ausführung*) or completion of design and finally to the 'elaboration' (*Ausarbeitung*) of the work in all its details. Accordingly, within the discussion of smaller forms (iii, 39ff) Koch provided the plan and characteristic details of the gavotte, bourrée, polonaise, anglaise, minuet and march, concluding with the chorale and figured melody. He described, for example, the gavotte as 'a dance piece of lively and pleasant character' much used in theatrical dance. Its features are '(1) an even time signature which is usually in 2/2 and not too fast; (2) that each phrase begins with a two-crotchet upbeat; (3) that it has even-numbered rhythmic units with a detectable phrase division at each second bar; (4) that it comprises two sections, each of eight bars'.

All these models were offered as generative: from them compositions could be created, almost mechanically – 'almost', because Koch held the view that 'living expression' (*lebendiger Ausdruck*) was essential to the artist ('the poet who abandons expression, image, figure, and becomes a dictionary-user, is in error', i, 6). They form part of an instruction manual that proceeds from harmony to counterpoint and then to melody and form. Yet they are important, too, in the history of analysis, because they separate 'norm' from individuality, implicitly stating what was 'expected' and thereby defining liberty. Moreover, although most of Koch's abundant music examples were specially written for the book (in the contemporary style of Graun, Benda, and early Haydn and Mozart), he appended to his discussion of the combination of four melodic sections a brief analysis (iii, 58ff) of the minuet from Haydn's Divertimento in G (HII:1). The criteria for his analysis are particularly interesting: 'This little minuet', he began, 'has the most complete unity'. He followed the philosophical dictate, transmitted by Sulzer (under *Einheit*), that 'wholeness ... and beauty consist of diversity

5. *From H.C. Koch: 'Versuch einer Anleitung zur Composition', ii (Leipzig, 1787), 455*

6. *J.-J. de Momigny: 'Cours complet d'harmonie et de composition', iii (Paris, 1806), 109–10*

bound together in unity'. Sulzer described unity with reference to a clock: 'if only one of its mechanical parts is removed then it is no longer whole [*Ganzes*] but only a part of something else'. In his analysis Koch identified the first four bars as the 'sole principal idea', repeated to form a closing phrase. The opening of the second half, also repeated as a closing phrase, 'while different from the preceding sections, is actually no less than the self-same phrase used in another way; for it is stated in contrary motion, and by means of a thorough deviation which results from this becomes bound together through greater diversity'.

Not only is the 'model' an important tool for formal analysis, later to be used by Prout, Riemann and Leichtentritt, but also the Sulzerian process of model–execution–elaboration is itself an important concept of artistic creation, which later acquired its analytical counterpart in the theory of layers (*Schichten*). In addition, Koch equipped the composer and analyst with a terminology, derived from grammar and rhetoric, for the description of structure. For him, melody was 'speech in sound' (*Tonrede*), comprising grammar and punctuation. He sought to establish a 'natural law' of musical utterance (*Tonsprache*) which he called the 'logic of the phrase'. In this logic the smallest sense-unit, called 'incomplete segment' (*unvollkommener Einschnitt*), normally occupied one bar, the 'complete segment' (*vollkommener Einschnitt*, itself divisible into two *Cäsuren* in Sulzer's definition of *Einschnitt*) two bars. Such segments combine to form the 'phrase' (*Satz*), defined as either 'opening phrase' (*Absatz*) or 'closing phrase' (*Schluss-Satz*). Phrases form a 'period' (*Periode*). All three principal words are grammatical constructs: *Einschnitt* as phrase, *Satz* as clause, and *Periode* as sentence, the third of these divisible, according to Koch, into 'subject' (i.e. first four bars, *enger Satz*) and 'predicate' (latter four bars).

At the beginning of the 19th century came a work that gave an unprecedented amount of space and range of thought to analysis. Jérôme-Joseph de Momigny (1762–1842) in his *Cours complet d'harmonie et de composition* (1806) devoted no fewer than 144 pages, including analytical plates, to an analysis of the first movement of Mozart's String Quartet in D minor K421/417*b*. He provided a double analysis, examining both phrase structure and expressive content. Momigny's phrase-structure analysis is based on the novel rhythmic concept that musical units proceed from upbeat (*levé*) to downbeat (*frappé*) and never vice versa. He termed his smallest sense-unit, made up of two successive notes, upbeat and downbeat, the *cadence* or *proposition musicale*. These two notes are in the relationship of *antécédent* and *conséquent*. In the opening bars of the movement by Mozart (fig.6), two *cadences mélodiques* pair off in antecedent–consequent relationship to form a *cadence harmonique*, two of these forming a *hémistiche*, two *hémistiches* forming a *vers*, and two *vers* forming a *période*. Momigny's concept does not, however, insist on hierarchy by pairs, and allows for as many as six or eight *vers* to make up a *période* in certain contexts. The *périodes* form further into *reprises* and are designated according to function within their *reprise* as 'de début', 'intermédiaire', 'de verve', 'mélodieuse', or 'complémentaire'. (In

other contexts Momigny used other terms from versification also to designate structural units of intermediate size: *distiche, strophe* and *stance*.)

In this phrase-structure analysis Momigny laid the basis for a view of music that was to become important at the end of the 19th century: of music as a succession of spans of tension. In his expressive analysis, on the other hand, he was looking back to the *Affektenlehre* of the 18th century. His method was to determine the *caractère* of the work under analysis, to select a verbal text that had the same character, and to set the text to the principal melodic material of the work so that melodic repetition was mirrored by verbal repetition, fluctuations of musical mood by fluctuations of textual meaning. He constructed a poetic parallel with the music, offering through it an interpretation of both form and content.

The plates for the analysis present the music laid out on ten parallel staves; the top four show the quartet in conventional score, the fifth staff presents the melodic line (and notes printed small here reveal the beginnings of melodic reduction technique) with its *cadences* marked, the sixth and seventh staves provide a harmonic reduction of the texture with harmonic *cadences* marked, the eighth and ninth staves present the principal melodic material with poetic text underlaid (in this case a dramatic scene between Dido and Aeneas, with notes from the first violin assigned to Dido and from the cello assigned to Aeneas) and with simple piano accompaniment, and the tenth staff shows the roots of the prevailing harmony as a fundamental bass (fig.6).

Momigny's other extended analysis is of the first movement of Haydn's 'Drumroll' Symphony no.103 (Eng. trans., 1994). This spans 24 pages of text combined with 47 pages of annotated full score. The text first investigates the substance of the movement, proceeding period by period, examining the thematic material and its deployment, its use of contrasting dynamics and timbres, stressing the achievement of variety in unity; it then builds a poetic analogue to the music in the form of a village community terrorized by a fearful storm and eventually chastened in the eyes of God. This latter 'pictorial and poetic analysis' belongs to an 18th-century tradition of exploring the borderland between words and music – a tradition exemplified by Klopstock and Lessing, of which the most celebrated product was Heinrich Wilhelm von Gerstenberg's double adaptation of C.P.E. Bach's C minor Fantasy, first to the words of Hamlet's monologue 'To be, or not to be' and then to those of Socrates' monologue as he takes hemlock (see Helm, 1972). Indeed, Momigny's writings suggest that there was a veritable school of such activity in Paris at this time. Grétry was a skilled exponent of this group, which Momigny called 'les parodistes'.

Momigny's two analyses from 1806 are monumental achievements. So too was another extended analysis, which occupied 21 columns of the Leipzig *Allgemeine musikalische Zeitung*, published in two instalments in July 1810: E.T.A. Hoffmann's analytical review of the score and parts of Beethoven's Fifth Symphony, complete with copious music examples (Eng. trans., 1994). Together three mighty analyses emerge from the head-waters of the broadening stream of 19th-century analysis. Superficially, Hoffmann's review has much in common with those of Momigny. Both deal in detail with matters of structure, both use highly technical language, both offer rich descriptive imagery. Hoffmann's pictorial language, however, belongs (as one would expect of him) to the world of Romantic literature, speaking of 'nameless, haunted yearning' and a 'magical spirit realm', and of the work being held together 'in a continuous fantastic sequence … like an inspired rhapsody'. His technical description, which freely uses such terms as *Hauptgedanke*, *Zwischensatz* and *Figur*, sees the music not in fixed format, through a series of periodic frames, but in free format, as a seamless continuity powered by motifs. It adumbrates an organicist view of musical structure, as for example (Eng. trans., p.163):

> it is particularly the close relationship of the individual themes to each other which provides the unity that is able to sustain *one* feeling in the listener's heart. … It becomes clearer to the musician when he discovers the bass pattern that is common to two different passages, or when the similarity between two passages makes it apparent. But often a deeper relationship that is not demonstrable in this way speaks only from the heart to the heart, and it is this relationship that exists between the subjects of the two allegros and the minuet, and that brilliantly proclaims the composer's rational genius.

At one point Hoffmann's text sets out five forms of the Menuett theme so that the reader can see the transformations.

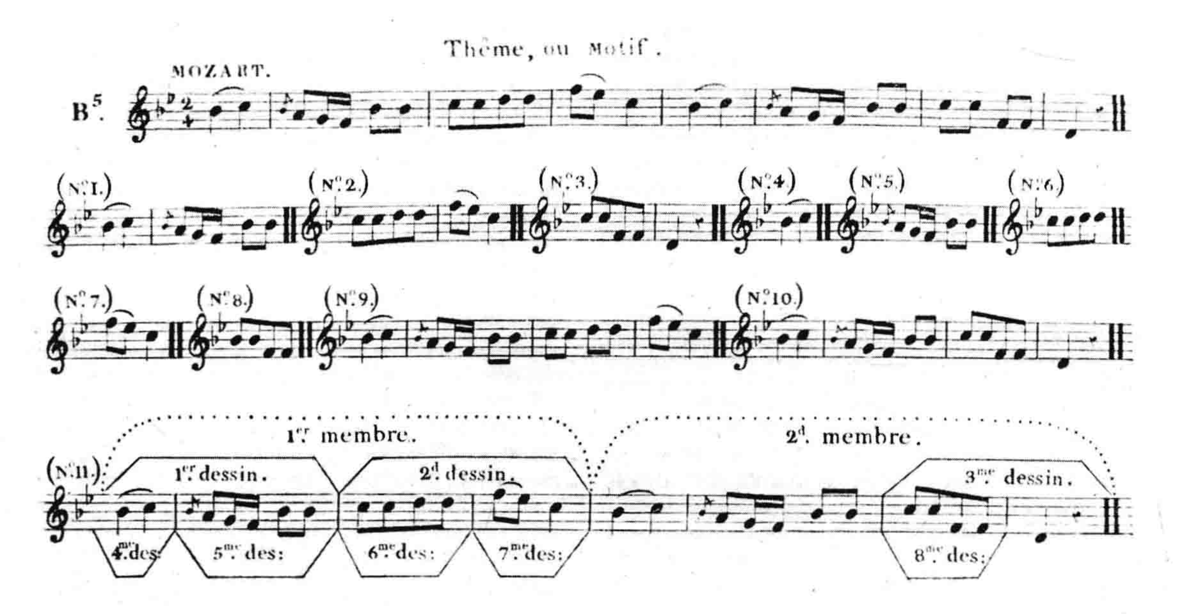
Schumann's review of Berlioz's *Symphonie fantastique* (1835) also combines objectivity and subjectivity in tackling the work from four distinct points of view: formal construction, style and texture, the poetic 'idea' lying behind the symphony, and the spirit that governs it. The review ranges itself against critics of the work, examining its structure section by section to show that 'despite the apparent formlessness … as regards its major proportions it possesses a wonderfully symmetrical disposition – to say nothing of its inner coherence' (Eng. trans., 1994, p.174); discussing harmonic and modulatory style, melodic and contrapuntal fabric, acknowledging the contravention of many theoretical rules but justifying them by the work's intensity, its 'wholly distinctive and indomitable spirit' (p.180); recounting the work's programme, and arguing that it spurs the listener's imagination to perceive its own further meaning; and finally affirming that the symphony 'has to be understood not as the work of art of a master, but rather as unlike anything that has gone before it by virtue of its inner strength and originality' (p.194).

The use of analysis to serve an interest in musical objects themselves, rather than to supply models for the study of composition, reflected a new spirit of historical awareness that arose with Romanticism. It was not a dispassionate 'scientific' interest in the past specimens, but a desire to enter into the past, to discover its essence. This spirit, in confluence with the Romantic image of 'genius', resulted in a new type of monograph, biographical and historical. An early example was J.N. Forkel's *Ueber Johann Sebastian Bachs Leben, Kunst und Kunstwerke* (1802), which, while including nothing that could be termed formal analysis as such, contained an extended characterization of Bach's music as a whole – in short, a stylistic analysis. Forkel was much influenced by the concept of 'organism' in contemporary philosophy and education; to seek the depths of 'Bach's transcendent genius' (Eng. trans., 1920, p.xxix) in the totality of his work rather than in individual compositions was consistent with this. He declared Bach's mastery of technique; at the same time he tried to define where 'Bach followed a course of his own, upon which the text books of his day were silent' (p.74). To identify genius he took, in chapters

5 and 6 ('Bach the Composer'), five aspects of music: harmony, modulation, melody, rhythm and counterpoint. His method was to cite a technical context, state the conventional in terms of contemporary theory or practice, and then consider Bach's handling of such a context. He thus had illuminating things to say about Bach's voice-leading, his use of passing notes, of pedal points, of remote modulations, his contrapuntal solo melodic writing, his fugal counterpoint and his use of the voice; for example (p.77):

> there is a rule that every note raised by an accidental cannot be doubled in the chord, because the raised note must, from its nature, resolve on the note above. If it is doubled, it must rise doubled in both parts and, consequently, form consecutive octaves. Such is the rule. But Bach freqently doubles not only notes accidentally raised elsewhere in the scale but actually the *semitonium modi* or leading-note itself. Yet he avoids consecutive octaves. His finest works yield examples of this.

For Forkel such transgression on Bach's part always produced a more natural, spontaneous or smooth effect than orthodoxy. The link between genius and nature was axiomatic: 'when [Bach] draws his melody from the living wells of inspiration and cuts himself adrift from convention, all is as fresh and new as if it had been written yesterday' (p.83).



The early decades of the century saw the publication of other comparable monographs, including Baini's study of Palestrina (*Memorie storico-critiche della vita e delle opere di Giovanni Pierluigi da Palestrina*, 1828), Carl Winterfeld's of Palestrina (1832) and Giovanni Gabrieli (1834) and Aleksandr Dmitreyevich Ulïbïshev's of Mozart (1843). In these, technical assessment was placed at the service of characterization of style; there was a critical and historical dimension to such writing that set it apart both from the field of composition teaching that had given rise to Koch's terminology and from the critical analysis of individual works exemplified by Hoffmann's review of Beethoven's Fifth and Schumann's of the *Symphonie fantastique*. Other writings pursued a third analytical path that derived from the model of the composition treatise but was focussed on the elucidation of pre-existing works – even where the work in question had been composed by the author, as in the case of the analysis by G.J. Vogler of one of his own preludes (1806; Eng. trans., 1994).

Perhaps the most striking aspect of the *Traité de mélodie* (1814, 2/1832) by the Czech composer and theorist Antoine Reicha is its citation of so many examples from actual music (he listed the composers in his preface). All these examples are submitted to segmentation and discussion. This in itself represents a significant shift from the compositional to the analytical standpoint – Reicha remarked in the preface to the *Traité* that 'It is with music as with geometry: in the former it is necessary to prove everything by music examples, just as it is with the latter by geometric figures'. Such a shift is emphasized by the inclusion of six extended analyses of works by Haydn (pp.40ff and ex.D[4]), Mozart (p.43, E[4]), Cimarosa (pp.43ff, F[4]), Sacchini (pp.45ff, G[4]), Zingarelli (pp.47ff, Q[4]) and Piccinni (pp.49ff, R[4]). Each piece is presented as a continuous melodic line annotated with brackets, labels and comments, and a page or two of discussion in the text.

Reicha established a set of technical terms in the French language comparable to those of Koch, Riepel and Sulzer. He used *dessin* to denote the smallest unit of construction (equivalent to *Einschnitt*), and likened it to an *idée*; two or three *dessins* normally make up a *rythme* (equivalent to *Satz*), repetition or multiplication of which (the second of a pair being called the *compagnon*) produces the *période*. A composition made up of several *périodes* is a *coupe*: that of two or three *périodes* is a *petite coupe binaire* or *ternaire*, and that of two or three *parties*, each comprising several *périodes*, is a *grande coupe binaire* or *ternaire*. The *dessin* is punctuated by a quarter-cadence (*quart de cadence*), the *rythme* by a *demi-cadence*, the *période* by a *trois-quarts de cadence* (if repeated) or by a *cadence parfaite*. Koch's division into grammar and punctuation is mirrored in this view, as is his fundamental concept of hierarchical phrase structure. Thus Reicha took the theme of the last movement of Mozart's String Quartet K458, 'The Hunt', and divided it into two *membres* (i.e. *rythmes*), each comprising two *dessins* of two bars' duration. Three of the four *dessins* are melodically distinct (his nos.1, 2 and 3), and Reicha broke each of these further into two sub-units, numbering five of them (nos.4–8) and still calling them *dessins*. All this is illustrated in his music example B[5], of which the first section is shown in fig.7.

Such writing could arouse the interest of the musical public. Around 1830 there was an intense debate in the pages of *La revue musicale* and the Leipzig *Allgemeine musikalische Zeitung* about the opening bars of Mozart's 'Dissonance' Quartet K465 (see Vertrees, 1974), in which the protagonists were Fétis and an anonymous writer identified by the pseudonym 'A.C. Leduc'. The response to this by the Mannheim-based composer and theorist Gottfried Weber was widely circulated. Weber acknowledged the 'disturbing effect' of the passage, and stated that its causes may be ascertained by analysis (Eng. trans., 1994, p.163): 'A thorough-going *analysis* of the entire *harmonic and melodic fabric* [*Textur*] of the passage in question will enable us to detect all these causes, to isolate them and see them interacting with one another, and thus to specify *what* it is in these tonal constructs [*Anklängen*] that disturbs us so much'. Weber deployed a number of approaches. He considered the tonal scheme of the passage through the application of harmonic theory; he identified the proliferation of passing notes as a factor contributing to the effect of the music; he noted cross-relations between the voices, and parallel progressions at the interval of a 2nd; he reviewed 'the grammatical construction of the passage as a whole' and finally assessed its 'rhetorical import'. Weber did not claim that his analysis proved either the 'lawlessness' or the 'law-abiding quality' of the music (p.183): only the 'musically trained ear' could judge whether the tolerable 'limits of harshness' had been overstepped. Content himself to accept the judgment of Mozart, and to disregard 'fools and jealous ones', Weber nonetheless felt that his analytical approach had been able to establish what the effects consisted of and what intentions lay behind them: 'All that technical theory could have done, it has here done' (p.182).

Weber was also among those who in the first decades of the 19th century continued the work previously done in the area of harmonic theory by Rameau, Heinichen, Kirnberger and others. His four-volume theory of tonality (*Versuch einer geordneten Theorie der Tonsetzkunst*, 1817–21) was widely used and acknowledged: the work

7. From A. Reicha: 'Traité de mélodie' (Paris, 1814), Planches, 46

went through three German editions, and its American-English edition (published under the name of Godfrey Weber), translated by James Warner (1842), went through some six impressions; this edition was revised in 1851 by John Bishop of Cheltenham, the translator of Czerny and editor of Reicha. In §53 of the *Versuch* Weber set out a new method of designating chord types. This uses Gothic letters in upper and lower case, with superscript circle, '7' and crossed-'7', to designate major, minor and diminished triads, dominant 7th, secondary 7th, half-diminished 7th, and major triad with major 7th. Then in §151 there are

Fundamental harmonies of each major key.

8. From G. Weber: 'Versuch einer geordneten Theorie der Tonsetzkunst' (Mainz, 1817–21; Eng. trans., rev. 2/1851, by J. Bishop), i, 287

Roman numerals, large and small (actually small-capital), with the same superscript symbols, to denote chord types as located on degrees of the scale within a given key (fig.8). The two 'modes of designation', as described in §153, can be combined by prefixing an upper- and lower-case italic letter and colon to the Roman numeral as an index of the prevailing key; thus C:IV^7 indicates the dominant 7th on the fourth degree of C major.

Weber claimed originality for these symbol-systems and complained of piracy by contemporary writers. The combined system just outlined provided the basis for Schenker's designation of fundamental harmonic steps (*Stufen*), and became widely used in 20th-century theoretical writings.

By far the most visionary steps in harmonic theory at this time, however, were taken by Momigny. Over a period of 18 years he formulated a theory of long-term tonality which enabled him to imply, for example, that the first movement of the Mozart D minor String Quartet in its entirety modulates (in the modern sense) a mere eight times, and that other extended passages normally regarded as modulating several times never leave the home key. While writing the *Cours complet* (1803–5) he evolved an expanded notion of tonality whereby a key comprised not only its seven diatonic notes but also the five flanking notes on the sharp and flat sides and a further five on the double-sharp and double-flat sides (relatively speaking), to produce a tonal space of 27 notes. Finally, in *La seule vraie théorie de la musique* (1821) that space is divided into diatonic genus, chromatic genus and enharmonic genus. By this formulation (derived from classical Greek music theory), most conventionally accepted modulation is classed as movement within this expanded tonal space – movement between areas called 'octachordes'. Such local movement within the tonal space is termed *modulation* (or *modulation négative*), whereas movement outside that space is termed *transition* (or *modulation positive*).

3. 1840–1910. When Carl Czerny translated Reicha's *Cours de composition* of 1816 and two *Traités* as

Vollständiges Lehrbuch der musikalischen Komposition (Vienna, 1834), he contributed by way of an appendix an analysis of the first movement of Beethoven's 'Waldstein' Sonata, in which he stripped away the surface figuration ('the moving figure'), leaving only the underlying harmonies ('the ground-harmony'), presented in block chords. Czerny also did this later in his own *School of Practical Composition* (?1848) for Chopin's Etude op.10 no.1 (fig.9), for the first prelude of Bach's *Das wohltemperirte Clavier*, i, and for the introduction to a sonata by Clementi; and he reduced a study by Cramer to its basic voice-leading ('the ground-melody').

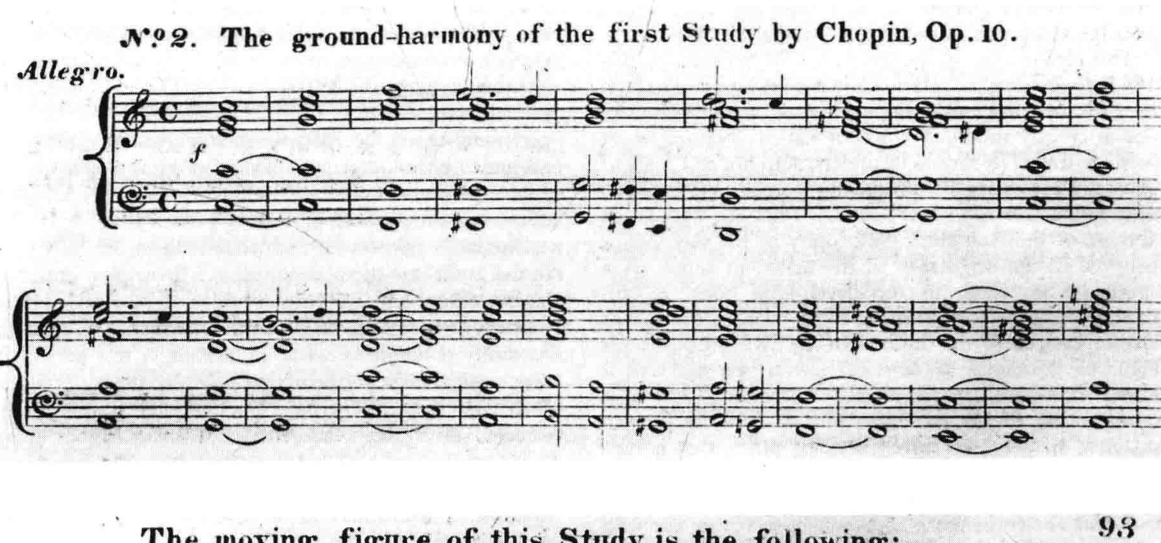
All the music examples in Czerny's *School* are attributed (they represent the generation of Beethoven, Hummel, Rossini, Méhul etc.), and many analyses of whole compositions are included. The treatise was unique in being the first independent manual of form and instrumentation. It took for granted a grounding in harmony and counterpoint, and concerned itself exclusively with the development of ideas and the formation of compositions 'from the most simple Theme to the Grand Symphony, and from the shortest Song to the Opera and Oratorio' (i, p.iii). It is a veritable compendium of musical forms, including exotic dances (such as the bolero, fandango and tarantella and a section on Russian national dances), vocal forms (such as the *romance, preghiera* and ballad), as well as the constituent movements of a sonata, many other forms, and genres such as the quartet, quintet and sextet.

Czerny's attitude towards form was highly determinate: 'the composition must … belong to a species already in existence; consequently, in *this* respect, no originality is, in general, necessary' (i, 1). His understanding of '*form* and *construction*' is itself quite specific (i, 6):

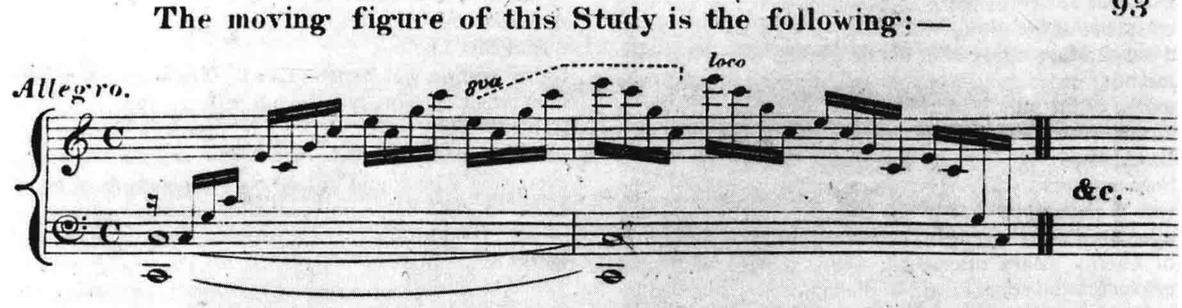
1st [A work's] extent and proper duration.

2ly The requisite modulations, partly into established keys, and partly also into arbitrary and extraneous ones, as well as the places where they are introduced.

3ly The rhythm (the proportion or symmetry) both of the whole, and also of the individual parts and periods of a piece.



4ly The manner in which a principal or an accessory melody is brought in at the proper place, and where it must alternate with such passages as form either a continuation, a moving figure, or a bridge to the following.



5ly The conduct and development of a principal or accessory idea.

6ly The structure and proper succession of the different component parts of the piece, answerable to the species of composition which the author has had in view, as expressed in the title.

There are … a tolerable number of different forms in music. These, however, are reducible to a far lesser number of each principal form, as are totally different in their structure from one another.

A.B. Marx, in his *Die Lehre von der musikalischen Komposition* (1837–47; partial Eng. trans., 1997), was less procrustean. 'The number of forms is unlimited', he said, and there are ultimately no laws dictating what form

9. *From C. Czerny: 'School of Practical Composition' (London, c1849), 92–3*

a particular composition should take. For Marx, form was 'the way in which the content of a work – the composer's conception, feeling, idea – outwardly acquires shape'. A better term for it, he suggested, might have been 'the externalization of content'. Nonetheless, the student composer cannot learn composition through inspiration and idea alone. He needs the models of previous composers as an intermediate stage on the road towards free composition. Thus 'it is possible to *derive* certain *principal forms*, and also certain composite or *compound forms* which are made up of these or variations of them; and only by creating these distinctions does it become possible to comprehend and master the immeasurable array of [formal] moulds [*Gestalten*]' (ii, 5). For Marx, 'form' was almost synonymous with 'whole' (*Ganzes*) (ii, 4ff):

Every work of art must have its form. For every work of art has of necessity its beginning and its end, hence its extent. It is made up in different ways of sections of different type and number. The generic term for all these features is the *form* of a work of art. ... There are as many forms as works of art.

Marx acknowledged that there were similarities in form between pieces, but denied strongly that forms were, as a result, 'routines' through which composers worked. Content was not really separable from form. Even so, the very appearance of similarities suggests that 'there must be some rationale underlying these moulds, some concept which is of broader significance, greater strength and longer duration' (ii, 7). Thus Marx denied form as 'convention' and proposed for it an epistemological basis. Forms are patterns abstracted from past practice, rather than conscious guidelines; they represent deep-seated principles of organization which analysis uncovers.

This idea is close to the ideas of A.W. Schlegel (1767–1845) concerning the relationship between art and nature: beneath the consciously moulded work of art must lie an unconsciously moulded work of nature. Nature 'is an intelligence. ... [It should be understood] not as a mass of products but as itself a producing [force]' (*Vorlesungen über schöne Literatur und Kunst*, i, 1801–2). Very much abreast of the Romantic philosophy of his day, Marx believed in the originality of the artist, in genius as a special endowment, in the developing 'idea' as all-important, in rules as existing to be broken. Marx was also influenced by the outlook of the Swiss educationist Heinrich Pestalozzi (1746–1827), who saw the law of man's development as essentially 'organic' – not as a combination of circumstances but as an inner growth process. All processes have a starting-point, they germinate and grow, and at all points are harmonious and whole. At that starting-point Marx placed the *Motiv*, a tiny unit of two or more notes which serves as 'the seed or sprout of the phrase out of which it grows' (i, 27). In 1841–2 Marx engaged in public dispute with Fink over methods of teaching composition, showing himself fully aware of the philosophical basis of his position (see *Die alte Musiklehre im Streit mit unserer Zeit*, 1841; see also Eicke, 1966).

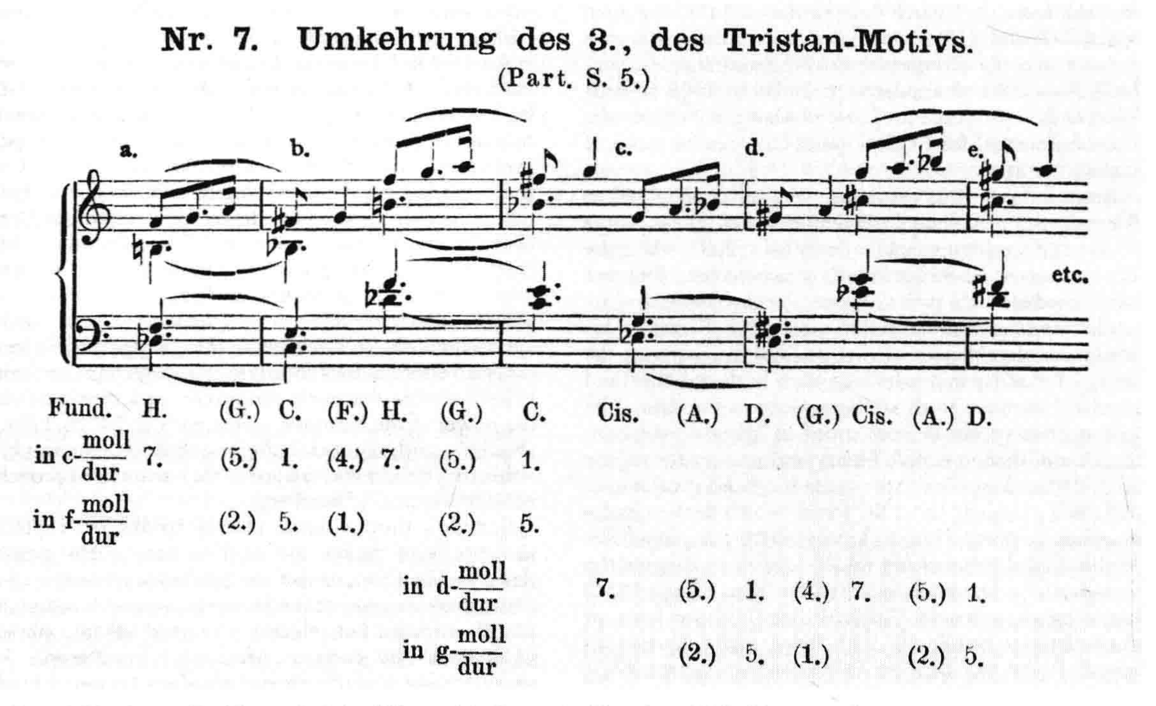
Marx's discussion of sonata form (*Sonatenform* – he was probably the first to use that term for the internal scheme of one movement) differs significantly from that of Czerny. Marx offered (ii, 498ff) a page of formal instruction on sonata form in the major key followed by twice as much indicating ways in which the 'ground-form' may be deviated from, stressing always that the spirit (*Geist*) of the composer may lead him in some other direction, and citing specific cases in Mozart and Beethoven. He pointed only to the unique balance of the key scheme, spelling it out in a highly original fashion, and recommended the composer to keep its advantages carefully in mind. The discussion was superseded when Marx issued the third volume of his compositional manual in 1845. There he devoted close on 100 pages to the topic, treating each of the principal sections of sonata form in turn, the design of each subject group (*Hauptsatz*, *Seitensatz*, *Schlusssatz*), the linkages between groups, the internal construction into antecedent and consequent, the use of motifs, ideas and cells. Significantly, he used the Beethoven piano sonatas as his exemplification throughout this discussion. Volume iii is itself a manual of musical forms that starts with simple forms, including variations, proceeds to rondo forms, to sonata form and thence to hybrid forms such as sonata-rondo, multi-movement structures and the fantasy, and concludes with vocal genres.

Marx's most significant analytical writing is contained in his *Ludwig van Beethoven: Leben und Schaffen*, which was first published in 1859 and continued to be reissued into the 1900s. This is a biography of the oeuvre rather than of the man – a sequence of analyses through which the development of Beethoven's art is traced. It contains extended analyses of all the symphonies, *Fidelio*, the *Missa solemnis* and several of the quartets. Many other works receive briefer analytical treatment. It is in this book that the concept of developing the idea is exploited most fully, especially in the chapter 'The *Eroica* Symphony and Ideal Music' (i, 275; Eng. trans., 1997), which expounds the aesthetic basis of 'idea'. The chapter on the Ninth Symphony (ii, 260) shows Marx's idealistic analytical technique at its best. His introduction to the performance of Beethoven's piano sonatas (1863) is alleged to be an outgrowth of this book. As well as giving advice on matters of execution, it supplies brief analyses of most of the sonatas, motivic and descriptive.

The latter part of the 19th century, and the early part of the 20th, saw the production of a growing number of books, pamphlets and other writings on musical subjects to meet the demands of pedagogical expansion. Though harmony texts also became numerous in this period, it was musical form above all that provided the material for such works. Some, perhaps because they were entirely directed at the lay reader, did not make explicit their intellectual sources and influences; but others chose also to contribute to and develop what was by now an established tradition of ideas. Marx's *Die Lehre von der musikalischen Komposition* went through six editions during his lifetime, and an English translation of the fourth edition was issued in 1852. The work eventually underwent revision by Riemann between 1887 and 1890 (i, rev. 9/1887; ii, rev. 7/1890; iv, rev. 5/1888), and was used in theory teaching well into the 20th century, exercising a profound influence on generations of musicians. In 1885 Salomon Jadassohn produced volume ii*a* of his composition treatise, entitled 'Forms in musical works of art analysed and graded as a course of study'. In 1887 the American writer A.J. Goodrich published his *Complete Musical Analysis*, and the American teacher Percy Goetschius produced a sucession of books on

musical form, of which his *Models of the Principal Musical Forms* (1894) was the first. Riemann's own *Katechismus der Kompositionslehre* (subtitled *Musikalische Formenlehre*) appeared in 1889. In 1908 Stewart Macpherson produced his *Form in Music*, which was the standard manual for English music students for much of the 20th century.

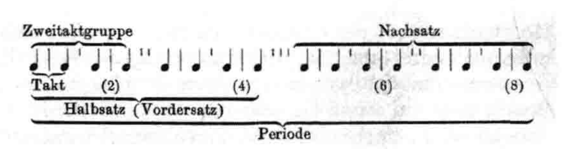
Among those who expressed themselves indebted to Riemann – a prolific and influential writer whose works covered an enormous range of musical subjects – was the British theorist Ebenezer Prout, who between 1893 and 1897 produced his two volumes *Musical Form* and its sequel *Applied Forms*. Prout took from Riemann his fundamental principles of rhythm, and in particular the study of motifs, and admitted that both volumes had involved intensive study of 'large German treatises'. The first volume proceeds from motif to 'phrase' and 'sentence', and then to simple binary and ternary forms, the second from dance forms to sonata form and vocal music, including a chapter on 'cyclic forms' which deals with the symphonic poem. Hugo Leichtentritt completed his *Musikalische Formenlehre* in 1911, later to become the first part of a more extended study (Eng. trans., 1951) including chapters on 'Aesthetic ideas as the basis of musical styles and forms' and 'Logic and coherence in music'. It also had detailed analyses of works, notably a 45-page study of Bruckner's Eighth Symphony and a chapter devoted to Schoenberg's piano pieces opp.11 and 19. It was with Prout and Leichtentritt that *Formenlehre* became a branch of the discipline of musical analysis rather than a prescriptive training for composers, and hence entered the field of musicology.



Approaches to harmony in the second half of the 19th century showed a tendency to divide into two camps: on the one hand those that took a conservative approach to theory but developed new insights born out of analytical pragmatics, and on the other hand those that brought a new rationalism to theory but had less impact on the practice of analysis. An example of the first kind is to be found in *Die Grundsätze der musikalischen Komposition* (1853–4) by the influential Viennese teacher Simon Sechter. Sechter's harmonic system took over the concept of fundamental bass originated by Rameau and transmitted via Heinichen, Kirnberger and Schulz. He developed a theory of chord progression based on correct succession of 'fundamental notes' and the 'underlying harmonies' (*Grundharmonien*) that they project. Sechter used the notion of harmonic step (*Stufe*), and he defined notes as either *leitereigen* (diatonic) or *leiterfremd* (literally 'alien to the scale'). 'Beneath every chromatic progression lies a diatonic one'; most chromatic harmony can be read as diatonic harmony with chromatic inflection; and most 'apparently modulatory passages in reality retain their allegiance' to the tonic. Fundamental notes must be diatonic to a major or minor scale, whatever goes on over them, but a subordinate *Stufe* of one key may become the tonic of a new key, thereby permitting transition from key to key. Some chords are described as 'representing' a fundamental that they do not contain (*Stellvertreter*: '[root] representatives'). Other chords are seen as belonging to two key areas (*Zwitterakkorde*: 'hybrid chords'). Although Sechter's approach looked back to Rameau, it also marked a major step in coming to terms with 19th-century developments in harmonic language; it influenced many generations of musicians, of whom Schoenberg is perhaps the most prominent example.

Another link between old and new in mid-century was the *Lehrbuch der musikalischen Komposition* (1850–67) by J.C. Lobe. Lobe used a system of designation similar to that of Gottfried Weber's *Versuch* several decades previously, but rather cruder: thus C:3 denoted the (minor) triad on the third degree of C major; a:5, the dominant 7th on the fifth degree of A minor; h:2°, the chord of the 9th on the second degree of B minor. Like Sechter's discussion of harmony, Lobe's is centred on the notion of *Stufe*. It makes a distinction between the progressions that are diatonic (*leitereigen*) and those that are modulatory (*ausweichend*); the concept of the altered (*alterirt*) chord allows chords with foreign harmony notes to be viewed as diatonic in certain contexts, thus increasing the power of the harmonic step greatly (i, 242ff). Lobe, it should be said, claimed credit for only part of this thinking – thinking that looks forward to the harmonic approaches of Schenker and Schoenberg.

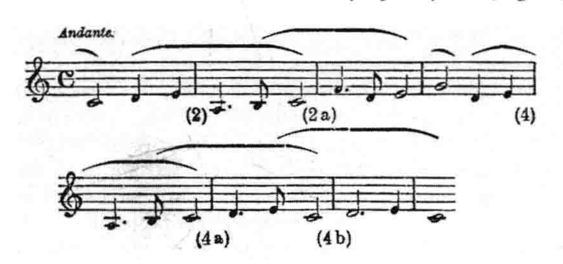
Sechter's third volume (1854) speaks of 'rhythmic sketches' and makes use of two noteworthy graphic devices. The first sets out the harmonic structure of an entire piece in terms of fundamentals whose durations are undifferentiated but which are marked off into phrases (*Abschnitte*) by commas (shades of Mattheson). The second presents a fully rhythmicized succession of fundamentals with two rows of numerals immediately beneath the staff. These numerals denote for each fundamental in turn the *Stufe* which it forms of either or both of two prevailing key areas. This graphic technique was adopted and elaborated by several analysts, notably in the quest for a theoretical formulation of the harmony of Wagner: fig.10, from an analysis by Karl Mayrberger, is a good example.



Although Mayrberger acknowledged his debt to Sechter, he also claimed to have built on the thinking of Moritz Hauptmann, whose *Die Natur der Harmonik und der Metrik: zur Theorie der Musik* (1853) was conditioned by Hegelian philosophy, and who did much to introduce the idea that music theory should be systematic and founded on logical principles. He formulated (1853) a theory of harmony and rhythm based on what he claimed to be universals. His theory of rhythm, like that of Momigny, took a two-element pattern as its basic unit and explained all units comprising more than two elements as intersections of two-element units. In Hauptmann's Hegelian terms, a two-element unit was the 'thesis', a three-element unit the 'antithesis' and a four-element unit the 'synthesis' in the metrical system. But Hauptmann's basic unit, unlike Momigny's, was made up of downbeat followed by upbeat, and it was Mathis Lussy who in his study of the anacrusis (1874) took up Momigny's *levé–frappé* pattern and developed the theory further. From this Riemann proceeded to develop a full theory based on the indivisible unit of the *Motiv*. The bulk of it appeared in his *Musikalische Dynamik und Agogik* (1884) and *System der musikalischen Rhythmik und Metrik* (1903); the theory was summarized in the *Vademecum der Phrasierung* (1900; 8/1912 as *Handbuch der Phrasierung*).

Underlying Riemann's theory is the postulate that the pattern weak–strong is the 'sole basis for all musical construction' (1895–1901, i, p.132). This fundamental unit is termed the *Motiv*: it represents a single unit of

10. From K. Mayrberger: 'Die Harmonik Richard Wagners', in 'Bayreuther Blätter', iv (1881), 176



energy (*Lebenskraft*) passing through phases of growth, peak and decay. It is thus a dynamic trace, a flux, and is far removed from the traditional notion of 'beats' in a 'bar', each beat being separate and having its own 'weight'. Musical form is constructed of many such units overlapping and interacting to produce extended and compressed spans of energy. These interactions occur against a 'background' of absolutely regular hierarchically built-up patterns: where two *Motiv* units occur in succession they form the two elements of a *Motiv* at the next level of structure, the first forming the growth phase, the second the stress point and decay phase. In turn, two such larger *Motiv* units form a still higher-level *Motiv*,

11. From H. Riemann: 'Präludien und Studien', i (Frankfurt, 1895), 163

and so on in a hierarchy. The result is a kind of conceptual grid, made up of equal units of energy and bearing an intrinsic relationship to the topography of the music. Given this theory, the process of analysis is one of locating the lines of the grid behind the articulated surface of a piece or passage.

A piece that was slavishly aligned to its grid would be made of regular modules, each comprising eight bars of 2/4 or 3/4 and pairing off into 16-bar, 32-bar, 64-bar and so forth units at higher levels. The eight-bar module is shown for 2/4 in fig.11 (*Zweitaktgruppe* is Riemann's term for a pair of *Motiv* units in weak–strong relationship: *Halbsatz* for a four-bar unit – either antecedent or consequent; *Periode* for an eight-bar module: 1895–1901, i, p.163). But in practice music adopts certain 'symmetry-disturbing processes', some of which stretch or compress the grid, others of which temporarily upset the internal relationships without affecting the regularity of the grid itself. Chief among these are: (*a*) elision (*Auslassung*) – the suppression of the growth phase of a unit, thus yielding a strong–weak–strong pattern; (*b*) cadential repetition – restatement of the stress point and decay phase of a unit at any level of structure (a classic example is the introduction to Schubert's Symphony no.9; fig.12);

12. From H. Riemann and C. Fuchs: 'Handbuch der Phrasierung' (Leipzig, 8/1912), 80

(*c*) dovetailing – a transfer of function whereby a final stressed unit is converted into an initial unstressed one; (*d*) general upbeat (*Generalauftakt*) – a large-scale upbeat, often occupying only the space of the upbeat to a *Motiv* but functioning as the upbeat to a larger formal unit; and (*e*) appended *Motiv* (*Anschlussmotiv*) – a subsidiary phrase unit placed immediately after the strong beat of a main phrase unit, serving to generate a second strong beat where a weak beat would normally occur. The first three of these processes alter the temporal distance between points on the grid; the last two may alter the impression

of such distance but do not necessarily alter the number of intervening beats.

Riemann's own analyses take one of two forms: books of analyses (those of Bach's '48', 1890, and Beethoven's string quartets, 1903, and piano sonatas, 1918–19), or 'phrase-structure editions' (of sonatas of Mozart, Beethoven and Haydn). The latter are editions that use special phrase-marks and signs, and number the bar-functions beneath the staff. The former adopt as their method of presentation the 'continuity line' – a single staff that shows all the main thematic material, accompanied by the special signs and numbering used in the editions, and employing also Riemann's system of harmonic symbols (fully explained in his *Handbuch des Generalbass-Spiels*, 4/1917, pp.12ff). These books also use conventional terminology when dealing with thematic material and aim at fully rounded 'technical and aesthetic analyses of pieces of music'.

In 1887 a writer who rejected both the formal analytical approach and that of naturalistic description, and was at the same time mistrustful of historical information, began publication of a guide to the concert repertory, *Führer durch den Konzertsaal*. This was the musicologist and conductor Hermann Kretzschmar. The first edition of his guide contained a very large number of analyses that Kretzschmar had written during earlier years for the benefit of his concert patrons. The analyses were classified into 'Symphony and Suite', 'Sacred Works' and 'Oratorios and Secular Choral Works', each category arranged in order by date of composition. The *Führer* was extremely popular: it went through many editions and, though already a vast undertaking, was constantly enlarged as it did so. By 1919 it was over 2000 pages long and its historical scope spanned nearly 300 years – from Monteverdi to Mahler.

Kretzschmar forged an approach to musical appreciation that saw music as a language, universal in character, with meanings recognizable by those with the necessary aesthetic training (*Satzästhetik*). Such training brought with it an instinctive sense of how a phrase should be performed, a perception of the inner character of the phrase. At the end of this training stood a method of interpretation that Kretzschmar called 'musical HERMENEUTICS', and which he saw as a revitalization of the Baroque theory of affects. In the first of two articles promoting this method (*JbMP 1902, 1905*) Kretzschmar defined hermeneutics as follows (see Bent, 1994, ii, 22–5, 106–7):

> In every field its aim is the same – to penetrate to the meaning and conceptual content [*Sinn und Ideenhalt*] enclosed within the forms concerned, to seek everywhere for the soul beneath the corporeal covering, to identify the irreducible core of thought [*reinen Gedankenkern*] in every sentence of a writer and in every detail of an artist's work; to explicate and interpret [*zu erklären und auszulegen*] the whole by obtaining the clearest possible understanding of every smallest detail – and all this by employing every aid that technical knowledge, general culture and personal talent can supply.

Kretzschmar sought to attack the free poetic description of music which many writers of the time indulged in, and to show how his own method was both firmly based on technical criteria and also capable of illuminating whole compositions rather than merely individual passages. At the heart of the method was 'thematic character' as defined by interval and contour. In these terms, the subject of the C major fugue of Bach's *Das wohltemperirte Clavier*, i, has an 'energetic disposition' which 'rests on the motif of the 4th as the principal element of the melodic structure'; but 'with the descending final phrase and the cautious approach to the main motif, the flow of the unmistakable energy which forms the middle section is framed on either side with expressions of melancholy' (*JbMP 1905*, p.282).

Hermeneutics as a critical method – as distinct from its etymological roots in a more general 'interpretation' – is generally acknowledged to have first been formulated in the work of Friedrich Schleiermacher and later developed by Wilhelm Dilthey. It was most likely the latter who influenced Kretzschmar in his use of the term to describe his own analytical writing, and in his indentification of Hoffmann and Schumann (see §2, above, for discussion of their analytical reviews of Beethoven and Berlioz) as being among his earlier precursors.

One may also find earlier examples of hermeneutic critical analysis in two renowned composer biographies: Otto Jahn's *W.A. Mozart* (1856–9) and Philipp Spitta's *Johann Sebastian Bach* (1873–80). Jahn's *Mozart* contained many analyses of individual works, often very detailed, sometimes occupying whole chapters. The more technical analyses tended to approach their subject from three points of view: external form, thematic character and use of instruments or voices. Even when Jahn drew certain groups of works together for consideration as genres – the early instrumental works, the piano music, the symphonies and so on – he generalized only on matters of form before dealing with works individually; but in these chapters there were also valuable comparative analyses of two or more works. In Spitta's *Bach* there was rather less formal analysis and much more on musical character. Spitta aimed, by description, 'to call up the spirit which alone can give [music] life and soul' (Eng. trans., i, p.viii). Spitta went further and attempted a symbolic interpretation, notably for the B minor Mass: for example (iii, 51):

> to represent the essential Unity as clearly as possible, Bach treats the parts in canon on the unison at the beginning of the principal subject each time, not using the canon on the fourth below till the second bar; thus both the Unity and the separate existence of the two Persons are brought out.

Wagner's music dramas were fertile ground for the production of analyses that aimed at 'elucidation' (*Erläuterung*). This was the word used by Hans von Wolzogen to describe his work. Encouraged by Wagner himself and also by Liszt, von Wolzogen published a 'thematic guide' (*thematischer Leitfaden*) to the *Ring* cycle (1876), followed by similar guides to *Tristan und Isolde* (1880) and *Parsifal* (1882). Von Wolzogen's writings combine synopsis of the plot and stage action with the identification of motifs and descriptive paraphrase of their musical treatment. He was not the first writer to identify motifs in Wagner's works by name, but his writings achieved wide currency and authority, and his method was taken up over the following decades by others, both in connection with Wagner (as late as Newman, 1949) and with the works of other composers. To the extent that his work spawned popular imitations, von Wolzogen's caution in identifying motifs with specific words and images, and his restricted use of the term 'leitmotif' to describe 'a cluster of definable separate motifs ... linked by organic mutation' (Bent, 1994, ii, p.91) have been obscured. It may be noted in passing that von Wolzogen's analysis of *Tristan* was a direct influence on Mayrberger's, though their methods and purposes were quite different.

Towards the end of the century, writing that moved in a hermeneutical way across a number of modes of interpretation had come to be influenced by the development of musical text criticism, which brought with it the first of the massive collected editions (*see* EDITIONS, HISTORICAL and MUSICOLOGY, §II, 3). The most notable scholar in this field was Gustav Nottebohm, who worked on the collected editions of Beethoven (1862–5) and Mozart (from 1878). In a long series of studies of sketches and other composition materials, published between 1865 and 1890, he tackled the problems of Beethoven's creative processes: how many pieces Beethoven worked on at a time, how he used sketches, drafts and scores, how he worked from single-line draft to full texture, how he conceived and modified formal structure. What Nottebohm came across on the way, namely Beethoven's painstaking formulation of thematic material, was a living exemplification of the ideas of melodic motif, germ-cell, organic growth, unity – ideas that were rife and which had found their way into the theoretical tradition. Here was a way of getting behind the finished text, of showing the composition student how a masterpiece was put together, errors, false starts and all, and at the same time of verifying one's deductive analyses.

This prospect was bound to be attractive to those seeking to produce elucidatory analysis. One of the first such writers to draw on Nottebohm's findings was George Grove. Each of the analyses in *Beethoven and his Nine Symphonies* (1896) presented a rounded picture of its subject, with a balance of historical and biographical information, text-critical evidence and formal analysis – both plentifully illustrated with music examples – and critical judgment. Each concluded with a survey of the work's critical reception. Grove adopted a narrative approach for his formal analyses which has since become the stock in trade of descriptive writers on music – by animating the orchestra ('This is prolonged by the wind instruments in a humorous passage') or the piece itself ('after a reference back ... a new subject appears ... as harsh and uncompromising as the first subject') or by treating the listeners as visitors ('After this we arrive at a pause'). Grove differed from Kretzschmar, however, in refusing to be influenced by the idea of motivic growth. The tangible evidence of how a theme came about was of interest to him, and he was ready to point out similarities between the themes of different composers, but he interpreted these as a matter of historical influence rather than something around which to create theories of musical structure.

4. 1910–45. Around the turn of the 20th century experimental research gave a scientific basis to some of the recently emerging attitudes towards musical experience. It was observed above (§3) that A.B. Marx, while using the word *Gestalt* for a formal 'mould', regarded 'form' as virtually synonymous with 'whole' (*Ganzes*). He felt, too, that formal 'moulds' were not merely conventions: they represented deep-seated principles of organization in the human mind. By the time of Prout and Leichtentritt a new branch of psychology was emerging, which laid emphasis on perception rather than on motivation: Gestalt psychology.

In essence Gestalt psychology was concerned with form (in keeping with the views of Hanslick, 1854, and of J.F. Herbart, 1811): it laid stress on the power of the perceiver mentally to organize whatever objects or situations he encounters, and to do so in formal terms rather than terms of individual components and his previous experience of them. Thus visually, objects that are in close proximity to each other, and objects that are similar in shape or colour, tend to be perceived as a group. Moreover, the perceiving mind seeks the simplest available grouping, looking for basic, complete shapes – for 'continuous wholes'. It looks also for repetition and symmetry, for equal separation in space and time. In short, it tries to place the simplest, most regular, most complete interpretation on the data before it.

Musical sound was used for illustrative purposes by the early Gestalt psychologist Christian von Ehrenfels. He pointed, in 1890, to the fact that a melody does not lose its melodic identity when transposed, despite the change of each note: a melody has a shape that can be heard, recognized and learnt without recognition of its constituent notes, intervals or rhythms. Perception of the shape comes not as a slow process but as a flash of insight; it is like the completion of an electric circuit.

There are three principles that relate to this. 'Closure' is the principle whereby the mind, when presented with a shape that is almost but not quite complete, will complete the shape automatically. 'Phi phenomenon' is the principle whereby the mind, when confronted with two separate occurrences, may link them together and attribute movement from one to the other. 'Prägnanz' is the principle whereby the mind will look for the interpretation of data that yields the most 'pregnant' result – the 'best' interpretation. All these processes can be seen at work in, for example, perception of a lute transcription of a 16th-century vocal piece, where the original vocal lines are presented only incompletely because of the limitations of lute technique; or in a solo violin or cello work by Bach, where several contrapuntal lines are carried, all of them incompletely yet with a general sense of the polyphony.

One final principle is of fundamental importance to music: figure–ground perception. Very often the mind selects from the data before it only certain salient features; these it organizes as a 'pregnant' figure (*Gestalt*), leaving the rest of the data to remain in the field of perception. Ultimately only the figure is passed up from the nervous system (where this organization of sensory experience takes place) to the psychological field where it is 'understood'. The rest of the data remains as the 'ground'. This subconscious process is simulated in a procedure the musical analyst calls 'reduction', an early example of which is Czerny's stripping away of surface ornament in Chopin, Bach and Clementi to reveal the underlying essential structure (see §II, 2 above and fig.9). Significantly, but quite conversely to Gestalt terminology, Czerny called the surface ornament 'the moving figure' and the structure 'the ground-melody' or 'the ground-harmony'.

The first full-scale use of Gestalt procedures was probably Arnold Schering's examination of the 14th-century Italian madrigal (1911–12). In it he introduced the idea of 'disembellishment' (*Dekolorieren*). This involved removing groups of short note values from melodic lines and substituting fewer notes of proportionately longer value to occupy the same amount of time: 'laying bare from within a melismatic passage the simple melodic progression'. Fig.13*a* shows an example of this (the reduction technique shows elements of 'closure' and 'Phi phenomenon', and is a clear example of figure–ground

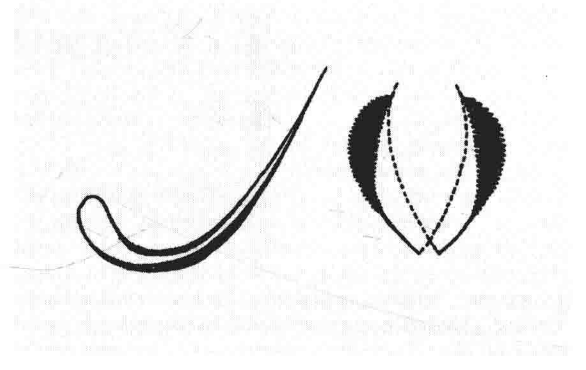
perception). Schering called what he uncovered 'melodic kernels' (*Melodiekerne*) or 'cells' (*Keime*), both terms being familiar from the organic music theorists of the 19th century. But in fact what he set out to reveal were medieval folksongs, since he believed that the elaborate 14th-century madrigals were really keyboard arrangements of folktunes. Such a theory is not inconceivable: there were keyboard arrangements in the 14th century, and Schering was simply reversing the procedure known as PARAPHRASE whereby a melody, usually a passage of

plainsong, was embellished in one voice of a polyphonic composition in the late Middle Ages and Renaissance. The difficulty lay in verifying the results as folksongs, and Schering adopted the interesting confirmatory device of reducing two different madrigals by different composers to the same underlying melodic progression. The two madrigals had the same poetic text, and Schering's assertion was that they both presented elaborated versions of the original folk melody for these words (fig.13*b* and fig.13*c*). Schering's work provided in embryonic form the techniques for both the melodic evolutionists (Réti, Keller and Walker) and also the work of Heinrich Schenker in structural harmony.

It was one of the greatest figures of historical musicology, Guido Adler, who attempted through his book *Der Stil in der Musik* (1911) to change the nature of historical writing about music by introducing the notion of style as the central concern of the historian. As early as 1885 Adler had published a programme for the future of musicology, placing strong emphasis on analysis, arguing for its rightful place in historical inquiry. He set out a series of criteria for the examination of structure in a work, under general headings such as rhythmic features, tonality, polyphonic construction, word-setting, treatment of instruments, and performing practice. In *Der Stil in der Musik* Adler criticized his contemporaries for making history out of a string of composers' names. What was necessary, he believed, was the formulation of a terminology adequate for the description of music 'without names to prop it up'. If music could be described in this way then it would become possible to compare work with work, and thus – in the dynamic terms that Adler used – to specify what features 'link works together'.



Music history was to Adler like a self-weaving textile whose threads, of different colours, thicknesses and strengths, were features of style. Threads might discontinue, change colour, change places or merge. Thus he spoke of 'stylistic direction' (*Stilrichtung*), 'stylistic change' (*Stilwandel*), 'stylistic transfer' (*Stilübertragung*), 'stylistic hybridization' (*Stilkreuzung*), 'stylistic mixing' (*Stilmischung*) (pp.19–48). His view of art was as an organism. Everything in it could be accounted for; nothing occurred by chance (p.13):

> The style of an epoch, of a school, of a composer, of a work, does not arise accidentally, as the casual outcome and manifestation of artistic will. It is, on the contrary, based on laws of becoming, of the rise and fall of organic development. Music is an organism, a plurality of single organisms which in their changing relationships and interdependencies form a totality.

Adler sharply criticized what he called the 'hero-cult' – that is, history written in terms only of leading composers: 'the edifice of style is built out of minor figures just as much as major, and all need investigation if the true picture is to appear'. (It is significant that Adler had been the prime mover in the Austrian national series of editions, Denkmäler der Tonkunst in Österreich, of which he was editor from 1894 to 1938; he must have been particularly conscious of the need to place lesser composers in historical perspective.) The task that he set the historian was to observe and apprehend that edifice of style in an essentially scientific manner; for 'style is the centre of the handling and comprehension of art ... it is the yardstick by which everything in the work of art is measured and judged' (p.5). He placed emphasis on 'apprehension' as the first stage: that is, a recognition of the facts purely as they are, which avoids value judgments and subjective preconceptions on the part of the historian.

Adler offered two methods of approaching this task, and it is here that his work is important for the analyst. One method is that of taking several pieces and examining them to identify what they have in common and how they differ. This is Adler's 'inductive method', by which the historian can perceive the forces that cause an established group of works to hold together; he can discover which works in a random collection are relatively close in style and which more distant; or he can trace links between works composed in chronological succession. The other, the 'deductive method', is to compare a given work with surrounding works, contemporary and preceding, measuring it against them by set criteria and establishing its position within them. Such criteria are the use of motif and theme, rhythm, melody, harmony, notation and so forth. Other criteria concern the function and medium of music: sacred or secular, vocal or instrumental, lyrical or dramatic, courtly, virtuoso and so on. Adler's book is far from a manual of stylistic analysis. It does not offer method in detail. It was a laying of foundations in which Adler sought to establish a 'framework of laws' (*Rahmengesetz*) by which style operates and within which research could proceed.

Adler made a particular study of the Viennese Classical style. Wilhelm Fischer too, his assistant from 1912 to 1928, completed a dissertation on the genesis of that style in 1915. Two other scholars pursued stylistic studies in scholarly fashion at this time, Ernst Bücken and Paul Mies, notably in their joint article on the foundations, methods and tasks of stylistic research into music (1922–3). Both also worked on Beethoven; indeed, Beethoven became a centre of attention for studies of personal style, with Gál's examination of individual features in the young Beethoven (1916), Becking's of Beethoven's personal style (1921), Mies's of the meaning of the sketches for an understanding of Beethoven's style (1925), Schiedermair's of the young Beethoven (1925), August Halm's of middle-period works (in *Beethoven*, 1926) and Engelsmann's of Beethoven's levels of composition (1931). Other studies of personal style include Danckert's 'Personal types in melodic style' (1931), later enlarged as 'Primal symbols in melodic formation' (1932). Becking was particularly interested in rhythm as a determinant of individuality (1928) and devised a set of graphic devices, known as 'Becking curves', for representing the rhythmic 'national constants' and 'personal constants': fig.14 shows the

14. From G. Becking: 'Der musikalische Rhythmus als Erkenntnisquelle' (Augsburg, 1928), 58, 110

curves for the 18th-century Italian-German mixture of styles represented by Handel, and for Wagner's early style.

The most distinguished and influential example of stylistic analysis at this time was, however, Knud Jeppesen's *The Style of Palestrina and the Dissonance*, first prepared as a doctoral dissertation in Danish in 1922, and subsequently translated into German in 1925 and English in 1927. Jeppesen provided in this book the detailed analytical procedure that Adler had left wanting. His choice of 'inductive' or 'deductive' method was conditioned by his general purpose: he saw the need for a history of dissonance treatment. He felt that modern manuals of counterpoint, based on Fux (*Gradus ad Parnassum*, 1725), lacked precisely that historical account, that 'genetic' growth of dissonance treatment, which would illuminate the development of musical style in time and place from the Middle Ages to the late Renaissance and from there to the end of the 18th century (pp.3ff):

> Passing from an absorbing study of Gregorian music to primitive polyphonic forms, from the style of Palestrina to the commencement of dramatic music, or from Bach's polyphony to the classical art of Vienna, would be the best manner of proceeding for recognizing immediately the essential peculiarities of the new style.

In taking Palestrina as his special study Jeppesen was starting with a 'central' point, and a stable one, from which he could look backwards (since Palestrina's work was a 'vast summary of the musical development of the preceding centuries') and forwards. At the same time he was starting with the best-known phenomenon in the field, and investigating it against a background which was in his terms virtually uncharted. He was therefore driven to the 'inductive' method, with no established criteria and only the possibility of comparing case with case until such criteria began to appear.

Jeppesen himself called this method 'empiric-descriptive', and identified it expressly with Adler's method. He stated it clearly (p.8):

> through comparison of variants of homogeneous forms of [the] language [of music] – whether taken from contemporary or from historically separated periods – to indicate and fix common qualities, which with certainty can be supposed to possess the essential accentuations of these forms. The material thus obtained may then serve as a basis upon which to build up the laws of the language, the laws of musical evolution. These, psychologically translated, finally develop into certain regulations and directions of will – the hidden force behind these laws.

Jeppesen in this way extended Adler's inquiry from the surface of music, considered empirically, to the subconscious controls of style, considered psychologically. In so doing he enunciated the motivation for later developments in feature analysis, including computer-assisted analysis. The aspect of Jeppesen's work that makes it scientific is the fact that the analyst is not selecting and summarizing: he is presenting the entire data for each case and adducing laws from it objectively.

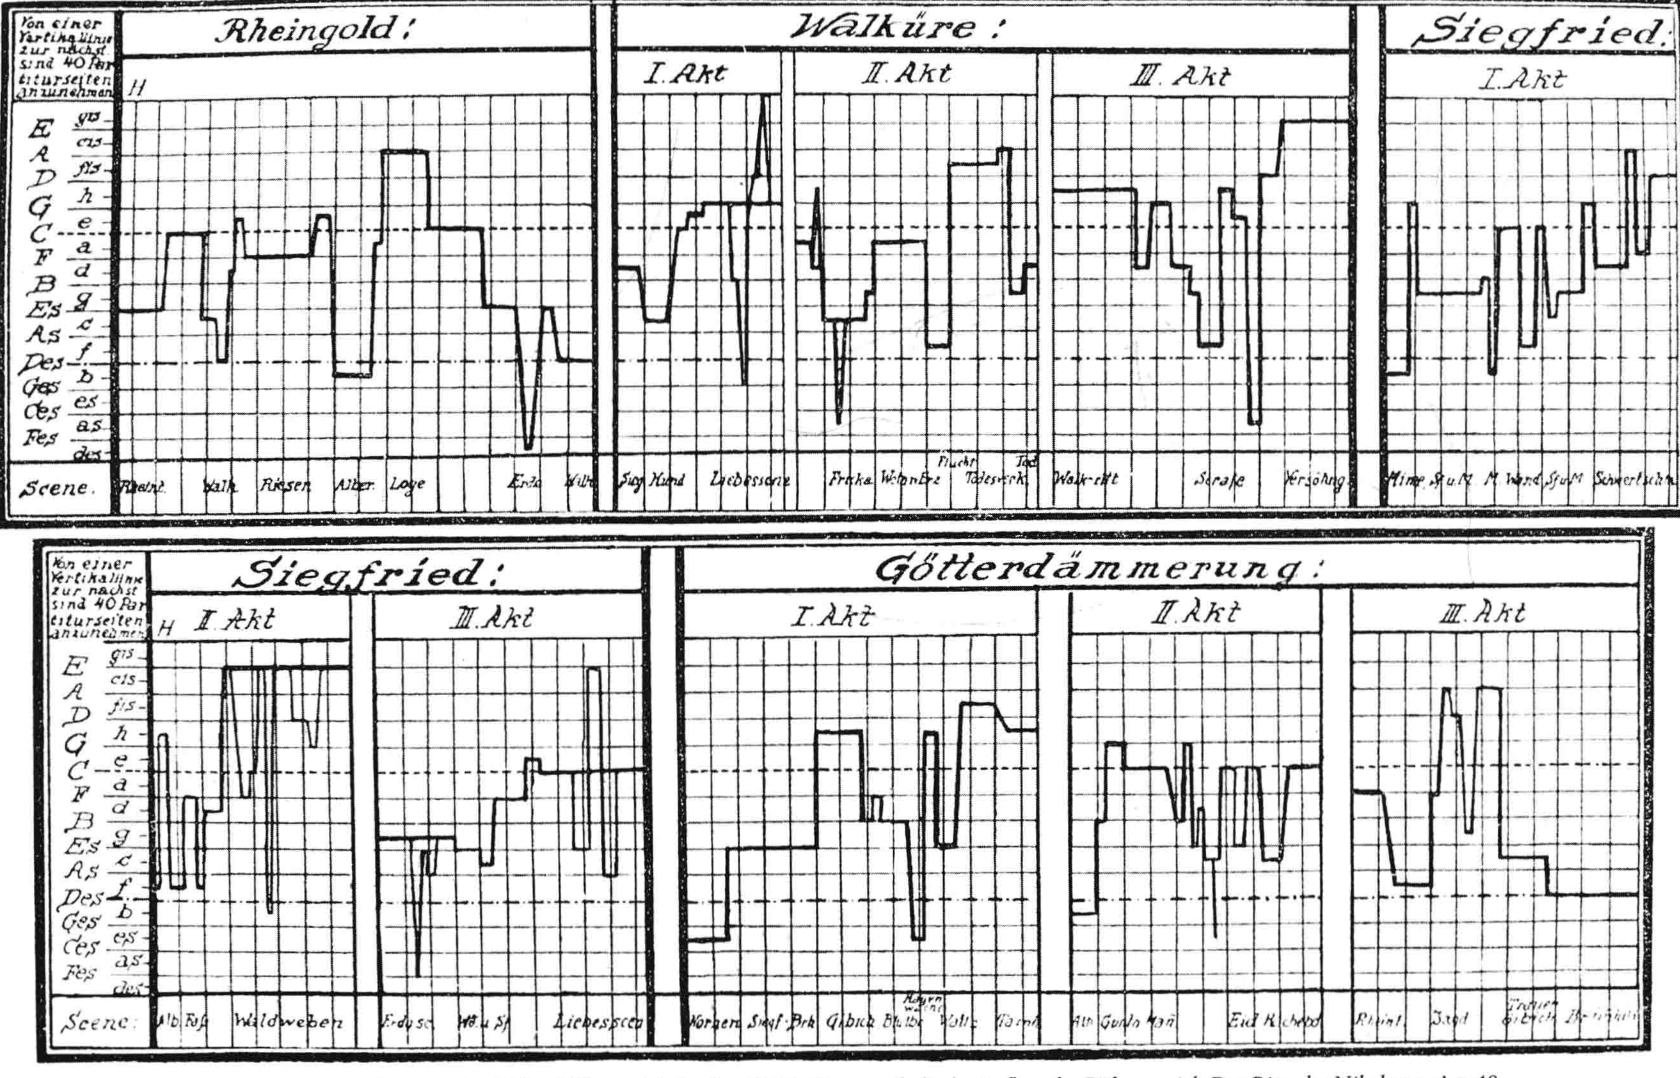
Jeppesen presented first an account of Palestrina's melodic style (pp.48–84) with regard to pitch contour, rhythmic flow and the width and direction of intervals. The preliminary work for this analysis must clearly have been an exhaustive search through every vocal part of Palestrina's entire output (in the Leipzig collected edition of 1862–1903) in order to count and note every interval in relation to its metrical placing. Thus he located and listed for the reader (p.55, note 3) the occurrence of major 6ths and descending minor 6ths as 'dead' intervals (i.e. between two phrases rather than during a phrase: 32 cases in all). The investigation of upward leaps in rhythmic context led to the uncovering of a subconscious law: 'on considering the style with regard to crotchets ... we meet with the astonishing fact, not previously observed, that a rule (almost without an exception) forbids the leap upward from an accentuated crotchet' (p.61). By contrast, Jeppesen listed no fewer than 35 melodic patterns in which a downward leap occurs from an accented crotchet, and charted all the places in which these patterns occur. It is in the much larger second discussion, that of dissonance treatment (pp.84–287), where he defined each dissonance in turn and discussed its degree and manner of use by Palestrina, that Jeppesen entered into historical comparison. Thus for example he considered the use of the 'portamento dissonance' (the anticipation of a note on a weak beat), stating: 'by Palestrina it was most frequently employed immediately before a syncope [i.e. syncopation] and in descending movement ... though the syncope is not an invariable condition' (pp.184ff). He then contrasted this limitation with the use by other composers, citing cases in Josquin, Obrecht, Carpentras, Cara and La Rue.

One of Adler's pupils was Ernst Kurth. Kurth's ideas were closely allied to those of the Gestalt psychologists, but also used Schopenhauer's concept of the 'Will' and Freud's of the subconscious mind. The Gestalt theorists saw three levels of aural perception: physical perception by the ear, sensory organization in the nervous system, and understanding at the psychological level. Kurth saw three levels of activity in musical creation, which he expounded as part of his theory of melody in the first part of *Grundlagen des linearen Kontrapunkts* (1917). The first of these levels is the operation of the 'Will' (which in art is unselfish and disinterested) in the form of kinetic energy (*Bewegungsenergie*); this, a continuous flow, is the living power of music; 'the origin of music ... is the will to move'. The second level is the psychological: the submerged stirrings of the unconscious mind draw on this energy to produce a 'play of tensions' (*Spiel von Spannungen*), each tug of tension describing an arc of growth and formation (*Ur-Formung* or *Erformung*). This play of tensions does not become conscious until the moment that it takes form in musical sound – the third level, the acoustic manifestation (*Erscheinungsform*). Because these three levels are activated one after the other to produce melody, the resultant line has unity and wholeness. Its shape is conceived before either notes or harmonic implications are brought into play; it is thus a 'closed progression'. This is the essence of Kurth's concept of the 'linear'. He saw it particularly at work in the music of Bach – a texture made up of lines, each of which is powered by kinetic energy and internally unified, and which make harmonic sense together only as a secondary phenomenon. This is what Kurth called 'linear counterpoint'. He evolved a concept of 'linear phase', a unit of growth and decay, quite separate from the conventional idea of 'phrase' in that it did not depend on rhythmic patterning, only on proportion and contour. The motif was such a phase: unified, distinctive, not losing its identity when its pitches, intervals and durations are modified (pp.21ff, 68ff).

Notes forming a melody contain kinetic energy; notes forming a chord contain 'potential energy'. Tonal har-

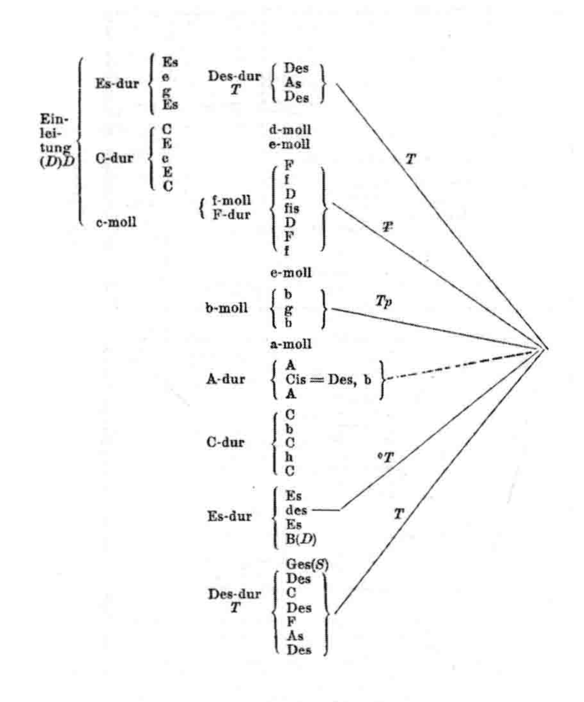
mony is a system of internal coherence, carrying the possibility of change, brought about by potential energy. The most powerful tension in this system is that of the leading note. In his second book, on Romantic harmony (1920), Kurth first expounded chromatic alteration as a process of placing the leading note where it would not normally occur. He distinguished between two forces at work in Romantic harmony, creating a polarization: 'constructive' and 'destructive' forces (pp.272ff). It is the cohesive forces of tonality that are constructive, and the dissolving forces of chromaticism that are destructive: alteration, the use of chords of the 7th or 9th in place of triads, and the use of chords for colouristic effects. Kurth took Wagner's *Tristan*, and in particular the many statements of the famous 'Tristan chord', as the central material for this book; it contained little actual analysis, yet it offered a new perspective for handling the large-scale tonal structure of Wagner's operas, giving insight into long-term tonal relationships despite pervading chromaticism and movement to remote key areas for long periods.

The scholar who grasped the problem of form and tonality in Wagner and exposed its 'secret' analytically was Alfred Lorenz. After a doctoral dissertation on form in the *Ring* (1922) and a study of the *Tristan* prelude (1922–3), he published the first of his four volumes of *Das Geheimnis der Form bei Richard Wagner* which were to analyse form in the *Ring* (1924), *Tristan* (1926), *Meistersinger* (1930) and *Parsifal* (1933). Lorenz's work was a landmark in the history of analysis. It was the largest-scale piece of sustainedly analytical writing so far. It used graphic and tabular techniques of presentation in a thorough-going way: the 'sine curve' for harmonic movement, the 'projectile curve' for extended formal contour, the graph for modulatory scheme (see fig.15 for the graph representing the whole *Ring* cycle as a vast unified structure in D♭ major, with lateral spacing marking 40 pages of score and each horizontal line a major and space a minor key area) and type-set diagrams for more detailed tonal movement (see fig.16 for the diagram of *Das Rheingold*, which is complementary to fig.15 and shows the opera as an introduction of 748 bars in the dominant of the dominant, followed by a massive symmetrical section of 3128 bars in D♭ pivoting round the relative minor, B♭).



Lorenz's work was the confluence of all the main developments in analysis before his time. It contained ideas from the Gestalt writers; his notion of periodization and symmetry derived from Riemann; his defining of structure drew on traditional *Formenlehre*; his perception of harmonic movement came from Kurth (to whom he dedicated his *Tristan* volume). It is also built from a large body of existing writings on Wagner's musical and dramatic structures (especially those by Hostinský, 1877; Grunsky, 1906, 1907; and von Ehrenfels, 1896, 1913) and on his leitmotifs (e.g. Mayrberger, 1881; von Wolzogen, 1876, 1880, 1882), and above all from Wagner's own prose writings.

Lorenz saw formal construction (*Formbildung*) as created out of three primary things: harmony, rhythm and melody. He segmented the entire *Ring* cycle into periods according to key area (pp.23ff). He also analysed the distribution of leitmotifs into formal groupings: repetition forms, arch forms, refrain forms and bar forms. It is in this last area that his main contribution to music theory lies. Lorenz perceived a hierarchical structure in music, the two extremes of which are his *kleine Rhythmik* and *grosse Rhythmik*. The second of these arises out of the first by forms being 'raised to a higher power' (*potenzierte Formen*). By this process, three consecutive passages of music may each be constructed in arch form (*ABA*); the third of them may be a restatement of the first and so create an arch form at a higher level. The process may be traced at more than two levels. He also described the embedding of small-scale units within forms, extending them and changing the balance, and very large-scale forms that contain small-scale forms of different sorts. By analysing formal units in this way, Lorenz sought to uncover the architectonics (*grosse Architektonik*) of very large musical structures.



In 1906 Heinrich Schenker had published his *Harmonielehre*, the first volume of his highly influential *Neue musikalische Theorien und Phantasien*. Further volumes were *Kontrapunkt* (1910, 1922) and *Der freie Satz* (1935). Schenker's unique view of a musical composition was that works that are tonal and exhibit mastery are projections in time of a single element: the tonic triad. The projection of this triad comprises two processes: its transformation into a two-part 'fundamental structure' called the *Ursatz*, and the 'composing-out' (*Auskomponierung*), or elaboration, of the structure by one technique or more of 'prolongation'. The *Ursatz* is made up of a linear descent to the root of the triad – the 'fundamental line' (*Urlinie*) – accompanied by an 'arpeggiation' in the bass (*Bassbrechung*), from the tonic to the dominant and back to the tonic. In the simplest form of the *Ursatz* the linear descent begins with the 3rd of the tonic triad, and each note in it is accompanied by one chord in the bass. But this is a highly abstract notion, and in practice the elaboration begins with the structure in an already articulated form, representing the 'background' (*Hintergrund*) of the work.

This highly developed complex of ideas emerged over the last 30 years of Schenker's career. In his early *Harmonielehre* he had argued – citing passages from Fux, Beethoven, Chopin, Liszt and Wagner in support – that arrangements of notes that look on the surface like chords in their own right are not always essential steps (*Stufen*) in a harmonic progression, but are often merely expansions of other essential steps (see especially Eng. trans., pp.141ff, 155, 212). In this way Schenker established a distinction between 'triads' and 'steps' whereby not all of the former in a given tonal context rise to the rank of the latter. He began to represent harmonic progressions graphically on two levels (e.g. his ex.173/234), using in one instance a 'formula' to show short-term triadic movement over longer-term harmonic steps (p.244), in which I–V:I–V is shown as numerator and I as denominator. On the larger scale he saw the key areas to which a composition modulated as either 'established', in which case they funtioned as 'steps' at a higher level of form, or 'unestablished', in which case they served only to elaborate other key areas.

Another principle that emerged early in Schenker's development as a theorist was a view of composition as the elaboration of a basic contrapuntal design. In *Ein Beitrag zur Ornamentik* (1903) he had illustrated by reference to form in a sonata of C.P.E. Bach the idea of 'group construction' (*Gruppenbildung*): the diversifying of a single tonal unit of structure by thematic and motivic

variety, by interior harmonic movement, by variety of rhythmic placing and patterning, and by contrast of dynamic levels (pp.11ff). Schenker's scholarly activities – in particular his concern for authenticity in editing and performance, and his respect for the authority of autograph scores and authorized editions – had led him to this study of ornamentation in Bach, Haydn, Mozart, Beethoven and others. Its sigificance for his development as an analyst was that he was later to develop a technique of stripping away layers of ornamentation in the process of revealing the ultimate structure of a piece. In his 'Erläuterungsausgabe' of four of Beethoven's last five piano sonatas (1913–21 – that of op.106 did not appear because its autograph could not be found) he achieved a balance between the analytical and the textual sides of his work. In the last volume of the set, on op.101, he developed the idea of reduction by carrying it through successive stages. (Fig.17 shows the stages laid out one above the other.) Schenker intended this example as a tracing of the creative process step by step, not as an analysis; thus he spoke not of 'reduction' but of the reverse, *Diminution* (i.e. embellishment). Nonetheless, and although Schenker's final line (*a*) here does not take the form of his eventual *Urlinie*, the way in which the notes *e′ g′*♯–*a′*–*b*♭*′*–*a′ g*♯*′*–*a′* in the right hand of bars 1–4 are reduced to (*e′*)–*g*♯*′*–*a′ g*♯*′*–*a′* and ultimately to *g*♯*′*–*a′* shows the technique of his later analyses already formed.

In 1925 Schenker produced the first issue of a yearbook, *Das Meisterwerk in der Musik*, which was to run to only three issues (1925, 1926, 1930). It contained ten analytical studies, of works by J.S. Bach, Domenico Scarlatti, Beethoven and Chopin, accompanied by Schenker's new type of graphic analyses, together with a long essay on 'Die Kunst der Improvisation' (itself containing important analyses of keyboard works by C.P.E. Bach and Handel), a polemic on editorial practice, 'Weg mit dem Phrasierungsbogen' ('Away with the phrasing slur'), and a study-in-progress of the concept of *Urlinie*. This was not the first journal that Schenker had produced: he had published ten issues of *Der Tonwille* between 1921 and 1924. (Both journals contained material exclusively by Schenker.) An important analytical product of *Der Tonwille* was the study of Beethoven's Symphony no.5, produced in instalments and later issued separately (1925). The first two issues of the journal had contained preliminary studies of the *Urlinie* idea together with analyses using the so-called *Urlinie-Tafeln* – graphic analyses showing the fundamental line.

The *Urlinie-Tafel* as developed at this stage was usually a presentation of a piece in full or partly reduced, with normal use of note values and complete with time signature and the original barring (numbered for reference). This was overlaid with auxiliary analytical symbols: horizontal and sloping square brackets over the staff to show the movement of the fundamental line; note heads printed large to indicate structural importance; curved lines like phrasing or bowing marks to indicate important progressions (often also labelled *Quintzug*, *Quartzug* etc.); dotted curves to indicate the longer-term structural retention of a particular pitch (or transfer to another octave) despite intervening pitches; and the fundamental harmonic steps (*Stufen*), symbolized below the staff by roman numerals, with conventional bass figuring to show the overlying harmonies. In some cases Schenker added a parallel staff above the *Urlinie-Tafel*: this carried his reduction of the piece to bare harmonic essentials – already termed *Ursatz* – and partly abandoned the durational significance of note symbols in favour of a valuation whereby greater duration denoted greater structural importance. Fig.18 illustrates all these features and many others (the *Urlinie-Tafel* showing the Largo from Bach's Violin Sonata no.3 BWV1005 bar-for-bar but in skeletal form): bar 7, and bar 17 a 5th lower, show how the fundamental line (*f″*–*e″*–*d″*) moves from the top line of the texture to the bottom and back, and how the last of its notes is not actually sounded but only implied (hence the parentheses). For this particular piece, Schenker chose also to give a three-layer graph (fig.19) of which the bottom layer is a partly reduced form of the piece, the middle one an intermediate stage of reduction, and the top one a complete reduction corresponding to the upper parallel staff of the *Urlinie-Tafel*. These two graphs are accompanied by 11 pages of closely reasoned text with further music examples.

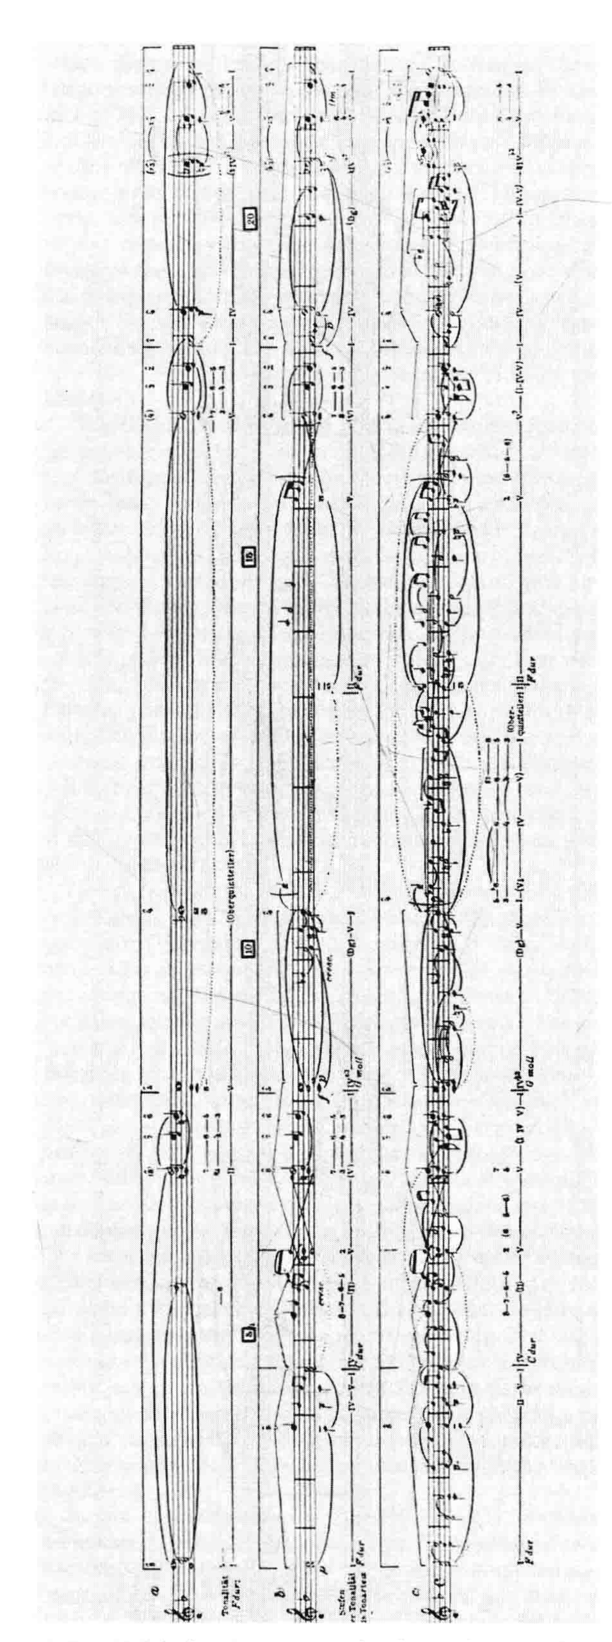
The main achievements of the yearbook were a long and lucid essay on Mozart's Symphony no.40 in G minor (vol.ii) and the massive analysis of Beethoven's 'Eroica' Symphony (vol.iii). In these analyses the layers (*Schichten*) are identified as 'foreground', 'middleground' and 'background'; horizontal brackets are abandoned in preference to the beaming together of structural notes, and many other graphic devices are adopted.

Such was the sophistication of Schenker's graphs during the last five years of his life that he was able to discard verbal commentary altogether. His *Fünf Urlinie-Tafeln* (1932) are self-sufficient graphings of works by Bach, Haydn and Chopin. By this time the *Ursatz* had taken its final form as a two-part counterpoint that accomplished

17. From H. Schenker: 'Die letzten fünf Sonaten von Beethoven: Sonata A dur Op.101' (Vienna, 1921), 52–3

what Schenker saw as lying at the heart of his theory – a projection of the triad into the dimension of time. Its upper voice, the *Urlinie*, was a melodic progression originating from a note of the triad and descending scalewise to the tonic (3–2–1, extensible to 5–4–3–2–1, or rarely 8–7–6–5–4–3–2–1); its lower voice, the *Bassbrechung*, was an 'arpeggiation' from the tonic note to the dominant and back again. This meant that the basic

18. From H. Schenker: 'Das Meisterwerk in der Musik', i (Munich, 1925), 'Urlinie-Tafeln', pl.2



structure of any tonal piece of music was diatonic, and all modulations were considered as 'prolongations' of diatonic harmonic steps.

Fig.20 shows the background and middleground (the *Ursatz* and three further layers) of Schenker's analysis of Chopin's Etude in C minor op.10 no.12, as published in *Fünf Urlinie-Tafeln*. Each of these layers is set out on a single staff and makes use of notational symbols (though with unconventional meanings), together with slurs, brackets and parentheses. The layers are aligned vertically, so that any element of the composition can be traced back to its conceptual origin in the *Ursatz*. Roman numerals are used for harmonic steps (from I to VII), capped arabic numerals for melodic degrees of the scale ($\hat{1}$, $\hat{2}$, $\hat{3}$ etc.), ordinary arabic numerals for bar numbers and bass figuring; words and auxiliary symbols are also used.

The first layer shows an articulation of the *Ursatz* into two parts: the first and second elements are presented before the statement is broken off; it is then recommenced and concluded. This transformation is known as 'interruption' (*Unterbrechung*), and the point of breaking off is marked by the word *Teiler* ('divider' – often indicated by two short vertical lines just above the staff). In layer 2 this interruption is multiplied to three occurrences.

In layers 2 and 3 void noteheads are used to indicate notes of greater structural importance, black noteheads notes of less. The void noteheads are linked together by large beams, pointing up the fundamental two-part form of the composition. Black noteheads are linked together by slur marks, which pick out detailed melodic progressions, and these progressions are often labelled verbally (e.g. *Terzzug abwärts*, '3rd-progression downwards', *Sext-Brechung-aufwärts*, 'arpeggiation through a 6th upwards'). They are also linked by beams to void notes. Dotted slur marks indicate not progression but recurrence of a structural note after the intervention of other notes (thus the recurrence of *d″* in the first half of layer 2). Black notes with tails (quaver symbols) are used to point up small-scale events of special interest (such as the neighbour-note patterns *g′–f♯′–g′* and *b♮″–c‴* in layer 3).

The 'foreground' (a term synonymous with *Urlinie-Tafel* in this publication) contains the elements of the contrapuntal design that are immediately perceptible, eliminating only ornamentation and note repetition from the surface of the work. In this analysis it is presented separately, occupying far more lateral space than the other layers and thus not aligned with them (fig.20*b*, showing only bars 1–18). The harmonic indications at the bottom of fig.20*b* show that what is considered as I–IV–V in the foreground becomes entirely I in the middleground. Moreover, Schenker's analytical method completely rejects the conventional idea of modulation: key changes are viewed as harmonic elaborations of diatonic harmonies. Thus the moves to B♭ minor, D♯ minor, C♯ minor and F minor around bar 30 of the étude are seen ultimately as prolongations of C minor harmony.

19. *From H. Schenker: 'Das Meisterwerk in der Musik', i (Munich, 1925), 'Urlinie-Tafeln', graph between pp.61 and 62*

The fullest statement of Schenker's approach was his posthumously published *Der freie Satz*, but the scope of his thought cannot be understood from this treatise alone. His analyses were designed primarily for the performer and were always pedagogical in funtion. They encouraged a new way of hearing music – long-range listening – and, by the time of his final graphic method, attempted to lead the reader stage by stage from the familiar text of a work through to an understanding of it as a complex organic whole.

In 1932 Schoenberg wrote: 'For nearly 20 years I have been collecting material, ideas and sketches, for an all-inclusive textbook of composition'. The project was never completed, and might best be regarded as a work-in-progress that Schoenberg was never likely to relinquish. (His early *Harmonielehre*, 1911, was brought to a conclusion only by dictation with the help of a stenographer.) But such was the importance of Schoenberg's musical thought in the history of 20th-century composition that even in fragmentary form, edited by Severine Neff and others as *Zusammenhang, Kontrapunkt, Instrumentation, Formenlehre* (Eng. trans., 1994) and *Der musikalische Gedanke und die Logik, Technik und Kunst seiner Darstellung* (Eng. trans., 1995), these writings seemed likely to exert a considerable influence on analysis – particularly on analysis of his own music and that of his pupils. The *Harmonielehre* too is of significant interest to analysts as a source of ideas applicable to music composed by Schoenberg, Berg and Webern in their early careers; Schoenberg's essays, a number of them on technical subjects (twice collected under the title *Style and Idea*, 1950, 1975), have also been used in this way.

This is symptomatic of a tendency for analysis of modern music to use approaches 'authenticated' by more or less direct association with the composer in question. Other examples include Hindemith, whose writings are discussed below, Messiaen, Babbitt, Xenakis, Boulez and Stockhausen: the music of all these can be analysed with ready citation of their own technical writings. Three factors that can be identified behind the growth of this phenomenon are: the difficulties of lay comprehension of modern styles, the function of analysis as elucidation that had been established by around 1910, and the propensity of composers to write about their own music in ways that were newly amenable to appropriation by analysts – historians and critics having long used such sources for their own purposes. In some cases composers also wrote more generally conceived theoretical or analytical texts, though no major composer of the 20th century, not even Schoenberg, has approached Rameau in status as a music theorist.

Schoenberg must indeed be reckoned eclectic and somewhat conservative as a theorist; but he wrote from conviction in trying to set out at least some of the impulses that drove him as a composer. It is ironic, then, that he was comparatively reticent about his most notable compositional innovation – 12-note serial technique – and about the particulars of his preceding atonal style. Seeing his own music as a continuation of the Austro-German tradition, he chose instead to write about broader topics in a way that adhered to the 19th-century view of music as organic. Construction thus begins with the motif, the motif must by its nature be repeated, repetition requires variation. But in Schoenberg's view the comprehensibility of musical form implied more than the aspect

20. From H. Schenker: 'Fünf Urlinie-Tafeln' (Vienna, 1932; from Eng. trans., 1969), 54–5, 56–7: (a) the fundamental structure; (b) the foreground 'graph')

of subdivision which enables the mind to grasp the whole through units: it also implied logic and coherence, without which such units remain disconnected. It was on these latter questions that he was at his most original. By the mid-1920s his instinct for unity and intellectual synthesis had led him to the principle of the musical Idea (*Gedanke*) as the foundation of all aspects of a work, including form, counterpoint and the presentation of material. This notion of the Idea remained difficult to grasp – it seems intended to give concrete expression to an organic-psychological image of the seed of creative thought, but also not to be identified consistently with a specific type of musical feature – and analysts were likely to conclude that Schoenberg had not helped them to address the question of where, in any particular work, one might look for the Idea itself.

Nonetheless, a number of concepts that emerged in Schoenberg's teaching and writings as he worked towards this position were taken up by others and used fruitfully in analysis. Among these was 'liquidation', whereby a melodic unit gradually loses its characteristic features until only a residue remains. Schoenberg's concept of 'developing variation' (*entwickelnde Variation*) was applied by Walter Frisch (1984) to the music of Brahms – whose innovations in musical language had been a lifelong preoccupation of Schoenberg. Developing variation was the principle whereby the structural ingredients of themes (motifs, phrases) were reiterated only in varied forms, with their internal elements (intervals, rhythms, harmony, contour) undergoing modifications at each restatement. Schoenberg's more rarely used 'basic shape' (*Grundgestalt*) was taken up by David Epstein (1979) in seeking a synthesis of Schenkerian and Schoenbergian ideas (*see also* GRUNDGESTALT).

Compared with the ambition of his earlier writings, the pedagogical texts dating from Schoenberg's American years are deliberately limited in scope. Of these, only *Models for Beginners in Composition* (1942) was issued in his lifetime; *Structural Functions of Harmony* (1954) appeared shortly after his death. Later, two sets of notes from the late 1930s, designed for teaching purposes, were assembled and published: *Preliminary Exercises in Counterpoint* (1963, dating from *c*1936) and *Fundamentals of Musical Composition* (1967, dating from between 1937 and 1948). The latter is a small manual of form; though intended for composers, it rests on analytical exemplification and is to some extent a manual of analysis, drawing particularly on examples from Beethoven's piano sonatas. The most influential aspect of the book, as disseminated earlier through his teaching, is his atomic splitting of the motif into 'element' or 'feature'. The 'element' is often a single interval underlying a pattern of notes, and itself undergoes repetition, transposition, inversion, internal multiplication, enlargement, contraction and all the other processes to which the motif is subject. His reduction of the first theme of Brahms's Symphony no.4 to a succession of 3rds is perhaps the most famous example in the book (fig.21).

In his *Unterweisung im Tonsatz* of 1937, another composer, Hindemith, believed himself to have laid down the basis of a *lingua franca* for modern composition, 'proceeding from the firm foundation of the laws of nature'. Like Schenker, Hindemith believed in the force of tonality and the primacy of the triad; but his theory is far more systematically acoustical. To Hindemith, if any

21. From A. Schoenberg: 'Fundamentals of Musical Composition' (London, 1967), 11

one of the notes of the chromatic octave scale be taken, then the other 11 notes can be ranged in descending order of relationship to it. This order he called 'Series 1'. Adopting the principle of inversion (by which, for example, minor 7th = major 2nd), he determined an order for intervals based on combination-tone curves in increasing complexity. This produced 'Series 2', of intervals in descending order of value with respect to a given note. This series acknowledges no point at which consonance ends and dissonance begins. From this Hindemith developed a system of chordal analysis, which first allocates to any chord a root – always present in the chord, unlike the roots of Rameau's harmonic system – and then measures the intensity of that chord. Hindemith classified chords containing three to six notes into separate groups and subgroups in terms of their harmonic intensity. Using these groups, a composer might put together a succession of chords in whatever 'harmonic crescendo and decrescendo' he wished. Such an increase and decrease of intensity he called a 'harmonic fluctuation' (a concept closely related to Kurth's idea of *Spannung*); and he devised a graphic means of demonstrating this beneath the staff (see fig.22, which shows the group and subgroup of each chord as well as the graphic fluctuation). Hindemith proceeded from there to determine harmonic relationships on a larger scale by measuring the progression of prevailing roots, the 'degree-progression', against Series 1.

Although *Unterweisung im Tonsatz* was intended as a constructional tool for composers, and stressed the realms of harmony that Hindemith felt were not adequately covered by conventional harmonic theory, its theories were meant to apply equally to the harmony of the past and thus to function as a means of interpreting and analysing the music of any period. (In all this it differed significantly from a treatise such as Messiaen's, 1944, which was concerned solely to explain his own music.) Hindemith supplied, at the end of the first volume, a set of analyses of music ranging from plainchant to music by himself and Schoenberg. As an analytical method his system is like Schenker's in being based on a theory of melody and harmony with no separate theory of rhythm. It is unlike it in that there are no structural levels: all notes at the surface can be related to the tonal centre, and modulation is an accepted tonal procedure which is not reduced out of existence.

Between 1935 and 1939 the programme notes that Donald Francis Tovey had been writing for the Reid Concert Series in Edinburgh since the mid-1910s (though

22. From P. Hindemith: 'Unterweisung im Tonsatz' (Mainz, 1937; from Eng. trans., 1942), i, 120

some go back to 1902) were published together in six volumes, reminiscent of Kretzschmar's *Führer durch den Konzertsaal*. The material was arranged by genre, and within that in chronological order, the final volume containing supplementary essays and a glossary. As a whole, the volumes made a substantial analysis book of the 18th- and 19th-century orchestral and choral repertory. To this Tovey added in 1944 a further volume on chamber music (some of whose essays go back to 1900) and a set of analyses of Beethoven's piano sonatas (1948). These books, and his articles for the *Encyclopaedia Britannica* written between 1906 and 1910, were a strong influence on subsequent British analytical and critical writing. They are notable for their pungent prose and avoidance of dogma. They are true examples of English empiricism, rejecting the analyst's formal models as 'nonsensical', and equally rejecting the idea of organic unity as '*a priori* fancies'. All such theories were 'fallacies' (1948, pp.298, 3, 8ff). Even the terms 'first subject' and 'second subject' were discarded: the latter had 'worked ... havoc in our notions of sonata form and sonata themes' (1935, p.2); and 'binary' and 'ternary' 'not only miss the essential grounds of classification, but are thoroughly misleading in all that they imply'. He deprecated any terminology that 'assumes a map-like or space-like view of music instead of a time-like view' (1935, pp.10ff).

Tovey saw himself as dealing only with the 'facts'. It was the successive aspect of description that was most important to him, since he saw analysis as tracing the same process in time that the 'naive listener' experienced. He thus proceeded 'bar-by-bar', 'phrase-by-phrase'; he called this method 'précis-writing', and attributed it to Hubert Parry. It is a judicious mixture of descriptive, naturalistic writing and technical information, illustrated with frequent musical examples and allocating letter-symbols to figures and themes. But here again Tovey was critical of others: 'we shall do well to beware of the exclusively subjective methods of criticism ... which may be but mildly caricatured as consisting in sitting in front of a work of art, feeling our pulses, and noting our symptoms'.

Tovey's method was a blend of the hermeneutic and the formalistic which implicitly stated that there are things in music beyond explanation. At the same time he was always concerned with audibility – perceptibility without recourse to orthodoxy. If a feature was not observable by the innocent ear of the non-expert hearer, then it was not worth observing. The 'naive listener already possesses the right musical sensations. These are as direct as the colours of a sunset or the tastes of a dinner. Connoisseurship comes from experience, not from verbal explanations' (1949, p.271). However, that Tovey dissented from the abstract theory of his age is not to be taken as signifying radically forward-looking thought. His idealized reader is not so very far from the amateur music-lover who was the addressee of much mid-19th-century analysis. It is clear that the 'naive listener' and Tovey's dislike of theorizing are counterparts within a single approach.

Tovey had little impact in continental Europe or the USA, but after 1970 underwent a revaluation among certain American scholars, notably Charles Rosen (1971, 1980) and Joseph Kerman (1975–6, 1985). For the latter, in his championing of a species of musicology that fuses the objectivity of the historian with the personal experience of the critic, Tovey was to become in some measure prototypical.

5. 1945–70. In the years after World War II two highly influential lines of intellectual thought came to impinge on musical theory. To some extent both were approaches to phenomena – methodologies – rather than fields of study in their own right. The first was linguistics, founded as a modern science by Ferdinand de Saussure about the turn of the 20th century; this began to influence musical theory in the 1930s and 40s before making a great impact in the 50s and 60s in conjunction with the closely related approaches of structuralism and semiology. The second was cybernetics and information theory, which as mechanistic views of the world began life at the end of the 40s with the work of Norbert Wiener (*Cybernetics*, 1948), and Claude Shannon and Warren Weaver (*The Mathematical Theory of Communication*, 1949).

Linguistics examines social communication through natural language, seeking to uncover the rules by which a given language operates, the deeper rules by which language as a general phenomenon operates, and the processes by which individuals intuitively learn the complex rules of their own language. It took important strides forward with the work of three circles of linguistics scholars: that in Prague, including Roman Jakobson and N.S. Trubetzkoy; that in Copenhagen, including Louis Hjelmslev; and that of American scholars including Zellig Harris and Noam Chomsky. The kindred approaches of semiology and structuralism both tend to reduce all kinds of non-linguistic social communication to the state of natural language, semiology by treating all the ways in which human beings signal to each other (by the clothes they wear, the gestures they make, the food they eat and so on) as 'codes' containing 'messages' which can be encoded and decoded by those familiar with that code, structuralism by seeing all social phenomena as 'wholes' (or 'structures') whose elements are governed by well-defined laws (*See* SEMIOTICS and STRUCTURALISM AND POST-STRUCTURALISM).

Cybernetics sees all activities, human, animal and machine, in terms of control systems. Thus the nervous system of a human and the electronic system of a computer and the servo system of a complex machine plant are seen as analogous processes, with inputs and outputs, with information feeding back to modify the operation of the system, and so forth. Information theory measures the capacity of systems to receive, process, store and transmit information. Information is thought of as a choice of one message from a set of possible messages; some messages come more frequently than others, thus setting up different probabilities for the arrival of any one message. Information theory reduces any existing range of choices to a network of two-way or 'binary' choices. When a highly probable choice is presented within a message, that choice is said to contain 'low information'; and conversely when an unlikely choice is presented then that choice contains 'high information'. In other words, information is generated by non-confirmation of expectation. Information theory spread rapidly in the early 1950s to fields of application as widely differing as genetics, neuro-physiology, sociology and philosophy, and soon to aesthetics, where it came upon certain difficulties. For in the arts what information theory calls 'redundancy' (namely, confirmation of expectation, non-information) plays a special role in creating form and structure.

The first musical contribution in either of the new fields of thought was probably an address to the first International Congress of Phonetic Sciences in Amsterdam as early as 1932 by the musicologist, style analyst and ethnomusicologist Gustav Becking (see §4 above). It was phonology (the science of distinguishing between elements in a stream of vocal linguistic sound and the apprehension of the rules by which these sounds are linked together), as developed by Trubetzkoy, that seemed relevant to music. And in particular it was the scholars of non-Western music, with their rapidly developing scientific approach to their material, who first saw its relevance. Becking, in discussing Serbo-Croat popular epic, pointed to a certain parallel between basic problems in phonology and those in musicology, illustrating this by the different constructions that people of different world cultures place on a given single musical sound. Such people operate within different musical systems, and Becking tried to set up a typology of systems, 'unidimensional', 'bidimensional', 'tridimensional' and 'quadridimensional'. The great linguistics scholar Roman Jakobson took up Becking's point in the same year, stressing that the particular property of music, as of poetry, is that its conventions are wholly phonological in operation, and do not concern etymology or vocabulary. He urged musical analysts to study the model of phonology.

13 years later Milos Weingart explored the analogies between musical and language phrase structure, with reference to Czech, and in 1949 Antonín Sychra examined folksong by means of linguistic method. Further significant developments in the linguistic analysis of music included a brief proposal by Bruno Nettl (1958) and the first contribution by an influential figure in this field, Nicolas Ruwet, in which he sought to define the aural problems of listening to integral serial music by reference to phonology and the need for a 'margin of error' between the phonemes in a phonemic system (1959). Discussions of the application of information theory appeared by such writers as Bean (1961), Meyer-Eppler (1962), Hiller (1964), Winkel (1964) and Brincker (1970).

In 1956, in a volume of essays dedicated to Jakobson, George P. Springer provided a comparison of language and music that surveyed the progress of linguistic analysis in music. Springer discussed the distinction between repetition (i.e. identity) and difference as a binary opposition, and the modification that the idea of variation brings to this, concluding that music (1956, p.510):

> is subject to conventional rules of combination and distribution, and *ipso facto*, of probability. ... Moreover, music turns out to be not only a stochastic process (producing a 'sequence of symbols ... according to certain probabilities') but the special kind of stochastic process known as the Markov chain (where 'probabilities depend on previous events').

Springer's description summarizes the basic principle of information-theory analysis, which views music as a linear process (*see* INFORMATION THEORY). The process is governed by a syntax, but the syntax is stated in terms of the probability that any one element will occur next in the line rather than in terms of grammatical laws. Music is treated by analogy with the transmission of a message from sender to receiver, but neither that nor the word 'information' should give the impression that meaning and communication are taken in the hermeneutic sense. A message is a chain of discrete sense-units, which in music are taken to be 'events' in a composition: usually isolated notes, chords or simultaneities. Any one event in the chain arouses a prediction of its following event. If the prediction is confirmed then no information is imparted; if it is 'non-confirmed' then information is imparted. But events in music form patterns, and the total amount of information contained in a pattern can be calculated by a formula and expressed as an 'index'.

As early as 1956 R.C. Pinkerton and Abraham Moles produced articles relating information theory, as presented by Shannon and Weaver, to music, and in 1958 and 1959 a spate of material was issued on the subject: two basic presentations by David Kraehenbuehl and Edgar Coons, an article by Joseph Youngblood, a monograph by W. Fucks, and an extended book on the broader application of the theory to aesthetic perception by Moles that devotes a chapter to perception of 'sonic material'. Coons and Kraehenbuehl (1958) offered two indices, one of articulateness, which they described as measuring 'how neatly the conditions of "unity" and "variety" have been arranged so that the force of neither is dulled', and one of hierarchy, which measured 'how successfully a "variety" of events has been arranged to leave an impression of "unit"' (p.150). Their method, in other words, measured the phenomena of unity and variety, which are so important in analysis, in an objective and tangible way rather than a subjective and vague way. It could do this for a single structure, or for a work with respect to the known terms of reference of that work's style.

In his first important book (1956) the aesthetician Leonard B. Meyer came close to information theory in his view of styles as culturally conditioned systems of expectations, and of musical meaning as deriving from the arousal, frustration and fulfilment of such expectations. Meyer was still working within the Gestalt concepts of *Prägnanz* and closure. In the following year, however, he introduced the fundamentals of information theory into his argument and revised his definition of 'meaning' in music, fashioning three stages of what he called 'embodied meaning': the 'hypothetical meaning' before a sound-pattern has been heard, the 'evident meaning' when the sound-pattern has become a concrete event, which initiates a stage of 'revaluation' comparable with 'feedback' in control systems, and the 'determinate meaning' that arises later in the total experience. Meyer dealt, as Moles had previously done, with the concept of 'noise' whereby information is distorted. The maturity of Meyer's thought is shown in his subsequent essay (1961), which subjected the view of music as information to the actual situation of music frequently reheard.

The use of the computer in musical analysis may be traced from 1949, when Bernard Bronson, editor of the melodies of the Childe ballads, analysed range, metre, modality, phrase structure, refrain pattern, melodic outline, anacrusis, cadence and final of folksongs, using data on punched cards. The measuring of such quantities and the production of sets of statistics was the facility most readily available from early computers. There was no essential difference between a human doing these operations by hand and a computer carrying them out electronically, but the computer had the advantages of speed, accuracy and exact memory. Software systems with biases towards the demands of musical material were created in the early 1960s. An important article by Selleck and Bakeman (1965) explained two strategies for analysing melodic structures: one through probabilities,

which derived from information theory, the other through comparing and sorting melodic units, which derived from linguistics. The journal *Computers and the Humanities* (1966–) maintained a director of projects in progress, enabling scholars to be aware of other work in their field and encouraging collaboration. A collection of essays on electronic data processing in music, published under the editorship of Heckmann (1967), presented a cross-section of work, including 'languages' for representing music, strategies of computational analysis, sample analyses and articles raising more general issues.

The most significant study of mathematics and music at this time was Xenakis's treatise *Musiques formelles* (1963). Although his exposition of probabilities, stochastics, Markov chains and the theory of games resorts to analysis mostly in order to trace the compositional means in his own works, the framework that Xenakis set out places the art of music on a more universal plane, opening it up to investigation according to precise laws. Pouring scorn on existing cybernetic and linguistic analyses of music as elementary and pseudo-objective, he proposed 'a world of sound-masses, vast groups of sound-events, clouds, and galaxies governed by new characteristics such as density, degree of order, and rate of change' in place of traditional 'linear' musical thought. Pierre Schaeffer's *Traité des objets musicaux* (1966) was a dissertation on the sonorous material from which music is made: an attempt to present a full typology of that material, and to discover its general laws. Schaeffer's treatise is underpinned with acoustics and with philosophy and is centred on 'l'expérience musicale'; but it is much more tangible in its formulation of a 'solfège des objets musicaux' which is in practice a system of classification by seven criteria: mass, dynamic, harmonic timbre, melodic profile, mass profile, grain and inflection (*allure*).

The postwar years were a period of revival, development and dissemination for the teachings of Schenker. Much of this was undertaken by former pupils of his who had emigrated to the USA. A Schenkerian tradition of teaching was established at the Mannes College of Music in New York, and knowledge of Schenkerian approaches was widened through the publication of important books by Adele Katz (1945) and Felix Salzer (1952). Although Schenker's most active pupils (and their pupils in turn) remained devoted to his insight, many of them had original ideas to contribute to the developing tradition. As Schenker's own writings remained largely unavailable in English translation, however, it was not always evident other than to specialists that Salzer's *Structural Hearing* in particular contained significant departures from Schenker's views on the nature of music and significant developments of his analytical techniques, notably in their application to early music and 20th-century music. In the process of gradual assimilation alongside other contemporary developments in analysis, Schenker's organicist language was to a large extent replaced by words that expressed musical relationships in terms of structure. The result, far from diminishing the impact of Schenker's ideas, served to establish him as a decisive influence. While it was left to later generations to re-examine Schenker's original writings in the context of the history of ideas, there was a new flourishing of practical analyses either along directly post-Schenkerian lines or significantly influenced by Schenkerian thought (e.g. Forte, 1955).

Schenkerian analytical work continued in strength during the 1960s, and an occasional publication under the title *Music Forum* was founded by Salzer and William J. Mitchell in 1967 to present extended analyses of which some in each issue would use Schenkerian techniques. The series had particular value because of the attempts made in it to extend Schenker's techniques to music outside the domain for which it was created: to medieval and Renaissance music (Salzer, 1967 and Bergquist, 1967) and to contemporary music. Among the non-Schenkerian material in *Music Forum* is Lewis Lockwood's masterly study of the autograph of Beethoven's Cello Sonata op.69, a rare blend of rigorous historical musicology and analytical method (1970).

During the first postwar decades a new approach to organic motivic analysis was being forged, which influenced analytical writing in Britain but found little sympathy elsewhere in Europe or in the USA. It was first expounded by Rudolph Réti in two books (1951, 1958), of which the earlier, *The Thematic Process in Music*, is his classic exposition. But before that, Réti, who had lived in Vienna most of his life until emigrating to the USA in the 1930s, had worked intensively on analyses of sonatas by Beethoven between 1944 and 1948 in an attempt to grasp Beethoven's compositional process. These analyses were published in 1967, ten years after his death.

Réti started from the two-dimensional view of formal construction that was implied in Schoenberg's *Fundamentals*: motivic expansion, and division and demarcation. Réti reconciled these two dimensions. His method in itself produces, by reduction of all the thematic material of a work to its abiding common elements, a series of 'cells' underlying the work's motivic material. These are small-scale melodic contours comprising two or three intervals and in origin non-rhythmic. Each cell can undergo transposition and inversion. Réti saw specific sequences of such cells recurring as a 'thematic pattern' in each of the movements of a large-scale work, and creating a symmetry or unity between movements which he considered a conscious act of composition. Such a pattern supplies its own natural thematic grouping which, in Beethoven's work, often takes the place of strict textbook form, becoming 'the skeleton of all themes in all movements; it determines the modulations, the figurations and the bridges, and above all, it provides an outline for the overall architecture' (1967, p.94). Thus the two prime cells of the 'Pathétique' Sonata of Beethoven are as shown in fig.23*a*; Réti has given them separate functions by designating them 'prime cell' and 'concluding motiv' respectively. Fig.23*b* shows where the cells are located in the opening bars of the first movement. The motifs (still without rhythm) which can be derived from these cells may be set out in a table (fig.23*c*). An entire movement can then be set out, in non-rhythmic form with its melodic shapes grouped to reveal the motif forms, as a 'thematic song' (fig.23*d*, the slow movement).

The Thematic Process in Music extended these ideas, expressing more fully Réti's view of music as a linear compositional process. The composer starts not with a theoretical scheme but with a motif that has arisen in his mind, which he allows to grow by constant transformation – by transposition, inversion, reiteration, paraphrase, variation. Its growth is evolutionary. In time he makes a significant modification to the motif or picks up a detail from his elaborative material, and this becomes the focus.

23. *From R. Réti: 'Thematic Patterns in Sonatas of Beethoven' (London, 1967), 17, 19, 23, 91*

A work is thus seen as 'a musical improvisation ... around a few motifs'. The book also dealt with key relationships, presenting a diversity of examples and attempting a historical survey of the thematic process. His second book, *Tonality, Atonality, Pantonality*, expounded what he saw as a new kind of tonality 'which does not appear on the surface but is created by the ear singling out hidden relationships between various points of a melodic or contrapuntal web' (p.65). At the heart of this idea was the 'moving tonic'. Réti supplied a wide range of contemporary analytical examples in support of his thesis.

Two years before this last book of Réti, Hans Keller presented the first of a succession of short, pithy articles in which he put forward the principles of 'functional analysis'. 'Functional analysis postulates that contrasts are but different aspects of a single basic idea, a background unity' (1956–7, p.15). Keller saw his analytical work as the purely objective isolating of background unities, and strongly refuted charges of subjectivity. Criticizing Toveyan analysis as 'anatomical', and thus concerned with 'dissection', he proposed a method that would attempt 'to elucidate the unifying *functions* of the living organism that is a musical work of art' (*MR*, xviii, 1957, p.203). Whereas Réti's view of music was as a single process passing from beginning to end, Keller saw music as a double process: a linear development – argument would be a better word, for Keller's view was that music communicates and that the listener 'understands' it – but one that is controlled by a single cell-like 'basic idea'.

The singularity of the basic idea introduces an element of projection into the compositional process. Keller spoke of musical thought as two-dimensional: that is, as having both a 'foreground' and a 'suppressed background', the latter too obvious to be stated by the composer yet vitally important for the analyst to reconstruct in order that the unity of what followed might be demonstrated. The background proceeds by the law of identity, the foreground by the law of contradiction. Thus music has the quality, not open to logical thought, that something may both be and not be something. In context, Keller's view of a piece of music (a piece, as with Schenker, that exhibits mastery) is of unity within diversity: of constant 'latent' presence of a single basic idea, articulated in time as a succession of 'manifest' contrasts on the surface of the music. To identify the pervasive, all-embracing idea is the first task of the analyst. All the principal thematic material must be brought together, and by reduction the highest common factor within that material must be isolated – a small-scale idea, a germ-cell, whose internal elements are reproduced at the surface in close proximity, and which recurs again and again. The second task is to account for the continuity of the foreground. This involves not only explaining how each manifestation of the basic idea is derived from the original but also why that particular derivation occurs at that point. Analysis elucidates the funtions of a piece as if it were a living organism. As with Réti, the basic idea is usually a melodic outline, a succession of intervals out of time. Its manifestation is thus a rhythmicization. The foreground derivations may involve transposition, inversion, retrogression or 'interversion' (the reordering of the elements of the idea). Keller, however, was less open than Réti to the criticism of neglecting rhythmic aspects of a structure, for his method recognized fundamental rhythmic patterns, and thus augmentation and diminution are further types of derivation. Also very important in foreground continuity were the separation of two phrases latently in antecedent–consequent relationship – called 'postponed complementation' by Keller – and the reversing of the order of two such phrases.

Early presentation of functional analysis was by verbal text with music examples. Such examples showed thematic material with labelled motifs and derhythmicized reductions. In 1957 Keller took an even bolder step than Schenker had when abandoning the word for the graph: Keller abandoned word and graph for sound, by preparing an analytical score which demonstrated what he saw as the background unities of Mozart's String Quartet in D minor K421/417*b* entirely in musical sound. Keller's method involved composing a score, for the same forces as the work under analysis, in which passages of the

original are interspersed with aural demonstrations of the links between themes. He claimed for this the advantages that it avoided the transition between musical and verbal thought, that the through-composition of the analytical score led along purely musical lines, and that the subjectiveness of verbal description was eliminated. Several such analyses were prepared and broadcast in Britain and on the Continent, but none of Keller's scores was published until much later (1985, 1995).

The work of Réti and Keller was furthered in the 1960s through two books by Alan Walker. In the first of these (1962) he argued for the validity of mirror forms, and introduced the Freudian elements of repression and preconscious association into the theory of motivic unity. Walker's second book, on musical criticism (1966), offers much analytical material, demonstrating the 'all-pervading background forces' that operate in musical creation, and furthering the Freudian theory. The book contains a useful exposition of 'historical background', a concept fundamental to Keller's work. A different association of motivic analysis and psychology lay behind Robert Donington's Jungian interpretation of Wagner's *Ring* (1963).

There was a revival of hermeneutic theory in *The Language of Music* by Deryck Cooke (1959), which argued for the materials of music as a quite specific vocabulary of intervallic contours with the connotations of emotional states. Cooke argued that these connotations arise not by convention but from the inherent forces of the intervals that make up the contours: forces of tension and direction. His analyses were thus apparently based on natural phenomena, translating a musical expression of psychological states and events (presumably those of the composer) into a verbal expression. Cooke's presentation of tonal intervallic patterns as underlying formulae that were deployed across a wide range of musical styles was independent of Albert B. Lord's study (1960) of Yugoslav epic, which proceeded from the concept of oral composition originated by the classical scholar Milman Parry (1902–35; see *The Making of Homeric Verse*, 1971). Lord investigated the mechanism by which a singer spontaneously creates or recreates a song through the 'theme' and the 'formula', and in particular through the capacity of formulae to group into 'systems' which provide the singer with alternatives to match different metrical situations in the poetry that he is creating. This idea, though scarcely applied to music by Lord, was taken up by Leo Treitler (1974) for the analysis of plainchant.

Towards the end of the period there was much interest in style analysis, as shown in Richard Crocker's *A History of Musical Style* (1966), Alan Lomax's discussion of 'cantometrics' (1968) and Jan LaRue's *Guidelines for Style Analysis* (1970). The last two studies are examples of category analysis, a method that starts with the recognition that music is too complex a phenomenon to be comprehended without some way of breaking down its material into elements – not so much its temporal elements (phrase, motif etc.), though these may be part of the 'breaking-down' process – as those facets that are constantly present: the 'parameters'. What the analyst requires is, in LaRue's words, 'a set of categories that are satisfactorily distinct, yet without undue branching and proliferation' (1970, p.10). Each category is then given a scale of measurement, and it is this measuring that is the critical operation in the analysis. Construction and cohesion are but two of the terms of reference, along with techniques of instrumentation and vocal writing, usages of consonance and dissonance, of metre and rhythm, of texture and such like, which characterize a style or repertory. LaRue's system was designed with the 18th-century instrumental repertory in mind, and Lomax's for singing style in the folk music of word cultures.

In abstract, category analysis establishes a two-dimensional grid, a 'matrix', one dimension comprising categories, the other the scale of measurement. Lomax's 'behavioral grid' is made up of 37 categories and 13 degrees. It operates on a single level, ultimately locating any singing style somewhere along a spectrum of style whose extremes are 'highly individualized and group-dominating performance' and 'highly cohesive, group-involving performance' (p.16). LaRue's system has only five categories (four 'contributing elements' and a fifth 'combining element') and three degrees (the Aristotelian 'rule of three': two extremes and a mean). In practice, however, the system contains hierarchies and is consequently much more complex to operate. The five categories are: Sound, Harmony, Melody, Rhythm and Growth. But sound is subdivided into 'Timbre', 'Dynamics', 'Texture and Fabric'; harmony into 'Color' and 'Tension'; melody into 'Range', 'Motion', 'Patterns' and so on. Each subcategory has its own set of degrees of measurement: thus melodic patterns are measured as Rising, Falling, Level, Waveform, Sawtooth or Undulating; and the number of degrees varies from subcategory to subcategory. Moreover, each category is considered at each of three levels of magnification (LaRue's 'dimensions': Large, Middle and Small). The resulting analytical grid is really three-dimensional, with categories and subcategories as one dimension, the three levels of structure as the second, and the variable degrees of measurement as the third. However, a finished analysis is displayed as a table, with categories as rows and dimensions as columns: each box in the table contains (if relevant) a verbal description that does not limit itself to quantification but also supplies information about context and function. LaRue stressed the need for large sampling of any given repertory as a frame of reference for judging distinctiveness, and appended to his analytical system a method of extracting the essential and relevant information from analyses of individual works so that comparative analysis may be performed without drowning in data.

6. Since 1970. The period after 1970 saw analysis emerge as a recognized discipline within musical studies, comprising a number of approaches and methods. This was reflected in a spate of new journals, some of them edited by graduate students in America, and in the formation of new societies of music theory. *Theory and Practice*, the organ of two student societies in New York State, began in 1975; so too did *In Theory Only*, journal of the Michigan Music Theory Society; and *Indiana Theory Review* followed them in 1978. All three contained analytical articles. Most important among the new organizations was the Society for Music Theory, founded in 1977, and its journal, *Music Theory Spectrum*, launched in 1979. *Music Analysis*, founded from King's College, London, in 1982 by Jonathan Dunsby, was the first periodical (at least since the days of Schenker) to be devoted specifically to analytical matters, representing a wide range of theories and approaches; and early issues of *Contemporary Music Review*, launched from

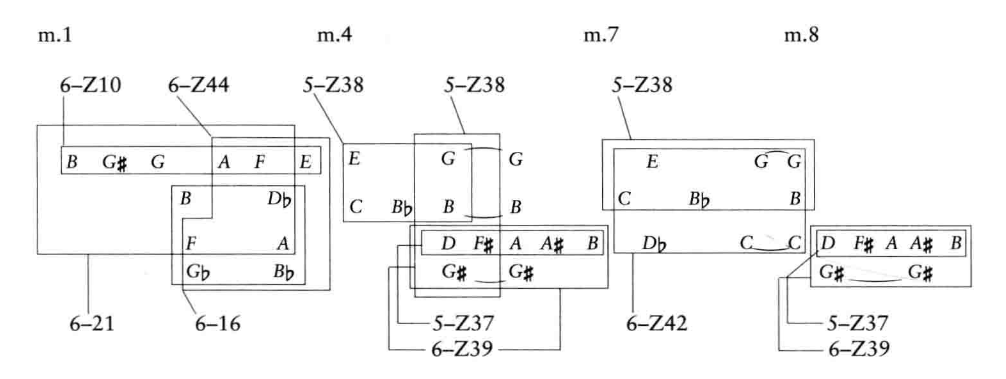
Nottingham in 1984, featured largely analysis of contemporary music. A series of monographs, Studies in Musical Genesis and Structure, connecting source- and sketch-studies with analysis, was launched in 1985 with Lewis Lockwood as editor. In Germany the periodical *Musiktheorie* was inaugurated in 1986. A regular series of British conferences on analysis began in London in 1984 and was taken over by the newly formed Society for Music Analysis in the early 1990s.

Initially, the circumscription of analysis through its methods brought new levels of theoretical rigour and operational refinement in the wake of virtually autonomous development. By the mid-1980s, two methods had achieved the widest currency and were seen respectively as core systems for the analysis of tonal and atonal music. These were (1) codified Schenkerian techniques, and (2) techniques using pitch-class set theory. (A sharp distinction was thus drawn between tonal and atonal analysis.) A little later, as those engaged in analysis sought to define their discipline in relation to broader currents in contemporary thought, and those outside analysis correspondingly sought to understand its purposes and outputs, the perceived self-sufficiency of method-driven analysis diminished dramatically. Analysis in the late 1990s was seen as a critical activity, drawing on established ways of writing that came in part from its historical accumulation of methods, but with a significant shift from the model of forensic examination towards the construction of interpretations.

Many developments in the period can be understood against the context of three broad lines of inquiry that were followed in relation to Schenkerian analysis. One, reflecting a widespread belief in the potential of methodical analysis to offer insight into music of virtually any kind, involved the application of extended kinds of Schenkerian analysis to musical repertories that had not been Schenker's own concern, including music composed around the turn of the 20th century, early music, popular music and non-Western music. Another, reflecting a school of thought that valued formalism in both theory and method (and which considered analysis as the practical application of theory), saw a number of scholars seeking to rationalize and codify Schenker's approach into a rigorous combination of music theory and analytical method. A third line of development, mainly occurring towards the end of the period and reflecting the growth of a new musical criticism, saw studies that treated Schenker's work as a body of critical writing situated in the cultural and philosophical network of its time, and examined the reinterpretation of its language and ideas in the decades following World War II.

Pitch-class set theory arose from the desire of composers and theorists to find a way of identifying any combination of evenly tempered pitches without invoking the bias towards local pitch centres implied by tonal terminology (*see* SET). In mathematical set theory, which had its origin in the work of Georg Cantor between 1874 and 1897, the fundamental concept is that of membership. A 'set' is made up of the 'elements' that are members of that set. The set may contain 'subsets' all of whose elements are members of the set itself. Where several sets exist, certain relationships can apply among them: relationships of equivalence (in which one set can be reduced to another by some simple procedure), intersection (in which sets have certain elements in common), union (in which sets are joined together), complementation (in which sets have no elements in common and together make up all the elements of some larger order, often called the 'universal set') and so forth.

Aspects of set theory entered the theory of musical composition with J.M. Hauer's theory of tropes (1925), and are evident in the writings of René Leibowitz, Josef Rufer, George Perle, George Rochberg (1955, 1959) and Pierre Boulez (1964, chap.2; 1966, part ii). The proper formulation of a set theory of music was the work of Milton Babbitt (1955, 1960, 1961, 1972), Donald Martino, David Lewin and John Rothgeb (*JMT*, iii–v, x, xi). But while Babbitt's work, using particularly the mathematical concept of the group, dealt with harmony and with the functions of melodic and rhythmic configurations in 12-note music, and also with the interaction of components over longer spans of time, it belonged to the realm of compositional theory rather than analysis.



The most significant analytical contribution was made by Allen Forte (1964, 1965, 1972–3, 1973). Forte established a numerical notation for musical pitches by disregarding the octave in which they were sounded and treating enharmonically equivalent pitches as identical. All Cs (together with all B♯s and D𝄫s) were assigned to pitch class 0, all C♯s and D♭s to pitch class 1, and so on to pitch class 11 (all B♮s and C♭s). He reduced the number of possible collections of pitch classes to manageable proportions by classifying sets as identical if they could be reduced to the same 'prime form' by transposition and/or inversion, and established a system of labelling by which any prime form, and thus by extension any set, could be identified. These labels had two main elements, the first of which (the cardinal number) was simply the number of pitch classes in the set. The second element (the ordinal number) was, strictly speaking, arbitrary – it simply referred the user of the system to a list of prime forms published by Forte (1973) – but was also to some extent based on an assessment of the intervals that arose within the set (i.e. among its constituent elements). In a few cases, distinct types of set could by such assessment be observed to possess an identical 'interval-class content'; such sets were said to be 'Z-related', and 'Z' was incorporated into the names of both set classes. Examples of set class names include 3–1, 4–Z15, 4–Z29 and 9–1: of these, 4–Z15 and 4–Z29 are Z-related, and 3–1 and 9–1 are complementary, which is to say that for each set of type 3–1 there is a set of type 9–1 which includes exactly the pitch classes that the 3–1 set omits from the 12 available.

Analysis using set classes had to reckon with the fact that the theory of pitch class sets deals almost exclusively with sets of from two to 12 elements, so that a musical work containing perhaps many hundreds or thousands of notes had to be divided up into small units amenable to the categorization and comparison that the theory allowed. This 'segmentation' process remained dependent on informal musical judgment, despite receiving some attention from theorists such as William Benjamin (1979) and Christopher Hasty (1981). By contrast, the abstract relations among sets and set classes were the subject of considerable theoretical examination, for example by Robert Morris (1979–80, 1987), John Rahn (1980), Charles Lord (1981) and Eric Isaacson (1990). It is impossible, however, to observe a water-tight distinction between the processes of musical segmentation and the

assessment of pitch class set relations, nor can it be maintained that one is firmly the province of analysis and the other of theory.

Forte extended basic pitch class set theory to include the association of sets within 'set-complexes' (K) and 'subcomplexes' (Kh) – a 'complex' being an array of all the sets that are related by inclusion and/or complementation to any one given central class of sets (the 'nexus set'). This established a type of organization that made possible the elucidation of atonal coherence in large-scale musical structures (Forte, 1978, on Stravinsky's *The Rite of Spring*; Janet Schmalfeldt, 1983, on Berg's *Wozzeck*; James Baker, 1986, on sonatas and orchestral works by Skryabin). A further extension of the theory was made by Forte in 1988 through a theory of pitch class set genera, which was based on a classification of all sets with four or more elements according to their trichordal subsets. 12 genera of varying sizes were thus constituted, with several large set classes being assigned to two or more genera. Each genus was linked informally with descriptions such as 'chromatic', 'diatonic' and 'atonal'. The associated analytical procedure involved making a segmentation of a musical passage and tabulating those set classes to which it could thus be reduced, and then noting the genus (or genera) to which each set class in the analysis belonged and calculating the statistical significance of each genus's representation in the sample. On this basis, weakly represented genera that were superfluous to the overall generic profile of the analysis were omitted. This typically left a generic profile based in quantified proportions on two or three genera, in a way that had been sensitive to the analytical context.

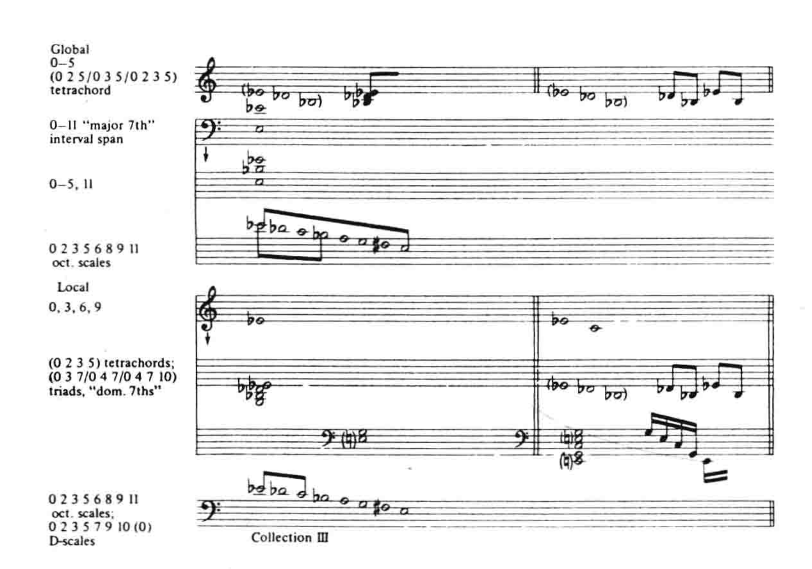

Fig.24 is taken from Forte's analysis (1981) of the first of Schoenberg's Three Piano Pieces op.11. This uses a diagrammatic notation in parallel with a passage in score: the segmentation into pitch class sets is shown by enclosing pitch class letter-names in rectangles, circles and ovals, the result leaving space for set labels, bar numbers and other items. It can be seen that the analysis proposes three levels of structure in bars 1–8. In level (*a*), six of the hexachords (i.e. six-note sets) which are to be of great importance for the structure of the piece are identified (6–Z10/Z39, 6–16, 6–21, 6–Z42 and 6–Z44) along with several of the pentachords, which together with their seven-note complements are destined to be significant. Level (*b*) shows new ways of segmenting the musical fabric; level (*c*) shows in particular some of the trichords (three-note sets) which play on the surface of the music. The recurrent hexachords and pentachords are seen as the basic harmonic vocabulary of the piece, whereas the trichords are the foreground through which the analysis must penetrate. Among the hexachords, the importance given in the analysis to the Z-related pair 6–Z19/44 illustrates the interdependence of pitch class set theory, segmentation and critical analysis. One pitch class set of type 6–Z44 [10, 11, 0, 3, 4, 7] corresponds to those letters of Schoenberg's surname which may be interpreted as letter-names for musical pitches (SCHBEG, extracted from 'Schönberg'). Although this set class is represented only once in level (*a*) and the segmentation would be no less complete without it, Forte found significance in its appearance in a number of Schoenberg's early works (1978). Elsewhere, the Z-relation allows him to assert the presence of Schoenberg's 'signature' through sets of type 6–Z19 as well.

Other writers identified a number of specific pitch class collections as being of particular importance in early 20th-century music. The most prominent of these was the 'octatonic' collection – comprising, for example, the pitch classes C, D♭, E♭, E♮, F♯, G, A and B♭ (two further transpositions of the collection are available) – which had been discussed in analyses of music by Skryabin and Stravinsky by Perle (1962) and Arthur Berger (1963–4). The role of octatonic collections in the music of Debussy, Webern, Bartók and Skryabin was further discussed by Forte (1991, 1994), Richard Cohn (1991) and Wai-Ling Cheong (1993). The fullest investigation was carried out by Pieter van den Toorn (1977, 1983), who showed in exhaustive detail how interactions between this collection and the diatonic collection could be charted in much of Stravinsky's music, taken from all the commonly recognized stylistic periods of the composer's career. In doing so, van den Toorn indicated that the octatonic collection could be articulated into a network of characteristic harmonic and melodic features, including triads, dominant 7th chords and scale fragments (fig.25).

Van den Toorn was not the only writer who developed an analytical method specifically in order to address the work of one 20th-century composer. Ernő Lendvai's use of a theory of 'axis tonality' (1955, 1983) to analyse the mature style of Bartók projected a Reimannian conception of complementary tonic, dominant and subdominant functions on to a fourfold regular division of the octave. This produced three axes corresponding to the three tonal functions, which among them gave functional labels to all 12 pitch classes. Although the same regular division of the octave served also to link triads at intervals of a minor 3rd in the Stravinsky analyses of Berger and van den Toorn, such points of convergence were not central to the work of any of these writers. Of greater importance was a sustainable belief in the authenticity of the analytical method to the composer's stated or unstated priorities. For example, the critical scrutiny that was directed at Lendvai's assertion that the formal proportions of many of Bartók's works were in correspondence with the Golden Section (a mathematical ratio whereby a twofold division of a line is made such that the ratio of the larger part to the whole is the same as the ratio of the smaller part to the larger part: *see* GOLDEN NUMBER) was concerned not so much with its analytical integrity as with its biographical value. In the absence of unambiguous documentary evidence that Bartók himself acknowledged this principle, speculation was directed at the possibility that a composer might follow it subconsciously. Lendvai's account of the characteristic harmonic and melodic intervals of Bartók's music in terms of the FIBONACCI SERIES (a sequence of numbers in which the ratio between adjacent terms tends towards the Golden Section, and which was famously associated by D'Arcy Wentworth Thomson with naturally occurring phenomena in plant growth) was clearly intended to play into such speculation.

This renewed concern of analysis with compositional method reflected a general expectation that analysis of 20th-century modernist works would assist in their broader comprehension. Appeals to biographical data and the composers' own writings frequently underpinned analyses of works by Schoenberg, Berg, Webern, Hindemith, Messiaen, Boulez and others who had given clear indications of their own technical procedures. Without necessarily showing greater technical rigour, these analyses achieved greater acceptance in the early part of the period than, for example, Roy Howat's assertion (1983) of Golden Section proportions in Debussy's works. Later in the period analyses that were not dependent on biography for their credibility came to be more widely valued. Among these were studies of Debussy by Richard

25. From P.C. van den Toorn: 'The Music of Igor Stravinsky' (New Haven, CT, 1983), 108

Parks (1989), Bartók by Paul Wilson (1992) and Berg by Dave Headlam (1996). Other notable analytical studies of individual 20th-century composers included those on Britten by Peter Evans (1979), Berg by Douglas Jarman (1979), Bartók by Elliott Antokoletz (1984), Hindemith by David Neumeyer (1986), Varèse by Jonathan Bernard (1987) and Webern by Kathryn Bailey (1991). Bernard's graphic notation (see also 1981, 1983, 1987) was a notable individual innovation in presentation whose similarity to display formats routinely available in MIDI sequencing software by the mid-1990s suggested one possible route to future computer-assisted analysis.

Robert Morgan (1976) and James Baker (1983, 1986) were prominent in developing Schenkerian principles to reflect the changes in harmony and form evident in progressive music composed during the mid-19th century through to the turn of the 20th. These extensions of the technique found wider acceptance than had earlier comparable analyses of Stravinsky, Schoenberg and Bartók by Roy Travis (1959, 1965–6) and of Wagner by William Mitchell (1967). A number of writers including Craig Ayrey (1982), Anthony Pople (1983, 1989), Joseph Straus (1987), James Baker (1990) and Edward Pearsall tackled the question of how Schenkerian chord prolongation might be said to occur in post-tonal or atonal music, but little consensus was reached on this topic. Another approach to music of the early 20th century which seemed to have characteristics of both tonality and atonality (according to the common understanding of those terms) was to present linked analyses based on the application of both Schenkerian and pitch class set methods to the same musical passages. There was generally little attempt at a hybridization of analytical method or of underlying theory: the aim was rather to provide demonstration of the co-existence of tonal and atonal features through established methods. Notable examples of such writing were studies of music by Schoenberg and Berg by Forte (1978, 1985) and Janet Schmalfeldt (1991; see also Schmalfeldt, 1983).

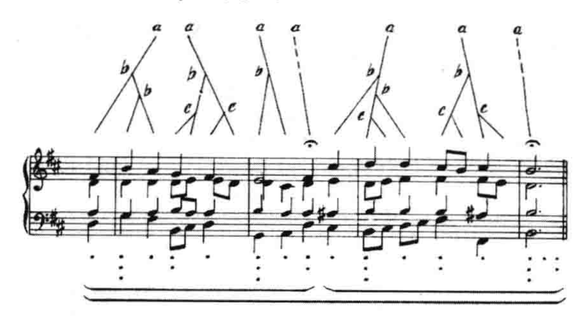
Applications of adapted Schenkerian principles to early music, for example to Lassus by Mitchell and Isaac by Saul Novack (both 1970), and to Monteverdi by Salzer (1983), were no less contentious theoretically than were Schenkerian analyses of post-tonal music; they also failed to achieve ready acceptance among scholars and musicians with a lively historical interest in this repertory (see the discussion by Mark Everist, 1992). A number of later studies responded to this difficulty of assimilation by examining voice-leading in early music less rigidly in line with Schenkerian archetypes and more evenhandedly in juxtaposition with technical matters familiar from the history of theory and composition – such as cadence formation, modality, compositional process and text structure. Examples included work by Daniel Leech-Wilkinson and Sarah Fuller on Machaut (1984, 1987, 1992), and by Cristle Collins Judd on Josquin (1985, 1992). These writers were perhaps more successful in achieving a conceptual synthesis than were many of those engaged in analysis of the post-tonal repertory, though this was not necessarily recognized at the time.

Before these developments, early-music analysis that was independent in spirit had included studies in 'proportional analysis' by Marianne Henze on Ockeghem (1968), Ernest Sanders on Philippe de Vitry (1975) and Brian Trowell on Dunstaple (1978–9). In a more occult vein, proportions in the music of Obrecht (Marcus van Crevel,

1959, 1964) and Bach (Ulrich Siegele, 1978) were said to be related to special 'cabalistic' numbers (whereby, for instance, 888 is associated with the Greek name for 'Jesus') or to numbers derived from simpler alphabetical summations (e.g. B–A–C–H = 2+1+3+8 = 14), whose presence in a piece was determined by counting metric pulses. The credibility of these types of analysis depended on either or both of two factors: the frequency and consistency with which a composer appeared to apply Golden Sections and other numerological devices over a wide range of his work; and any external circumstances that enabled one to infer a composer's interest in such matters, such as the composer's knowledge of and interest in mathematics, and his awareness of other art forms based on numerical principles (*see* NUMBERS AND MUSIC).

A similar pattern of developments may be observed in analysis of popular and non-Western musics during the period. Applications of Schenkerian techniques to popular music, including analyses of Gershwin by Steven Gilbert (1995) and Arthur Maisel (1990), of Beatles songs by Walter Everett (1987) and of American popular ballads by Forte (1995), began in the late 1990s to be absorbed into the broader study of music in popular culture. The close musical readings in Allan F. Moore's monograph on the Beatles' *Sgt. Pepper* album (1997) combined Schenker-style graphs of tonal and melodic frameworks with discussion of recorded sonorities, tempo relationships and, above all, the interaction of music with text (*see also* POPULAR MUSIC). The interpretation of text–music relations, and of music in relation to drama, image and narrative, had by this time become central in studies of opera and film music: it was in this vein that the analysis of music in popular culture seemed likely to develop, rather than through further accommodation with techniques derived from the analysis of Western concert music.

The eurocentrism of Schenkerian analysis did not cause it to be excluded totally from studies of non-Western music (see the discussion by Jonathan Stock, 1993), but semiological approaches (see below; *see also* SEMIOTICS) were more prominent in analytical writing on these musics. This was in line both with the origins of musical semiotics and with the anthropological methodologies that underpinned scholarly inquiry into the meaning and practices of music in other cultures. Influential authors in this broad field included Simha Arom (1985; Eng. trans., 1991; see also Nattiez, 1993) and Kofi Agawu (*see also* ETHNOMUSICOLOGY).



Explicit codification of Schenker's principles went beyond the earlier objective of bringing his work to the fuller attention of English-speaking musicians, something which was largely accomplished by the translation of *Der freie Satz* by the Schenker pupil Ernst Oster as *Free Composition* (1979). Together with subsequent translations, including those of *Kontrapunkt* (1987) and *Das Meisterwerk in der Musik* (1994, 1996, 1997), this largely displaced the need for texts such as Forte's presentation (1959) of Schenker's approach as a conception of musical structure, which had been instrumental in drawing the Austrian's work into the discipline of analysis as practised and understood by professional scholars in the English-speaking world, particularly the USA. The demands of music theory pedagogy, however, led to a need for textbooks in Schenkerian analysis which was initially met by those of Forte and Gilbert (1982) and David Neumeyer and Susan Tepping (1992). Examples of the use of Schenkerian techniques in analysis were too numerous to be usefully cited here. Among recurring concerns of such analysis were large-scale parallels across sonata-form movements made evident at a middleground analytical level, often involving voice-exchanges and/or the enharmonic reinterpretation of chromatic pitches. Examples were to be found among the writings of Eric Wen (1982), Carl Schachter (1983), David Beach (1993), and Roger Kamien and Naphtali Wagner (1997).

A second kind of codification of Schenker's work may be distinguished, more far-reaching than the first, in which theorists sought explicitly to refine and reinterpret Schenkerian principles along scientific lines into an explicit and rigorous body of theoretical constructs and analytical practices. Two such reinterpretations were undertaken by Gregory Proctor and Herbert Lee Riggins (1988) and Richard Littlefield and David Neumeyer (1992); an earlier, less explicit reformulation was given by Jonathan Dunsby (1980). All of these were apparently independent of the computer-based reformulations of Schenkerian concepts and procedures undertaken in the 1960s and 70s by Michael Kassler (1967) and Stephen Smoliar (1976–7).

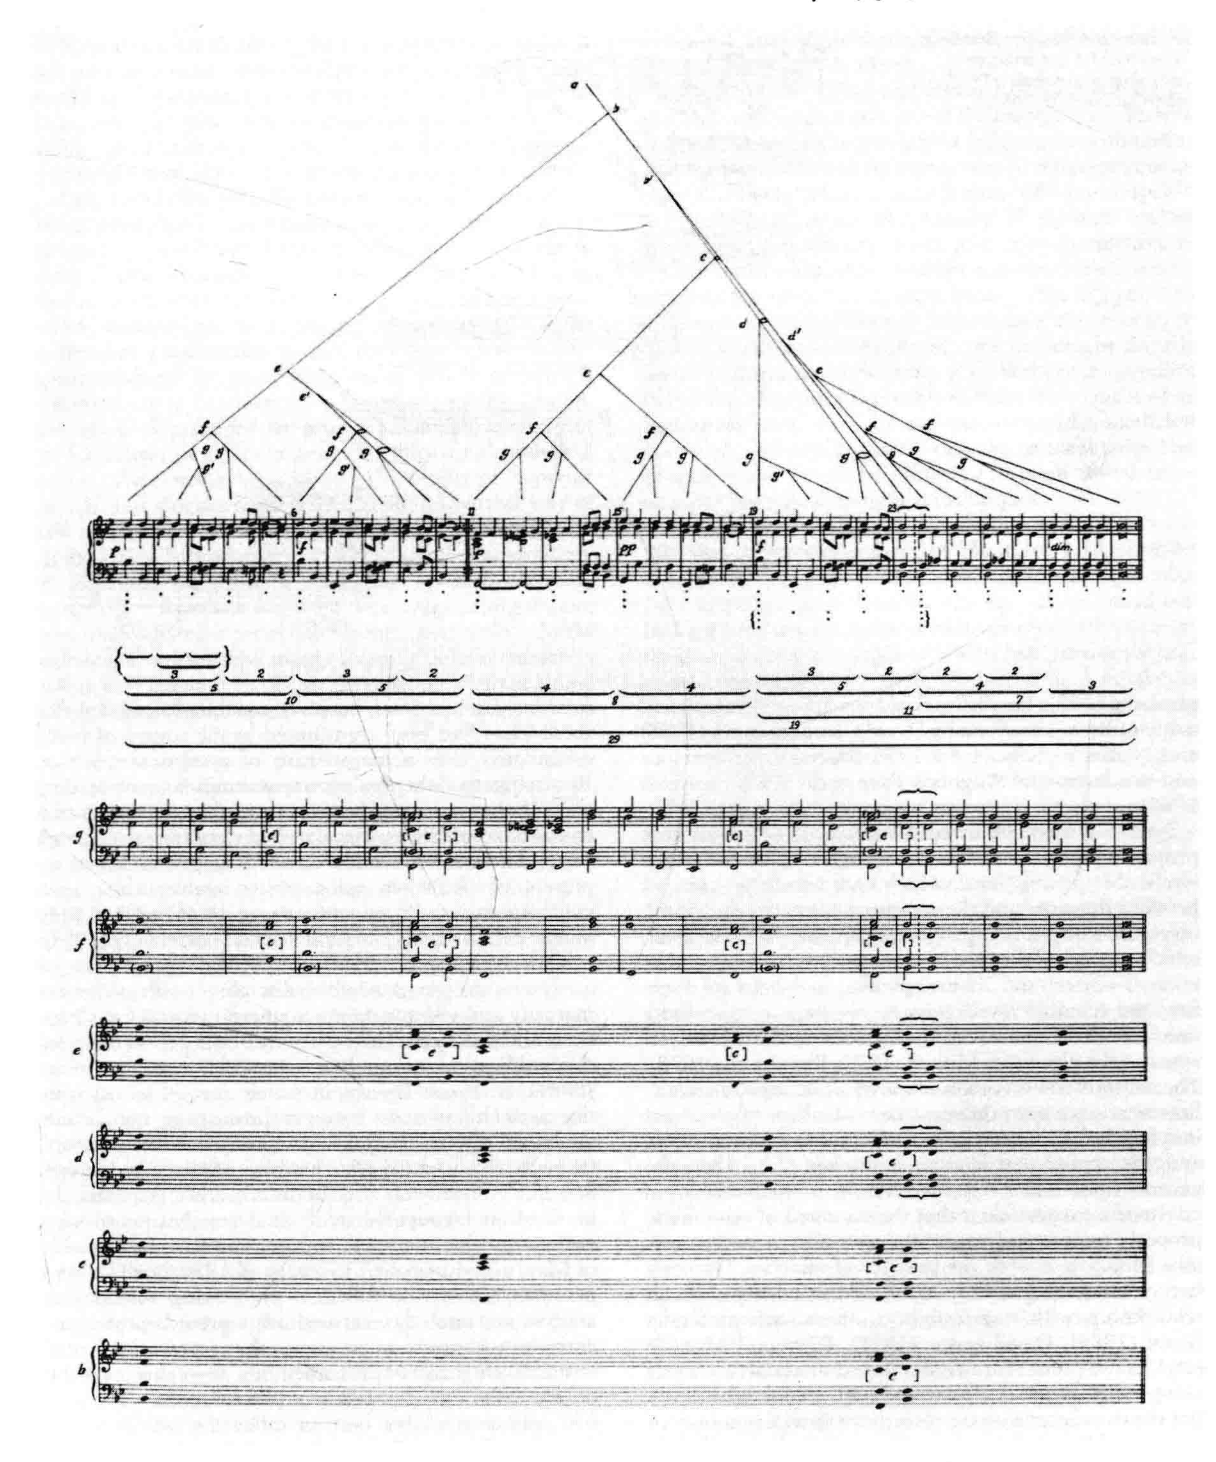
Schenkerian thought was also one catalyst for the broad theory, based on analogies between linguistics and analysis, of Fred Lerdahl and Ray Jackendoff (1977, 1981, 1983). Under Noam Chomsky's influence, questions such as 'Does music have a deep structure?' and 'Do universals exist in music?' had fascinated musicians in the 70s. The series of lectures given under the title 'The Unanswered Question' by Leonard Bernstein in 1973, later televised, and published in 1976, raised these in a challenging fashion. In a series of articles beginning in 1977 and culminating in *A Generative Theory of Tonal Music* (1983), Lerdahl and Jackendoff, composer and linguist respectively, evolved a theory whose central purpose was to elucidate the organization that the listener imposes mentally on the physical signals of tonal music. Using principally music by Bach, Haydn, Mozart and Beethoven as their 'idiom', they compiled a grammar that 'models the listener's connection between the presented musical surface of a piece and the structure he attributes to that piece. Such a grammar comprises a system of rules that assigns analyses to pieces'. The system was thus like Chomsky's grammar in that it was 'mentalistic', that is, concerned with mental processes rather than with end-products, and in that it was at heart an analytic procedure in which the generative function of the theory was a system for deriving or testing analyses.

The theory of Lerdahl and Jackendoff had an outward resemblance to Chomsky's in that it was a set of rules operating on four components. These four were 'dimensions' of musical structure, and all were hierarchical: 'grouping structure'; 'metrical structure'; 'time-span reduction' (reduction in the Schenkerian sense, but based equally on pitch and rhythmic criteria); and 'prolongational reduction', which took account of the intuitive sense of tension and relaxation in music. Two types of rule governed each category: 'well-formedness rules' which controlled the making of possible structural descriptions of pieces; and 'preference rules' which determined which of a number of possible descriptions corresponded to a listener's preferences.

Three graphic conventions were adopted for demonstrating the operation of these rules. Grouping structure was shown as horizontal braces, and metrical structure as lines of dots, both below the staff and reiterated vertically to express hierarchy; reduction was shown as branching trees above the staff. Fig.26 gives a small-scale example, which is a local time-span reduction. For prolongational

26. *From F. Lerdahl and R. Jackendoff: 'A Generative Theory of Tonal Music' (Cambridge, MA, 1983), 132*

reduction, the three diagrams acquire solid and void circles at the nodes to indicate the type of prolongation that the branching represented; reductive levels were displayed on separate staves below, adopting Schenkerian conventions for solid and void noteheads and solid and dotted phrase-marks. Fig.27 shows the *St Anthony Chorale* analysed in this way (the original is already slightly reduced).



Lerdahl and Jackendoff claimed that much of their grammar was 'idiom-independent' (i.e. it held good whatever the musical style), and thus that certain of their rules constituted 'universals' of musical perception and could be taken to represent innate aspects of musical cognition. Their work was published at a time when points of contact between analysis and the cognitive sciences were gaining significant ground. The journal *Music Perception*, founded in 1983, included in its early issues a number of articles that reflected this, such as a group of investigations into hierarchical structures in music by Eugene Narmour, Allan Keiler, and Lerdahl and Jackendoff (all 1983–4), studies of synaesthesia in Skryabin and Messiaen by Peacock (1985) and Bernard (1986), and of the perceptibility of polytonality and serial organization by Krumhansl and Schmuckler (1986), Sandell and Sergeant (1987).

Many researchers in musical cognition took the results of musical analysis as a point of departure. Their focus was on such questions as whether the structures typically proposed by analysis were perceptible by others. To some extent this was a consequence of the difficulty of finding a proper role, in such empirical enquiry, for one of the characteristic aspects of analysis, namely the analyst's personal reflection on a musical work. For example, the large team of specialists built up in the late 1970s by Boulez at IRCAM in Paris sought to place acoustical and psychoacoustical research at the service of composers: in doing so it encouraged the analysis of the materials of music rather than of musical works themselves. Ironically, this general difficulty may have contributed to the development of an enhanced critical dimension in analysis, both by subjecting typical products of structural analysis to direct scrutiny and by making it seem that if analysis were transformed into a cognitive science it might surrender its capacity to foster new interpretations of pieces of music. This did not prevent the cognitive sciences from making a significant impact on musical thoery, however, as was shown, in addition to the theory of Lerdahl and Jackendoff, by Narmour's exceptionally detailed theory of melodic structure (1992), and Robert Gjerdingen's application of schema theory to phrase patterns in classical music (1986, 1988). The impact of these theories on analytical practice, however, was limited, whereas the Lerdahl–Jackendoff theory could be regarded as sufficiently predictive to warrant empirical investigation of the validity of its rules, for example by Irène Deliège (1987).

Empirical analysis of music in performance, by contrast, preserved a role for traditional score-based analysis as an agent of mediation in the interpretation of data concerning tiny nuances of articulation. Analysis of data gathered from performances was typically concerned with details of timing. In the work of Eric Clarke and Bruno Repp there was a strong methodological component deriving from psychology or artificial intelligence (*see* PSYCHOLOGY OF MUSIC, §IV, and COMPUTERS AND MUSIC, §III). Other studies, for example by Nicholas Cook (1987), David Epstein (1995) and John Rink (1995), undertook a comparative assessment of data from different performances of a work in the light of basic musical analyses, which were often themselves developed further through a flexible analytical response to priorities observable in coherent performances. Although there was perhaps inevitably an implication that some performances studied were preferable to others, writing of this kind could be seen as distinct from discussions that gave principal consideration to the practical value analysis might have for performers seeking to develop an interpretation (notably Edward Cone, 1968, 1985, and Wallace Berry, 1989).

The relationship during this period between analysis and musical semiotics reflected the concern with analytical method, and later the suspicion of structural methods and structuralism generally, that characterized the trajectory of analysis as a whole (*see also* SEMIOTICS; the terms 'semiotics' and 'semiology' draw on different academic traditions but are used interchangeably). The foundations of musical semiotics were laid in a series of articles by the professor of linguistics at the University of Paris at Vincennes, Nicolas Ruwet. Ruwet's principle of 'distributional analysis' (1966, 1972) was predicated on a view of music as a stream of sounding elements governed by rules of 'distribution': that is, of ways in which the elements associate with or complement or mutually exclude each other. Its aim was to state these rules as 'adequately' as possible for any given passage of music, or work or group of works; to formulate, in other words, a syntax for the music. Its method was to break the stream of music into component units (or 'unities' – i.e. units that either could not be further subdivided or did not need to be because their sub-units never occur independently). All possible units were compared with all other possible units; when an identity was found, the contexts of the two occurrences were examined for identity. From this comparative analysis emerged a list of all 'distinctive units', an account of the distribution of each, and a grouping into units distributed in identical or related ways; and ultimately a restatement of the stream of music in terms of these units and the laws that govern them. The success of this exercise lay not so much in the quality of the finished analysis as in the fact that it had been produced by an exact and verifiable procedure.

Ruwet's analysis triggered a dispute among semiologists as to whether in such a mechanized procedure the analysis should begin with musical units of large proportions and work towards a microscopic finished analysis, or begin with a microscopic segmentation and gradually construct the larger formal units by the recognition of equivalence between phrases that were distinguished only by differences of detail. The immediate dispute was won by the

27. From F. Lerdahl and R. Jackendoff: 'A Generative Theory of Tonal Music' (Cambridge, MA, 1983), 205

second school of thought, and the Montreal-based scholar Jean-Jacques Nattiez (1975) aroused remarkable interest with intensive analyses that proceeded from small-scale segmentation. Despite the variety of Nattiez's means of presentation (which included the tree-structure diagram, the lexicon of items and the table of distributions), and despite the apparent limitation of distributional analysis to monophonic music, or at any rate to a single melodic line, the distributional principle was for a while adopted as if it were an analytical method to be set alongside Schenkerian and set-based methods. The comparison of uninterpreted 'unities' was seen as a productive strategy in the analysis of otherwise intractable modern scores (e.g. Nattiez's analysis of Varèse's *Density 21.5*, 1975; Eng. trans., 1982; fig.28) and in music whose interpretation seemed prey to ambiguities. Among the subsequent

28. From J.-J. Nattiez: 'Varèse's "Density 21.5": a Study in Semiological Analysis' [1975], 'MAn', i/3 (1982), 268

products of this line of work were a full-scale analytical study of Berio's *Sinfonia* by David Osmond-Smith (1985) and Nattiez's study of the 1976 Bayreuth performance and production of Wagner's *Ring* cycle (1983; see also 1985).

Nattiez's work followed a branch of semiotics that proposed a partition of the semiological space into three levels: the 'poietic' level, which concerned the relations between the score and the composer (or performer, if the object of study was a performance); the 'esthesic' level, which concerned the relations between the score (or other musical object) and its interpreters; and between these two the 'neutral level' (*niveau neutre*), a supposedly uninterpreted domain within which distributional analysis was to take place (see Molino, 1975; Eng. trans., 1990). The neutral level was soon acknowledged as problematic, however, since even the most basic division of an object into 'unities' demanded some rudimentary understanding, and this implied that semiosis had taken place. Once the neutral level had been revealed as a methodological convenience it was clear that the concerns of semiology, properly understood, were not so easily to be brought into conjunction with the practice of analysis. Nattiez's later writings (e.g. 1985, 1990) addressed this difficult relationship with responsibility; others such as Simha Arom (1969), David Lidov (1975), Raymond Monelle (1992) and Eero Tarasti developed musical semiotics along more secure and conventional semiological lines. But the encounter with the directly analytical semiotics of Ruwet and Nattiez served to encourage analysts including Agawu (1991) and Robert Samuels (1995) to develop wide-ranging arguments that assisted in broadening the perspectives of the discipline: the former presented a rich synthesis of viewpoints on the Viennese Classical style, and the latter an analysis of Mahler's Sixth Symphony that dealt equally in close motivic analysis and the work's wider cultural resonances.

The semiological focus of these writings notwithstanding, both Agawu and Samuels readily incorporated Schenkerian analyses in their work, thereby reflecting the dominating impact of Schenker's ideas on professional analysts. Some writers, however, exhibited a concern that these ideas had been transmuted in the course of being assimilated into a mainstream of analytical practice. Returning to Schenker's own writings and re-reading them in the context of his own time, they drew attention to considerable disparities that had thus arisen, although their criticisms were often directed against earlier interpreters of Schenker rather than against their own contemporaries. Prominent among these writers were William Rothstein (1986) and Robert Snarrenberg (1994).

The rise of such criticism reflected the growth of analysis into an academic discipline with sufficient maturity and self-awareness to question its own assumptions and practices. The early part of the period had seen the publication of analysis symposia, notably in the *Journal of Music Theory*, in which musical works were discussed by two or more authors using contrasting analytical approaches. A collection of these symposia, through which Schenkerian analyses of pieces by Mozart, Schubert, Beethoven and Brahms were contrasted (by implication favourably) with analyses that followed a variety of other methods, appeared under the editorship of Maury Yeston in 1977. By around 1980, however, this practice had largely fallen away, leaving Schenkerian analysis and pitch class set methods supremely prominent, with the additional consequence that repertories central to the development of those methods were taken as points of reference in the discussion of other musics.

It was at this time that an influential attack on the discipline by Joseph Kerman (1980) advised musical scholars 'how to get out' of analysis. Perhaps the most substantive of Kerman's observations were that analysis tended to concentrate on 'masterworks' and, concomitantly, that it took the aesthetic value of its musical objects of study as a given. In his view this discouraged the exercise of a properly critical faculty that was the first duty of a musicologist. The new florescence of critical writing encouraged by Kerman's wider commentary on musicological disciplines (see Kerman, 1985) did not have a great impact on the practice of analysis until it addressed issues of theory. When it did so it brought post-

structuralist critical theory to the attention of musical scholars at a time when the influence of semiology was receding. Derridean thought centred on ideas of deconstruction was powerful in undermining the *de facto* definition of analysis as a constellation of methods among which two methods were overwhelmingly prominent.

Deconstruction wilfully evaded linguistic definition, being presented in the writings of its adherents such as Jacques Derrida and Paul de Man as a deliberately method-free and ruthlessly opportunistic approach to literary texts (*see* DECONSTRUCTION). Its *modus operandi* was to observe internal contradictions in linguistic usage, and other peculiarities within the text, whose consequences could be pursued so as to reveal underlying assumptions or motivations – broadly speaking, ideologies. It also managed to offer a sustained critique of structuralism in all its guises. This allowed the musical scholar Alan Street, who wrote influentially of 'superior myths' and 'dogmatic allegories' (1989), to attack one of the touchstones of structural analysis: the principle of unity. David Montgomery (1992) addressed 'organicism' in similar terms. Perhaps as a result of such criticism, structural analysis in the 1990s was wary of organicism and often spoke of 'coherence' rather than 'unity'. At the same time, writers who sought to apply deconstruction to music still found it easier to deconstruct analytical and critical texts about music than to address musical texts directly.

One line of literary critical practice with potential for application to music was narratology (*see* NARRATOLOGY, NARRATIVITY), which sought to interpret individual literary examples of narrative against archetypal qualities and structures of narrative. Anthony Newcomb addressed instrumental works by Schumann and Mahler in this way (1983–4, 1992). His approach was open to the criticism that it simply revisited structural analysis under a new agenda, mapping narrative characteristics on to musical structures. Seen more positively in this light, however, it could be said to have provided a precedent for such potentially far-reaching analytical insights as the new interpretation of form-building processes in Sibelius's Fifth Symphony put forward by James Hepokoski (1993). A different relationship between structural analysis and literary criticism was pursued influentially by Lawrence Kramer (e.g. 1990, 1992–3). Working frequently with texted music, Kramer proclaimed the value of a hermeneutic approach, seeking 'hermeneutic windows ... through which the discourse of our understanding can pass' (1990, p.6). The range of reference in his interpretations was remarkable, and included psychoanalytical, feminist and other gender-related modes of criticism. Kramer made use of structural analysis, for example Schenker's analysis of Haydn's 'Representation of Chaos' (from *Das Meisterwerk*, ii, in Kramer, 1992–3), together with analyses of his own. It is perhaps revealing that frequently in his writings a 'hermeneutic window' is to be found between structural analysis of the music and literary or cultural analysis of the text (or of another overt representational meaning of the music). In this sense Kramer's work, like Newcomb's, revisits a long-standing concern, in this case about the relationship between music and text, or more broadly between the musical and the extra-musical. Another author whose insights lay at this boundary was Carolyn Abbate, who developed a musical analogue of the concept of a narrative voice (1991). Much of Abbate's work centred on 19th-century opera, which was an important focus for scholars seeking to combine structural analysis with textual interpretation, such as Warren Darcy (1993, 1994).

Joseph Straus (1990) and Kevin Korsyn were among analysts who made direct use of the literary critic Harold Bloom's theory of the 'anxiety of influence' in comparing musical works written by composers of different generations. Korsyn (1991) measured Brahms's Romance op.118 no.5 against Chopin's Berceuse op.57 through a close comparison of musical detail and correspondences of design, concluding that 'Brahms incorporates Chopin's text into his own, but ... then breaks with [it], resisting influence, choosing himself rather than the precursor' (p.57). Straus's examination of compositions by Bartók, Berg, Schoenberg, Stravinsky and Webern maintained that tonal allusions observable in them were traces of an inescapable past that these composers had nonetheless mastered, and argued firmly that the musical coherence of such works should be addressed through atonal, serial or other post-tonal analytical techniques.

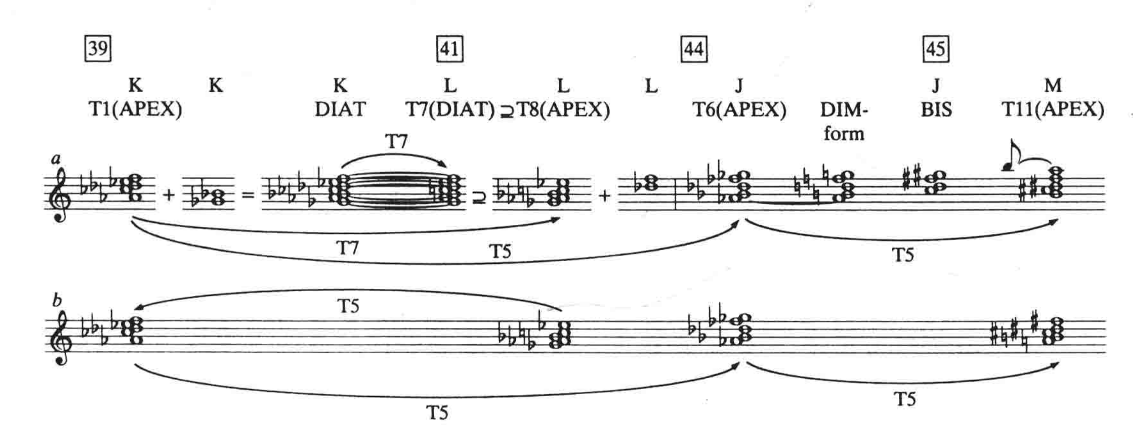
Another important development during the 1980s and 90s was a reconsideration of the history of analysis, notably by Ian Bent (1984, 1994, 1996). In particular, Bent identified precedents for the critical-analytical hermeneutics of the 90s across a wide variety of 19th-century writings on music, not all of which had previously been considered analytical in nature or intention. A number of other scholars, such as Alastair Williams (1997), found a different impetus towards an analytical criticism that exposed ideologies, while dealing rigorously with musical detail, in the writings of Theodor W. Adorno.

Derridean deconstruction presented an alternative to the linkage of structuralism and phenomenology – identified by Derrida himself in his critique of Husserl – that was proposed as a broad analytical strategy by David Lewin in a series of writings from the mid-1980s on. Phenomenology is a 'science of experience'. It is concerned not with the world as natural object or with mind as a store of knowledge. It deals with the contact between object and mind; it studies consciousness directed towards objects ('intentionality'), and aims to describe the structure of consciousness.

An early example of musical phenomenology was the massive two-volume study by the Swiss conductor and mathematician Ernest Ansermet (1961). Ranging across mathematical, acoustical and philosophical issues, it reached a study of musical structures that centred on the idea of the 'melodic path' (*chemin mélodique*). Classifying intervals as 'active extrovert', 'active introvert', 'passive extrovert' and 'passive introvert', it tried to give a value to the degree of tension in a melody. Other pioneers of musical phenomenology were Philip Batstone (1968–9), Lionel Pike (1970) and Thomas Clifton (1983), though their writings showed little consensus (*see also* PHILOSOPHY OF MUSIC).

A concern with immediate perception also motivated developments in the analysis of phenomena of timbre, melodic contour and aspects of rhythm and metre. Robert Cogan and Pozzi Escot (1976) took phonological analysis, as performed in the field of linguistics, as a model for investigating what they called 'sonic design' – the way in which sound-spectra are shaped in musical space. Their contention was that compositions are just as much formations of basic sonic stuff as formations of tonal or rhythmic materials, and that composers and eras of music often bear recognizable sonic 'fingerprints'. They made resourceful use of graphs to carry out tone-colour analysis of single instrumental sounds and ensembles and also

made use of sound-spectrum analysis, a technique developed by IBM which was capable of photographing the sonic 'content' of a whole composition. Cogan provided an analysis of Stravinsky's *The Rite of Spring* in his journal *Sonus* (1982), and in 1984 presented a series of analyses together with a theory of tone-colour strongly influenced by the linguist Roman Jakobson. Studies of melodic contour were less spectacular in their presentation, frequently being expressed in numerical or symbolic terms reminiscent of pitch class set analysis, though with the important difference that the order of terms was crucial in defining a sequence of directed intervals or of changes of direction. Foundations for future work were laid by Michael Friedmann (1985), Elizabeth West Marvin and Paul Laprade (1987), Larry Polansky and Richard Bassein (1992), Robert Morris (1993) and Ian Quinn (1997).



Like much work in the analysis of contour, Lewin's broad phenomenology (1985–6) was presented in formal terms suggesting the use of Artificial Intelligence as a metaphor:

> I propose as a provisional model for 'a musical perception' this basic formula:
>
> p = (EV, CXT, P-R-LIST, ST-LIST)
>
> Here the musical perception p is defined as a formal list containing four arguments. The argument EV specifies a sonic *event* or family of *events* being 'perceived'. The argument CXT specifies a musical *context* in which the perception occurs. The argument P-R-LIST is a list of pairs (p_i, r_i); each pair specifies a *perception* p_i and a *relation* r_i which p bears to p_i. The argument ST-LIST is a list of *statements* s1, ..., s_k made in some stipulated *language* L.

Similarly, Lewin developed structural analysis through a theory of 'generalized musical intervals and transformations' which was expressed in terms of the formal apparatus of mathematical lemmas and theorems (1987). The underlying principles of his approach were, first, that 'intervals' of some kind are found in many musical domains, including most obviously pitch and rhythm (each of which can be measured in a number of ways), and that their means of measurement can be modelled by simple mathematical operations; and, secondly, that any interval, for example the interval of two semitones between middle C and the D above it, can be expressed equivalently as a particular 'transformation' of the C into the D or vice versa (in this case a transposition upwards or downwards by two semitones). The second principle is harder to grasp than the first, but its potential to refocus musical reflection is correspondingly greater: it allows something that is intuitively thought of as a transformation of one musical object into another, such as a statement of a theme and a statement of a variant of part of it, to be brought within the same mathematical framework as something that is intuitively conceived as a relationship between two musical objects, such as the pitch interval between two notes, or the interval of time between successive statements of a fugue subject.

Lewin's theory of transformations was based on mathematical group theory, a powerful development of set theory which does not merely deal with collections of objects but associates those collections with specific operations on the objects. In analytical applications, for example by Lewin himself (1993) and by Henry Klumpenhouwer (1992; see also Lewin, 1990, 1994), it resulted in descriptions that reflected musical complexity as networks of transformations (and of transformations of transformations etc.) each of which was defined mathematically and could be labelled in a way that reflected the phenomenological import of the transformation (fig.29). The application of group theory to late 19th-century harmonic practice was also more directly explored by both Lewin himself (1983–4) and later writers including Cohn (1991, 1996).

During this period analysis may be said variously to have come into intimate contact with the cognitive sciences, semiology and critical theory, to have taken on the style if not the substance of applied mathematics, and to have defined itself as an academic discipline before dissolving that definition in favour of a millennial uncertainty. Of all the cognate disciplines, it is criticism that is presently the hardest to differentiate clearly from analysis. Both tend firmly towards the formalist side of what can be identified as a formalist/historicist divide, but if this has focussed 'formalism' as a sensitive issue, it must be acknowledged that those engaged in the new musicological criticism of the 1980s and 90s were less happy to be seen as formalists than were those whose primary concern was to develop structural analysis. Indeed, the concern of analysis with structure might still be taken as a defining characteristic – were definition itself not shunned by many of its practitioners today. In these circumstances it seems right to acknowledge that structures are now understood to be asserted rather than discovered, that the analyst is more inclined than ever to see his or her work as the writing down of interpretations from a personal perspective, and that charting the

discipline historically has been one catalyst in making the languages of analysis a focus of self-awareness for those who read and write with them.

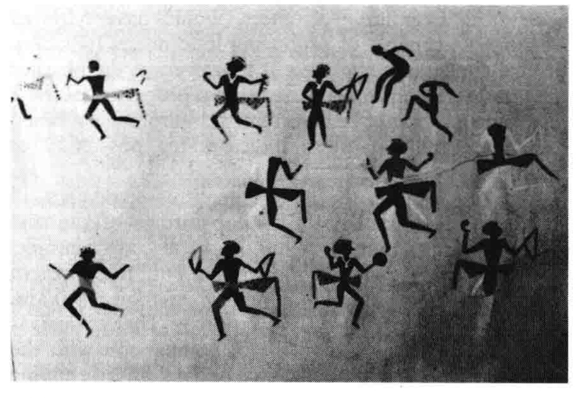
IAN D. BENT/ANTHONY POPLE

Anatolia (Gk.: 'eastern land'). An area roughly corresponding to the Asian part of Turkey. At the time of the Hittite empire (*c*1400–1200 BCE), which included central and south-east Anatolia, Hittite rule extended into northern Syria. Archaeological research in Turkey since the middle of the 20th century has resulted in a substantial increase in the materials available for a reconstruction of the history of Anatolian music. Evaluation of these finds, which include instruments and depictions of musicians, together with information from Hittite cuneiform texts has led to a new understanding of the musical life of the area. Not only does Anatolia appear to have stood out from the rest of the prehistoric cultural environment of the Near East and Mediterranean, but the range of musical instruments produced and developed there is greater than was previously thought. The widespread belief that Anatolia was primarily a land of transition – a bridge between the advanced cultures of Mesopotamia, the Levant, Transcaucasia and the Mediterranean civilizations – and that the highland population mostly adopted foreign cultural traditions can no longer be sustained. Indeed, the evidence indicates the presence of many indigenous elements in Bronze Age Anatolian musical culture and a strong vein of creativity on the part of the Anatolian people.

This article covers a period of some eight millennia, from the earliest times to the Persian conquest of Anatolia in the 6th century BCE.



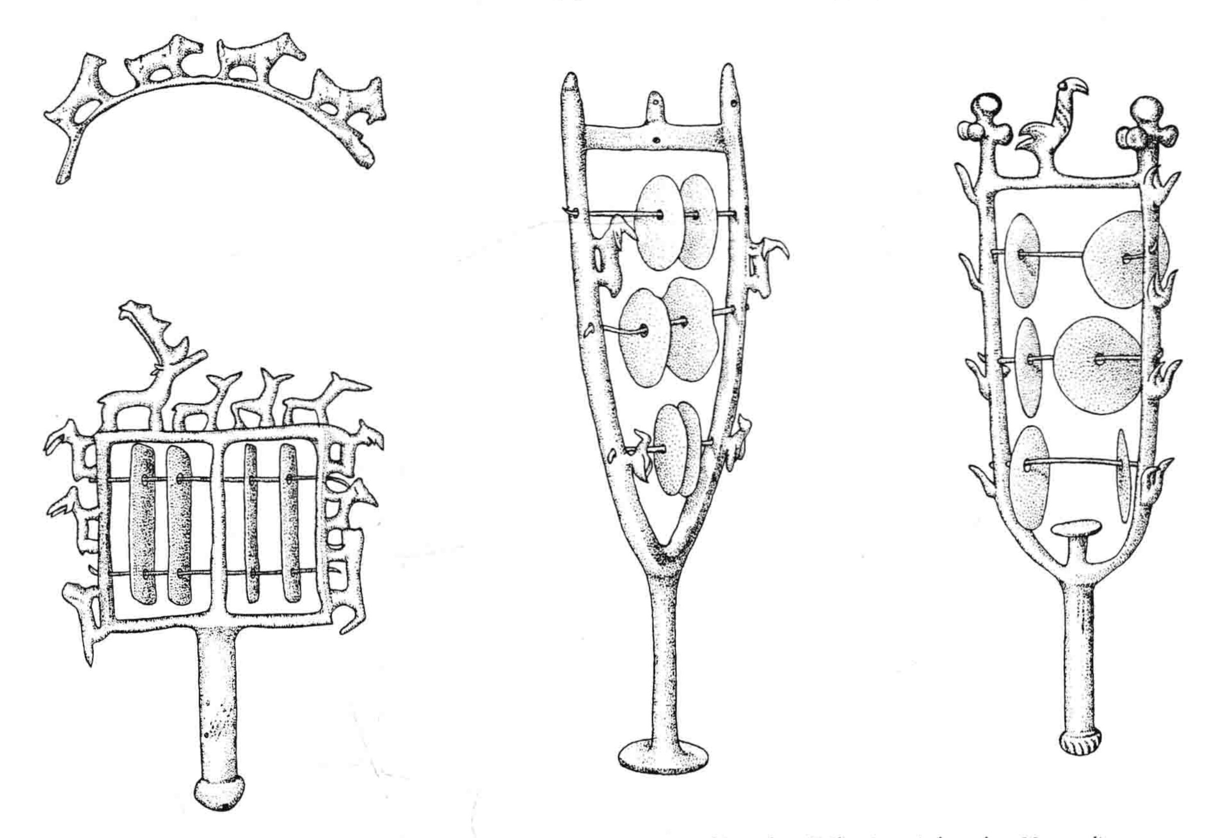
1. NEOLITHIC (8000–5500 BCE) AND CHALCOLITHIC (5500–3000 BCE) PERIODS. Iconographic evidence and the discovery of fragments of objects that could have been used for generating sound strongly indicate that the earliest manifestation of a musical culture in Anatolia dates from the neolithic period. Groups of nomadic hunter-gatherers, in order to be able to communicate with each other over large distances, would have required instruments capable of producing loud noises (whistles, drums, concussion sticks etc.). However, in the absence of complete specimens, the functional properties of these 'instruments' cannot be determined. Interpretation based on ethnographic parallels indicates the possibility of multiple uses.

At Çatal Höyük, the largest neolithic settlement, in south-central Anatolia, the wall paintings of the east mound include a number of hunting scenes. For example, in room F V, 1 (early 6th millennium BCE) the northern wall shows some kind of bull hunt or ceremony (Ankara, Museum of Anatolian Civilizations). The animal is depicted much larger than life in comparison with the many hunters surrounding it; two of the hunters, running behind the bull, hold up a disc that is probably a frame drum. In the same room other hunting scenes show men grasping horns or clubs in both hands, or swinging curved sticks which they possibly clashed to make a loud noise and drive the game into traps.

With the transition from hunting and gathering to a more sedentary existence based on agriculture and animal husbandry, a radical change occurred in the human way of life. In the pre-pottery neolithic period (9th–7th millennia) complex settlements built of solid masonry were established at such places as Çayönü, Nevalı Çori, Göbekli Tepe, Cafer Höyük, Gritille and Aşıklı Höyük, some of which already had precincts and temple buildings for ritual purposes. There is increasing evidence for cult ceremonies, dance music, funeral rites and ancestor worship. Group dancing (8th millennium onwards) is the most common artistic theme (Garfinkel, 1998, pp.207–37); instruments (e.g. drums, rattles, clappers) appear only rarely. The dance scenes in the rock engravings of Tirişin, a mountainous region in the extreme south-east of Turkey, cannot be dated precisely, but the depiction of one group of 12 dancers is thought to be neolithic; a scene at Taht-i Melik, showing a drummer and a dancer, is probably of later date (see Uyanik, 1974, figs.117 and 86). The earliest representation of dancing from Anatolia (late 8th – early 7th millennium) is on a relief on a stone bowl from Nevalı Çori (Hauptmann, 1993, p.67, fig.27). At Çatal Höyük the middle of the eastern wall of Room F V, 1 shows a group of men in leopard-skins dancing (see Mellaart, 1966, p.189, pl.lxi*a*). Another scene, in Room A III, 1, depicts a hunting ritual involving dancers holding their weapons; one figure has a bow in each hand, two perform artistic leaps and another holds a horn-shaped stick and is striking a frame drum (fig.1; see also Stockmann, 1984, fig.2).

Among the excavated sound-generating instruments dating from the pre-pottery neolithic period onwards are scrapers made from the shoulder-blades of sheep, goats or cattle. Sound was produced by drawing a rigid or pliable object such as a wooden stick or a plectrum-like piece of bone along notches carved into the outer edges of the bones. Evidence of whirring implements like the BULLROARER or buzz and of rattles and rattling ornaments has been found in south-east Anatolian sites (Çayönü, Grikihaciyan, Hallan Çemi Tepesi, Sakça Gözü, Norşuntepe, Arslantepe), in places of worship and in graves, indicating that such objects were used in a religious context.

In general, however, evidence for prehistoric musical instruments is almost wholly lacking: the perishable materials from which they were made has ensured that nearly nothing has survived.



1. Hunting ritual: transcript of a wall painting at Çatal Höyük, 6th millennium BCE

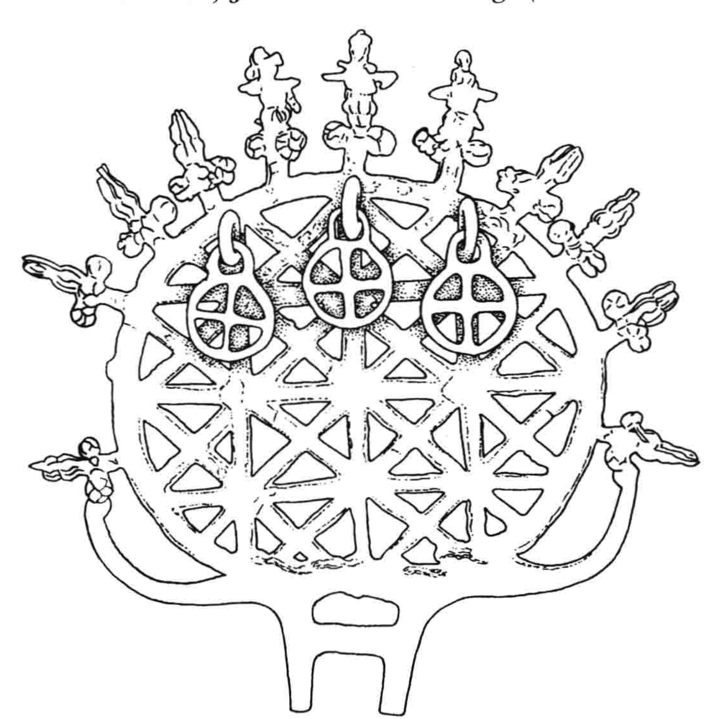
2. Early Bronze Age (3000–2000 BCE). During the Early Bronze Age in Anatolia sound-generating instruments were increasingly made of arsenical copper, bronze or silver. About 100 metal idiophones of Anatolian origin survive from this period, almost all of them from the last third (see Bachmann, 1998): some 70 specimens of stemmed cymbals (characteristic of this era in Anatolia), several sistra, either complete or fragmentary, ritual standards with pendant clappers, metal discs for striking, clashing staves and other forms of clappers, and rattles. Most are from graves or hoards – their ritual function is clear from the funerary context. Objects such as the display items from the princely graves of Alaca Höyük are highly sophisticated in design and craftsmanship (particularly bronze-casting). These Early Bronze Age idiophones were largely the product of indigenous Anatolian culture, traces of which are not found outside the area at this time, except possibly in individual exported items.

Stemmed cymbals (fig.2) have been discovered at the necropolises of Alaca Höyük and Horoztepe and among grave goods and in hoards at other central Anatolian sites. Interestingly, all the surviving examples date from a relatively short period, *c*2400–2000 BCE (phase III of the Early Bronze Age). The diameter of the cymbals ranges between 4 and 12 cm (normally 6–8 cm); almost invariably the shallow discs have an indentation in the middle of the underside, and the stem, acting as a handle, usually ends in a slightly thickened section. In most cases this globular boss has a diagonal or, occasionally, a horizontal hole through which a string evidently passed, either to loop the instrument over the player's wrist or to link a pair of cymbals together; sometimes the handle is hollow and conical. A number of the instruments are decorated – the boss with an animal figure or a cluster of protuberances, the stem with artistic mouldings, and the upper side of the disc with hatching. Most of the stemmed cymbals found in graves were deliberately broken before being buried or were so severely distorted as to render them unplayable. The high regard in which these instruments were held is evident not least because they were made of silver as well as of copper alloys.

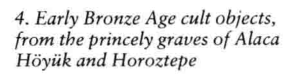
The elaborately shaped sistra of Anatolia are clearly to be distinguished from the shaken idiophones of other musical cultures and periods. They consist of a frame that is richly decorated with animal figures, pairs of horns and bud-shaped ornamentation, and of a handle; both are cast in one piece from an alloy of arsenic and copper. Within the frame are two or three parallel rods, with their ends bent over, onto which square or round pierced pieces of

2. Early Bronze Age Anatolian stemmed cymbals and bosses

3. *Early Bronze Age Anatolian sistra, from the cemetery at Horoztepe (a: Museum of Anatolian Civilizations, Ankara; b–c: Metropolitan Museum of Art, New York)*



metal are threaded side by side. An exceptionally richly decorated example about 25·5 cm high (fig.3*a*: Ankara, Museum of Anatolian Civilizations, 18519) was discovered in 1954 in a grave in the cemetery at Horoztepe in the Tokat district (Özgüç and Akok, 1957, 201ff; 1958, p.7). Two more or less completely preserved sistra, 33 and 34·5 cm high respectively (figs.3*b–c*: New York, Metropolitan Museum of Art, 55.137.1–2; see also Muscarella, 1988, pp.400–1), may also have come from Horoztepe (Özgüç and Akok, 1958). Parts of further sistra were excavated at Alaca Höyük, including a circular pierced metal disc and a fragment of a slightly bent metal ring decorated with animal figures (see Koşay, 1951, pl.185; Tezcan, 1960, p.35). Also discovered were a number of decorative elements and concentric, pierced, circular discs of gold; these, too, were interpreted as parts of sistra (see Özgüç and Akok, 1958, p.49; Tezcan, 1960, p.35). The use of precious metals for cult instruments suggests that such objects, in addition to producing sound, were also priestly status symbols. As with the stemmed cymbals, this type of sistrum is evidently also an indigenous artefact of Anatolia.

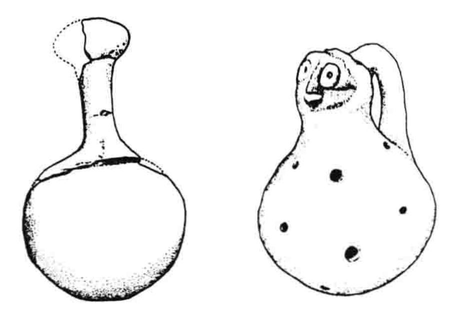


Among the bronze cult objects from the princely graves of Alaca Höyük and Horoztepe are 17 shaken idiophones with ring-shaped, rhomboid or semicircular frames filled with elaborate lattice-work (fig.4). Sound was generated by disc-shaped pendants hanging from eyelets on the frame of the pierced bronze disc. Laden with symbolism and probably used in funerary rites, these richly ornamented objects are thought to represent solar discs or the cosmos, possibly used as cult standards. A base section with two pointed pins probably fixed the instrument to the pole or yoke of the vehicle that bore the bodies of high-ranking people to the grave; the instruments with the clapper pendants were then placed in the grave with other valuable goods, to accompany the dead person's passage to the next world (see Orthmann, 1967, pp.34–54).

Pottery rattles have been found in considerable number at sites such as Troy, Karaoğlan, Tarsus, İkiztepe, Bademağaci, Karahöyük (Konya), Norşuntepe, Lidar Höyük, Ahlatlıbel, Acemhöyük, Polatlı and Demircihüyük. They were mostly interpreted as children's toys, but they could also have been musical amulets whose original purpose was to avert evil. The form of these objects ranges from the usual globular or semi-globular shape to anthropomorphic, zoomorphic and vessel-shaped rattles, with or without handles or eyelets, and they include a number of unusual types found only in Anatolia (fig.5).

String instruments first appeared in Anatolia during phase III of the Early Bronze Age. An instrument resembling a harp is visible on a fragment of a ceramic vessel with figural reliefs (Malatya, Malatya Museum, M 3047) dating from the late 3rd millennium BCE; it was found at Arslantepe, north-east of Malatya. The representation of the seated harpist is highly stylized, and the string instrument itself, which is only rudimentarily indicated, is difficult to reconcile with Mesopotamian or Egyptian models. The closest comparison appears to be with the triangular frame harps visible on Cycladic marble statuettes.

3. MIDDLE BRONZE AGE (2000–1600 BCE). This period, which is distinguished by important changes in relation



4. Early Bronze Age cult objects, from the princely graves of Alaca Höyük and Horoztepe

to the previous, prehistoric phase, also made its mark in the field of Anatolian musical culture. The Assyrians boosted foreign trade in the Near East and established a network of trading colonies in Anatolia, of which the most important was that at Kanesh (Kültepe). In the 18th century BCE the Old Assyrian network collapsed as a result of the chaos caused by fighting between Anatolian rulers seeking supremacy. The Indo-European incursors (Hittites, Luvians, Palaians and Lycians) adopted the highly developed culture of the native population. Despite all the foreign influences, the indigenous element in Anatolia was so strong that it is possible, in the artistic domain, to speak of an Anatolian style. However, with regard to the musical instruments of the time, indigenous and imported ones cannot always be told apart.

(i) Idiophones. The wide variety of Early Bronze Age musical instruments made of metal is not found in the Middle Bronze Age, which produced only one type of cymbals. Differing from the stemmed cymbals of the 3rd millennium, these convex, wide-rimmed instruments were held by means of loops of leather (or some other material) fixed through holes in the centre of the discs, rather than by metal handles. A pair of cymbals with diameters of 12·8 and 13 cm (Ankara, Museum of Anatolian Civilizations, 13125) was found in a house in the Assyrian trading colony of Kanesh on the outskirts of Kültepe (Level II, 1920–1840 BCE). Another, smaller pair, 6 cm in diameter (Kayseri, Archaeological Museum, 73.631 and 73.632; see Özgüç, 1986, p.74, pl.128), was discovered in one of the graves of Kültepe (Level I*b*, 1810–1740). Cymbal players are shown on Anatolian ceramic reliefs dating from about 1700 BCE up to the development of centralized Hittite power, for instance, on the Bitik and the İnandık vases (see §4(i) below), and on potsherds from Alişar Hüyük, Kabaklı and Boğazköy-Ḫattuša, the Hittite capital.

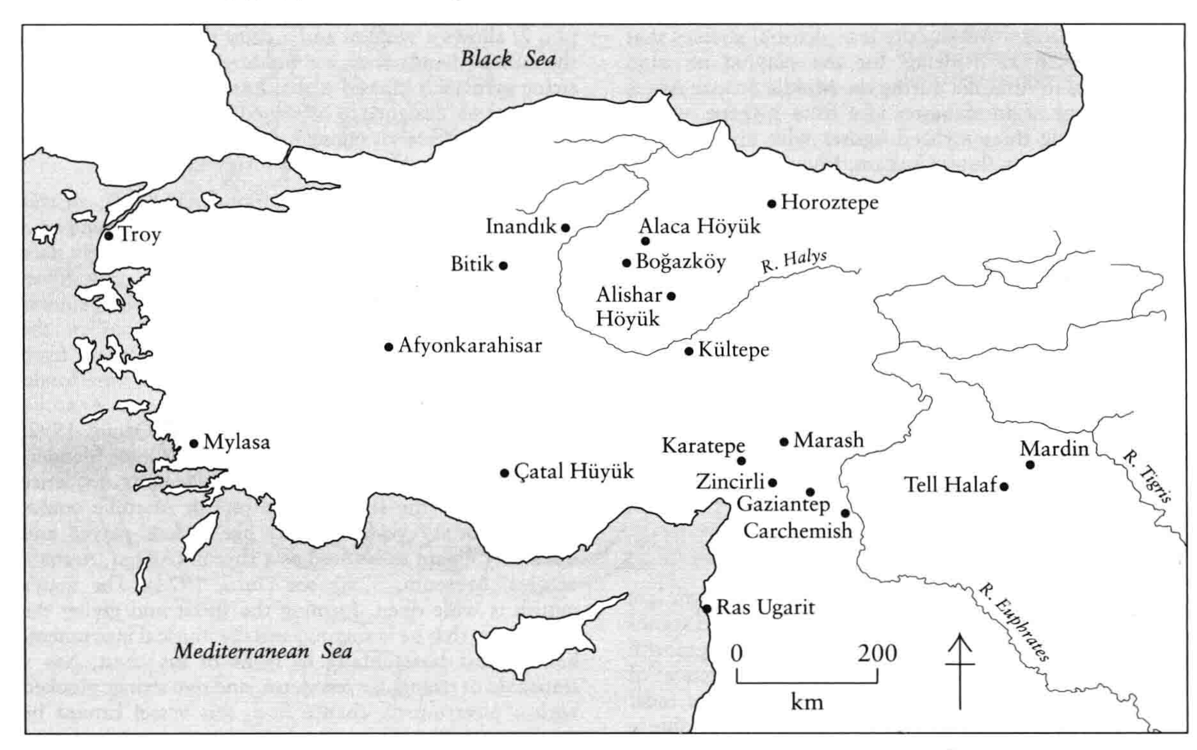
5. Early Bronze Age rattles

(ii) Membranophones. Evidence for the use of pottery drums is scarce. Slender ceramic tubes widening in diameter at both ends and some goblet-like forms corresponding to the *darbukka* type of drum played today in the Middle East and also found in iconographic records of the past may have been either drums or pot stands (see, for instance, the example in Antakya, Hatay Museum, T3729). However, in an archaeomusicological context any globular vessel is of interest if its opening is surrounded by small pierced lugs to which a membrane could be attached. Special attention has been paid to those pottery vessels, thought to be drums, whose striking shape clearly distinguishes them from the many other ceramic vessels dating from the first half of the 2nd millennium. The characteristic feature of this type of drum is its wide opening surrounded by a row of spikes and surmounting a tubular central section with a rounded, two-handled section at the bottom. Two almost complete specimens are presently known, one from Beycesultan (Ankara, Museum of Anatolian Civilizations, 19356; see Lloyd and Mellaart, 1965, figs. on pp.8 and 23) and the other from Bayraklı (Izmir, Archaeological Museum, 6710; see Akurgal, 1993, pls.2 and 28), as well as several fragments, all found on sites in the western half of Turkey.

(iii) Aerophones. Among the few pictorial sources that may be taken as evidence for the playing of wind instruments in Anatolia during the Middle Bronze Age is the fragment of an alabaster idol from Kültepe, with a relief showing three stylized figures who appear to be playing end-blown flutes (Ankara, Museum of Anatolian Civilizations, 14–11–64; see Özgüç, 1957, fig.15). A pottery figure in the round applied to the wall of a vessel excavated in Korucutepe (Elaziğ, Museum, 73/Pt 10–5) is clearly a flute player. Dated to the first half of the 2nd millennium, it shows a long, edge-blown flute played with both hands and held under the musician's chin; the player's pursed mouth is clearly visible as are two finger-holes on the front of the instrument. Several bone pipes dating from the pre-pottery neolithic period (from Cayönü) and more particularly from the 2nd millennium (Arslantepe, Acemhöyük, Alaca Höyük) have carefully bored holes or else a rectangular window; they are considered to be wind instruments, but their functional properties have not yet been ascertained.

(iv) Chordophones.

(a) Lyres. Cylinder seals and seal impressions of the late 3rd and early 2nd millennia BCE from central and south-east Anatolia provide evidence of cultural exchanges with Mesopotamia and Syria and also of the development of Anatolian types of instruments. Lyre players are most often depicted, sometimes with other figures holding a slightly curved stick in each hand probably to provide a rhythmic accompaniment. Among the earliest seals depicting lyres to be excavated in Asia Minor are those from a *pithos* grave in Oylum Höyük, near Gaziantep (Gaziantep Museum; see Özgen, 1993, p.470, fig.4). Five seals were found near the skeleton's neck, together with beads and the remains of silver wire, indicating that they had been fixed to his necklace as decoration. Three depict banqueting scenes, in which a lyre player is shown seated at a table or sacrificial altar; a dancer with raised arms and a musician with a pair of crooked stick clappers are also present in two of these scenes. Each of the lyres is asymmetrical, with strikingly curved arms, one of which extends well above the yoke; the yoke itself has a bulge at one end. This type of lyre is also found on a cylinder seal from Carchemish (Istanbul, Museum of the Ancient Orient, 6934) dating from about 2000 BCE.



Lyre players can be distinguished in a number of seal impressions on clay tablet envelopes written in cuneiform script excavated at the Assyrian trading settlement near Kültepe (Level II, 1920–1840 BCE; see Teissier, 1994, p.231 no.480, and p.233, nos.537–8). However, the players in these presentation scenes and scenes with gods are so small that it is impossible to identify precisely the types of instruments shown. In one such scene the player holds what looks like a type of Mesopotamian 'bull' lyre (see T. and N. Özgüç, 1953, pl.lxii, no.702), but on closer examination it seems doubtful that what is thought to be the bull's head is in fact a part of the lyre. In a depiction of a seated lyre player preserved in mirror image on an incomplete stone mould unearthed at Acemhöyük (Levels III or IV, 19th or 18th century BCE), the instrument being played, with five strings and irregularly curved arms, has also been regarded as a bull lyre (see Özgüç, 1976, pp.559–60, pls.VI–VII). The string holder on the rectangular resonator is visible, and the extended section – the 'bull's head' – to one side of the resonator is relatively small. A seal impression dating from the 19th or 18th century BCE from Acemhöyük (see Özgüç, 1979, p.290, pl.i, 2) shows a woman and a deity shaking hands; with their other hands they are holding a symmetrical five-string lyre with curved arms. Large lyres with doubly curved arms, designed to be played in horizontal position, are shown on seal designs of uncertain date from Tarsus and Mardin (see Norborg, 1995, figs.43–4).

(b) Lutes. An example of a long-necked lute, in this instance accompanied by concussion sticks, is found on a 17th-century Hittite stamp seal from Boğazköy (see Boehmer, 1988, pp.51ff, figs.1–2). In these early depictions the manner in which the lute is being held is similar to that shown in the oldest representations of the instrument – on Akkadian cylinder seals. Dating from about the same time, a fragment of a painted vase found at Samsat, a large settlement in south-east Anatolia (Adıyaman, Adıyaman Museum, 3059; see Özgüç, 1992, pl.i, 1), shows a musician holding a very long, slender-necked lute with a small, almost circular body. Evidence for the use of the short-necked lute in Anatolia comes from a pottery vessel shaped like a lute player and obviously meant to be used as a rhyton (Adana, Archaeological Museum, 3790; see Duru, 1974). The man's mouth is wide open, forming the spout and giving the impression that he is singing, and the musical instrument, held almost horizontally in front of his chest, has a trapezoid or triangular resonator, and two strings plucked with a plectrum. A chance find, this vessel cannot be dated precisely.

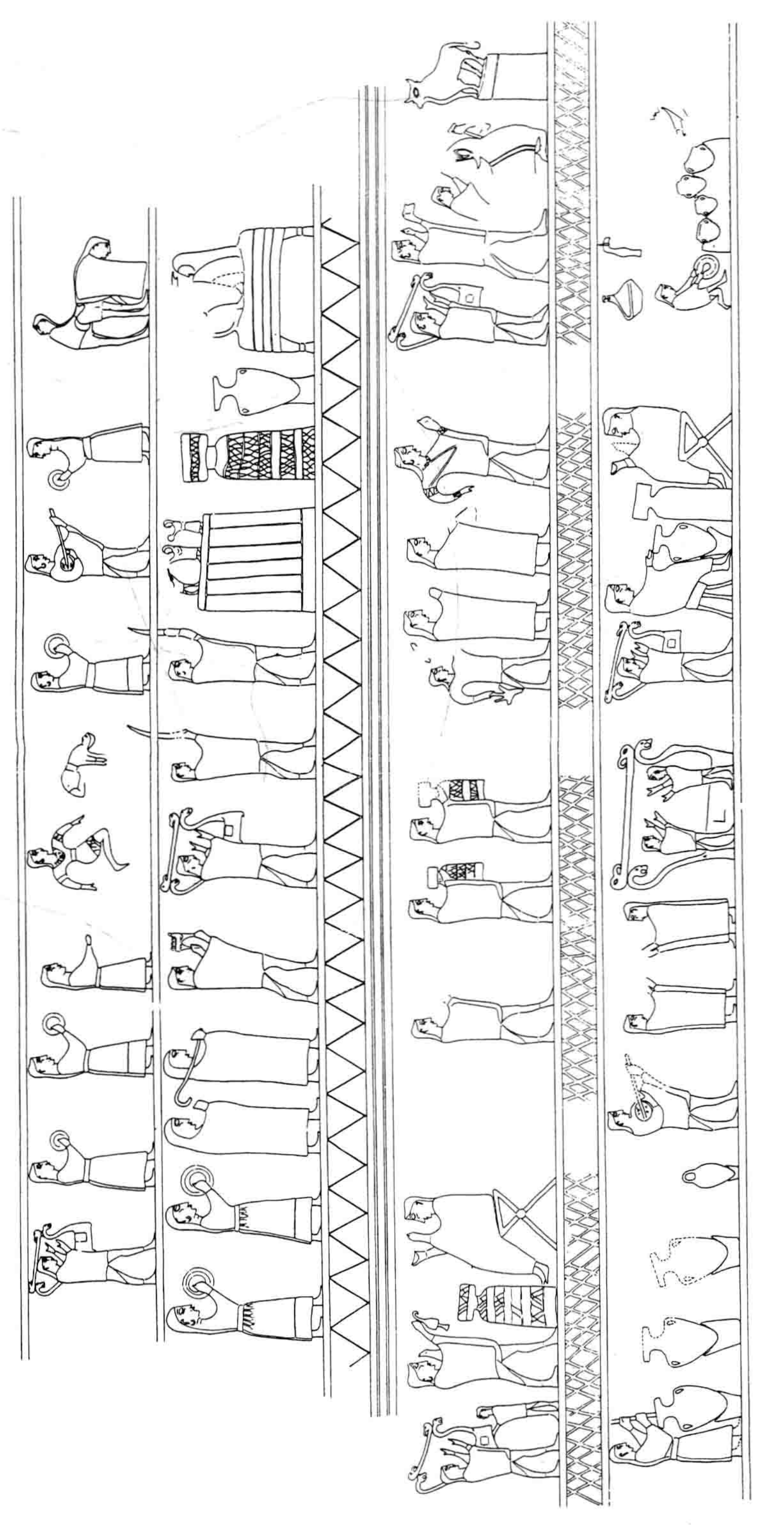
(c) Harps. The vertical angular harp first appears in Anatolia on seal designs of the 18th century BCE. A Syrian cylinder seal found in the ruler's palace in Karahöyük (Konya, Archaeological Museum, 1971.32.425) shows a female attendant playing a slender angular harp with the strings running vertically (see Alp, 1968, pp.117ff, pl.11, no.23).

4. LATE BRONZE AGE: HITTITE PERIOD (1600–1200 BCE). The Hittites had been moving into Anatolia since the late 3rd millennium BCE. With the establishment of the Old Kingdom (1600–1400 BCE), they first appeared as a political power; a period of expansion and further deployment of power began around the middle of the 2nd millennium. The Hittite Empire (1430–1200 BCE) extended to include not only a large part of central, southern and south-east Anatolia, but also northern Syria. For this period, written records, in the form of Hittite cuneiform texts, become available for the first time, and these together with iconographic sources (representations of musicians in the context of extensive festival ceremonies) assist in shaping our knowledge of Hittite musical culture. (For a map of the major Hittite sites see fig.6.)

(i) Archaeological evidence. The İnandık vase (Ankara, Museum of Anatolian Civilizations, 84–1–65; see Özgüç, 1988, pp.83–106), from the Hittite cultural centre of İnandık, dates from the 16th century BCE. On this vase four friezes arranged one above the other illustrate the course of a festival (fig.7), beginning with a kitchen scene (the lowest frieze) in which food and drink for the cult banquet are being prepared, proceeding through depictions of symposia and the pouring of libations, animal sacrifices, processions and acrobatic performances, and ending with a ritual scene known as the Sacred Marriage. As well as gods, priests, bringers of gifts, and other cult personnel, a large number of dancers and musicians take part. As the İnandık vase makes clear, the lyre and lute players are dressed in short tunics and the cymbals players

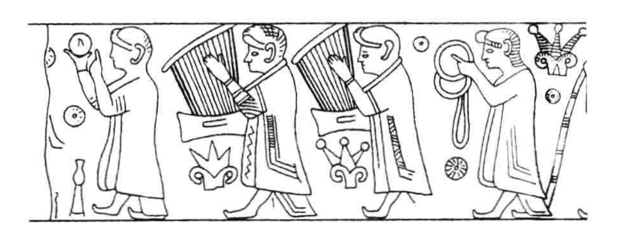
6. Map of major Hittite sites

in long robes, suggesting that the chordophones were reserved for men and the idiophones for women. The lyre played a central part in Hittite ceremonies, and in this instance the instruments depicted – six portable and one standing – are of the asymmetrical type. Each lyre has strongly curved arms, a yoke that is also bent at both ends, and a resonator with a raised rectangular area that is probably a box-shaped bridge. These large, richly ornamented instruments are regarded as a specifically Anatolian Hittite development, whereas the lutes – long-necked with an elliptical resonator and several holes on the soundboard and played with a plectrum held in the player's right hand – belong to the general class of ancient long-necked lutes. The many players of cymbals taking part in this festive ritual suggest that the volume of the music was loud. The same range and types of instruments as those represented on the İnandık vase may be seen on the fragments of vessels found near Çorum (see Sipahi and Yıldırım, 2000).



Two asymmetrical lyres and pairs of conspicuously large cymbals held together by a cord are shown in a ritual procession and libation scene depicted on the frieze around the rim of a Hittite fist-shaped silver vessel (a rhyton) dating from about the middle of the 2nd millennium BCE (fig.8; Boston, Museum of Fine Arts, RL 144.1977). The eight- or nine-string lyres are notable for the shape of the resonator, on which a narrow bridge is visible (Güterbock and Kendall, 1995, pp.45–60).

The orthostats of Alaca Höyük, which also date from the second half of the 2nd millennium (Ankara, Museum of Anatolian Civilizations, 11), depict an extended ritual scene in which a group of entertainers, including a lute player, amuse the weather god with music, dance and mime. As Hittite descriptions of festivities show, cult rituals included both solemn sacrificial ceremonies and performances to divert the gods. In this well-known representation, the lutenist's instrument is a long-necked lute with a relatively large body and clearly waisted sides. The soundboard has ten holes, and frets are marked on the instrument's slightly curved neck. The two strings were plucked with a plectrum fastened to the instrument with a cord (Eichmann, 1988, pp.598–601, fig.8*b*; Baltacıoğlu, 1995).



A number of fragments found at Boğazköy, including an ornamental appliqué on a vessel and potsherds with reliefs, provide evidence for the harp at the time of the Hittite empire. However, in each case, only fragmentary representations of the harpists are preserved. One of the potsherds shows the player's head and a part of the instrument (see Boehmer, 1983, pl.x, fig.23): the musician, represented with his mouth open, is probably singing to his own accompaniment; of the instrument's vertical strings only seven survive and part of the slightly curved resonator that widens towards the top, belonging to a vertical angular harp. The head of a second, squatting harpist is missing; the instrument, held against the player's chest, is also incomplete, making it impossible to ascertain exactly what type of harp it is. These finds have been dated to the 13th century BCE (see Parzinger and Sanz, 1992, p.113, pl.70, no.94). Two further potsherds each show the upper part of a harp: one instrument is surmounted by an animal head, the other is bent back to form a ring-shaped structure.

Also from Boğazköy and dating from the same period are two bronze statuettes of wind players and one of a drummer (Paris, Musée du Louvre, MNB 338).

(ii) Literary evidence. Cuneiform tablets from the royal archives of the Hittite capital Boğazköy-Ḫattuša cover the period of the Hittite state's existence, but because of their official nature they provide almost no details about the use of music in the everyday life of the people. The various 'editions', however, constitute a rich source of

7. Instruments in a ritual context: details from the İnandık vase, 16th century BCE (Museum of Anatolian Civilizations, Ankara)

8. Detail from a libation scene depicted on a Hittite silver rhyton, c mid-2nd millennium BCE *(Museum of Fine Arts, Boston)*

information about the official cult. Although the copious descriptions make little specific reference to music – comment is confined to short, stereotyped expressions relating to instruments – it is known that music, both instrumental and vocal (with and without accompaniment), was performed at several points during the festivals, especially when offerings were made, when the royal couple 'drank the gods', when the king moved from one place to another, and during processions with statues of deities. Dance, performed according to certain rules, was also included on occasion (for the special Hittite terminology relating to dance see de Martino, 1989). The notational system of the Hittites is still unknown, although scholars assume that it probably did not differ from that used in the rest of the ancient Near East.

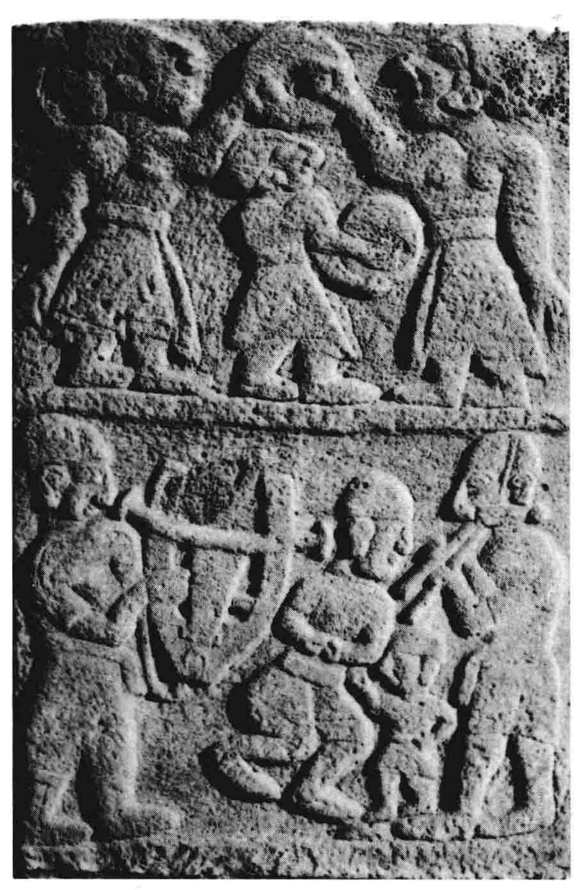
Musical instrument names are written on the tablets either in Sumerograms (represented in the following discussion by capital letters) or in Hittite (given here in italic), but the absence of further technical description has made the process of identification very difficult (if not impossible). In some cases the presence of a determinative indicates the material of construction – GIŠ ('wood') or URUDU ('metal') – but not the type of instrument (string, wind, percussion etc.), which, moreover, cannot necessarily be ascertained from the verbs associated with playing, because usage is inconsistent: *parai-/pariparai-*, 'to blow', is found solely with SI*šawatar*, 'horn'; *walḫ-*, 'to beat' or 'to strike', generally occurs with percussion instruments but also on occasion in connection with string instruments; *hazziya-*, *hazzik*(*k*)-, *hazzišk-*, 'to strike' or 'to pluck', was originally applied to string instruments, but it later took on the more general meaning of 'to play' (de Martino, 1988).

The instrument most frequently mentioned in the texts is the GIŠ dINANNA (= 'instrument of the goddess Ishtar'), which has been identified as 'lyre' or 'kithara' (de Martino, 1987). Its Hattic (i.e. pre-Hittite) equivalent is generally considered to be *zinar* (Laroche, 1955, pp.73–4), of which there were two sizes, large (GIŠ dINANNA.GAL = *ḫunzinar)* and small/medium (GIŠ dINANNA.TUR = *ippizinar*). GIŠTIBULA (formerly read as GIŠŠÀ.A.TAR) is thought to denote a string instrument, probably a long-necked lute (see de Martino, 1997, p.485). (URUDU)*galgalturi*, an instrument sometimes found in pairs, most likely represents 'cymbals' (see Gurney, 1977, p.35; Güterbock, 1995; Dinçol, 1998, p.2) or 'clappers' (Polvani, 'Osservazioni', 1988, p.218), or maybe 'tambourine' (Roszkowska, 1987, p.144; Puhvel, 1984–97, iv, 25). (GIŠ)*arkammi*, which in most cases occurs together with *galgalturi*, is generally equated with 'drum' (Polvani, 'Osservazioni', 1988; Roszkowska, 1987, p.24; Güterbock, 1995, p.59; Dinçol, 1998, p.4), its identification with 'harp' (Puhvel, 1984–97, i, p.146) or 'lute' (Klinger, 1996, pp.494–5) not being supported by the textual evidence. A number of scholars believe (GIŠ)*arkammi* to be identical with (GIŠ)BALAG.DI (Otten and Souček, 1969, p.62; Klinger, 1996, p.746), although others, while admitting the similarity of these instruments, regard them as essentially different, interpreting (GIŠ)BALAG.DI as 'tambourine' (Polvani, 'Osservazioni', 1988, p.219). (GIŠ)*ḫuḫupal* has also been interpreted in different ways, including 'cymbal' (Polvani, 1988), 'drum with one membrane' (Güterbock, 1995, p.71) and 'tambourine with one membrane' (Dinçol, 1998); during the *Lallupiya* ritual this instrument was also used as a drinking vessel (Güterbock, 1995, pp.63–4). Wind instruments include the GI.GÍD (= 'long reed'), a flute or (double) reed-pipe, and SI*šawatar/šawitra-*, a horn. (GIŠ)*mukar*, used to summon the gods in the temples and to repel evil, probably denotes an idiophone, perhaps 'sistrum' (Gurney, 1977, p.35; Güterbock and Hoffner, 1986, iii/3, pp.323–4; de Martino, 1997, p.487); it is never found with a verb meaning 'to play'.

Song (SÌR = *išhamai-/išhamiya-*: 'song', 'melody', 'to sing') played an important part in Hittite festivals (see Kümmel, 1973). Among professional musicians and singers the following three – LÚNAR = *kinirtalla-*, LÚ*halliyari-*; and LÚGALA = LÚ*šahtarili-* – seem to have occupied an important position. Some players were called after their instruments: for example, LÚ/MUNUS*arkammiyala* played the GIŠ*arkammi*, although to do so appears not to have been this musician's unique privilege since others could also play it. Persons with other duties were also permitted to play instruments and sing during the festivals. The texts of the songs were in Hittite, or in languages such as Hattic, Luwian and Hurrian, and were performed by a soloist (or soloists) or chorus accompanied by instruments, generally the lyre. In festivals of Hattic origin and in some Luwian ones, the stanzas or refrains might be sung by the chorus and soloist(s) in alternation (see Klinger, 1996, pp.277–8). The songs have titles such as *Song of the Bulls*, *Song of the God*, and some seem to have been specifically addressed to particular gods, for example, the *Song of Hilašši* and the *Song of the God of the Favourable Day* in the Hišuwa festival, during which three drum players singing the *Song of War* (*kuwayaralla zahhiyaš*), accompanied by instruments, performed a war dance symbolizing a battle with the Storm god. References to music are also found in mythological texts. In the *Hedammu* myth there is a passage describing how the 'Great Sea' is escorted from the house of Kumarbi to an accompaniment of drums and cymbals (see Siegelová, 1971, p.38). In the *Song of Ullikummi* the Goddess Ishtar sings and plays drums and cymbals in an attempt to lure the deaf and blind Ullikummi to the seashore (see Güterbock, 1952, p.14). In funerary rituals musicians sang to an accompaniment on the lyre (see Otten, 1958).

A number of references to songs occur in non-religious sources: for example, in an Old Hittite historical text there is a war song called *Song of the God Zababa*; and the full text of a song of two warriors is preserved in a palace chronicle.

5. EARLY IRON AGE (1200 UP TO THE PERSIAN CONQUEST). After the fall of the Hittite Empire, several small states were established in Anatolia during the first half of the 1st millennium BCE. The south-east was divided up into separate principalities in which Hittite traditions were deliberately perpetuated. In central Anatolia the state of Phrygia, with its capital Gordion, came into being. Urartu formed in the extreme east, and Lydia in the north-west. Greek immigrants founded cities on the west coast.



9. Musicians with lute, aulos and clappers: relief from Carchemish, early 1st millennium BCE *(Museum of Anatolian Civilizations, Ankara)*

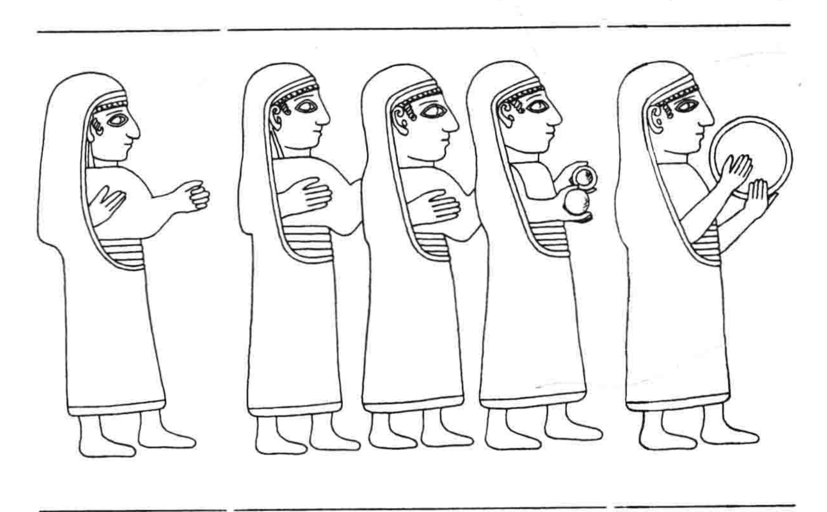
(i) South-east Anatolia: neo-Hittite kingdoms (1200–700 BCE*).* The foremost iconographic sources are the orthostat reliefs of the palaces and fortresses of late Hittite rulers, and some funerary stelae. The reliefs, which are notable for their faithful reproduction of individual iconographic details, come from Carchemish (Jerablus), Guzana (Tell Halaf), Sam'al (Zincirli), Gurgum (Maraş) and Karatepe; with a few exceptions, they can be dated to the 9th and 8th centuries BCE. The range of instruments shown is almost wholly confined to various types of lyre, lutes with long stick-like necks and very small pear-shaped or elliptical resonators, double auloi, usually played with a *phorbeia* (Gk.: 'mouthband'), and drums of different sizes. There are occasional depictions of cymbals, concussion sticks, syrinxes and horns, but the harp no longer features. The reliefs portray both solo and ensemble music-making, usually in the context of court or religious festivities, and also instrumental performance combined with dance (see Orthmann, 1971, pp.394–8).

A pair of early orthostats from Zincirli (Berlin, Vorderasiatisches Museum, 2652) depict a seated lute player facing a male dancer in a short tunic. The player is holding a long-necked lute in the normal way, and the strikingly long instrument has an extremely small resonator (the representation makes it possible to estimate the likely volume of sound); a loop hangs down from the top half of the stick-shaped neck. The dancer, wearing a short tunic, with his arms raised at an angle at shoulder-height, is making specific hand movements; a globular object, possibly a rattle, is fastened to his ankle.

Two orthostat reliefs depicting related musical themes flank a small entrance near the King's Gate at Carchemish (Ankara, Museum of Anatolian Civilizations, 119 and 141). The first, a dance scene (fig.9), shows three musicians of different size wearing ankle-length robes, and a dancer in a short tunic; the first musician plays a lute similar to the instrument on the Zincirli relief, with strings plucked by a plectrum; the second has a double aulos, and the third is marking the dance rhythm with a pair of stick clappers. The second orthostat depicts a horn player and three men beating the side of a large shallow drum with the palms of their hands; the drum is fixed to carrying-straps over the shoulders of the two drummers on either side of it (this orthostat appears to be emphasizing the loudness of the sound and its signalling function).

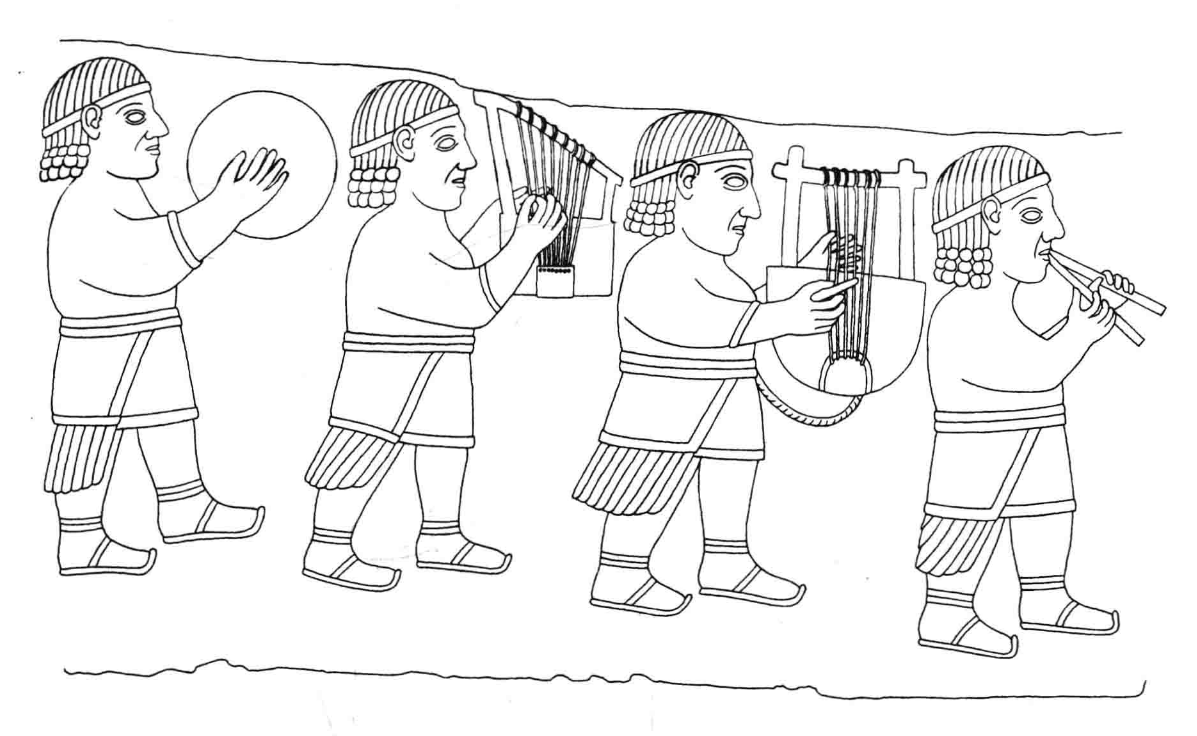
A wild dance scene is represented on an orthostat still in its original position near the north gate at Karatepe (fig.10; Karatepe, Open-Air Museum). In the lower section two dancers of different size stand at the centre; they are flanked by a lyre player and a man, wearing a PHORBEIA, playing a double aulos. The upper area shows a figure with a frame drum; the indented disc above this figure's

10. Dancers, with musicians playing the lyre (bottom left) and double aulos (bottom right): basalt relief, c700 BCE (Open-Air Museum, Karatepe)



head is possibly a gong with a concave central area, or perhaps a wreath.

Two festival scenes with animals in anthropomorphized form standing upright to dance and play music were depicted on orthostats from Tell Halaf (formerly in Berlin, Staatliche Museen Preussischer Kulturbesitz, but destroyed in World War II). In each the lion, as the mightiest of beasts, plays the lyre. Other animals accompany the lyre with a frame drum, cymbals and concussion sticks. Similar scenes with animals playing music, probably deriving from orally transmitted animal fables, date from as early as the 3rd and 2nd millennia in Mesopotamia and Egypt.



A relief that is difficult to date or to classify stylistically, from Rumkale near Gaziantep, represents a barefoot man in a long robe, with a bag on his back and a water-bottle hanging from his belt, he may be a nomadic shepherd. With his right hand he holds a branch over his shoulder and in his left hand is a syrinx which is placed under his chin (Paris, Musée du Louvre, AO.1531).

One of the most unusual of the late Hittite reliefs, from the area of Karamanmaraş (Antakya, Hatay Museum, 17915), is a funerary stela decorated on all four sides with closely related reliefs. A magnificently dressed woman, enthroned and attended by two serving women, is depicted on the front of this stela, and five more women, one behind the other, are shown on the other three sides. The first woman is beating a frame drum, the second is playing a pair of small cymbals, and the others follow, either clapping their hands or making a gesture of greeting (fig.11; see also Schachner, 1996, pp.203ff, figs.1–8).

The majority of late Hittite reliefs with scenes of music-making are concerned with the ritual cult feast. One such banqueting scene, on an orthostat at the Water Gate of Carchemish (Ankara, Museum of Anatolian Civilizations, 123), shows a male figure with a drinking goblet in his hand sitting at a table laden with food; a servant with a fan stands behind him, and a lute player and another servant holding a vessel are standing opposite. The musician has the same type of instrument as those shown in other late Hittite depictions of lutes, with a loop fastened to the top. This detail also appears on the fragment of a stela from Maraş (New York, Metropolitan Museum of Art, 91.34.1), which shows parts of a banqueting scene and the end of a lute. In another stela from Maraş (New York, MMA, 91.34.2), the female figure seated at the banqueting table holds a mirror in one hand and a rectangular box lyre in the other; the lyre is an attribute of the banqueting scene and the bird shown above the lyre suggests a musical reference. A similar relief, on a stela from the province of Maraş (Karamanmaraş, Archaeological Museum, 1040), depicts a lyre and

11. Funerary stela from the area of Karamanmaraş (Hatay Museum, Antakya)

12. Procession of musicians: late Hittite relief from Karatepe (Open-Air Museum, Karatepe)

a mirror – again, attributes of the scene – above the heads of the male and female figures seated opposite each other. The six-stringed symmetrical box lyre, with the arms running parallel and the strings fanned out clearly, shows the bridge and tailpiece as well as the bulges where the strings are fastened to the yoke.

A particularly lavish representation of a court festivity, in which seven servants and court officials and seven musicians are taking part as well as the enthroned ruler (probably Barrakib), can be reconstructed from the complete and fragmentary orthostats found at Zincirli (see Voos, 1985, pp.65–86). The procession of musicians is led by a man with a double aulos (Berlin, Vorderasiatisches Museum, VA 2999 and VA 974), followed by two lyre players with instruments that clearly differ from each other, and two drummers (Istanbul, Museum of the Ancient Orient, 7723). Two more men with frame drums bring up the rear, one standing on the other's shoulders (Berlin, VM, S 6584). The musicians' clothes, with their tasselled belts, are different from from those of the other figures.

There is an interesting parallel to this festive scene from Zincirli in Prince Azitawadda's fortified summer residence at Karatepe. The reliefs of the first two orthostats behind the lion portal of the south gateway form a thematic unit in two registers, again representing a courtly scene of a cult banquet (Karatepe, Open-Air Museum). The central position in the scene is occupied by the ruler, who sits enthroned before a table covered with food and surrounded by a crowd of servants. In the lower register, the sacrificial bull is being led up, and the court musicians are shown standing behind each other on the left. As in the Zincirli banquet scene, the procession of musicians (fig.12) is led by a reed-instrument player, in this case blowing a double aulos; he is followed by two musicians with different types of lyre, while a drummer beating the frame drum usual at this period follows at the rear. Unlike the servants, who are shown in statuesque poses, all the musicians have their left feet slightly raised, suggesting that they are marching in time. Again, the musicians' clothes, with double belts and with over-garments extending at the back below knee-length tunics, differ from those of the other figures. From these late Hittite reliefs it would appear, therefore, that an ensemble of court musicians with its own special uniform, set marching order and fixed group of instruments had already been established.

A considerable variety of lyres are represented in these reliefs, together with interesting details of construction and playing styles. Where two lyre players appear in the same ensemble, as in the Zincirli and Karatepe reliefs, two entirely different types of instrument are shown, one symmetrical and one asymmetrical. Generally, the symmetrical type has five or six strings, of about the same length and running approximately parallel, which are plucked with a plectrum held in the right hand; the left-hand fingers (visible behind the stringing) damp the strings that are not meant to sound when the plectrum strums all the strings simultaneously to mark the rhythm of the music. On the Zincirli relief, the portrayal of the symmetrical box lyre shows the strap slung around the front arm of the yoke and the musician's left wrist, enabling the instrument to be held close to the player's chest as he marches along. Also visible are the semi-circular string holder and two circular ornaments or sound-holes on the box-shaped resonator. By contrast, the late Hittite asymmetrical lyre, with its eight to 12 strings, resembles the triangular frame harp more than the symmetrical lyre. The illustration of this type of instrument on the Zincirli reliefs shows that the arm of the lyre closest to the musician was seven times as long as the other and several times thicker. The longest of the 12 strings is approximately three times as long as the shortest,

suggesting that the instrument had a wide range. The yoke forms an angle of about 45° to the long arm and is itself even longer; the fan-shaped arrangement of the strings made it easier for the fingers to pluck each string separately. The strings are fixed to a rectangular holder, a 'box bridge', open at the top and fitted sideways to the relatively large rectangular resonator close to the lower edge. Illustrations of this type of instrument, dating from about the early 7th century BCE, are found in Nineveh (Mesopotamia) and in Syria (for instance, Antakya, Hatay Museum, T 3729).

(ii) Eastern Anatolia: Urartian period (c825–600 BCE). During the 9th century BCE a mighty kingdom, called Urartu by the Assyrians, arose in the east, its core area lying between lakes Van (Turkey), Urmia (Iran) and Sevan (Armenia). At the height of its power in the 8th and 7th centuries BCE, this empire (capital Tushpa, now Van) extended from the Euphrates to the Caspian Sea, and from the southern Caucasus and the eastern coastal region of the Black Sea to north-east Iraq. It was destroyed in about 600 BCE by invading Medes and Scythians from the east and north.

Rich deposits of ore formed the basis for the highly developed metal-working skills of its people, especially in copper and bronze. Many bronze sound-generating objects of Urartian provenance have been discovered, including bells of various types, particularly horse bells (see Özgen 1984, pp.109–111). Urartian and Assyrian reliefs of the late 8th century onwards frequently depict horses with bells hanging from their necks. The most characteristic type, made of cast bronze, is about 7–10 cm high, slightly conical in shape and with an octagonal, polygonal or approximately circular base. The body, divided up by two or three horizontal ridges (the lowest at the bottom), is perforated by rectangular or triangular openings or occasionally by openings in the form of an animal head. It is surmounted by a half dome or flattened dome, usually with rosette decoration, and a loop handle at the top. Two small holes opposite each other in the top of the dome would have held a metal pin from which to hang the clapper; as a result of corrosion, neither clappers nor pins, which were usually made of iron, have survived. Sometimes it is possible to date the bells from the names of the Urartian rulers inscribed on them; the earliest is from about 800 BCE (see Muscarella, 1988, pp.427–3; Calmeyer, 1957–71, iii, 427–31). In another type of cast bronze bell, the body is entirely closed apart from a vertical slit a few millimetres wide running from its mouth to its shoulder.

Bronze crotals, whose antecedents can be traced back to the last third of the 2nd millennium and the time of the Hurrian Mitannian empire, occur as frequently as bells. Made by the lost-wax (*cire perdue*) method, they have hollow bodies – spherical, spindle-shaped or zoomorphic – with perforated walls; a small ball (or sometimes two or more balls) inside the instrument causes it to ring when shaken. Some of the crotals have eyelets from which they could be hung, or pins for fastening them to a stick or to the pole or yoke of a chariot. They have been found with the remains of chariots in grave chambers, for instance, in Nizhnih Adjyaman and Lchashen near Lake Sevan. Crotals shaped like birds, bulls, wild goats, ibexes and stags, from the Transcaucasus and north-east Anatolia, can be seen in museums in Armenia, Georgia and eastern Turkey (see Bossert, 1942, pl.65, no.317; Yaylalı, 1997, pp.19–31).

Figural reliefs on such Urartian bronze objects as votive plaques, belts, clasps, helmets, quivers, shields and vessels have yet to be systematically studied for the presence of musical motifs. Two Urartian bronze belts from the late 8th century BCE depict cult scenes with musicians, dancers and acrobats: the one shows female players of the aulos, the lyre and the frame drum, a male stiltwalker, and a woman in dance posture shaking an idiophonic cult standard (Istanbul, Sadberk Hanım Museum, ARK 608–12181); the other shows musicians plucking a rectangular string instrument, dancers, and an acrobat doing a handstand or cartwheel (see Kellner, 1991, no.282).

(iii) Central Anatolia: Phrygian period (c800–700 BCE). The Phrygians, who made their way east from south-east Europe in the 12th century BCE and settled in central Anatolia, stepped into the power vacuum after the fall of the Hittite empire in about 1200 BCE. The Phrygian kingdom was at its height in the 8th century BCE. Written and pictorial sources as well as musical instrument finds suggest that the Phrygians' religious music was orgiastic: their typical instruments – the Phrygian aulos (see Bélis, 1986, pp.21–40), cymbals and frame drums – undoubtedly produced a very loud sound, and worship of the Phrygian goddess CYBELE was clearly accompanied by ecstatic rituals and exciting, deafening noise. The many extant statuettes of Cybele and the votive plaques associated with her usually show the goddess with her attribute of a frame drum (see Naumann, 1983, p.136). During excavations in Boğazköy, a sculptural group was found among remains of buildings from the Phrygian period at the fortress gates of Büyükkale (fig.13; Ankara, Museum of Anatolian Civilizations, 138.3.64). Dated to the mid-6th century BCE and presumably of cultic significance, it shows Cybele flanked by two male musicians less than half her height, one wearing a *phorbeia* and playing the double aulos (with equal length and parallel pipes), the other playing the seven-string lyre.

Discovered very close to the statue of Cybele and dated to about the same time is a fragmentary bronze cymbal; 8·7 cm in diameter, it has a convex central area, pierced in the middle, and a flat outer area curving slightly up at the rim. A pair of early Phrygian (mid-8th–mid-7th century BCE) bronze cymbals, excavated at the temple precincts of the lower city of Boğazköy (see Bittel, 1968, pp.79–82; Boehmer, 1972, pp.135–6) are about 10 cm in diameter and 2 mm thick. A circular, flat iron disc with a diameter of 33·5 cm and a suspension loop is slightly older and has been identified as a struck idiophone (a kind of gong). Two bronze tulip-shaped bells with an elliptical cross-section and wide loops were found in the later Phrygian level of Boğazköy (7th–6th centuries BCE). The rings to which the clappers were attached can still be seen, but the clappers themselves are missing (see Boehmer, 1972, p.70, pl.x; p.158, no.1658, pl.lvi).

Fragments of chordophones and aerophones have also been found in Gordion, the capital of the Phrygian kingdom. They all date to the late Phrygian period, extending from the invasion of the Cimmerians in 695 to the last quarter of the 4th century BCE. The fragments of string instruments include a bridge and a string holder made of bone or ivory for a double-string instrument, probably a long-necked lute. Among the fragments of wind instruments are the upper section of an aulos, and

13. Cybele, with musicians playing the double aulos and lyre: sculpture from Boğazköy, mid-6th century BCE *(Museum of Anatolian Civilizations, Ankara)*

two others (now in the Gordion museum), neither of which has been identified with any certainty, made from the wing bones of large birds, one with two finger-holes and the other with six. A lyre is depicted on shards of a painted pottery vessel from Tumulus J in Gordion, dating from the end of the 7th century. The instrument, a standing lyre with eight strings, is approximately circular and about the same size as its player, who is shown sitting on a stool flanked by two birds (see Kohler, 1995, pp.68–9, fig.27*d*).

A number of bronze figures of musicians standing or sitting to play reed instruments, trumpets or occasionally the syrinx are unprovenanced and, despite the 'Phrygian cap' worn by the musicians, cannot be definitely identified as examples of Phrygian art. The figure of a trumpeter playing his instrument with the *phorbeia* probably comes from Mylasa.

Knowledge of Phrygian auloi as the characteristic instruments of Phrygian musical culture derives mainly from Greek and Roman written and pictorial sources. With the spread of the cult of Cybele to the west and the adoption of Phrygian auloi into the cult of DIONYSUS, this special form of the double aulos reached Greece and Rome, where it was used in theatres as well as for religious purposes, attracting much attention by its appearance and sound. These reed instruments, played in pairs, were of different lengths. The longer instrument had a funnel-shaped bell that curved upwards or backwards when the instrument was held in a more or less horizontal position during performance. Detailed depictions of Phrygian auloi occur relatively frequently in Roman reliefs of the imperial period; even the bombyx mechanism, the reeds and the separate sections of the cylindrical pipes are clearly visible in some of these representations (*see* AULOS, §I, 3–4 and fig.1). Greek and Latin written accounts indicate that Phrygian aulos players became famous far beyond the borders of their native land.

(iv) Western Anatolia: Lydian period (c678–547/6 BCE*).* Under the pressure of Doric migration, western Anatolia was more densely settled by Greek immigrants after the end of the 2nd millennium BCE, particularly in the coastal regions. The Greek cities founded there united to form the Ionian League. The Lydian empire arose in the land behind the Ionian coastal cities, but its history cannot be traced back further than the 7th century BCE. Archaeomusicological material found in the coastal regions of Anatolia and the offshore islands of the Aegean provides evidence of a variety of instrument types and of lively cultural exchanges with Greece. The depictions of lyres from Lydia, Caria, Lycia and Cilicia of the Geometric and Archaic periods (950–600 and 600–480 BCE respectively) include unusual and short-lived special forms as well as some very elaborate and technically sophisticated types.

The representation of a seven-string lyre on late Geometric shards dating from the first half of the 7th century BCE, excavated in Bayraklı, is very similar in its circular shape to the Phrygian lyre shown on shards in Tumulus J in Gordion (see §III, 3 above), but the former differs not only in its number of strings but also in the ends of the arms of the lyre, which extend far beyond the yoke itself, curving out and becoming increasingly broad (Akurgal, 1961, pp.13–14, fig.3). Both depictions portray birds as the musical symbol of the lyre. In the lower part of the picture of the Bayraklı lyre, the line running parallel to the yoke, just where the strings end, should probably be regarded not as the upper edge of the resonator but as a string holder. The two crosses between the arms, most probably the resonator's soundholes, suggest that the resonator itself was quite large. As in the case of the Gordion fragment, the stand fitted to one side indicates that the instrument was a standing lyre. A quite different type of lyre is shown on the fragment of a vessel from Pitane (Çandarlı), dated to around 600 BCE. Two 6th-century relief friezes from Lycia with scenes of music-making and wrestling (Istanbul, Archaeological Museum, 5273 and 763) depict the round-based lyre. The seven-string lyre on a relief from Xanthos is very ornate. A marble sarcophagus found in 1994 in the province of Çanakkale, showing an aulos player, a kithara player, and a dancing girl with crotala performing at a funeral, can be dated to the late 6th century. The resonator of the lyre is made from a tortoise shell (Sevinç, 1996, pp.251–64).

Several aulos fragments found during excavations of the temple of Artemis at Ephesus and the acropolis of Lindos date from the Archaic period (Istanbul, Archaeological

Museum, 2796 and 3784; London, British Museum, GR 1907.12–1.423). The early 6th-century bone pipe from Ephesus is about 14 cm long, with five finger-holes at the front and one hole at the back.

(v) Persian conquest: a turning-point. A clear break in the development of the musical cultures of Anatolia came with the conquest of the area by the Persians. Between 547 and 337 Anatolia was part of the Achaemenid empire (*see* IRAN, §I, 4(iii)), and in 334 it was conquered by Alexander the Great. During the succeeding Hellenistic period (334–27 BCE), Greek civilization spread throughout the whole of Anatolia, not just to the west coast as in previous centuries, when the cultural exchange was stronger from east to west.

Greek written accounts from classical antiquity provide a graphic picture of the cultural influence of Anatolia on the Mediterranean area, more particularly the influence of the Phrygians and Lydians on Greek music (Thiemer, 1979). Several musical instruments common in ancient Greece were believed to have originated in Anatolia and to have been imported from there. The same was true of the origin of songs and modes in the teachings of Greek music theory on the *harmoniai*, as the terms Lydian, Mixolydian, Phrygian, Hypophrygian and Hypolydian clearly indicate.

WERNER BACHMANN (1–4(i), 5), BELKIS DINÇOL(4(ii))

Anaya (Arze), Franklin (*b* Cochabamba, 23 Sept 1912; *d* Cochabamba, 15 Feb 1998). Bolivian pedagogue, composer and architect. After fighting in the Chaco War he studied music and architecture in Chile (1936–42); thereafter, apart from a study trip to Madrid in 1959, he remained in his native Cochabamba. The Coro de los Valles, which he founded in 1954, was for several decades the mainstay of the city's musical life. *Wayra*, Anaya's most renowned composition, was originally written for this choir and subsequently arranged for various instrumental combinations.

Notwithstanding his prolific career as an architect – he served as dean of the faculty of architecture at the Universidad Mayor de San Simón de Cochabamba and designed university campuses in Cochabamba and Oruro – Anaya has earned national recognition mainly on the strength of his educational work. In 1961 he founded the Instituto Laredo, a school for gifted children, with the goal of promoting happiness through an 'integral education'; this is characterized by a particular emphasis on music, based on the principle that, of all disciplines, music cultivates the widest range of human faculties. Witness to the integrity of Anaya's ideas is the unusually high number of his pupils that have gone on to positions of leadership, both within and outside the arts.

WORKS

all composed during the period 1954–62 and published in Madrid (1994)

Wayra, SATB; Cotoca, SATB; Canción de cuna I, SAT; Canción de cuna II, S, Mez, A; Burrukhaty - Amador, SATB; Juana Azurduy de Padilla, SATB, perc; Jesucristo Khuyakuway, SATB

Principal publisher: Editorial Música Mundana

AGUSTÍN FERNÁNDEZ

Ančerl, Karel (*b* Tučapy, Bohemia, 11 April 1908; *d* Toronto, 3 July 1973). Czech conductor. He studied composition and conducting at the Prague Conservatory (1925–9) and then was assistant conductor to Hermann Scherchen in Alois Hába's opera *The Mother* at Munich in 1931. He became a member of Scherchen's conducting class in Strasbourg, and later also studied with Talich in Prague. His career as conductor for the theatre and for Prague radio (1933–9) was interrupted by the Nazi occupation of Czechoslovakia. He was sent to concentration camps and was the only member of his family to survive. He returned to conduct the Prague Opera (1945–8), the Czech RSO (1947–50) and the Czech PO (1950–68), and from 1942 to 1952 was a professor at the Prague Conservatory. He received a Czechoslovakian State Prize in 1958 and was named National Artist in 1966. Ančerl's speciality in Czech music and in modern music had been demonstrated before the war at ISCM festivals in Amsterdam (1933), Prague (1935), Barcelona (1936) and Paris (1937). After the war he toured more widely, conducting orchestras in Belgium and the Netherlands (1947), the USSR (1948) and elsewhere, and taking the Czech PO to various European countries (including England in 1956 and 1962) and to Australia, New Zealand, Japan, China and India in 1959. He returned to England from 1967 as guest conductor with the LPO and later with other orchestras. After the Soviet invasion of 1968 he left Czechoslovakia, and in 1969 he succeeded Ozawa as music director of the Toronto SO, raising its technical standard and introducing works by composers such as Bartók, Martinů, Smetana and Suk.

This appointment marked his decisive separation from the political pressures of musical life in Czechoslovakia. He never achieved the eminence of his younger contemporary, Rafael Kubelík, but he became after Kubelík the best known of his generation of Czech conductors; he made many recordings in a repertory ranging from Mozart to Stravinsky. Ančerl's music-making was always characterized by lyrical warmth, as can be heard on his recordings of Mozart, Brahms and Mahler. In Czech works he added a rhythmic pungency, often underlining the music's folk origins.
